## 6.1109 Digikam::NamespaceEditDlg Class Reference

Inheritance diagram for Digikam::NamespaceEditDlg:

### Public Slots

- void **accept** () override

### Public Member Functions

- **NamespaceEditDlg** (bool create, [NamespaceEntry](#) &entry, QWidget \*const parent=nullptr)
- void **saveData** ([NamespaceEntry](#) &entry)

### Static Public Member Functions

- static bool **create** (QWidget \*const parent, [NamespaceEntry](#) &entry)
- static bool **edit** (QWidget \*const parent, [NamespaceEntry](#) &entry)

## 6.1110 Digikam::NamespaceEntry Class Reference

The [NamespaceEntry](#) class provide a simple container for dmetadata namespaces variables, such as names, what types of data expects and extra xml tags.

### Public Types

- enum **NamespaceType** {  
  **TAGS** = 0 , **TITLE** = 1 , **RATING** = 2 , **COMMENT** = 3 ,  
  **PICKLABEL** = 4 , **COLORLABEL** = 5 }
- enum **NsSubspace** { **EXIF** = 0 , **IPTC** = 1 , **XMP** = 2 }
- enum **SpecialOptions** {  
  **NO\_OPTS** = 0 , **COMMENT\_ALTLANG** = 1 , **COMMENT\_ATLLANGLIST** = 2 , **COMMENT\_XMP** = 3 ,  
  **COMMENT\_JPEG** = 4 , **TAG\_XMPBAG** = 5 , **TAG\_XMPSEQ** = 6 , **TAG\_ACDSEE** = 7 }
- enum **TagType** { **TAG** = 0 , **TAGPATH** = 1 }

### Public Member Functions

- **NamespaceEntry** (const [NamespaceEntry](#) &other)

### Static Public Member Functions

- static QString **DM\_COLORLABEL\_CONTAINER** ()
- static QString **DM\_COMMENT\_CONTAINER** ()
- static QString **DM\_PICKLABEL\_CONTAINER** ()
- static QString **DM\_RATING\_CONTAINER** ()
- static QString **DM\_TAG\_CONTAINER** ()
- static QString **DM\_TITLE\_CONTAINER** ()

## Public Attributes

- QString **alternativeName**
- QList< int > [convertRatio](#)
- int **index** = -1
- bool **isDefault** = true
- bool **isDisabled** = false
- QString [namespaceName](#)
- NamespaceType **nsType** = TAGS
- SpecialOptions **secondNameOpts** = NO\_OPTS
- QString **separator**
- SpecialOptions **specialOpts** = NO\_OPTS
- NsSubspace **subspace** = XMP
- TagType **tagPaths** = TAGPATH

## 6.1110.1 Member Data Documentation

### 6.1110.1.1 convertRatio

QList<int> Digikam::NamespaceEntry::convertRatio

Rating Options

### 6.1110.1.2 namespaceName

QString Digikam::NamespaceEntry::namespaceName

Tag Options

## 6.1111 Digikam::NamespaceListView Class Reference

Inheritance diagram for Digikam::NamespaceListView:

### Public Slots

- void **slotDeleteSelected** ()  
*slotDeleteSelected - delete selected item from Quick Access List*
- void **slotMoveItemDown** ()
- void **slotMoveItemUp** ()

### Signals

- void **signalItemsChanged** ()  
*contextMenuEvent - reimplemented method from QListView to handle custom context menu*

### Public Member Functions

- QModelIndexList **mySelectedIndexes** ()
- **NamespaceListView** (QWidget \*const parent=nullptr)

### Protected Member Functions

- void **dropEvent** (QDropEvent \*e) override
- QModelIndex **indexVisuallyAt** (const QPoint &p)
- void **startDrag** (Qt::DropActions supportedActions) override

## 6.1111.1 Member Function Documentation

### 6.1111.1.1 startDrag()

```
void Digikam::NamespaceListView::startDrag (
    Qt::DropActions supportedActions ) [override], [protected]
```

Reimplemented methods to enable custom drag-n-drop in QListView

## 6.1112 Digikam::NetworkManager Class Reference

Inheritance diagram for Digikam::NetworkManager:

### Public Member Functions

- `QNetworkAccessManager * getNetworkManager (QObject *const object) const`

### Static Public Member Functions

- `static NetworkManager * instance ()`

### Friends

- class `NetworkManagerCreator`

## 6.1112.1 Member Function Documentation

### 6.1112.1.1 `getNetworkManager()`

```
QNetworkAccessManager * Digikam::NetworkManager::getNetworkManager (
    QObject *const object ) const
```

Get the current QNetworkAccessManager or create a new QNetworkAccessManager if the passed QObject runs on a different thread.

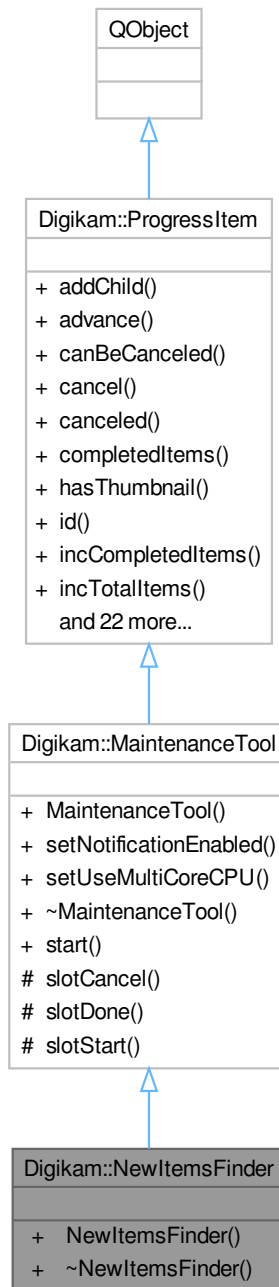

### 6.1112.1.2 `instance()`

```
NetworkManager * Digikam::NetworkManager::instance ( ) [static]
```

Global instance of internal network manager. All accessor methods are thread-safe.

## 6.1113 Digikam::NewItemsFinder Class Reference

Inheritance diagram for Digikam::NewItemsFinder:

### Public Types

- enum `FinderMode` { `CompleteCollectionScan`, `ScanDeferredFiles`, `ScheduleCollectionScan` }

## Public Member Functions

- **NewItemsFinder** (const [FinderMode](#) mode=[CompleteCollectionScan](#), const QStringList &foldersToScan=QStringList(), [ProgressItem](#) \*const parent=nullptr)

## Public Member Functions inherited from [Digikam::MaintenanceTool](#)

- **MaintenanceTool** (const QString &id, [ProgressItem](#) \*const parent=nullptr)
- void [setNotificationEnabled](#) (bool b)
- virtual void [setUseMultiCoreCPU](#) (bool)

## Public Member Functions inherited from [Digikam::ProgressItem](#)

- void **addChild** ([ProgressItem](#) \*const kiddo)
- bool [advance](#) (unsigned int v)
 

*Advance total items processed by n values and update percentage in progressbar.*
- bool [canBeCanceled](#) () const
- void **cancel** ()
- bool **canceled** () const
- unsigned int **completedItems** () const
- bool [hasThumbnail](#) () const
- const QString & [id](#) () const
- bool **incCompletedItems** (unsigned int v=1)
- void **incTotalItems** (unsigned int v=1)
- const QString & [label](#) () const
- [ProgressItem](#) \* [parent](#) () const
- unsigned int [progress](#) () const
- **ProgressItem** ([ProgressItem](#) \*const parent, const QString &id, const QString &label, const QString &status, bool [canBeCanceled](#), bool hasThumb)
- void **removeChild** ([ProgressItem](#) \*const kiddo)
- void **reset** ()
 

*Reset the progress value of this item to 0 and the status string to the empty string.*
- void **setComplete** ()
 

*Tell the item it has finished. This will emit [progressItemCompleted\(\)](#) result in the destruction of the item after all slots connected to this signal have executed. This is the only way to get rid of an item and needs to be called even if the item is canceled. Don't use the item after this has been called on it.*
- bool **setCompletedItems** (unsigned int v)
- void [setLabel](#) (const QString &v)
- void [setProgress](#) (unsigned int v)
 

*Set the progress (percentage of completion) value of this item.*
- void [setShowAtStart](#) (bool showAtStart)
 

*Set the property to pop-up item when it's added in progress manager. Use this method if you consider that item is important to be notified to end-user.*
- void [setStatus](#) (const QString &v)
 

*Set the string to be used for showing this item's current status.*
- void [setThumbnail](#) (const QIcon &icon)
 

*Sets whether this item has a thumbnail.*
- void **setTotalItems** (unsigned int v)
- void [setUsesBusyIndicator](#) (bool useBusyIndicator)
 

*Sets whether this item uses a busy indicator instead of real progress for its progress bar. If it uses a busy indicator, you are still responsible for calling [setProgress\(\)](#) from time to time to update the busy indicator.*
- bool [showAtStart](#) () const
- const QString & [status](#) () const
- bool **totalCompleted** () const
- unsigned int **totalItems** () const
- void **updateProgress** ()
 

*Recalculate progress according to total/completed items and update.*
- bool [usesBusyIndicator](#) () const

## Additional Inherited Members

### Public Slots inherited from [Digikam::MaintenanceTool](#)

- void **start** ()

### Signals inherited from [Digikam::MaintenanceTool](#)

- void [signalCanceled](#) ()
- void [signalComplete](#) ()

### Signals inherited from [Digikam::ProgressItem](#)

- void [progressItemAdded](#) ([ProgressItem](#) \*item)  
*Emitted when a new [ProgressItem](#) is added.*
- void [progressItemCanceled](#) ([ProgressItem](#) \*item)  
*Emitted when an item was canceled. It will not go away immediately, only when the owner sets it complete, which will usually happen. Can be used to visually indicate the canceled status of an item. Should be used by the owner of the item to make sure it is set completed even if it is canceled. There is a [ProgressManager::slotStandardCancelHandler](#) which simply sets the item completed and can be used if no other work needs to be done on cancel.*
- void **progressItemCanceledById** (const QString &id)
- void [progressItemCompleted](#) ([ProgressItem](#) \*item)  
*Emitted when a progress item was completed. The item will be deleted afterwards, so slots connected to this are the last chance to work with this item.*
- void [progressItemLabel](#) ([ProgressItem](#) \*item, const QString &label)  
*Emitted when the label of an item changed. Should be used by progress dialogs to update the label of an item.*
- void [progressItemProgress](#) ([ProgressItem](#) \*item, unsigned int v)  
*Emitted when the progress value of an item changes.*
- void [progressItemStatus](#) ([ProgressItem](#) \*item, const QString &mess)  
*Emitted when the status message of an item changed. Should be used by progress dialogs to update the status message for an item.*
- void [progressItemThumbnail](#) ([ProgressItem](#) \*item, const QPixmap &thumb)  
*Emitted when the thumbnail data must be set in item.*
- void [progressItemUsesBusyIndicator](#) ([ProgressItem](#) \*item, bool value)  
*Emitted when the busy indicator state of an item changes. Should be used by progress dialogs so that they can adjust the display of the progress bar to the new mode.*

### Protected Slots inherited from [Digikam::MaintenanceTool](#)

- virtual void **slotCancel** ()
- virtual void **slotDone** ()
- virtual void **slotStart** ()

## 6.1113.1 Member Enumeration Documentation

### 6.1113.1.1 FinderMode

```
enum Digikam::NewItemFinder::FinderMode
```

## Enumerator

CompleteCollectionScan	Scan whole collection immediately.
ScanDeferredFiles	Defer whole collection scan.
ScheduleCollectionScan	Scan immediately folders list passed in constructor.

## 6.1114 Digikam::NewlyAppearedFile Class Reference

## 6.1117.1 Member Function Documentation

### 6.1117.1.1 detect()

```
float Digikam::NoiseDetector::detect (
    const cv::Mat & image ) const [override], [virtual]
```

Implements [Digikam::AbstractDetector](#).

## 6.1118 Digikam::NonDeterministicRandomData Class Reference

Inheritance diagram for Digikam::NonDeterministicRandomData:

## Public Member Functions

- [NonDeterministicRandomData](#) (int size)

## 6.1118.1 Constructor & Destructor Documentation

### 6.1118.1.1 NonDeterministicRandomData()

```
Digikam::NonDeterministicRandomData::NonDeterministicRandomData (  
    int size ) [explicit]
```

Constructs a QByteArray of given byte size filled with non-deterministic random data. For larger quantities of data, prefer using a [RandomNumberGenerator](#) seeded with non-deterministic data.

## 6.1119 Digikam::NormalizeFilter Class Reference

Inheritance diagram for Digikam::NormalizeFilter:

## 6.1119.1 Member Function Documentation

### 6.1119.1.1 filterAction()

`FilterAction` Digikam::NormalizeFilter::filterAction ( ) [override], [virtual]

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1119.1.2 filterIdentifier()

`QString` Digikam::NormalizeFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1119.1.3 readParameters()

```
void Digikam::NormalizeFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.1120 Digikam::NormalSearchTreeView Class Reference

Inheritance diagram for Digikam::NormalSearchTreeView:

### Signals

- void [copySearch](#) (SAAlbum \*album)

### 6.1120.1 Detailed Description

Tree view for all saved "normal" searches. Allows editing and creating searches in the context menu.

Author

jwienke

### 6.1120.2 Constructor & Destructor Documentation

#### 6.1120.2.1 NormalSearchTreeView()

```
Digikam::NormalSearchTreeView::NormalSearchTreeView (
    QWidget *const parent,
    SearchModel *const searchModel,
    SearchModificationHelper *const searchModificationHelper )
```

Constructor.

## Parameters

<i>parent</i>	qt parent
<i>searchModel</i>	the model this view should act on
<i>searchModificationHelper</i>	the modification helper object used to perform operations on the displayed searches

**6.1120.2.2 ~NormalSearchTreeView()**

```
Digikam::NormalSearchTreeView::~NormalSearchTreeView ( ) [override]
```

Destructor.

**6.1120.3 Member Function Documentation****6.1120.3.1 addCustomContextMenuActions()**

```
void Digikam::NormalSearchTreeView::addCustomContextMenuActions (
    ContextMenuHelper & cmh,
    Album * album ) [override], [protected], [virtual]
```

Adds actions to delete or rename existing searches.

Reimplemented from [Digikam::EditableSearchTreeView](#).

**6.1120.3.2 copySearch**

```
void Digikam::NormalSearchTreeView::copySearch (
    SAlbum * album ) [signal]
```

Emitted if the given search shall be copied.

## Parameters

<i>album</i>	search to copy
--------------	----------------

**6.1120.3.3 editSearch**

```
void Digikam::NormalSearchTreeView::editSearch (
    SAlbum * album ) [signal]
```

Emitted if the given search shall be edited.

## Parameters

<i>album</i>	search to edit
--------------	----------------

### 6.1120.3.4 handleCustomContextMenuAction()

```
void Digikam::NormalSearchTreeView::handleCustomContextMenuAction (
    QAction * action,
    const AlbumPointer< Album > & album ) [override], [protected], [virtual]
```

Handles deletion and renaming actions.

Reimplemented from [Digikam::EditableSearchTreeView](#).

### 6.1120.3.5 newSearch

```
void Digikam::NormalSearchTreeView::newSearch ( ) [signal]
```

Emitted of a new search shall be created.

## 6.1121 Digikam::NRContainer Class Reference

### Public Attributes

- double **softness** [3] = { 0.9 }  
*Y, Cb, Cr softness.*
- double **thresholds** [3] = { 1.2 }  
*Y, Cb, Cr thresholds.*

### 6.1121.1 Member Data Documentation

#### 6.1121.1.1 thresholds

```
double Digikam::NRContainer::thresholds[3] = { 1.2 }
```

Separated values per channel

## 6.1122 Digikam::NREstimate Class Reference

Inheritance diagram for Digikam::NREstimate:

### Public Member Functions

- [NREstimate](#) (`DImg *const img`, `QObject *const parent=nullptr`)
- void [setLogFilesPath](#) (`const QString &path`)
- [NRContainer settings](#) () const
- void [startAnalyse](#) () override

## Public Member Functions inherited from [Digikam::DImgThreadedAnalyser](#)

- **DImgThreadedAnalyser** ([DImg](#) \*const orgImage, [QObject](#) \*const parent=nullptr, const [QString](#) &name=QString())  
*Constructs an image analyser with all arguments (ready to use). The given original image will be copied. You need to call [startFilter\(\)](#) to start the threaded computation. To run analyser without to use multithreading, call [startFilterDirectly\(\)](#).*
- **DImgThreadedAnalyser** ([QObject](#) \*const parent=nullptr, const [QString](#) &name=QString())  
*Constructs a filter without argument. You need to call [setupFilter\(\)](#) and [startFilter\(\)](#) to start the threaded computation. To run filter without to use multithreading, call [startFilterDirectly\(\)](#).*

## Public Member Functions inherited from [Digikam::DImgThreadedFilter](#)

- bool m\_wasCancelled = false

## 6.1122.1 Constructor & Destructor Documentation

### 6.1122.1.1 NREstimate()

```
Digikam::NREstimate::NREstimate (
    DImg *const img,
    QObject *const parent = nullptr ) [explicit]
```

Standard constructor with image container to parse

## 6.1122.2 Member Function Documentation

### 6.1122.2.1 setLogFilePath()

```
void Digikam::NREstimate::setLogFilePath (
    const QString & path )
```

To set image path where log files will be created to host computation algorithm results, for hacking purpose. If path is not set, no log files will be created.

### 6.1122.2.2 settings()

```
NRContainer Digikam::NREstimate::settings ( ) const
```

Return all Wavelets noise reduction settings computed by image analys.

### 6.1122.2.3 startAnalyse()

```
void Digikam::NREstimate::startAnalyse ( ) [override], [virtual]
```

Perform estimate noise.

Implements [Digikam::DImgThreadedAnalyser](#).

## 6.1123 Digikam::NRFilter Class Reference

## 6.1123.1 Member Function Documentation

### 6.1123.1.1 filterAction()

`FilterAction` Digikam::NRFilter::filterAction ( ) [override], [virtual]

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1123.1.2 filterIdentifier()

`QString` Digikam::NRFilter::filterIdentifier ( ) const [override], [virtual]

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1123.1.3 readParameters()

```
void Digikam::NRFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.1125.1 Member Function Documentation

### 6.1125.1.1 filterAction()

`FilterAction` Digikam::OilPaintFilter::filterAction ( ) [override], [virtual]

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1125.1.2 filterIdentifier()

`QString` Digikam::OilPaintFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1125.1.3 readParameters()

`void` Digikam::OilPaintFilter::readParameters (   
     const `FilterAction` & *action* ) [override], [virtual]

Implements [Digikam::DImgThreadedFilter](#).

## 6.1126 Digikam::OnlineVersionChecker Class Reference

Inheritance diagram for Digikam::OnlineVersionChecker:

## Signals

- void **signalNewVersionAvailable** (const QString &version)
- void **signalNewVersionCheckError** (const QString &error)

## Public Member Functions

- void **cancelCheck** ()
- void **checkForNewVersion** ()
- **OnlineVersionChecker** (QObject \*const parent, bool checkPreRelease=false)
- QString **preReleaseFileName** () const
- void **setCurrentBuildDate** (const QDateTime &dt)
- void **setCurrentVersion** (const QString &version)

## Static Public Member Functions

- static bool **bundleProperties** (QString &arch, QString &ext, QString &qtVersion, QString &dir)
- static QString **lastCheckDate** ()

## 6.1126.1 Member Function Documentation

### 6.1126.1.1 bundleProperties()

```
bool Digikam::OnlineVersionChecker::bundleProperties (
    QString & arch,
    QString & ext,
    QString & qtVersion,
    QString & dir ) [static]
```

Return true if the system and architecture are supported by the bundle workflow. 'arch' is the relevant prefix for the bundle architecture. 'ext' is the relevant bundle file extension. 'qtVersion' is the relevant version of Qt used in the bundle file-name. 'dir' is the subdirectory if any to get the bundle file.

### 6.1126.1.2 lastCheckDate()

```
QString Digikam::OnlineVersionChecker::lastCheckDate ( ) [static]
```

Return the last date as string when have been performed a check for new version.

## 6.1127 Digikam::OnlineVersionDlg Class Reference

Inheritance diagram for Digikam::OnlineVersionDlg:

### Signals

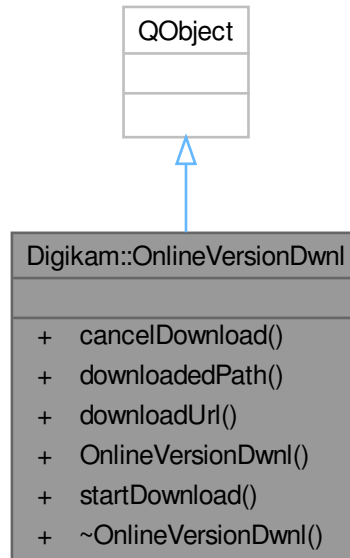

- void **signalSetupUpdate** ()

### Public Member Functions

- **OnlineVersionDlg** (QWidget \*const parent=nullptr, const QString &version=QLatin1String(digikam\_↵  
version\_short), const QDateTime &buildDt=digiKamBuildDate(), bool checkPreRelease=false, bool update↵  
WithDebug=false)

## 6.1128 Digikam::OnlineVersionDwnl Class Reference

Inheritance diagram for Digikam::OnlineVersionDwnl:

### Signals

- void **signalComputeChecksum** ()
- void **signalDownloadError** (const QString &error)
- void **signalDownloadProgress** (qint64 bytesReceived, qint64 bytesTotal)

### Public Member Functions

- void **cancelDownload** ()
- QString **downloadedPath** () const
- QString **downloadUrl** () const
- **OnlineVersionDwnl** (QObject \*const parent=nullptr, bool checkPreRelease=false, bool updateWith↔ Debug=false)
- void **startDownload** (const QString &version)

## 6.1129 Digikam::OpenCVDNNFaceDetector Class Reference

### Public Member Functions

- cv::Mat **prepareForDetection** (const [DImg](#) &inputImage, cv::Size &paddedSize) const
- cv::Mat **prepareForDetection** (const QImage &inputImage, cv::Size &paddedSize) const
- cv::Mat **prepareForDetection** (const QString &inputImagePath, cv::Size &paddedSize) const
- cv::Mat **prepareForDetectionYuNet** (cv::Mat &cvImage, cv::Size &paddedSize) const
- void **setAccuracy** (const int accuracy)
- void **setFaceDetectionSize** ([FaceScanSettings::FaceDetectionSize](#) size)

### Static Public Member Functions

- static int [recommendedImageSizeForDetection](#) ()

## 6.1129.1 Member Function Documentation

### 6.1129.1.1 detectFaces()

```
QList< QRect > Digikam::OpenCVDNNFaceDetector::detectFaces (
    const cv::Mat & inputImage,
    const cv::Size & paddedSize )
```

There is no proof that doing this will help, since face can be detected at various positions (even half, masked faces can be detected), not only frontal. Effort on doing this should be questioned. TODO: Restructure and improve Face Detection module.

void OpenCVDNNFaceDetector::resizeBboxToStandardHumanFace(int& width, int& height) { Human head sizes data. [https://en.wikipedia.org/wiki/Human\\_head#Average\\_head\\_sizes](https://en.wikipedia.org/wiki/Human_head#Average_head_sizes)

```
float maxRatioFrontalFace    = 15.4 / 15.5;
float minRatioNonFrontalFace = 8.6  / 21.6;

float r = width*1.0/height, rReference;

if      ((r >= minRatioNonFrontalFace*0.9) && r <= (maxRatioFrontalFace * 1.1))
{
    rReference = r;
}
else if (r <= 0.25)
{
    rReference = r * 1.5;
}
else if (r >= 4)
{
    rReference = r / 1.5;
}
else if (r < minRatioNonFrontalFace * 0.9)
{
    rReference = minRatioNonFrontalFace;
}
else if (r > maxRatioFrontalFace * 1.1)
{
    rReference = maxRatioFrontalFace;
}

if (width > height)
{
    height = width / rReference;
}
else
{
    width = height * rReference;
}

}
```

### 6.1129.1.2 recommendedImageSizeForDetection()

```
int Digikam::OpenCVDNNFaceDetector::recommendedImageSizeForDetection ( ) [static]
```

Returns the image size (one dimension). recommended for face detection. If the image is considerably larger, it will be rescaled automatically.

## 6.1130.1 Member Enumeration Documentation

### 6.1130.1.1 Classifier

```
enum Digikam::OpenCVDNNFaceRecognizer::Classifier
```

## Enumerator

SVM	Support Vector Machines ( <a href="https://docs.opencv.org/4.x/dc/dd6/ml_intro.html#ml_intro_svm">https://docs.opencv.org/4.x/dc/dd6/ml_intro.html#ml_intro_svm</a> )
OpenCV_KNN	K-Nearest Neighbors ( <a href="https://docs.opencv.org/4.x/dc/dd6/ml_intro.html#ml_intro_knn">https://docs.opencv.org/4.x/dc/dd6/ml_intro.html#ml_intro_knn</a> )
Tree	K-Nearest Neighbors Tree ( <a href="https://en.wikipedia.org/wiki/K-nearest_neighbors_algorithm">https://en.wikipedia.org/wiki/K-nearest_neighbors_algorithm</a> )
DB	Closest Neighbors Tree from the database.

## 6.1130.2 Member Function Documentation

### 6.1130.2.1 clearTraining()

```
void Digikam::OpenCVDNNFaceRecognizer::clearTraining (
    const QList< int > & idsToClear )
```

Clear specified trained data.

### 6.1130.2.2 prepareForRecognition() [1/2]

```
cv::Mat Digikam::OpenCVDNNFaceRecognizer::prepareForRecognition (
    const cv::Mat & cvinputImage ) [static]
```

Returns a cvMat created from the cvinputImage, optimized for recognition.

### 6.1130.2.3 prepareForRecognition() [2/2]

```
cv::Mat Digikam::OpenCVDNNFaceRecognizer::prepareForRecognition (
    QImage & inputImage ) [static]
```

Returns a cvMat created from the inputImage, optimized for recognition.

### 6.1130.2.4 recognize() [1/2]

```
QVector< int > Digikam::OpenCVDNNFaceRecognizer::recognize (
    const QList< QPair< QImage *, QString > > & inputImages )
```

Try to recognize a list of given images. Returns a list of identity ids. If an identity cannot be recognized, returns -1.

### 6.1130.2.5 recognize() [2/2]

```
int Digikam::OpenCVDNNFaceRecognizer::recognize (
    const QPair< QImage *, QString > & inputImage )
```

Try to recognize the given image. Returns the identity id. If the identity cannot be recognized, returns -1. TODO: verify workflow to economize this routine.

### 6.1130.2.6 remove()

```
bool Digikam::OpenCVDNNFaceRecognizer::remove (
    const QString & hash )
```

Returns a cvMat of the extracted features from the cvinputImage, optimized for recognition.

### 6.1130.2.7 setNbNeighbors()

```
void Digikam::OpenCVDNNFaceRecognizer::setNbNeighbors (
    int k )
```

Set K parameter of K-Nearest neighbors algorithm.

### 6.1130.2.8 setThreshold()

```
void Digikam::OpenCVDNNFaceRecognizer::setThreshold (
    int threshold )
```

Set maximum square distance of 2 vectors.

### 6.1130.2.9 train()

```
void Digikam::OpenCVDNNFaceRecognizer::train (
    const QList< QPair< QImage *, QString > > & images,
    const int label )
```

Register faces corresponding to an identity.

### 6.1136.1.1 [parseOperation\(\)](#)

```
QString Digikam::Option::parseOperation (
    ParseSettings & settings,
    const QRegularExpressionMatch & match ) [override], [protected], [pure virtual]
```

TODO: describe me

#### Parameters

<i>settings</i>	contains settings
<i>match</i>	result of the regular expression match done in <code>Option::parse()</code>

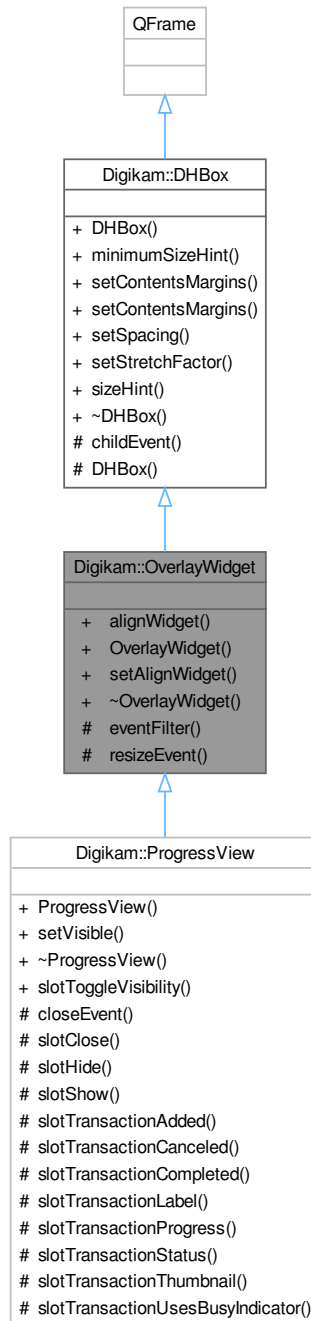

Returns

Implements [Digikam::Rule](#).

Implemented in [Digikam::CameraNameOption](#), [Digikam::DatabaseOption](#), [Digikam::DateOption](#), [Digikam::DirectoryNameOption](#), [Digikam::FilePropertiesOption](#), [Digikam::MetadataOption](#), and [Digikam::SequenceNumberOption](#).

## 6.1137 Digikam::OverlayWidget Class Reference

## Friends

- class **Private**

## 6.1142.1 Detailed Description

Frame with popup menu behavior to host [PanIconWidget](#).

## 6.1142.2 Member Function Documentation

### 6.1142.2.1 close

```
void Digikam::PanIconFrame::close (  
    int r ) [slot]
```

Close the popup window. This is called from the main widget, usually. `r` is the result returned from [exec\(\)](#).

### 6.1142.2.2 exec() [1/2]

```
int Digikam::PanIconFrame::exec (  
    const QPoint & pos )
```

Execute the popup window.

### 6.1142.2.3 exec() [2/2]

```
int Digikam::PanIconFrame::exec (  
    int x,  
    int y )
```

Execute the popup window.

### 6.1142.2.4 keyPressEvent()

```
void Digikam::PanIconFrame::keyPressEvent (  
    QKeyEvent * e ) [override], [protected]
```

Catch key press events.

#### 6.1142.2.5 popup()

```
void Digikam::PanIconFrame::popup (
    const QPoint & pos )
```

Open the popup window at position pos.

#### 6.1142.2.6 resizeEvent()

```
void Digikam::PanIconFrame::resizeEvent (
    QResizeEvent * resize ) [override]
```

The resize event. Simply resizes the main widget to the whole widgets client size.

#### 6.1142.2.7 setMainWidget()

```
void Digikam::PanIconFrame::setMainWidget (
    QWidget *const main )
```

Set the main widget. You cannot set the main widget from the constructor, since it must be a child of the frame itselfes. Be careful: the size is set to the main widgets size. It is up to you to set the main widgets correct size before setting it as the main widget.

- void **showEvent** (QShowEvent \*) override

## 6.1143.1 Member Function Documentation

### 6.1143.1.1 regionSelectionMoved()

```
void Digikam::PanIconWidget::regionSelectionMoved (
    bool targetDone ) [protected]
```

Recalculate the target selection position and emit 'signalSelectionMoved'.

### 6.1143.1.2 signalSelectionMoved

```
void Digikam::PanIconWidget::signalSelectionMoved (
    const QRect & rect,
    bool targetDone ) [signal]
```

Emitted when selection have been moved with mouse. 'targetDone' boolean value is used for indicate if the mouse have been released.

## Protected Attributes inherited from [Digikam::ParallelWorkers](#)

- int `m_currentIndex` = 0
- StaticMetacallFunction `m_originalStaticMetacall` = nullptr
- QMetaObject \* `m_replacementMetaObject` = nullptr
- QList< [WorkerObject](#) \* > `m_workers`

### 6.1144.1 Constructor & Destructor Documentation

#### 6.1144.1.1 ParallelAdapter()

```
template<class A >
Digikam::ParallelAdapter< A >::ParallelAdapter ( ) [default]
```

Instead of using a single [WorkerObject](#), create a [ParallelAdapter](#) for your worker object subclass, and add() individual WorkerObjects. The load will be evenly distributed. Note: unlike with [WorkerObject](#) directly, there is no need to call schedule(). For inbound connections (signals connected to a [WorkerObject](#)'s slot, to be processed, use a Qt::DirectConnection on the adapter. For outbound connections (signals emitted from the [WorkerObject](#)), use [ParallelAdapter](#)'s connect to have a connection from all added WorkerObjects.

### 6.1144.2 Member Function Documentation

#### 6.1144.2.1 asQObject()

```
template<class A >
QObject * Digikam::ParallelAdapter< A >::asQObject ( ) [inline], [override], [virtual]
```

Return the target QObject (double inheritance)

Implements [Digikam::ParallelWorkers](#).

#### 6.1144.2.2 mocMetaObject()

```
template<class A >
const QMetaObject * Digikam::ParallelAdapter< A >::mocMetaObject ( ) const [inline], [override], [virtual]
```

The moc-generated metaObject of the target object

Implements [Digikam::ParallelWorkers](#).

#### 6.1144.2.3 staticMetacallPointer()

```
template<class A >
StaticMetacallFunction Digikam::ParallelAdapter< A >::staticMetacallPointer ( ) [inline], [override], [virtual]
```

Implements [Digikam::ParallelWorkers](#).

#### 6.1144.2.4 WorkerObjectQtMetacall()

```
template<class A >
int Digikam::ParallelAdapter< A >::WorkerObjectQtMetacall (
    QMetaObject::Call _c,
    int _id,
    void ** _a ) [inline], [override], [virtual]
```

The qt\_metacall of [WorkerObject](#), one level above the target QObject

Implements [Digikam::ParallelWorkers](#).

### 6.1145 Digikam::ParallelPipes Class Reference

Inheritance diagram for Digikam::ParallelPipes:

#### Public Slots

- void **process** (const FacePipelineExtendedPackage::Ptr &package)

#### Signals

- void **processed** (const FacePipelineExtendedPackage::Ptr &package)

### Public Member Functions

- void **add** ([WorkerObject](#) \*const worker)
- void **deactivate** ([WorkerObject::DeactivatingMode](#) mode=[WorkerObject::FlushSignals](#))
- void **schedule** ()
- void **setPriority** ([QThread::Priority](#) priority)
- void **wait** ()

### Public Attributes

- [QList](#)< [WorkerObject](#) \* > **m\_workers**

### Protected Attributes

- int **m\_currentIndex** = 0
- [QList](#)< [QMetaMethod](#) > **m\_methods**

## 6.1146 Digikam::ParallelWorkers Class Reference

Inheritance diagram for Digikam::ParallelWorkers:

### Public Member Functions

- bool **connect** (const char \*signal, const QObject \*receiver, const char \*method, Qt::ConnectionType type=Qt::AutoConnection) const

*Connects signals outbound from all workers to a given receiver.*

- void **deactivate** ([WorkerObject::DeactivatingMode](#) mode=[WorkerObject::FlushSignals](#))
- bool [optimalWorkerCountReached](#) () const
- [ParallelWorkers](#) ()=default
- void [schedule](#) ()
- void **setPriority** (QThread::Priority priority)
- void **wait** ()

### Static Public Member Functions

- static int [optimalWorkerCount](#) ()

### Protected Types

- typedef void(\* **StaticMetacallFunction**) (QObject \*, QMetaObject::Call, int, void \*\*)

### Protected Member Functions

- void **add** ([WorkerObject](#) \*const worker)
- virtual QObject \* [asQObject](#) ()=0
- virtual const QMetaObject \* [mocMetaObject](#) () const =0
- const QMetaObject \* **replacementMetaObject** () const
- int [replacementQtMetacall](#) (QMetaObject::Call \_c, int \_id, void \*\*\_a)
- int **replacementStaticQtMetacall** (QMetaObject::Call \_c, int \_id, void \*\*\_a)
- virtual StaticMetacallFunction **staticMetacallPointer** ()=0
- virtual int [WorkerObjectQtMetacall](#) (QMetaObject::Call \_c, int \_id, void \*\*\_a)=0

### Protected Attributes

- int **m\_currentIndex** = 0
- StaticMetacallFunction **m\_originalStaticMetacall** = nullptr
- QMetaObject \* **m\_replacementMetaObject** = nullptr
- QList< [WorkerObject](#) \* > **m\_workers**

## 6.1146.1 Constructor & Destructor Documentation

### 6.1146.1.1 ParallelWorkers()

```
Digikam::ParallelWorkers::ParallelWorkers ( ) [default]
```

[ParallelWorkers](#) is a helper class to distribute work over several identical workers objects. See [ParallelAdapter](#) for guidance how to use it.

## 6.1146.2 Member Function Documentation

### 6.1146.2.1 asQObject()

```
virtual QObject * Digikam::ParallelWorkers::asQObject ( ) [protected], [pure virtual]
```

Return the target QObject (double inheritance)

Implemented in [Digikam::ParallelAdapter< A >](#), and [Digikam::ParallelAdapter< Digikam::FileWorkerInterface >](#).

### 6.1146.2.2 mocMetaObject()

```
virtual const QMetaObject * Digikam::ParallelWorkers::mocMetaObject ( ) const [protected],  
[pure virtual]
```

The moc-generated metaObject of the target object

Implemented in [Digikam::ParallelAdapter< A >](#), and [Digikam::ParallelAdapter< Digikam::FileWorkerInterface >](#).

### 6.1146.2.3 optimalWorkerCount()

```
int Digikam::ParallelWorkers::optimalWorkerCount ( ) [static]
```

Regarding the number of logical CPUs on the current machine, returns the optimal count of concurrent workers

### 6.1146.2.4 optimalWorkerCountReached()

```
bool Digikam::ParallelWorkers::optimalWorkerCountReached ( ) const
```

Returns true if the current number of added workers has reached the [optimalWorkerCount\(\)](#)

### 6.1146.2.5 replacementQtMetacall()

```
int Digikam::ParallelWorkers::replacementQtMetacall (  
    QMetaObject::Call _c,  
    int _id,  
    void ** _a ) [protected]
```

Replaces slot call distribution of the target QObject

### 6.1146.2.6 schedule()

```
void Digikam::ParallelWorkers::schedule ( )
```

The corresponding methods of all added worker objects will be called

### 6.1146.2.7 WorkerObjectQtMetacall()

```
virtual int Digikam::ParallelWorkers::WorkerObjectQtMetacall (  
    QMetaObject::Call _c,  
    int _id,  
    void ** _a ) [protected], [pure virtual]
```

The qt\_metacall of [WorkerObject](#), one level above the target QObject

Implemented in [Digikam::ParallelAdapter< A >](#), and [Digikam::ParallelAdapter< Digikam::FileWorkerInterface >](#).

## 6.1147 Digikam::Parser Class Reference

Inheritance diagram for Digikam::Parser:

### Public Member Functions

- `ParseResults` **invalidModifiers** (`ParseSettings` &settings)
- `RulesList` **modifiers** () const
- `RulesList` **options** () const
- `QString` **parse** (`ParseSettings` &settings)
- void **reset** ()
- bool **tokenAtPosition** (`ParseSettings` &settings, int pos)
- bool **tokenAtPosition** (`ParseSettings` &settings, int pos, int &start, int &length)

### Static Public Member Functions

- static bool **parseStringlsValid** (const `QString` &str)

### Protected Member Functions

- void **registerModifier** (`Rule` \*modifier)
- void **registerOption** (`Rule` \*option)
- void **unregisterModifier** (const `Rule` \*modifier)
- void **unregisterOption** (const `Rule` \*option)

## 6.1147.1 Member Function Documentation

### 6.1147.1.1 parseStringIsValid()

```
bool Digikam::Parser::parseStringIsValid (
    const QString & str ) [static]
```

check if the given parse string is valid

#### Parameters

<i>str</i>	the parse string
------------	------------------

#### Returns

true if valid / can be parsed

## 6.1148 Digikam::ParseResults Class Reference

### Public Types

- typedef QPair< int, int > **ResultsKey**
- typedef QMultiMap< ResultsKey, ResultsValue > **ResultsMap**
- typedef QPair< QString, QString > **ResultsValue**

### Public Member Functions

- void **addEntry** (const ResultsKey &key, const ResultsValue &value)
- void **append** (const ParseResults &results)
- void **clear** ()
- void **debug** () const
- void **deleteEntry** (const ResultsKey &key)
- bool **hasKey** (const ResultsKey &key)
- bool **hasKeyAtApproximatePosition** (int pos) const
- bool **hasKeyAtPosition** (int pos) const
- bool **isEmpty** () const
- ResultsKey **keyAtApproximatePosition** (int pos) const
- ResultsKey **keyAtPosition** (int pos) const
- QList< ResultsKey > **keys** () const
- int **offset** (const ResultsKey &key) const
- QString **replaceTokens** (const QString &markedString) const
- QString **result** (const ResultsKey &key) const
- QString **resultValuesAsString** () const
- QString **token** (const ResultsKey &key) const
- QList< ResultsValue > **values** () const

## 6.1149 Digikam::ParseSettings Class Reference

### Public Member Functions

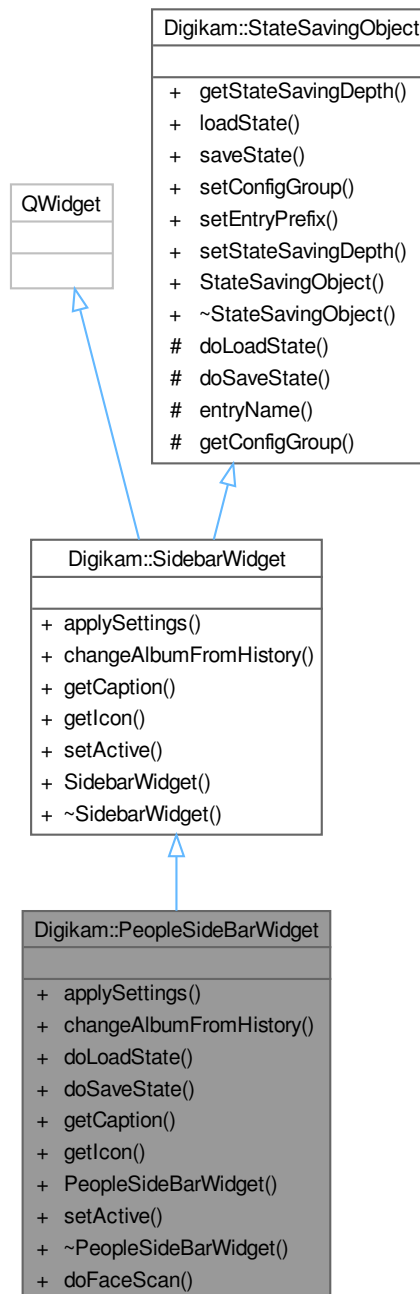

- bool **isValid** () const
- **ParseSettings** ()  
*default constructor*
- **ParseSettings** (const [ItemInfo](#) &info)  
*ItemInfo constructor.*
- **ParseSettings** (const QString &\_parseString)
- **ParseSettings** (const QString &\_parseString, const [ItemInfo](#) &info)

### Public Attributes

- QDateTime **creationTime**
- ParseResults::ResultsKey **currentResultsKey**
- int **cutFileName** = 0
- QUrl **fileUrl**
- [ParseResults](#) **invalidModifiers**
- [AdvancedRenameManager](#) \* **manager** = nullptr
- QString **parseString**
- [ParseResults](#) **results**
- int **startIndex** = 1
- QString **str2Modify**
- bool **useOriginalFileExtension** = true

## 6.1150 Digikam::PeopleSideBarWidget Class Reference

Inheritance diagram for Digikam::PeopleSideBarWidget:

### Signals

- void **requestFaceMode** (bool on)
- void **signalFindDuplicates** (const QList< [TAlbum](#) \* > &albums)

## Signals inherited from [Digikam::SidebarWidget](#)

- void [requestActiveTab](#) ([SidebarWidget](#) \*)
- void [signalNotificationError](#) (const QString &message, int type)

## Public Member Functions

- void [applySettings](#) () override
- void [changeAlbumFromHistory](#) (const QList< [Album](#) \* > &album) override
- void [doLoadState](#) () override
- void [doSaveState](#) () override
- const QString [getCaption](#) () override
- const QIcon [getIcon](#) () override
- **PeopleSideBarWidget** (QWidget \*const parent, [TagModel](#) \*const tagModel, [SearchModificationHelper](#) \*const searchModificationHelper)
- void [setActive](#) (bool active) override

## Public Member Functions inherited from [Digikam::SidebarWidget](#)

- [SidebarWidget](#) (QWidget \*const parent)
- [~SidebarWidget](#) () override=default

## Public Member Functions inherited from [Digikam::StateSavingObject](#)

- [StateSavingDepth](#) [getStateSavingDepth](#) () const
- void [loadState](#) ()
- void [saveState](#) ()
- virtual void [setConfigGroup](#) (const KConfigGroup &group)
- virtual void [setEntryPrefix](#) (const QString &prefix)
- void [setStateSavingDepth](#) (const [StateSavingDepth](#) depth)
- [StateSavingObject](#) (QObject \*const host)
- virtual [~StateSavingObject](#) ()

## Static Public Member Functions

- static void [doFaceScan](#) (const [FaceScanSettings](#) &faceScanSettings)

## Additional Inherited Members

## Public Types inherited from [Digikam::StateSavingObject](#)

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }

## Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- QString [entryName](#) (const QString &base) const
- KConfigGroup [getConfigGroup](#) () const

## 6.1150.1 Member Function Documentation

### 6.1150.1.1 applySettings()

```
void Digikam::PeopleSideBarWidget::applySettings ( ) [override], [virtual]
```

This method is invoked when the application settings should be (re-) applied to this widget.

Implements [Digikam::SidebarWidget](#).

### 6.1150.1.2 changeAlbumFromHistory()

```
void Digikam::PeopleSideBarWidget::changeAlbumFromHistory (
    const QList< Album * > & album ) [override], [virtual]
```

This is called on this widget when the history requires to move back to the specified album

Implements [Digikam::SidebarWidget](#).

### 6.1150.1.3 doLoadState()

```
void Digikam::PeopleSideBarWidget::doLoadState ( ) [override], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1150.1.4 doSaveState()

```
void Digikam::PeopleSideBarWidget::doSaveState ( ) [override], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1150.1.5 getCaption()

```
const QString Digikam::PeopleSideBarWidget::getCaption ( ) [override], [virtual]
```

Must be implemented to return the title of this sidebar's tab.

#### Returns

localized title string

Implements [Digikam::SidebarWidget](#).

### 6.1150.1.6 `getIcon()`

```
const QIcon Digikam::PeopleSideBarWidget::getIcon ( ) [override], [virtual]
```

Must be implemented and return the icon that shall be visible for this sidebar widget.

#### Returns

pixmap icon

Implements [Digikam::SidebarWidget](#).

### 6.1150.1.7 `setActive()`

```
void Digikam::PeopleSideBarWidget::setActive (
    bool active ) [override], [virtual]
```

This method is called if the visible sidebar widget is changed.

## Parameters

<i>active</i>	if true, this widget is the new active widget, if false another widget is active
---------------	--

Implements [Digikam::SidebarWidget](#).

## 6.1151 Digikam::PersistentWidgetDelegateOverlay Class Reference

Inheritance diagram for Digikam::PersistentWidgetDelegateOverlay:

**Public Slots**

- void **enterPersistentMode** ()
- void **leavePersistentMode** ()
- void **setPersistent** (bool persistent)
- void **storeFocus** ()

**Public Member Functions**

- bool **isPersistent** () const
- **PersistentWidgetDelegateOverlay** (QObject \*const parent)
- void **setActive** (bool active) override

**Public Member Functions inherited from [Digikam::AbstractWidgetDelegateOverlay](#)**

- [AbstractWidgetDelegateOverlay](#) (QObject \*const parent)

**Public Member Functions inherited from [Digikam::ItemDelegateOverlay](#)**

- virtual bool **acceptsDelegate** (QAbstractItemDelegate \*) const

- virtual QWidget \* **createWidget** ()=0
- bool **eventFilter** (QObject \*obj, QEvent \*event) override
- virtual QString **notifyMultipleMessage** (const QModelIndex &, int number)
- QWidget \* **parentWidget** () const
- virtual void **widgetEnterEvent** ()
- void **widgetEnterNotifyMultiple** (const QModelIndex &index)
- virtual void **widgetLeaveEvent** ()
- void **widgetLeaveNotifyMultiple** ()

## Protected Member Functions inherited from [Digikam::ItemDelegateOverlay](#)

- `QList< QModelIndex > affectedIndexes` (const QModelIndex &index) const
- `bool affectsMultiple` (const QModelIndex &index) const
- `int numberOfAffectedIndexes` (const QModelIndex &index) const
- `bool viewHasMultiSelection` () const

## Additional Inherited Members

## Signals inherited from [Digikam::ItemDelegateOverlay](#)

- `void hideNotification` ()
- `void requestNotification` (const QModelIndex &index, const QString &message)
- `void update` (const QModelIndex &index)

## Protected Slots inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

## Protected Slots inherited from [Digikam::ItemDelegateOverlay](#)

- virtual `void visualChange` ()

## Protected Attributes inherited from [Digikam::AbstractWidgetDelegateOverlay](#)

- `bool m_mouseButtonPressedOnWidget` = false
- `QWidget * m_widget` = nullptr

## Protected Attributes inherited from [Digikam::ItemDelegateOverlay](#)

- `QAbstractItemDelegate * m_delegate` = nullptr
- `QAbstractItemView * m_view` = nullptr

## 6.1151.1 Constructor & Destructor Documentation

### 6.1151.1.1 PersistentWidgetDelegateOverlay()

```
Digikam::PersistentWidgetDelegateOverlay::PersistentWidgetDelegateOverlay (
    QObject *const parent ) [explicit]
```

This class offers additional / modified behavior: When a "persistent" mode is entered, it will not move by mouse hover, but stay and only move on mouse click. If the overlay widget had focus, it will be restored on show.

## 6.1151.2 Member Function Documentation

### 6.1151.2.1 hide()

```
void Digikam::PersistentWidgetDelegateOverlay::hide ( ) [override], [protected], [virtual]
```

Called when the widget shall be hidden (mouse cursor left index, viewport, uninstalled etc.). Default implementation [hide\(\)](#)s `m_widget`.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.1151.2.2 setActive()

```
void Digikam::PersistentWidgetDelegateOverlay::setActive (
    bool active ) [override], [virtual]
```

If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots. If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.1151.2.3 setFocusOnWidget()

```
void Digikam::PersistentWidgetDelegateOverlay::setFocusOnWidget ( ) [protected], [virtual]
```

Reimplement to set the focus on the correct subwidget. Default implementation sets focus on widget()

Reimplemented in [Digikam::AssignNameOverlay](#).

### 6.1151.2.4 setPersistent

```
void Digikam::PersistentWidgetDelegateOverlay::setPersistent (
    bool persistent ) [slot]
```

Enters persistent mode. The overlay is moved because of mouse hover.

### 6.1151.2.5 showOnIndex()

```
void Digikam::PersistentWidgetDelegateOverlay::showOnIndex (
    const QModelIndex & index ) [protected], [virtual]
```

Reimplemented in [Digikam::AssignNameOverlay](#).

### 6.1151.2.6 slotEntered()

```
void Digikam::PersistentWidgetDelegateOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Most overlays reimplement this slot to get the starting point for repositioning a widget etc. This class instead provides [showOnIndex\(\)](#) which you shall use for this purpose.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.1151.2.7 slotLayoutChanged()

```
void Digikam::PersistentWidgetDelegateOverlay::slotLayoutChanged ( ) [override], [protected],
[virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.1151.2.8 slotReset()

```
void Digikam::PersistentWidgetDelegateOverlay::slotReset ( ) [override], [protected], [virtual]
```

Default implementations of these three slots call [hide\(\)](#)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.1151.2.9 slotRowsRemoved()

```
void Digikam::PersistentWidgetDelegateOverlay::slotRowsRemoved (
    const QModelIndex & parent,
    int start,
    int end ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.1151.2.10 slotViewportEntered()

```
void Digikam::PersistentWidgetDelegateOverlay::slotViewportEntered ( ) [override], [protected],
[virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.1151.2.11 viewportLeaveEvent()

```
void Digikam::PersistentWidgetDelegateOverlay::viewportLeaveEvent (
    QObject * obj,
    QEvent * event ) [override], [protected], [virtual]
```

Called when a `QEvent::Leave` of the viewport is received. The default implementation [hide\(\)](#)s.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 6.1152 Digikam::PhotoInfoContainer Class Reference

### Public Member Functions

- `bool isEmpty () const`
- `bool isNull () const`
- `PhotoInfoContainer & operator= (const PhotoInfoContainer &)=default`
- `PhotoInfoContainer & operator= (PhotoInfoContainer &&)=default`
- `bool operator== (const PhotoInfoContainer &t) const`
- `PhotoInfoContainer (const PhotoInfoContainer &)=default`

### Public Attributes

- static `QString labelPickName` (`PickLabel label`)

## Protected Member Functions

- bool `eventFilter` (`QObject *obj, QEvent *ev`) override

## Protected Member Functions inherited from [Digikam::DHBox](#)

- void `childEvent` (`QChildEvent *e`) override
- **DHBox** (`bool vertical, QWidget *const parent`)

## 6.1156.1 Member Function Documentation

### 6.1156.1.1 pickLabels()

```
QList< PickLabel > Digikam::PickLabelWidget::pickLabels ( ) const
```

Return the list of Pick Label buttons turned on or an empty list of none.

**6.1156.1.2 setButtonsExclusive()**

```
void Digikam::PickLabelWidget::setButtonsExclusive (
    bool b )
```

Set all Color Label buttons exclusive or not. Default is true as only one can be selected. Non-exclusive mode is dedicated for Advanced Search tool.

**6.1156.1.3 setDescriptionBoxVisible()**

```
void Digikam::PickLabelWidget::setDescriptionBoxVisible (
    bool b )
```

Show or not on the bottom view the description of label with shortcuts.

**6.1156.1.4 setPickLabels()**

```
void Digikam::PickLabelWidget::setPickLabels (
    const QList< PickLabel > & list )
```

Turn on Color Label buttons using list. Pass an empty list to clear all selection.

**6.1157 Digikam::PlaceholderWidget Class Reference**

Inheritance diagram for Digikam::PlaceholderWidget:

**Public Member Functions**

- **PlaceholderWidget** (QWidget \*const parent=nullptr)
- void **setMessage** (const QString &message)

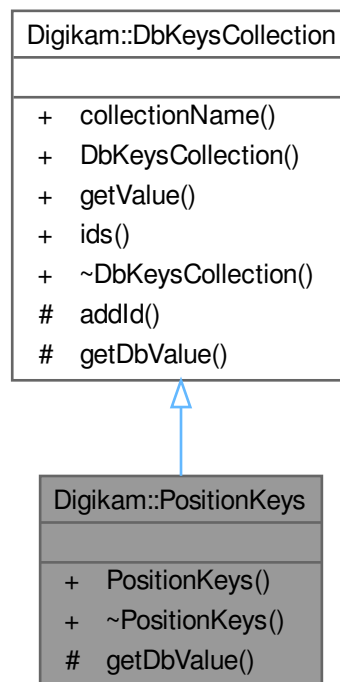

## 6.1158 Digikam::PointTransformAffine Class Reference

### Public Member Functions

- `const std::vector< float > & get_b () const`
- `const std::vector< std::vector< float > > & get_m () const`
- `const std::vector< float > operator() (const std::vector< float > &p) const`
- `PointTransformAffine (const std::vector< std::vector< float > > &m_)`
- `PointTransformAffine (const std::vector< std::vector< float > > &m_, const std::vector< float > &b_)`

## 6.1159 Digikam::PositionKeys Class Reference

Inheritance diagram for Digikam::PositionKeys:

### Public Member Functions

- [PositionKeys \(\)](#)

### Public Member Functions inherited from [Digikam::DbKeysCollection](#)

- `QString collectionName () const`
- `DbKeysCollection (const QString &n)`
- `QString getValue (const QString &key, ParseSettings &settings)`

### Protected Member Functions

- QString [getDbValue](#) (const QString &key, [ParseSettings](#) &settings) override

### Protected Member Functions inherited from [Digikam::DbKeysCollection](#)

- void [addId](#) (const QString &id, const QString &description)

## 6.1159.1 Constructor & Destructor Documentation

### 6.1159.1.1 PositionKeys()

```
Digikam::PositionKeys::PositionKeys ( )
```

## 6.1159.2 Member Function Documentation

### 6.1159.2.1 getDbValue()

```
QString Digikam::PositionKeys::getDbValue (
    const QString & key,
    ParseSettings & settings ) [override], [protected], [virtual]
```

Abstract method for retrieving the value from the database for the given key.

This method has to be implemented by all child classes. It is called by the [getValue\(\)](#) method.

#### Parameters

<i>key</i>	the key representing the value in the database
<i>settings</i>	the <a href="#">ParseSettings</a> object holding all relevant information about the image.

#### Returns

the value of the given database key

#### See also

[DbKeysCollection::getValue\(\)](#)

Implements [Digikam::DbKeysCollection](#).

## Signals inherited from [Digikam::LoadSaveThread](#)

- void [signalImageLoaded](#) (const [LoadingDescription](#) &loadingDescription, const [DImg](#) &img)
- void [signalImageSaved](#) (const [QString](#) &filePath, bool success)
- void [signalImageStartedLoading](#) (const [LoadingDescription](#) &loadingDescription)
- void [signalImageStartedSaving](#) (const [QString](#) &filePath)
- void [signalLoadingProgress](#) (const [LoadingDescription](#) &loadingDescription, float progress)
- void [signalMoreCompleteLoadingAvailable](#) (const [LoadingDescription](#) &oldLoadingDescription, const [LoadingDescription](#) &newLoadingDescription)
- void [signalSavingProgress](#) (const [QString](#) &filePath, float progress)
- void [signalThumbnailLoaded](#) (const [LoadingDescription](#) &loadingDescription, const [QImage](#) &img)

## Signals inherited from [Digikam::DynamicThread](#)

- void [finished](#) ()
- void [starting](#) ()

## 6.1163.1 Constructor & Destructor Documentation

### 6.1163.1.1 [PreviewLoadThread\(\)](#)

```
Digikam::PreviewLoadThread::PreviewLoadThread (
    QObject *const parent = nullptr ) [explicit]
```

Creates a preview load thread. Provides three flavors of preview loading. The default loading policy, for the typical usage in a preview widget, always stops any previous tasks and loads the new task as soon as possible.

## 6.1163.2 Member Function Documentation

### 6.1163.2.1 [load\(\)](#) [1/2]

```
void Digikam::PreviewLoadThread::load (
    const LoadingDescription & description )
```

Load a preview. Loading description will not be touched.

### 6.1163.2.2 [load\(\)](#) [2/2]

```
void Digikam::PreviewLoadThread::load (
    const QString & filePath,
    const PreviewSettings & settings,
    int size = 0 )
```

Load a preview. Settings determine the loading mode. For fast loading, size is preview area size. For fast-but-large loading, it serves as a minimum size. For high quality loading, it is ignored

### 6.1163.2.3 loadFast()

```
void Digikam::PreviewLoadThread::loadFast (
    const QString & filePath,
    int size )
```

Load a preview that is optimized for fast loading. Raw decoding and color management settings will be adjusted.

### 6.1163.2.4 loadFastButLarge()

```
void Digikam::PreviewLoadThread::loadFastButLarge (
    const QString & filePath,
    int minimumSize )
```

Load a preview that is as large as possible without sacrificing speed for performance. Especially, raw previews are taken if larger than the given size. Raw decoding and color management settings will be adjusted.

### 6.1163.2.5 loadFastSynchronously()

```
DImg Digikam::PreviewLoadThread::loadFastSynchronously (
    const QString & filePath,
    int size,
    const IccProfile & profile = IccProfile() ) [static]
```

Synchronous versions of the above methods. These are safe to call from the non-UI thread, as the [IccProfile](#) either passed or deduced independent from a displaying widget

### 6.1163.2.6 loadHighQuality()

```
void Digikam::PreviewLoadThread::loadHighQuality (
    const QString & filePath,
    PreviewSettings::RawLoading rawLoadingMode = PreviewSettings::RawPreviewAutomatic
)
```

Load a preview with higher resolution, trading more quality for less speed. Raw decoding and color management settings will be adjusted.

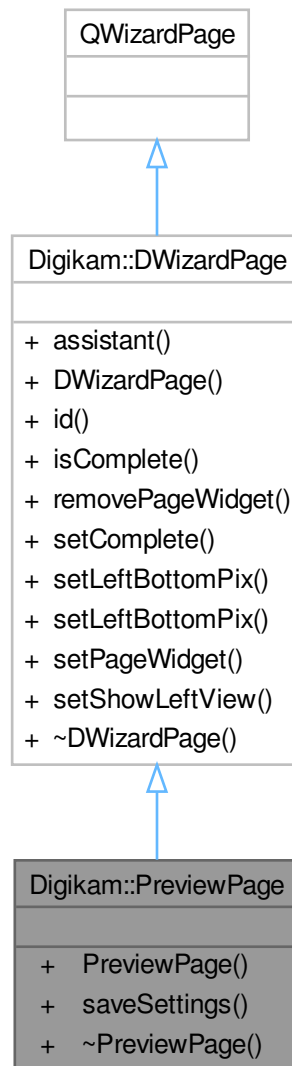

### 6.1163.2.7 setDisplayingWidget()

```
void Digikam::PreviewLoadThread::setDisplayingWidget (
    QWidget *const widget )
```

Optionally, set the displaying widget for color management

## 6.1164 Digikam::PreviewPage Class Reference

Inheritance diagram for Digikam::PreviewPage:

### Public Member Functions

- **PreviewPage** (QWizard \*const dlg)
- void **saveSettings** ()

### Public Member Functions inherited from [Digikam::DWizardPage](#)

- QWizard \* **assistant** () const
- **DWizardPage** (QWizard \*const dlg, const QString &title)

- int **id** () const
- bool **isComplete** () const override
- void **removePageWidget** (QWidget \*const w)
- void **setComplete** (bool b)
- void **setLeftBottomPix** (const QIcon &icon)
- void **setLeftBottomPix** (const QPixmap &pix)
- void **setPageWidget** (QWidget \*const w)
- void **setShowLeftView** (bool v)

## 6.1165 Digikam::PreviewSettings Class Reference

### Public Types

- enum [Quality](#) { [FastPreview](#) , [FastButLargePreview](#) , [HighQualityPreview](#) }
- enum [RawLoading](#) { [RawPreviewAutomatic](#) , [RawPreviewFromEmbeddedPreview](#) , [RawPreviewFromRawHalfSize](#) , [RawPreviewFromRawFullSize](#) }

### Public Member Functions

- bool **operator==** (const [PreviewSettings](#) &other) const
- [PreviewSettings](#) ([Quality](#) quality=[HighQualityPreview](#), [RawLoading](#) rawLoading=[RawPreviewAutomatic](#))

### Static Public Member Functions

- static [PreviewSettings](#) **fastPreview** ()
- static [PreviewSettings](#) **highQualityPreview** ()

### Public Attributes

- bool **convertToEightBit** = false
- [Quality](#) **quality**
- [RawLoading](#) **rawLoading**

## 6.1165.1 Member Enumeration Documentation

### 6.1165.1.1 Quality

enum [Digikam::PreviewSettings::Quality](#)

#### Enumerator

FastPreview	A preview were loading time is most important. Preview can be reduced in size. Additionally specifying the size of the preview area may be appropriate
FastButLargePreview	Load a preview that is as large as possible without sacrificing speed for performance. Especially, raw previews are taken if larger than the given size. Raw decoding and color management settings will be adjusted.
HighQualityPreview	Load a high quality additional image. For normal images, loads the full data. For RAW, the additional settings below are taken into account

## 6.1166 Digikam::PreviewThreadWrapper Class Reference

Inheritance diagram for Digikam::PreviewThreadWrapper:

### Signals

- void **signalFilterFinished** (int, const QPixmap &)
- void **signalFilterStarted** (int)

### Public Member Functions

- **PreviewThreadWrapper** (QObject \*const parent=nullptr)
- void **registerFilter** (int id, [DImgThreadedFilter](#) \*const filter)
- void **startFilters** ()
- void **stopFilters** ()

## 6.1167 Digikam::PreviewToolBar Class Reference

Inheritance diagram for Digikam::PreviewToolBar:

### Public Types

- enum `PreviewMode` {  
`PreviewOriginalImage` = 0x00000001 , `PreviewBothImagesHorz` = 0x00000002 , `PreviewBothImagesVert` = 0x00000004 , `PreviewBothImagesHorzCont` = 0x00000008 ,  
`PreviewBothImagesVertCont` = 0x00000010 , `PreviewTargetImage` = 0x00000020 , `PreviewToggleOnMouseOver` = 0x00000040 , `NoPreviewMode` = 0x00000080 ,  
**AllPreviewModes** , **UnSplitPreviewModes** = `PreviewOriginalImage` | `PreviewTargetImage` | `PreviewToggleOnMouseOver` }

### Signals

- void **signalPreviewModeChanged** (int)

### Public Member Functions

- void **PreviewMode previewMode** () const
- void **PreviewToolBar** (QWidget \*const parent=nullptr)
- void **readSettings** (const KConfigGroup &group)
- void **registerMenuActionGroup** (EditorWindow \*const editor)
- void **setPreviewMode** (PreviewMode mode)
- void **setPreviewModeMask** (int mask)
- void **writeSettings** (KConfigGroup &group)

## 6.1167.1 Member Enumeration Documentation

### 6.1167.1.1 PreviewMode

enum `Digikam::PreviewToolBar::PreviewMode`

Enumerator

<code>PreviewOriginalImage</code>	Original image only.
<code>PreviewBothImagesHorz</code>	Horizontal with original and target duplicated.
<code>PreviewBothImagesVert</code>	Vertical with original and target duplicated.
<code>PreviewBothImagesHorzCont</code>	Horizontal with original and target in contiguous.
<code>PreviewBothImagesVertCont</code>	Vertical with original and target in contiguous.
<code>PreviewTargetImage</code>	Target image only.
<code>PreviewToggleOnMouseOver</code>	Original image if mouse is over image area, else target image.
<code>NoPreviewMode</code>	Target image only without information displayed.

## 6.1168 Digikam::PrivateProgressItemCreator Class Reference

Inheritance diagram for `Digikam::PrivateProgressItemCreator`:

## Public Slots

- void **slotProgressItemCanceled** ([ProgressItem](#) \*item)
- void **slotProgressItemCompleted** ()

## Signals

- void **lastItemCompleted** ()

## Public Member Functions

- void **addProgressItem** ([ProgressItem](#) \*const item) override
- [ProgressItem](#) \* **createProgressItem** (const QString &action) const override

## Public Attributes

- QAtomicInt **activeProgressItems**

## 6.1168.1 Member Function Documentation

### 6.1168.1.1 addProgressItem()

```
void Digikam::PrivateProgressItemCreator::addProgressItem (  
    ProgressItem *const item ) [override], [virtual]
```

Implements [Digikam::FileActionProgressItemCreator](#).

### 6.1168.1.2 createProgressItem()

```
ProgressItem * Digikam::PrivateProgressItemCreator::createProgressItem (  
    const QString & action ) const [override], [virtual]
```

Implements [Digikam::FileActionProgressItemCreator](#).

## 6.1169 Digikam::ProcessLauncher Class Reference

Inheritance diagram for Digikam::ProcessLauncher:

### Signals

- void **signalComplete** (bool `success`, int `exitCode`)

## Public Member Functions

- qint64 [elapsedTime](#) () const
- int [exitCode](#) () const
- QString [output](#) () const
- **ProcessLauncher** (QObject \*const parent=nullptr)
- void **setArguments** (const QStringList &args)
- void [setConsoleTraces](#) (bool b)
- void **setProgram** (const QString &prog)
- void **setTimeout** (int msec)
- void **setWorkingDirectory** (const QString &dir)
- void [startProcess](#) ()
- bool [success](#) () const

## 6.1169.1 Member Function Documentation

### 6.1169.1.1 [elapsedTime\(\)](#)

```
qint64 Digikam::ProcessLauncher::elapsedTime ( ) const
```

Return the elapsed time in ms to run the process.

### 6.1169.1.2 [exitCode\(\)](#)

```
int Digikam::ProcessLauncher::exitCode ( ) const
```

Return the exit code from the process.

### 6.1169.1.3 [output\(\)](#)

```
QString Digikam::ProcessLauncher::output ( ) const
```

Return the process output as string.

### 6.1169.1.4 [setConsoleTraces\(\)](#)

```
void Digikam::ProcessLauncher::setConsoleTraces (
    bool b )
```

If turned on, all traces from the process are printed on the console.

### 6.1169.1.5 [startProcess\(\)](#)

```
void Digikam::ProcessLauncher::startProcess ( )
```

Start the process.

### 6.1169.1.6 success()

```
bool Digikam::ProcessLauncher::success ( ) const
```

Return true if the process is started and completed without error.

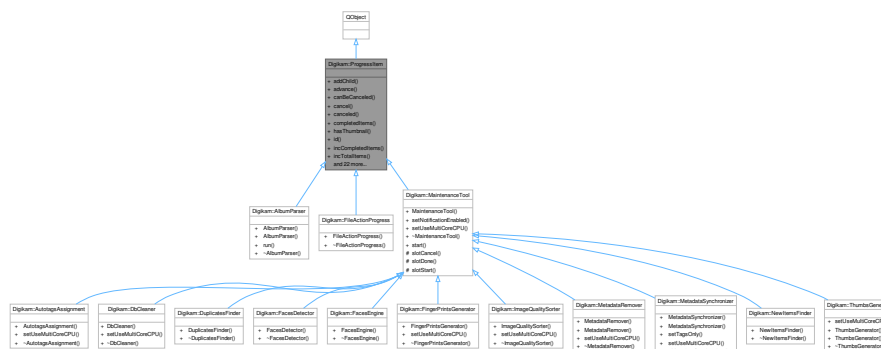

## 6.1170 Digikam::ProgressEntry Class Reference

### Public Attributes

- bool **canCancel** = false
- QString **message**
- float **progress** = 0.0

## 6.1171 Digikam::ProgressItem Class Reference

Inheritance diagram for Digikam::ProgressItem:

### Signals

- void **progressItemAdded** (ProgressItem \*item)  
*Emitted when a new ProgressItem is added.*
- void **progressItemCanceled** (ProgressItem \*item)  
*Emitted when an item was canceled. It will not go away immediately, only when the owner sets it complete, which will usually happen. Can be used to visually indicate the canceled status of an item. Should be used by the owner of the item to make sure it is set completed even if it is canceled. There is a ProgressManager::slotStandardCancelHandler which simply sets the item completed and can be used if no other work needs to be done on cancel.*
- void **progressItemCanceledById** (const QString &id)
- void **progressItemCompleted** (ProgressItem \*item)  
*Emitted when a progress item was completed. The item will be deleted afterwards, so slots connected to this are the last chance to work with this item.*
- void **progressItemLabel** (ProgressItem \*item, const QString &label)  
*Emitted when the label of an item changed. Should be used by progress dialogs to update the label of an item.*
- void **progressItemProgress** (ProgressItem \*item, unsigned int v)  
*Emitted when the progress value of an item changes.*
- void **progressItemStatus** (ProgressItem \*item, const QString &mess)

*Emitted when the status message of an item changed. Should be used by progress dialogs to update the status message for an item.*

- void [progressItemThumbnail](#) ([ProgressItem](#) \*item, const QPixmap &thumb)

*Emitted when the thumbnail data must be set in item.*

- void [progressItemUsesBusyIndicator](#) ([ProgressItem](#) \*item, bool value)

*Emitted when the busy indicator state of an item changes. Should be used by progress dialogs so that they can adjust the display of the progress bar to the new mode.*

## Public Member Functions

- void **addChild** ([ProgressItem](#) \*const kiddo)

- bool [advance](#) (unsigned int v)

*Advance total items processed by n values and update percentage in progressbar.*

- bool [canBeCanceled](#) () const

- void **cancel** ()

- bool **canceled** () const

- unsigned int **completedItems** () const

- bool [hasThumbnail](#) () const

- const QString & [id](#) () const

- bool **incCompletedItems** (unsigned int v=1)

- void **incTotalItems** (unsigned int v=1)

- const QString & [label](#) () const

- [ProgressItem](#) \* [parent](#) () const

- unsigned int [progress](#) () const

- [ProgressItem](#) ([ProgressItem](#) \*const [parent](#), const QString &[id](#), const QString &[label](#), const QString &[status](#), bool [canBeCanceled](#), bool [hasThumb](#))

- void **removeChild** ([ProgressItem](#) \*const kiddo)

- void **reset** ()

*Reset the progress value of this item to 0 and the status string to the empty string.*

- void **setComplete** ()

*Tell the item it has finished. This will emit [progressItemCompleted\(\)](#) result in the destruction of the item after all slots connected to this signal have executed. This is the only way to get rid of an item and needs to be called even if the item is canceled. Don't use the item after this has been called on it.*

- bool **setCompletedItems** (unsigned int v)

- void [setLabel](#) (const QString &v)

- void [setProgress](#) (unsigned int v)

*Set the progress (percentage of completion) value of this item.*

- void [setShowAtStart](#) (bool [showAtStart](#))

*Set the property to pop-up item when it's added in progress manager. Use this method if you consider that item is important to be notified to end-user.*

- void [setStatus](#) (const QString &v)

*Set the string to be used for showing this item's current status.*

- void [setThumbnail](#) (const QIcon &icon)

*Sets whether this item has a thumbnail.*

- void **setTotalItems** (unsigned int v)

- void [setUsesBusyIndicator](#) (bool useBusyIndicator)

*Sets whether this item uses a busy indicator instead of real progress for its progress bar. If it uses a busy indicator, you are still responsible for calling [setProgress\(\)](#) from time to time to update the busy indicator.*

- bool [showAtStart](#) () const

- const QString & [status](#) () const

- bool **totalCompleted** () const

- unsigned int **totalItems** () const

- void **updateProgress** ()

*Recalculate progress according to total/completed items and update.*

- bool [usesBusyIndicator](#) () const

## 6.1171.1 Member Function Documentation

### 6.1171.1.1 advance()

```
bool Digikam::ProgressItem::advance (
    unsigned int v )
```

#### Parameters

v	The value to advance.
---	-----------------------

#### Returns

true if totalCompleted()

### 6.1171.1.2 canBeCanceled()

```
bool Digikam::ProgressItem::canBeCanceled ( ) const
```

#### Returns

Whether this item can be canceled.

### 6.1171.1.3 hasThumbnail()

```
bool Digikam::ProgressItem::hasThumbnail ( ) const
```

#### Returns

whether this item has a thumbnail.

### 6.1171.1.4 id()

```
const QString & Digikam::ProgressItem::id ( ) const
```

#### Returns

The id string which uniquely identifies the operation represented by this item.

### 6.1171.1.5 label()

```
const QString & Digikam::ProgressItem::label ( ) const
```

#### Returns

The user visible string to be used to represent this item.

### 6.1171.1.6 parent()

```
ProgressItem * Digikam::ProgressItem::parent ( ) const
```

#### Returns

The parent item of this one, if there is one.

### 6.1171.1.7 progress()

```
unsigned int Digikam::ProgressItem::progress ( ) const
```

#### Returns

The current progress value of this item in percent.

### 6.1171.1.8 progressItemAdded

```
void Digikam::ProgressItem::progressItemAdded (
    ProgressItem * item ) [signal]
```

#### Parameters

<i>item</i>	The <a href="#">ProgressItem</a> that was added.
-------------	--

### 6.1171.1.9 progressItemCanceled

```
void Digikam::ProgressItem::progressItemCanceled (
    ProgressItem * item ) [signal]
```

#### Parameters

<i>item</i>	The canceled item;
-------------	--------------------

### 6.1171.1.10 progressItemCompleted

```
void Digikam::ProgressItem::progressItemCompleted (
    ProgressItem * item ) [signal]
```

#### Parameters

<i>item</i>	The completed item.
-------------	---------------------

**6.1171.1.11 progressItemLabel**

```
void Digikam::ProgressItem::progressItemLabel (
    ProgressItem * item,
    const QString & label ) [signal]
```

**Parameters**

<i>item</i>	The updated item.
<i>label</i>	The new label.

**6.1171.1.12 progressItemProgress**

```
void Digikam::ProgressItem::progressItemProgress (
    ProgressItem * item,
    unsigned int v ) [signal]
```

**Parameters**

<i>item</i>	The item which got a new value.
<i>v</i>	The value, for convenience.

**6.1171.1.13 progressItemStatus**

```
void Digikam::ProgressItem::progressItemStatus (
    ProgressItem * item,
    const QString & mess ) [signal]
```

**Parameters**

<i>item</i>	The updated item.
<i>mess</i>	The new message.

**6.1171.1.14 progressItemThumbnail**

```
void Digikam::ProgressItem::progressItemThumbnail (
    ProgressItem * item,
    const QPixmap & thumb ) [signal]
```

**Parameters**

<i>item</i>	The updated item
<i>thumb</i>	thumbnail data

### 6.1171.1.15 progressItemUsesBusyIndicator

```
void Digikam::ProgressItem::progressItemUsesBusyIndicator (
    ProgressItem * item,
    bool value ) [signal]
```

#### Parameters

<i>item</i>	The updated item
<i>value</i>	True if the item uses a busy indicator now, false otherwise

### 6.1171.1.16 setLabel()

```
void Digikam::ProgressItem::setLabel (
    const QString & v )
```

#### Parameters

<i>v</i>	Set the user visible string identifying this item.
----------	--

### 6.1171.1.17 setProgress()

```
void Digikam::ProgressItem::setProgress (
    unsigned int v )
```

#### Parameters

<i>v</i>	The percentage value.
----------	-----------------------

### 6.1171.1.18 setShowAtStart()

```
void Digikam::ProgressItem::setShowAtStart (
    bool showAtStart )
```

#### Parameters

<i>showAtStart</i>	The flag to turn on this property.
--------------------	------------------------------------

### 6.1171.1.19 setStatus()

```
void Digikam::ProgressItem::setStatus (
    const QString & v )
```

**Parameters**

v	The status string.
---	--------------------

**6.1171.1.20 setThumbnail()**

```
void Digikam::ProgressItem::setThumbnail (
    const QIcon & icon )
```

**Parameters**

<i>icon</i>	The icon to use as thumbnail.
-------------	-------------------------------

**6.1171.1.21 setUsesBusyIndicator()**

```
void Digikam::ProgressItem::setUsesBusyIndicator (
    bool useBusyIndicator )
```

param useBusyIndicator The flag to indicate busy state.

**6.1171.1.22 showAtStart()**

```
bool Digikam::ProgressItem::showAtStart ( ) const
```

**Returns**

true if item must be pop-up when it's added in progress manager.

**6.1171.1.23 status()**

```
const QString & Digikam::ProgressItem::status ( ) const
```

**Returns**

The string to be used for showing this item's current status.

**6.1171.1.24 usesBusyIndicator()**

```
bool Digikam::ProgressItem::usesBusyIndicator ( ) const
```

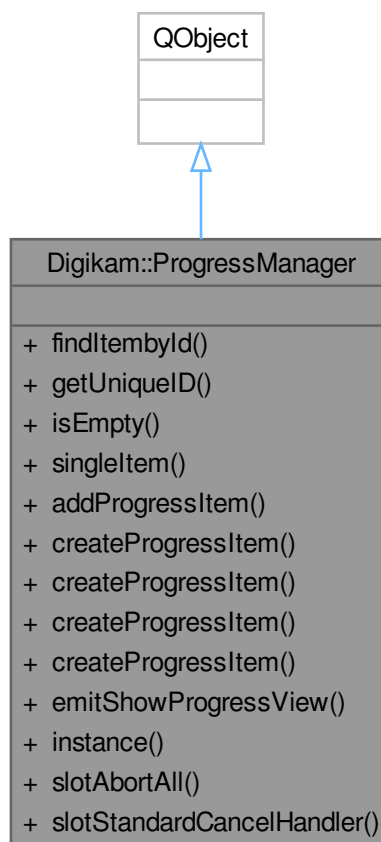

**Returns**

whether this item uses a busy indicator instead of real progress display

## 6.1172 Digikam::ProgressManager Class Reference

The [ProgressManager](#) singleton keeps track of all ongoing transactions and notifies observers (progress dialogs) when their progress percent value changes, when they are completed (by their owner), and when they are canceled. Each [ProgressItem](#) emits those signals individually and the singleton broadcasts them. Use the [createProgressItem\(\)](#) statics to acquire an item and then call `->setProgress( int percent )` on it every time you want to update the item and `->setComplete()` when the operation is done. This will delete the item. Connect to the item's [progressItemCanceled\(\)](#) signal to be notified when the user cancels the transaction using one of the observing progress dialogs or by calling `item->cancel()` in some other way. The owner is responsible for calling `setComplete()` on the item, even if it is canceled. Use the `standardCancelHandler()` slot if that is all you want to do on cancel.

Inheritance diagram for Digikam::ProgressManager:

### Public Slots

- void **slotAbortAll** ()  
*Aborts all running jobs. Bound to "Esc".*
- void **slotStandardCancelHandler** ([ProgressItem](#) \*item)  
*Calls `setCompleted()` on the item, to make sure it goes away. Provided for convenience.*

## Signals

- void **completeTransactionDeferred** ([ProgressItem](#) \*item)
- void [progressItemAdded](#) ([ProgressItem](#) \*)
- void [progressItemCanceled](#) ([ProgressItem](#) \*)
- void [progressItemCompleted](#) ([ProgressItem](#) \*)
- void [progressItemLabel](#) ([ProgressItem](#) \*, const [QString](#) &)
- void [progressItemProgress](#) ([ProgressItem](#) \*, unsigned int)
- void [progressItemStatus](#) ([ProgressItem](#) \*, const [QString](#) &)
- void [progressItemThumbnail](#) ([ProgressItem](#) \*, const [QPixmap](#) &)
- void [progressItemUsesBusyIndicator](#) ([ProgressItem](#) \*, bool)
- void **showProgressView** ()

*Emitted when an operation requests the listeners to be shown. Use [emitShowProgressView\(\)](#) to trigger it.*

## Public Member Functions

- [ProgressItem](#) \* [findItemById](#) (const [QString](#) &id) const
- [QString](#) [getUniqueId](#) ()
  - Use this to acquire a unique id number which can be used to discern an operation from all others going on at the same time. Use that number as the id string for your progressItem to ensure it is unique.*
- bool [isEmpty](#) () const
- [ProgressItem](#) \* [singleItem](#) () const

## Static Public Member Functions

- static bool [addProgressItem](#) ([ProgressItem](#) \*const t, [ProgressItem](#) \*const parent=nullptr)
  - Add a created progressItem outside manager with the given parent.*
- static [ProgressItem](#) \* [createProgressItem](#) (const [QString](#) &id, const [QString](#) &label, const [QString](#) &status=[QString](#)(), bool canBeCanceled=true, bool hasThumb=false)
  - Use this version if you have the id string of the parent but without the parent instance.*
- static [ProgressItem](#) \* [createProgressItem](#) (const [QString](#) &label, const [QString](#) &status=[QString](#)(), bool canBeCanceled=true, bool hasThumb=false)
  - Creates a [ProgressItem](#) with a unique id and the given label. This is the simplest way to acquire a progress item. It will not have a parent.*
- static [ProgressItem](#) \* [createProgressItem](#) (const [QString](#) &parent, const [QString](#) &id, const [QString](#) &label, const [QString](#) &status=[QString](#)(), bool canBeCanceled=true, bool hasThumb=false)
  - Use this version if you have the id string of the parent and want to add a subjob to it.*
- static [ProgressItem](#) \* [createProgressItem](#) ([ProgressItem](#) \*const parent, const [QString](#) &id, const [QString](#) &label, const [QString](#) &status=[QString](#)(), bool canBeCanceled=true, bool hasThumb=false)
  - Creates a new progressItem with the given parent, id, label and initial status.*
- static void **emitShowProgressView** ()
  - Ask all listeners to show the progress dialog, because there is something that wants to be shown.*
- static [ProgressManager](#) \* [instance](#) ()

## Friends

- class **ProgressManagerCreator**

## 6.1172.1 Detailed Description

### Note

if you request an item with a certain id and there is already one with that id, there will not be a new one created but the existing one will be returned. This is convenient for accessing items that are needed regularly without the to store a pointer to them or to add child items to parents by id.

## 6.1172.2 Member Function Documentation

### 6.1172.2.1 addProgressItem()

```
bool Digikam::ProgressManager::addProgressItem (
    ProgressItem *const t,
    ProgressItem *const parent = nullptr ) [static]
```

#### Parameters

<i>t</i>	The process to add on manager.
<i>parent</i>	Specify an already existing item as the parent of this one (can be null).

#### Returns

true if [ProgressItem](#) have been added to manager, else false.

### 6.1172.2.2 createProgressItem() [1/4]

```
ProgressItem * Digikam::ProgressManager::createProgressItem (
    const QString & id,
    const QString & label,
    const QString & status = QString(),
    bool canBeCanceled = true,
    bool hasThumb = false ) [static]
```

#### Parameters

<i>id</i>	Used to identify this operation for cancel and progress info.
<i>label</i>	The text to be displayed by progress handlers
<i>status</i>	Additional text to be displayed for the item.
<i>canBeCanceled</i>	can the user cancel this operation? Cancelling the parent will cancel the children as well (if they can be canceled) and ongoing children prevent parents from finishing.
<i>hasThumb</i>	flag to indicate if progress item has a thumbnail.

#### Returns

The [ProgressItem](#) representing the operation.

**6.1172.2.3 createProgressItem() [2/4]**

```
ProgressItem * Digikam::ProgressManager::createProgressItem (
    const QString & label,
    const QString & status = QString(),
    bool canBeCanceled = true,
    bool hasThumb = false ) [static]
```

**Parameters**

<i>label</i>	The text to be displayed by progress handlers
<i>status</i>	Additional text to be displayed for the item.
<i>canBeCanceled</i>	Can the user cancel this operation? Cancelling the parent will cancel the children as well (if they can be canceled) and ongoing children prevent parents from finishing.
<i>hasThumb</i>	flag to indicate if progress item has a thumbnail.

**Returns**

The [ProgressItem](#) representing the operation.

**6.1172.2.4 createProgressItem() [3/4]**

```
ProgressItem * Digikam::ProgressManager::createProgressItem (
    const QString & parent,
    const QString & id,
    const QString & label,
    const QString & status = QString(),
    bool canBeCanceled = true,
    bool hasThumb = false ) [static]
```

**Parameters**

<i>parent</i>	Specify an already existing item as the parent of this one.
<i>id</i>	Used to identify this operation for cancel and progress info.
<i>label</i>	The text to be displayed by progress handlers
<i>status</i>	Additional text to be displayed for the item.
<i>canBeCanceled</i>	can the user cancel this operation? Cancelling the parent will cancel the children as well (if they can be canceled) and ongoing children prevent parents from finishing.
<i>hasThumb</i>	flag to indicate if progress item has a thumbnail.

**Returns**

The [ProgressItem](#) representing the operation.

**6.1172.2.5 createProgressItem() [4/4]**

```
ProgressItem * Digikam::ProgressManager::createProgressItem (
    ProgressItem *const parent,
```

```

const QString & id,
const QString & label,
const QString & status = QString(),
bool canBeCanceled = true,
bool hasThumb = false ) [static]

```

**Parameters**

<i>parent</i>	Specify an already existing item as the parent of this one.
<i>id</i>	Used to identify this operation for cancel and progress info.
<i>label</i>	The text to be displayed by progress handlers
<i>status</i>	Additional text to be displayed for the item.
<i>canBeCanceled</i>	can the user cancel this operation? Cancelling the parent will cancel the children as well (if they can be canceled) and ongoing children prevent parents from finishing.
<i>hasThumb</i>	flag to indicate if progress item has a thumbnail.

**Returns**

The [ProgressItem](#) representing the operation.

**6.1172.2.6 findItembyId()**

```

ProgressItem * Digikam::ProgressManager::findItembyId (
    const QString & id ) const

```

**Returns**

the progressitem for this

**Parameters**

<i>id</i>	if it exist, else null.
-----------	-------------------------

**6.1172.2.7 getUniqueID()**

```

QString Digikam::ProgressManager::getUniqueID ( )

```

**Returns**

The string with the unique ID number.

**6.1172.2.8 instance()**

```

ProgressManager * Digikam::ProgressManager::instance ( ) [static]

```

**Returns**

The singleton instance of this class.

### 6.1172.2.9 isEmpty()

```
bool Digikam::ProgressManager::isEmpty ( ) const
```

#### Returns

true when there are no more progress items.

### 6.1172.2.10 progressItemAdded

```
void Digikam::ProgressManager::progressItemAdded (
    ProgressItem * ) [signal]
```

#### See also

[ProgressItem::progressItemAdded\(\)](#)

### 6.1172.2.11 progressItemCanceled

```
void Digikam::ProgressManager::progressItemCanceled (
    ProgressItem * ) [signal]
```

#### See also

[ProgressItem::progressItemCanceled\(\)](#)

### 6.1172.2.12 progressItemCompleted

```
void Digikam::ProgressManager::progressItemCompleted (
    ProgressItem * ) [signal]
```

#### See also

[ProgressItem::progressItemCompleted\(\)](#)

### 6.1172.2.13 progressItemLabel

```
void Digikam::ProgressManager::progressItemLabel (
    ProgressItem * ,
    const QString & ) [signal]
```

#### See also

[ProgressItem::progressItemLabel\(\)](#)

### 6.1172.2.14 progressItemProgress

```
void Digikam::ProgressManager::progressItemProgress (
    ProgressItem * ,
    unsigned int ) [signal]
```

See also

[ProgressItem::progressItemProgress\(\)](#)

### 6.1172.2.15 progressItemStatus

```
void Digikam::ProgressManager::progressItemStatus (
    ProgressItem * ,
    const QString & ) [signal]
```

See also

[ProgressItem::progressItemStatus\(\)](#)

### 6.1172.2.16 progressItemThumbnail

```
void Digikam::ProgressManager::progressItemThumbnail (
    ProgressItem * ,
    const QPixmap & ) [signal]
```

See also

[ProgressItem::progressItemThumbnail](#)

### 6.1172.2.17 progressItemUsesBusyIndicator

```
void Digikam::ProgressManager::progressItemUsesBusyIndicator (
    ProgressItem * ,
    bool ) [signal]
```

See also

[ProgressItem::progressItemUsesBusyIndicator](#)

### 6.1172.2.18 singleItem()

```
ProgressItem * Digikam::ProgressManager::singleItem ( ) const
```

Returns

the only top level progressitem when there's only one. Returns 0 if there is no item, or more than one top level item. Since this is used to calculate the overall progress, it will also return 0 if there is an item which uses a busy indicator, since that will invalidate the overall progress.

### 6.1172.2.19 slotStandardCancelHandler

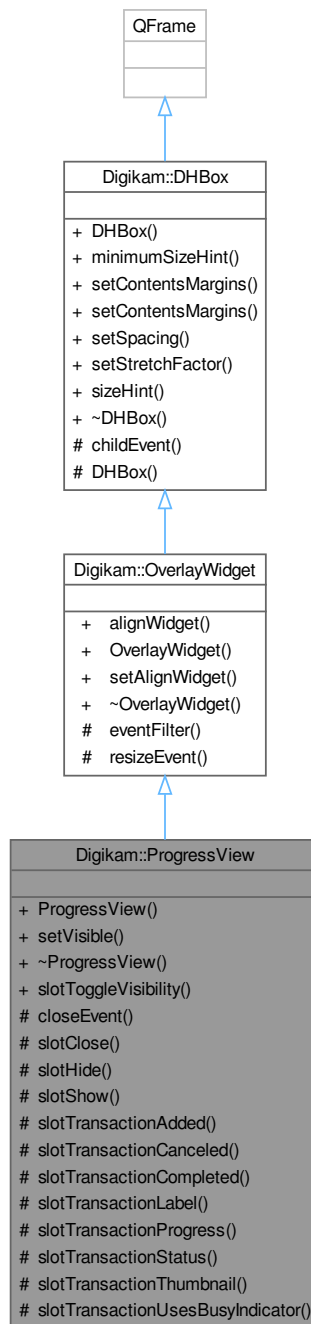

```
void Digikam::ProgressManager::slotStandardCancelHandler (
    ProgressItem * item ) [slot]
```

## Parameters

<i>item</i>	the canceled item.
-------------	--------------------

## 6.1173 Digikam::ProgressView Class Reference

Inheritance diagram for Digikam::ProgressView:

### Public Slots

- void **slotToggleVisibility** ()

### Signals

## Protected Attributes

- QVBoxLayout \* **m\_layout** = nullptr
- QWidget \* **m\_widget** = nullptr

## 6.1175.1 Constructor & Destructor Documentation

### 6.1175.1.1 ProxyLineEdit()

```
Digikam::ProxyLineEdit::ProxyLineEdit (
    QWidget *const parent = nullptr ) [explicit]
```

This class will not act as a QLineEdit at all, but present another widget (any kind of widget) instead in the space assigned to the QLineEdit. Use this class if you need to pass a QLineEdit but want actually to use a different widget.

## 6.1175.2 Member Function Documentation

### 6.1175.2.1 mouseMoveEvent()

```
void Digikam::ProxyLineEdit::mouseMoveEvent (
    QMouseEvent * event ) [override], [protected]
```

We just re-implement all relevant QWidget event handlers and call the QWidget implementation, not the QLineEdit one.

### 6.1175.2.2 mousePressEvent()

```
void Digikam::ProxyLineEdit::mousePressEvent (
    QMouseEvent * event ) [override], [protected]
```

NOTE: see bug #326718: We need to use QLineEdit parent class with these methods to have clear button working fine.

## 6.1175.2.3 setWidget()

```
void Digikam::ProxyLineEdit::setWidget (
    QWidget * widget ) [virtual]
```

After constructing, set the actual widget here

## 6.1176 Digikam::QListImageListProvider Class Reference

Inheritance diagram for Digikam::QListImageListProvider:

## Public Member Functions

- bool [atEnd](#) () const override
- QPair< QImage \*, QString > [image](#) () override
- QList< QPair< QImage \*, QString > > [images](#) () override
- void [proceed](#) (int steps=1) override
- void [reset](#) ()
- void [setImage](#)s (const QList< QPair< QImage \*, QString > > &) override
- void [setUnpairedImages](#) (const QList< QImage \* > &) override
- int [size](#) () const override

## Public Attributes

- QList< QPair< QImage \*, QString > >::const\_iterator [it](#)
- QList< QPair< QImage \*, QString > > [list](#)

### 6.1176.1 Detailed Description

A wrapper implementation for [ImageListProvider](#) if you have a QList of QImages

### 6.1176.2 Member Function Documentation

#### 6.1176.2.1 atEnd()

```
bool Digikam::QListImageListProvider::atEnd ( ) const [override], [virtual]
```

Implements [Digikam::ImageListProvider](#).

#### 6.1176.2.2 image()

```
QPair< QImage *, QString > Digikam::QListImageListProvider::image ( ) [override], [virtual]
```

Implements [Digikam::ImageListProvider](#).

#### 6.1176.2.3 images()

```
QList< QPair< QImage *, QString > > Digikam::QListImageListProvider::images ( ) [override], [virtual]
```

Implements [Digikam::ImageListProvider](#).

#### 6.1176.2.4 proceed()

```
void Digikam::QListImageListProvider::proceed (
    int steps = 1 ) [override], [virtual]
```

Implements [Digikam::ImageListProvider](#).

**6.1176.2.5 setImages()**

```
void Digikam::QListImageListProvider::setImages (
    const QList< QPair< QImage *, QString > > & lst ) [override], [virtual]
```

Implements [Digikam::ImageListProvider](#).

**6.1176.2.6 setUnpairedImages()**

```
void Digikam::QListImageListProvider::setUnpairedImages (
    const QList< QImage * > & lst ) [override], [virtual]
```

Implements [Digikam::ImageListProvider](#).

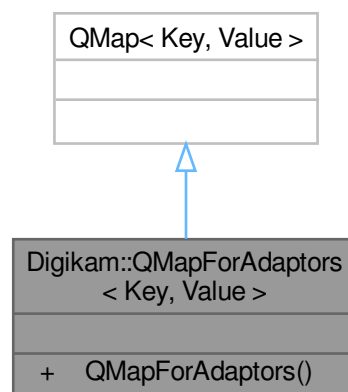

**6.1176.2.7 size()**

```
int Digikam::QListImageListProvider::size ( ) const [override], [virtual]
```

Implements [Digikam::ImageListProvider](#).

**6.1177 Digikam::QMapForAdaptors< Key, Value > Class Template Reference**

Inheritance diagram for Digikam::QMapForAdaptors< Key, Value >:

**Public Types**

- typedef Value **data\_type**
- typedef Key **key\_type**
- typedef std::pair< const Key, Value > **value\_type**

### 6.1177.1 Detailed Description

```
template<typename Key, typename Value>
class Digikam::QMapForAdaptors< Key, Value >
```

Adds the necessary typedefs so that `associative_property_map` accepts a `QMap`, and it can be used as a Boost Property Map.

## 6.1178 Digikam::QueueListView Class Reference

Inheritance diagram for `Digikam::QueueListView`:

### Public Types

- enum `ItemListType` { `Pending` = 0 , `Selected` , `All` }

## Public Slots

- void **slotAddItems** (const [ItemInfoList](#) &)
- void **slotAssignedToolsChanged** (const [AssignedBatchTools](#) &)

## 6.1188.1 Member Function Documentation

### 6.1188.1.1 filterAction()

`FilterAction` Digikam::RainDropFilter::filterAction ( ) [override], [virtual]

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1188.1.2 filterIdentifier()

`QString` Digikam::RainDropFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1188.1.3 readParameters()

```
void Digikam::RainDropFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.1189 Digikam::RandomNumberGenerator Class Reference

### Public Member Functions

- quint32 `currentSeed` ( ) const
- double `number` (double min, double max)
- int `number` (int min, int max)
- [RandomNumberGenerator](#) ( )
- void `reseed` ( )
- void `seed` (quint32 seed)
- quint32 `seedByTime` ( )
- quint32 `seedNonDeterministic` ( )
- bool `yesOrNo` (double p)

### Static Public Member Functions

- static quint32 `nonDeterministicSeed` ( )
- static quint32 `timeSeed` ( )

## 6.1189.1 Detailed Description

This class differs from standard pseudo random number generators (`rand()`) in these points:

- it uses a specified, independently implemented algorithm identical across platforms
- provides access to the used seed
- it can thus guarantee replayable sequences
- it provides convenient seeding of varying quality

## 6.1189.2 Constructor & Destructor Documentation

### 6.1189.2.1 RandomNumberGenerator()

```
Digikam::RandomNumberGenerator::RandomNumberGenerator ( ) [explicit]
```

Constructs a random number generator that is seeded with a constant value. It is recommended to call a `seed` method after construction.

## 6.1189.3 Member Function Documentation

### 6.1189.3.1 currentSeed()

```
quint32 Digikam::RandomNumberGenerator::currentSeed ( ) const
```

Retrieves the current seed. Can be used for `seed(quint32)` to replay the results again.

### 6.1189.3.2 nonDeterministicSeed()

```
quint32 Digikam::RandomNumberGenerator::nonDeterministicSeed ( ) [static]
```

Produces a non-deterministic seed, as used by `seedNonDeterministic()`

### 6.1189.3.3 number() [1/2]

```
double Digikam::RandomNumberGenerator::number (
    double min,
    double max )
```

Returns a random double in the interval `[min, max)` (including min, excluding max) Warning: this method is non re-entrant.

#### 6.1189.3.4 number() [2/2]

```
int Digikam::RandomNumberGenerator::number (
    int min,
    int max )
```

Returns a random integer in the interval [min, max] (including min and max). Warning: this method is non re-entrant.

#### 6.1189.3.5 reseed()

```
void Digikam::RandomNumberGenerator::reseed ( )
```

Seeds the generator again with the [currentSeed\(\)](#). This is not a no-op, rather, the sequence of random numbers starts again from its beginning after each re-seed. Equivalent to `seed(currentSeed())`

#### 6.1189.3.6 seed()

```
void Digikam::RandomNumberGenerator::seed (
    quint32 seed )
```

Seeds the generator with the given value. This is not meant to be called with a constant value, but with a value retrieved from [currentSeed\(\)](#) on a previous run. Across platforms, the same sequence of random numbers will be generated for the same seed.

#### 6.1189.3.7 seedByTime()

```
quint32 Digikam::RandomNumberGenerator::seedByTime ( )
```

Seeds the generator by current time. This is common practice and good enough for most purposes. Returns the new [currentSeed\(\)](#).

#### 6.1189.3.8 seedNonDeterministic()

```
quint32 Digikam::RandomNumberGenerator::seedNonDeterministic ( )
```

Seeds the generator from a non-deterministic random number generator. This is the most secure seeding method. Returns the new [currentSeed\(\)](#).

#### 6.1189.3.9 timeSeed()

```
quint32 Digikam::RandomNumberGenerator::timeSeed ( ) [static]
```

Produces a seed that includes at least the time as source of random data

## 6.1189.3.10 yesOrNo()

```
bool Digikam::RandomNumberGenerator::yesOrNo (
    double p )
```

Returns true with a probability of  $p$  (where  $p$  shall be in the interval  $[0, 1)$ ) Warning: this method is non re-entrant.

## 6.1190 Digikam::RangeDialog Class Reference

Inheritance diagram for Digikam::RangeDialog:

**6.1193.1 Member Enumeration Documentation****6.1193.1.1 RatingValue**

enum `Digikam::RatingComboBox::RatingValue`

An advanced widget for entering a rating, including support for Null and NoRating values

**Enumerator**

Null	The rating value. All values except Null correspond to the integers used by the database.
------	---

- void **starting** ()

## 6.1204.1 Detailed Description

This is a special filter. It implements RAW post processing. Additionally, it provides some facilities for use from the [DImg](#) Raw loader.

The original image shall come from RawEngine without further modification.

## 6.1204.2 Constructor & Destructor Documentation

### 6.1204.2.1 RawProcessingFilter() [1/3]

```
Digikam::RawProcessingFilter::RawProcessingFilter (
    QObject *const parent = nullptr ) [explicit]
```

Default constructor. You need to call [setSettings\(\)](#) and [setOriginalImage\(\)](#) before starting the filter.

### 6.1204.2.2 RawProcessingFilter() [2/3]

```
Digikam::RawProcessingFilter::RawProcessingFilter (
    DImg *const orgImage,
    QObject *const parent,
    const DRawDecoding & settings,
    const QString & name = QString() )
```

Traditional constructor

### 6.1204.2.3 RawProcessingFilter() [3/3]

```
Digikam::RawProcessingFilter::RawProcessingFilter (
    const DRawDecoding & settings,
    DImgThreadedFilter *const master,
    const DImg & orgImage,
    const DImg & destImage,
    int progressBegin = 0,
    int progressEnd = 100,
    const QString & name = QString() )
```

For use with a master filter. Computation is started immediately.

## 6.1204.3 Member Function Documentation

### 6.1204.3.1 filterAction()

```
FilterAction Digikam::RawProcessingFilter::filterAction ( ) [override], [virtual]
```

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1204.3.2 filterIdentifier()

```
QString Digikam::RawProcessingFilter::filterIdentifier ( ) const [inline], [override], [virtual]
```

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1204.3.3 filterImage()

```
void Digikam::RawProcessingFilter::filterImage ( ) [override], [protected], [virtual]
```

Main image filter method. Override in subclass.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1204.3.4 readParameters()

```
void Digikam::RawProcessingFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

### 6.1204.3.5 setObserver()

```
void Digikam::RawProcessingFilter::setObserver (
    DImgLoaderObserver *const observer,
    int progressBegin,
    int progressEnd )
```

Normally, filters post progress and are cancelled by [DynamicThread](#) facilities. Here, as an alternative, a [DImgLoaderObserver](#) is set. Its `continueQuery` is called and progress is posted in the given interval.

### 6.1204.3.6 setOutputProfile()

```
void Digikam::RawProcessingFilter::setOutputProfile (
    const IccProfile & profile )
```

As additional and first post-processing step, convert the image's color space to the specified profile.

### 6.1204.3.7 setSettings()

```
void Digikam::RawProcessingFilter::setSettings (
    const DRawDecoding & settings )
```

Set the raw decoding settings. The post processing is carried out here, the libraw settings are needed to construct the [FilterAction](#).

## 6.1205 Digikam::RecognitionBenchmarker Class Reference

Inheritance diagram for Digikam::RecognitionBenchmarker:

### Classes

### 6.1205.1 Member Function Documentation

#### 6.1205.1.1 result()

```
QString Digikam::RecognitionBenchmarker::result ( ) const
```

NOTE: Bench performance code. No need i18n here

## 6.1206 Digikam::RecognitionBenchmarker::Statistics Class Reference

### Public Attributes

- int **correctlyRecognized** = 0
- int **knownFaces** = 0

## 6.1207 Digikam::RecognitionPreprocessor Class Reference

Inheritance diagram for Digikam::RecognitionPreprocessor:

### Public Member Functions

- void **init** (PreprocessorSelection mode)
- cv::Mat **preprocess** (const cv::Mat &image) const override

### 6.1207.1 Member Function Documentation

#### 6.1207.1.1 preprocess()

```
cv::Mat Digikam::RecognitionPreprocessor::preprocess (
    const cv::Mat & image ) const [override], [virtual]
```

Implements [Digikam::FacePreprocessor](#).

## 6.1208 Digikam::RecognitionTrainingProvider Class Reference

Inheritance diagram for Digikam::RecognitionTrainingProvider:

### Public Member Functions

- `ImageListProvider * images` (const `Identity &`) override
- `ImageListProvider * newImages` (const `Identity &id`) override
- **`RecognitionTrainingProvider`** (const `Identity &identity`, const `QList< QPair< QImage *, QString > >` &`newImages`)

### Public Attributes

- `QListImageListProvider m_empty`
- `Identity m_identity`
- `QListImageListProvider m_toTrain`

### 6.1208.1 Detailed Description

A simple QImage training data container used by `RecognitionDatabase::train(Identity, QImage, QString)`.

## 6.1208.2 Member Function Documentation

### 6.1208.2.1 images()

```
ImageListProvider * Digikam::RecognitionTrainingProvider::images (
    const Identity & identity ) [override], [virtual]
```

Provides all images known for the given identity. Ownership of the returned object stays with the [TrainingDataProvider](#).

Implements [Digikam::TrainingDataProvider](#).

### 6.1208.2.2 newImages()

```
ImageListProvider * Digikam::RecognitionTrainingProvider::newImages (
    const Identity & identity ) [override], [virtual]
```

Provides those images for the given identity that have not yet been supplied for training. Ownership of the returned object stays with the [TrainingDataProvider](#).

Implements [Digikam::TrainingDataProvider](#).

## 6.1209 Digikam::RecognitionTrainingUpdateQueue Class Reference

## 6.1210.1 Member Function Documentation

### 6.1210.1.1 [aboutToDeactivate\(\)](#)

```
void Digikam::RecognitionWorker::aboutToDeactivate ( ) [override], [protected], [virtual]
```

Called from [deactivate\(\)](#), typically from a different thread than the worker thread, possibly the UI thread. You can stop any extra controlled threads here. Immediately afterwards, an event will be sent to the working thread which will cause the event loop to quit. ([aboutToQuitLoop\(\)](#))

Reimplemented from [Digikam::WorkerObject](#).

### 6.1210.1.2 [process](#)

```
void Digikam::RecognitionWorker::process (
    const FacePipelineExtendedPackage::Ptr & package ) [slot]
```

TODO: investigate this method.

## 6.1211 Digikam::RedEye::RegressionTree Struct Reference

### Public Member Functions

## 6.1211.1 Member Function Documentation

### 6.1211.1.1 `operator()`

```
const std::vector< float > & Digikam::RedEye::RegressionTree::operator() (
    const std::vector< float > & feature_pixel_values,
    unsigned long & i ) const
```

requires

- All the index values in splits are less than

#### Parameters

<code>feature_pixel_values</code>	size.
-----------------------------------	-------

- `leaf_values.size()` is a power of 2. (i.e. we require a tree with all the levels fully filled out.
- `leaf_values.size() == splits.size()+1` (i.e. there needs to be the right number of leaves given the number of splits in the tree) ensures runs through the tree and returns the vector at the leaf we end up in.

#### Parameters

<code>i</code>	egal the selected leaf node index.
----------------	------------------------------------

## 6.1215.1 Constructor & Destructor Documentation

### 6.1215.1.1 RedEyeCorrectionFilter()

```
Digikam::RedEyeCorrectionFilter::RedEyeCorrectionFilter (
    const RedEyeCorrectionContainer & settings,
    DImgThreadedFilter *const parentFilter,
    const DImg & orgImage,
    const DImg & destImage,
    int progressBegin = 0,
    int progressEnd = 100 ) [explicit]
```

Constructor for slave mode: execute immediately in current thread with specified master filter

## 6.1215.2 Member Function Documentation

### 6.1215.2.1 filterAction()

```
FilterAction Digikam::RedEyeCorrectionFilter::filterAction ( ) [override], [virtual]
```

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1215.2.2 filterIdentifier()

```
QString Digikam::RedEyeCorrectionFilter::filterIdentifier ( ) const [inline], [override],
[virtual]
```

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

## 6.1219.1 Member Function Documentation

### 6.1219.1.1 setHudWidget()

```
void Digikam::RegionFrameItem::setHudWidget (
    QGraphicsWidget *const hudWidget )
```

Sets a widget item as HUD item. A HUD item will be positioned relative to this item, and repositioned on position changes or resizing. Ownership of the item is taken, and it is made a child item of this item. You can also add QWidget directly. It will be wrapped in a proxy item.

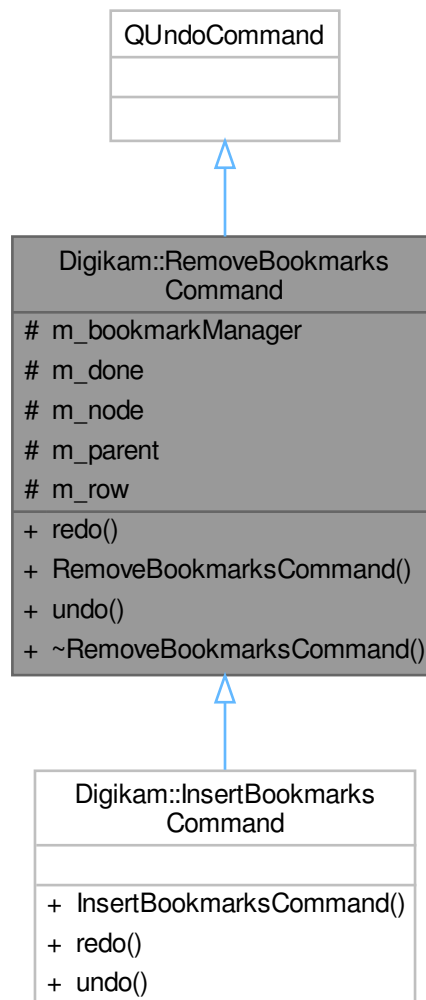

### 6.1219.1.2 setViewportRect

```
void Digikam::RegionFrameItem::setViewportRect (
    const QRectF & rect ) [slot]
```

The associated HUD item is dynamically moved to be visible. This can only be done for *one* region at a time. Set the current primary view region of the scene by this method to dynamically reposition the HUD inside this region. The rect given is in scene coordinates.

*Translates the model index from this model to host's tag model.*
- `~RGTagModel () override`  
*Destructor.*

### 6.1230.1 Detailed Description

The `RGTagModel` class is a wrapper above `QAbstractItemModel`. It holds data for the tag tree displayed in `ReverseGeocodingWidget`. The model gets the data from the tag model of host application and displays it in a `QTreeView`. It stores three type of tags: old tags (the tags that belong to the host's tag model), spacer tags (tags representing address elements or custom tags) and new tags (tags containing data retrieved from backend).

### 6.1230.2 Constructor & Destructor Documentation

#### 6.1230.2.1 RGTagModel()

```

Digikam::RGTagModel::RGTagModel (
    QAbstractItemModel *const externalTagModel,
    QObject *const parent = nullptr ) [explicit]

```

#### Parameters

<code>externalTagModel</code>	The tag model found in the host application.
<code>parent</code>	The parent object

### 6.1230.3 Member Function Documentation

#### 6.1230.3.1 addDataInTree()

```
void Digikam::RGTagModel::addDataInTree (
    TreeBranch * currentBranch,
    int currentRow,
    const QStringList & addressElements,
    const QStringList & elementsData )
```

##### Parameters

<i>currentBranch</i>	The branch from where the scan starts.
<i>currentRow</i>	The row of the current branch.
<i>addressElements</i>	A list containing address elements. Example: {Country}, {City}...
<i>elementsData</i>	A list containing the name of each address element found in elements. Example: France, Paris...

#### 6.1230.3.2 addExternalTags()

```
void Digikam::RGTagModel::addExternalTags (
    TreeBranch * parentBranch,
    int currentRow )
```

##### Parameters

<i>parentBranch</i>	The branch that will be parent for the old tag.
<i>currentRow</i>	The row where this external tag will be added.

#### 6.1230.3.3 addNewData()

```
QList< QList< TagData > > Digikam::RGTagModel::addNewData (
    const QStringList & elements,
    const QStringList & resultedData )
```

##### Parameters

<i>elements</i>	A list containing address elements. Example: {Country}, {City}...
<i>resultedData</i>	A list containing the name of each address element found in elements. Example: France, Paris...

##### Returns

A list containing new tags

#### 6.1230.3.4 addNewTag()

```
QPersistentModelIndex Digikam::RGTagModel::addNewTag (
    const QModelIndex & parent,
```

```
const QString & newTagName,
const QString & newElement )
```

**Parameters**

<i>parent</i>	The index of the parent.
<i>newTagName</i>	The name of the new tag.
<i>newElement</i>	The new element of the tag.

**6.1230.3.5 addSpacerTag()**

```
void Digikam::RGTagModel::addSpacerTag (
    const QModelIndex & parent,
    const QString & spacerName )
```

**Parameters**

<i>parent</i>	The index of the parent. If parent == QModelIndex(), then the spacer is added to top-level
<i>spacerName</i>	The name of the spacer. If it's an address element, the address element name will have the form {addressElement}. For example: {Country}, {City}...

**6.1230.3.6 branchFromIndex()**

```
TreeBranch * Digikam::RGTagModel::branchFromIndex (
    const QModelIndex & index ) const
```

**Parameters**

<i>index</i>	Current model index.
--------------	----------------------

**Returns**

The branch for the current index.

**6.1230.3.7 climbTreeAndGetSpacers()**

```
void Digikam::RGTagModel::climbTreeAndGetSpacers (
    const TreeBranch * currentBranch )
```

**Parameters**

<i>currentBranch</i>	The branch from where the search starts.
----------------------	--

**6.1230.3.8 deleteAllSpacersOrNewTags()**

```
void Digikam::RGTagModel::deleteAllSpacersOrNewTags (
    const QModelIndex & currentIndex,
    Type whatShouldRemove )
```

**Parameters**

<i>currentIndex</i>	If <i>whatShouldRemove</i> represents a spacer, the function will remove all spacers below <i>currentIndex</i> . If <i>whatShouldRemove</i> represents a new tag, the function will delete all new tags.
<i>whatShouldRemove</i>	The tag type that should be removed. The options are: spacers or new tags.

**6.1230.3.9 deleteTag()**

```
void Digikam::RGTagModel::deleteTag (
    const QModelIndex & currentIndex )
```

**Parameters**

<i>currentIndex</i>	The tag found at this index will be deleted.
---------------------	--

**6.1230.3.10 findAndDeleteSpacersOrNewTags()**

```
void Digikam::RGTagModel::findAndDeleteSpacersOrNewTags (
    TreeBranch * currentBranch,
    int currentRow,
    Type whatShouldRemove )
```

**Parameters**

<i>currentBranch</i>	The tree branch from where the scan starts.
<i>currentRow</i>	The row of current branch.
<i>whatShouldRemove</i>	The tag type that should to be removed. The options are: spacers or new tags.

**6.1230.3.11 fromSourceIndex()**

```
QModelIndex Digikam::RGTagModel::fromSourceIndex (
    const QModelIndex & externalTagModelIndex ) const
```

Translates the model index from host's tag model to this model.

**Returns**

The index of current old tag.

**6.1230.3.12 getSpacerAddress()**

```
QList< TagData > Digikam::RGTAGModel::getSpacerAddress (
    TreeBranch * currentBranch )
```

**Parameters**

<i>currentBranch</i>	The branch where the scan stops.
----------------------	----------------------------------

**Returns**

The tag address of *currentBranch*

**6.1230.3.13 getSpacers()**

```
QList< QList< TagData > > Digikam::RGTagModel::getSpacers ( )
```

**Returns**

The spacer list.

**6.1230.3.14 getTagType()**

```
Type Digikam::RGTagModel::getTagType (
    const QModelIndex & index ) const
```

**Parameters**

<i>index</i>	The index of the tag.
--------------	-----------------------

**Returns**

The type of the tag found at *index*.

**6.1230.3.15 readdNewTags()**

```
void Digikam::RGTagModel::readdNewTags (
    const QList< QList< TagData > > & tagAddressList )
```

**Parameters**

<i>tagAddressList</i>	A list containing new tags.
-----------------------	-----------------------------

**6.1230.3.16 readdTag()**

```
void Digikam::RGTagModel::readdTag (
    TreeBranch *& currentBranch,
    int currentRow,
    const QList< TagData > & tagAddressElements,
    int currentAddressElementIndex )
```

## Parameters

<i>currentBranch</i>	The branch from where the scan starts.
<i>currentRow</i>	The row of the currentBranch.
<i>tagAddressElements</i>	A list containing address elements. Example: {Country}, {City}...
<i>currentAddressElementIndex</i>	The current element in the tag address list.

## Note

tagAddressElements contains address tag: Places,Spain,Barcelona readTag climbs the tree and checks on each level if tagAddressElements[level] is found. if the tag is found, it climbs up the next level else, it recreates the new tag and climbs up that tree.

**6.1230.3.17 toSourceIndex()**

```
QModelIndex Digikam::RGTagModel::toSourceIndex (
    const QModelIndex & tagModelIndex ) const
```

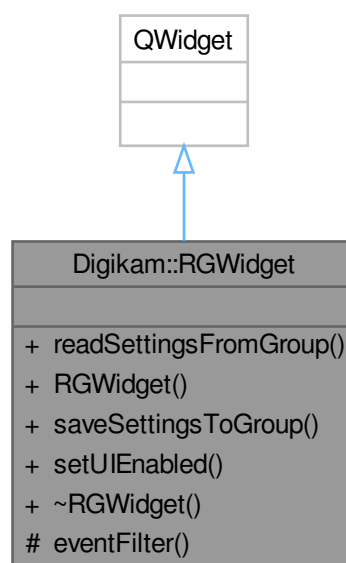

## Returns

The index of a tag in host's tag model.

**6.1231 Digikam::RGWidget Class Reference**

The [RGWidget](#) class represents the main widget for reverse geocoding.

Inheritance diagram for Digikam::RGWidget:

## Signals

- void [signalProgressChanged](#) (const int currentProgress)
- void [signalProgressSetup](#) (const int maxProgress, const QString &progressText)
- void [signalSetUIEnabled](#) (const bool enabledState)
- void **signalSetUIEnabled** (const bool enabledState, QObject \*const cancelObject, const QString &cancelSlot)
- void [signalUndoCommand](#) (GPSUndoCommand \*undoCommand)

## Public Member Functions

- void [readSettingsFromGroup](#) (const KConfigGroup \*const group)
- [RGWidget](#) (GPSItemModel \*const imageModel, QItemSelectionModel \*const selectionModel, QAbstractItemModel \*externTagModel, QWidget \*const parent=nullptr)  
*Constructor.*
- void [saveSettingsToGroup](#) (KConfigGroup \*const group)
- void [setUIEnabled](#) (const bool state)
- [~RGWidget](#) () override

## Protected Member Functions

## 6.1231.1 Constructor & Destructor Documentation

### 6.1231.1.1 RGWidget()

```
Digikam::RGWidget::RGWidget (
    GPSItemModel *const imageModel,
    QItemSelectionModel *const selectionModel,
    QAbstractItemModel * externTagModel,
    QWidget *const parent = nullptr ) [explicit]
```

#### Parameters

<i>imageModel</i>	The image model
<i>selectionModel</i>	The image selection model
<i>externTagModel</i>	The tag model
<i>parent</i>	The parent object

### 6.1231.1.2 ~RGWidget()

```
Digikam::RGWidget::~~RGWidget ( ) [override]
```

#### Destructor

## 6.1231.2 Member Function Documentation

### 6.1231.2.1 eventFilter()

```
bool Digikam::RGWidget::eventFilter (
    QObject * watched,
    QEvent * event ) [override], [protected]
```

Here are filtered the events.

### 6.1231.2.2 readSettingsFromGroup()

```
void Digikam::RGWidget::readSettingsFromGroup (
    const KConfigGroup *const group )
```

Restores the settings of widgets contained in reverse geocoding widget.

#### Parameters

<i>group</i>	Here are stored the settings.
--------------	-------------------------------

### 6.1231.2.3 saveSettingsToGroup()

```
void Digikam::RGWidget::saveSettingsToGroup (
    KConfigGroup *const group )
```

Saves the settings of widgets contained in reverse geocoding widget.

#### Parameters

<i>group</i>	Here are stored the settings.
--------------	-------------------------------

### 6.1231.2.4 setUIEnabled()

```
void Digikam::RGWidget::setUIEnabled (
    const bool state )
```

Sets whether the containing widgets are enabled or disabled.

#### Parameters

<i>state</i>	If true, the controls are enabled.
--------------	------------------------------------

### 6.1231.2.5 signalProgressChanged

```
void Digikam::RGWidget::signalProgressChanged (
```

```
const int currentProgress ) [signal]
```

Counts how many images were processed.

#### Parameters

<i>currentProgress</i>	The number of processed images.
------------------------	---------------------------------

### 6.1231.2.6 signalProgressSetup

```
void Digikam::RGWidget::signalProgressSetup (
    const int maxProgress,
    const QString & progressText ) [signal]
```

Update the progress bar.

### 6.1231.2.7 signalSetUIEnabled

```
void Digikam::RGWidget::signalSetUIEnabled (
    const bool enabledState ) [signal]
```

This signal emits when containing widgets need to be enabled or disabled.

#### Parameters

<i>enabledState</i>	If true, the containing widgets will be enabled. Else, they will be disabled.
---------------------	---

### 6.1231.2.8 signalUndoCommand

```
void Digikam::RGWidget::signalUndoCommand (
    GPSUndoCommand * undoCommand ) [signal]
```

Sends the needed data to Undo/Redo Widget.

#### Parameters

<i>undoCommand</i>	Holds the data that will be used for undo or redo actions
--------------------	---

### Protected Slots

- virtual void **slotTokenTriggered** (const QString &)

## Protected Member Functions

- bool [addToken](#) (const QString &id, const QString &description, const QString &actionName=QString())
- virtual QString [parseOperation](#) ([ParseSettings](#) &settings, const QRegularExpressionMatch &match)=0
- void **setDescription** (const QString &desc)
- void **setIcon** (const QString &pixmap)
- void **setRegExp** (const QRegularExpression &regExp)
- void [setUseTokenMenu](#) (bool value)

## 6.1233.1 Member Function Documentation

### 6.1233.1.1 addToken()

```
bool Digikam::Rule::addToken (
    const QString & id,
    const QString & description,
    const QString & actionName = QString() ) [protected]
```

add a token to the parser, every parser should at least assign one token object

#### Parameters

<i>id</i>	the token id string (used for parsing)
<i>description</i>	the description of the token (used for example in the tooltip)
<i>actionName</i>	[optional] the name of the token action (only used when the token menu is displayed)

#### Returns

### 6.1233.1.2 escapeToken()

```
QString Digikam::Rule::escapeToken (
    const QString & token ) [static]
```

Escape the token characters to make them work in regular expressions

#### Parameters

<i>token</i>	the token to be escaped
--------------	-------------------------

#### Returns

A token with escaped characters. This token can then be used in a regular expression

### 6.1233.1.3 isValid()

```
bool Digikam::Rule::isValid ( ) const
```

Checks the validity of the parse object

**Returns**

true if valid

**6.1233.1.4 parseOperation()**

```
virtual QString Digikam::Rule::parseOperation (
    ParseSettings & settings,
    const QRegularExpressionMatch & match ) [protected], [pure virtual]
```

TODO: describe me

**Parameters**

<i>settings</i>	contains settings
<i>match</i>	result of the regular expression match done in <code>Option::parse()</code>

**Returns**

Implemented in [Digikam::CaseModifier](#), [Digikam::DefaultValueModifier](#), [Digikam::RangeModifier](#), [Digikam::RemoveDoublesModifier](#), [Digikam::ReplaceModifier](#), [Digikam::TrimmedModifier](#), [Digikam::UniqueModifier](#), [Digikam::CameraNameOption](#), [Digikam::DatabaseOption](#), [Digikam::DateOption](#), [Digikam::DirectoryNameOption](#), [Digikam::FilePropertiesOption](#), [Digikam::MetadataOption](#), [Digikam::SequenceNumberOption](#), [Digikam::Modifier](#), and [Digikam::Option](#).

**6.1233.1.5 regExp()**

```
QRegularExpression & Digikam::Rule::regExp ( ) const
```

TODO: This is probably not needed anymore. Find out. returns the currently assigned regExp object. Note that it is returned as a const ref, meaning that if you use it in your custom parse operation, the main parse method has already searched for the pattern and filled in the results of this search, so that you can use `QRegularExpressionMatch::captured()` immediately, you don't have to search on your own.

For example when implementing the [Option::parseOperation\(\)](#) method, get the regExp object with

```
const QRegularExpression& reg = regExp();
```

and immediately fetch possible matches with

```
const QString& param1 = reg.captured(1);
```

**See also**

[Option](#)  
[Modifier](#)

**Returns**

a const ref to the assigned regexp object

### 6.1233.1.6 registerButton()

```
QPushButton * Digikam::Rule::registerButton (  
    QWidget * parent )
```

Register a button in the parent object. By calling this method, a new button for the parser object will be created and all necessary connections will be setup.

**Parameters**

<i>parent</i>	the parent object the button will be registered for
---------------	---

**Returns**

a pointer to the newly created button

**6.1233.1.7 registerMenu()**

```
QAction * Digikam::Rule::registerMenu (
    QMenu * parent )
```

Register a menu action in the parent object. By calling this method, a new action for the parser object will be created and all necessary connections will be setup.

**Parameters**

<i>parent</i>	the parent object the action will be registered for
---------------	---

**Returns**

a pointer to the newly created action

**6.1233.1.8 reset()**

```
void Digikam::Rule::reset ( ) [virtual]
```

Resets the parser to its initial state

Reimplemented in [Digikam::UniqueModifier](#).

**6.1233.1.9 setUseTokenMenu()**

```
void Digikam::Rule::setUseTokenMenu (
    bool value ) [protected]
```

If multiple tokens have been assigned to a rule, a menu will be created. If you want to display a menu for every defined token, set this method to 'true' and re-implement the

**See also**

slotTokenTriggered method.

**Parameters**

<i>value</i>	boolean parameter to set token menu usage
--------------	---

### 6.1233.1.10 tokens()

```
TokenList & Digikam::Rule::tokens ( ) const
```

#### Returns

a list of all registered tokens

### 6.1233.1.11 useTokenMenu()

```
bool Digikam::Rule::useTokenMenu ( ) const
```

Returns true if a token menu is used.

## 6.1234 Digikam::RuleDialog Class Reference

## 6.1238.1 Detailed Description

A Search [Album](#) representation

## 6.1238.2 Member Function Documentation

### 6.1238.2.1 [databaseUrl\(\)](#)

```
CoreDbUrl Digikam::SAlbum::databaseUrl ( ) const [override], [virtual]
```

#### Returns

the kde url of the album

Implements [Digikam::Album](#).

### 6.1238.2.2 [getTemporaryHaarTitle\(\)](#)

```
QString Digikam::SAlbum::getTemporaryHaarTitle (
    DatabaseSearch::HaarSearchType haarType ) [static]
```

Returns the title for a temporary haar search depending on the sub-type used for this search

#### Parameters

<i>haarType</i>	type of the haar search to get the name for
-----------------	---

**Returns**

string that identifies this album uniquely as an unsaved search

**6.1238.2.3 getTemporaryTitle()**

```
QString Digikam::SAlbum::getTemporaryTitle (
    DatabaseSearch::Type type,
    DatabaseSearch::HaarSearchType haarType = DatabaseSearch::HaarImageSearch ) [static]
```

Returns the title of search albums that is used to mark them as a temporary search that isn't saved officially yet and is only used for viewing purposes.

**Parameters**

<i>type</i>	the type of the search to get the temporary title for
<i>haarType</i>	there are several haar searches, so that this search type needs a special handling

**Returns**

string that identifies this album uniquely as an unsaved search

**6.1238.2.4 isTemporarySearch()**

```
bool Digikam::SAlbum::isTemporarySearch ( ) const
```

Indicates whether this album is a temporary search or not.

**Returns**

true if this is a temporary search album, else false

- void **triggerShowProgressDialog** ()
- void **incrementProgressDialog** (int)
- void **progressFromInitialization** (const QString &, int)

## 6.1242.1 Member Function Documentation

### 6.1242.1.1 abortInitialization()

```
void Digikam::ScanController::abortInitialization ( )
```

If the controller is currently processing a database update (typically after first run), cancel this hard and as soon as possible. Any progress may be lost.

### 6.1242.1.2 beginFileMetadataWrite()

```
void Digikam::ScanController::beginFileMetadataWrite (
    const ItemInfo & info )
```

Implementation of [FileMetadataWrite](#), see there. Calling these methods is equivalent.

### 6.1242.1.3 cancelAllAndSuspendCollectionScan()

```
void Digikam::ScanController::cancelAllAndSuspendCollectionScan ( )
```

Cancels all running or scheduled operations and suspends scanning. This method returns when all scanning has stopped. This includes a call to [suspendCollectionScan\(\)](#). Restart with [resumeCollectionScan](#).

### 6.1242.1.4 cancelCompleteScan()

```
void Digikam::ScanController::cancelCompleteScan ( )
```

If the controller is currently doing a complete scan (typically at startup), stop this operation. It can be resumed later.

### 6.1242.1.5 completeCollectionScan()

```
void Digikam::ScanController::completeCollectionScan (
    bool defer = false )
```

Carries out a complete collection scan, providing progress feedback. Synchronous, returns when ready. The database will be locked while the scan is running. With the DeferFiles variant, deep files scanning (new files), the part which can take long, will be done during the time after the method returns, shortening the synchronous wait. After `completeCollectionScanDeferFiles`, you need to call `allowToScanDeferredFiles()` once to enable scanning the deferred files.

### 6.1242.1.6 completeCollectionScanInBackground()

```
void Digikam::ScanController::completeCollectionScanInBackground (
    bool defer,
    bool fastScan = true )
```

Scan Whole collection without to display a progress dialog or to manage splashscreen, as for [NewItemsFinder](#) tool.

### 6.1242.1.7 databaseInitialization()

```
ScanController::Advice Digikam::ScanController::databaseInitialization ( )
```

Calls [CoreDbAccess::checkReadyForUse\(\)](#), providing progress feedback if schema updating occurs. Synchronous, returns when ready.

### 6.1242.1.8 finishFileMetadataWrite()

```
void Digikam::ScanController::finishFileMetadataWrite (
    const ItemInfo & info,
    bool changed )
```

Implementation of [FileMetadataWrite](#), see there. Calling these methods is equivalent.

### 6.1242.1.9 getNewIdsList()

```
QList< qlonglong > Digikam::ScanController::getNewIdsList ( ) const
```

Returns item ids from new detected items

### 6.1242.1.10 hintAtModificationOfItems()

```
void Digikam::ScanController::hintAtModificationOfItems (
    const QList< qlonglong > & ids )
```

Hint at the fact that an item may have changed, although its modification date may not have changed. Note that a scan of the containing directory will need to be triggered nonetheless for the hints to take effect.

### 6.1242.1.11 hintAtMoveOrCopyOfAlbum()

```
void Digikam::ScanController::hintAtMoveOrCopyOfAlbum (
    const PAlbum *const album,
    const PAlbum *const dstAlbum,
    const QString & newAlbumName = QString() )
```

Hint at the imminent copy, move or rename of an album, so that the collection scanner is informed about this. If the album is renamed, give the new name in newAlbumName. DstAlbum is the new parent album / dstPath is the new parent directory of the album, so do not include the album name to dstPath.

### 6.1242.1.12 hintAtMoveOrCopyOfItems()

```
void Digikam::ScanController::hintAtMoveOrCopyOfItems (
    const QList< qlonglong > & ids,
    const PAlbum *const dstAlbum,
    const QStringList & itemNames )
```

Hint at the imminent copy, move or rename of items, so that the collection scanner is informed about this. Give the list of existing items, specify the destination with dstAlbum, and give the names at destination in itemNames (Unless for rename, names wont usually change. Give them nevertheless.)

### 6.1242.1.13 restart()

```
void Digikam::ScanController::restart ( )
```

Restart thread after shutdown.

### 6.1242.1.14 restartCollectionScan()

```
void Digikam::ScanController::restartCollectionScan ( )
```

Restart a suspended collection scanning. All scheduled scanning tasks are queued and will be done when [restartCollectionScan\(\)](#) has been called.

### 6.1242.1.15 resumeCollectionScan()

```
void Digikam::ScanController::resumeCollectionScan ( )
```

Resume a suspended collection scanning. All scheduled scanning tasks are queued and will be done when [resumeCollectionScan\(\)](#) has been called. Calling these methods is recursive, you must resume as often as you called suspend.

### 6.1242.1.16 scannedInfo()

```
ItemInfo Digikam::ScanController::scannedInfo (
    const QString & filePath,
    CollectionScanner::FileScanMode mode = CollectionScanner::NormalScan )
```

If necessary (modified or newly created, scans the file directly Returns the up-to-date [ItemInfo](#).

#### 6.1242.1.17 `scheduleCollectionScan()`

```
void Digikam::ScanController::scheduleCollectionScan (
    const QString & path )
```

Schedules a scan of the specified part of the collection. Asynchronous, returns immediately.

#### 6.1242.1.18 `scheduleCollectionScanExternal()`

```
void Digikam::ScanController::scheduleCollectionScanExternal (
    const QString & path )
```

Schedules a scan of the specified part of the collection. Asynchronous, returns immediately. A very long delay with timer restart may be introduced before the actual scanning starts, so that you can call this often without checking for duplicates. This method is only for the `QFileSystemWatcher`.

#### 6.1242.1.19 `scheduleCollectionScanRelaxed()`

```
void Digikam::ScanController::scheduleCollectionScanRelaxed (
    const QString & path )
```

Schedules a scan of the specified part of the collection. Asynchronous, returns immediately. A small delay may be introduced before the actual scanning starts, so that you can call this often without checking for duplicates. This method must only be used from the main thread.

#### 6.1242.1.20 `shutDown()`

```
void Digikam::ScanController::shutDown ( )
```

Wait for the thread to finish. Returns after all tasks are done.

#### 6.1242.1.21 `suspendCollectionScan()`

```
void Digikam::ScanController::suspendCollectionScan ( )
```

Temporarily suspend collection scanning. All scheduled scanning tasks are queued and will be done when [resumeCollectionScan\(\)](#) has been called. Calling these methods is recursive, you must resume as often as you called suspend.

#### 6.1242.1.22 `updateUniqueHash()`

```
void Digikam::ScanController::updateUniqueHash ( )
```

Carries out a complete collection scan, at the same time updating the unique hash in the database and thumbnail database. Synchronous, returns when ready. The database will be locked while the scan is running.

## 6.1243 Digikam::ScanController::FileMetadataWrite Class Reference

### Public Member Functions

- void **changed** (bool wasChanged)
- **FileMetadataWrite** (const [ItemInfo](#) &info)

### Protected Attributes

- bool **m\_changed** = false
- [ItemInfo](#) **m\_info**

### 6.1243.1 Detailed Description

When writing metadata to the file, the file content on disk changes, but the information is taken from the database; therefore, the resulting scanning process can be optimized.

Thus, if you write metadata of an [ItemInfo](#) from the database to disk, do this in the scope of a [FileMetadataWrite](#) object.

*Retrieve the requested shade color, using the specified color as the base color and the specified contrast.*

### 6.1248.1 Detailed Description

A set of methods used to work with colors.

[SchemeManager](#) currently provides access to the system color palette that the user has selected (in the future, it is expected to do more). It greatly expands on QPalette by providing five distinct "sets" with several color choices each, covering background, foreground, and decoration colors.

A [SchemeManager](#) instance represents colors corresponding to a "set", where a set consists of those colors used to draw a particular type of element, such as a menu, button, view, selected text, or tooltip. Each set has a distinct set of colors, so you should always use the correct set for drawing and never assume that a particular foreground for one set is the same as the foreground for any other set. Individual colors may be quickly referenced by creating an anonymous instance and invoking a lookup member.

#### Note

The color palettes for the various states of a widget (active, inactive, disabled) may be wildly different. Therefore, it is important to take the state into account. This is why the [SchemeManager](#) constructor requires a QPalette::ColorGroup as an argument.

To facilitate working with potentially-varying states, two convenience API's are provided. These are [SchemeManager::adjustBackground](#) and its sister [SchemeManager::adjustForeground](#), and the helper class KStatefulBrush.

## 6.1248.2 Member Enumeration Documentation

### 6.1248.2.1 BackgroundRole

enum [Digikam::SchemeManager::BackgroundRole](#)

This enumeration describes the background color being selected from the given set.

Background colors are suitable for drawing under text, and should never be used to draw text. In combination with one of the overloads of [SchemeManager::shade](#), they may be used to generate colors for drawing frames, bevels, and similar decorations.

#### Enumerator

NormalBackground	Normal background.
AlternateBackground	Alternate background; for example, for use in lists. This color may be the same as BackgroundNormal, especially in sets other than View and Window.
ActiveBackground	Third color; for example, items which are new, active, requesting attention, etc. Alerting the user that a certain field must be filled out would be a good usage (although NegativeBackground could be used to the same effect, depending on what you are trying to achieve). Unlike ActiveText, this should not be used for mouseover effects.
LinkBackground	Fourth color; corresponds to (unvisited) links. Exactly what this might be used for is somewhat harder to qualify; it might be used for bookmarks, as a 'you can click here' indicator, or to highlight recent content (i.e. in a most-recently-accessed list).
VisitedBackground	Fifth color; corresponds to visited links. This can also be used to indicate "not recent" content, especially when a color is needed to denote content which is "old" or "archival".
NegativeBackground	Sixth color; for example, errors, untrusted content, etc.
NeutralBackground	Seventh color; for example, warnings, secure/encrypted content.
PositiveBackground	Eighth color; for example, success messages, trusted content.

### 6.1248.2.2 ColorSet

enum [Digikam::SchemeManager::ColorSet](#)

This enumeration describes the color set for which a color is being selected.

Color sets define a color "environment", suitable for drawing all parts of a given region. Colors from different sets should not be combined.

#### Enumerator

View	Views; for example, frames, input fields, etc. If it contains things that can be selected, it is probably a View.
Window	Non-editable window elements; for example, menus. If it isn't a Button, View, or Tooltip, it is probably a Window.
Button	Buttons and button-like controls. In addition to buttons, "button-like" controls such as non-editable dropdowns, scrollbar sliders, slider handles, etc. should also use this role.

## Enumerator

Selection	Selected items in views. Note that unfocused or disabled selections should use the Window role. This makes it more obvious to the user that the view containing the selection does not have input focus.
Tooltip	Tooltips. The tooltip set can often be substituted for the view set when editing is not possible, but the Window set is deemed inappropriate. "What's This" help is an excellent example, another might be pop-up notifications (depending on taste).
Complementary	Complementary areas. Some applications want some areas to have a different color scheme. Usually dark areas over a light theme. For instance the fullscreen UI of a picture viewer, or the logout/lock screen of the plasma workspace ask for a dark color scheme even on light themes.

**6.1248.2.3 DecorationRole**

```
enum Digikam::SchemeManager::DecorationRole
```

This enumeration describes the decoration color being selected from the given set.

Decoration colors are used to draw decorations (such as frames) for special purposes. Like color shades, they are neither foreground nor background colors. Text should not be painted over a decoration color, and decoration colors should not be used to draw text.

## Enumerator

FocusColor	Color used to draw decorations for items which have input focus.
HoverColor	Color used to draw decorations for items which will be activated by clicking.

**6.1248.2.4 ForegroundRole**

```
enum Digikam::SchemeManager::ForegroundColor
```

This enumeration describes the foreground color being selected from the given set.

Foreground colors are suitable for drawing text or glyphs (such as the symbols on window decoration buttons, assuming a suitable background brush is used), and should never be used to draw backgrounds.

For window decorations, the following is suggested, but not set in stone:

- Maximize - PositiveText
- Minimize - NeutralText
- Close - NegativeText
- WhatsThis - LinkText
- Sticky - ActiveText

## Enumerator

NormalText	Normal foreground.
InactiveText	Second color; for example, comments, items which are old, inactive or disabled. Generally used for things that are meant to be "less important". InactiveText is not the same role as NormalText in the inactive state.
ActiveText	Third color; for example items which are new, active, requesting attention, etc. May be used as a hover color for clickable items.
LinkText	Fourth color; use for (unvisited) links. May also be used for other clickable items or content that indicates relationships, items that indicate somewhere the user can visit, etc.
VisitedText	Fifth color; used for (visited) links. As with LinkText, may be used for items that have already been "visited" or accessed. May also be used to indicate "historical" (i.e. "old") items or information, especially if InactiveText is being used in the same context to express something different.
NegativeText	Sixth color; for example, errors, untrusted content, deletions, etc.
NeutralText	Seventh color; for example, warnings, secure/encrypted content.
PositiveText	Eighth color; for example, additions, success messages, trusted content.

**6.1248.2.5 ShadeRole**

```
enum Digikam::SchemeManager::ShadeRole
```

This enumeration describes the color shade being selected from the given set.

Color shades are used to draw "3d" elements, such as frames and bevels. They are neither foreground nor background colors. Text should not be painted over a shade, and shades should not be used to draw text.

## Enumerator

LightShade	The light color is lighter than dark() or shadow() and contrasts with the base color.
MidlightShade	The midlight color is in between base() and light().
MidShade	The mid color is in between base() and dark().
DarkShade	The dark color is in between mid() and shadow().
ShadowShade	The shadow color is darker than light() or midlight() and contrasts the base color.

**6.1248.3 Constructor & Destructor Documentation****6.1248.3.1 SchemeManager() [1/2]**

```
Digikam::SchemeManager::SchemeManager (
    const SchemeManager & other )
```

Construct a copy of another [SchemeManager](#).

**6.1248.3.2 ~SchemeManager()**

```
Digikam::SchemeManager::~SchemeManager ( ) [default]
```

Destructor

### 6.1248.3.3 SchemeManager() [2/2]

```
Digikam::SchemeManager::SchemeManager (
    QPalette::ColorGroup state,
    ColorSet set = View,
    KSharedConfigPtr config = KSharedConfigPtr() ) [explicit]
```

Construct a palette from given color set and state, using the colors from the given KConfig (if null, the system colors are used).

## 6.1248.4 Member Function Documentation

### 6.1248.4.1 adjustBackground()

```
void Digikam::SchemeManager::adjustBackground (
    QPalette & palette,
    BackgroundRole newRole = NormalBackground,
    QPalette::ColorRole color = QPalette::Base,
    ColorSet set = View,
    const KSharedConfigPtr & config = KSharedConfigPtr() ) [static]
```

Adjust a QPalette by replacing the specified QPalette::ColorRole with the requested background color for all states. Using this method is safer than replacing individual states, as it insulates you against changes in QPalette::Color↔Group.

#### Note

Although it is possible to replace a foreground color using this method, it's bad usability to do so. Just say "no".

### 6.1248.4.2 adjustForeground()

```
void Digikam::SchemeManager::adjustForeground (
    QPalette & palette,
    ForegroundRole newRole = NormalText,
    QPalette::ColorRole color = QPalette::Text,
    ColorSet set = View,
    const KSharedConfigPtr & config = KSharedConfigPtr() ) [static]
```

Adjust a QPalette by replacing the specified QPalette::ColorRole with the requested foreground color for all states. Using this method is safer than replacing individual states, as it insulates you against changes in QPalette::Color↔Group.

#### Note

Although it is possible to replace a background color using this method, it's bad usability to do so. Just say "no".

**6.1248.4.3 background()**

```
QBrush Digikam::SchemeManager::background (
    BackgroundRole role = NormalBackground ) const
```

Retrieve the requested background brush.

**6.1248.4.4 contrast()**

```
int Digikam::SchemeManager::contrast ( ) [static]
```

Returns the contrast for borders.

**Returns**

the contrast (between 0 for minimum and 10 for maximum contrast)

**6.1248.4.5 contrastF()**

```
qreal Digikam::SchemeManager::contrastF (
    const KSharedConfigPtr & config = KSharedConfigPtr() ) [static]
```

Returns the contrast for borders as a floating point value.

**Parameters**

<i>config</i>	pointer to the config from which to read the contrast setting (the default is to use KSharedConfig::openConfig())
---------------	---

**Returns**

the contrast (between 0.0 for minimum and 1.0 for maximum contrast)

**6.1248.4.6 createApplicationPalette()**

```
QPalette Digikam::SchemeManager::createApplicationPalette (
    const KSharedConfigPtr & config ) [static]
```

Used to obtain the QPalette that will be used to set the application palette from desktop platform theme.

**Parameters**

<i>config</i>	KConfig from which to load the colors
---------------	---------------------------------------

**Returns**

the QPalette

**6.1248.4.7 decoration()**

```
QBrush Digikam::SchemeManager::decoration (
    DecorationRole role ) const
```

Retrieve the requested decoration brush.

**6.1248.4.8 foreground()**

```
QBrush Digikam::SchemeManager::foreground (
    ForegroundRole role = NormalText ) const
```

Retrieve the requested foreground brush.

**6.1248.4.9 operator=()**

```
SchemeManager & Digikam::SchemeManager::operator= (
    const SchemeManager & other )
```

Standard assignment operator

**6.1248.4.10 shade() [1/3]**

```
QColor Digikam::SchemeManager::shade (
    const QColor & color,
    ShadeRole role ) [static]
```

Retrieve the requested shade color, using the specified color as the base color and the system contrast setting.

**Note**

Shades are chosen such that all shades would contrast with the base color. This means that if base is very dark, the 'dark' shades will be lighter than the base color, with `midlight() == shadow()`. Conversely, if the base color is very light, the 'light' shades will be darker than the base color, with `light() == mid()`.

**6.1248.4.11 shade() [2/3]**

```
QColor Digikam::SchemeManager::shade (
    const QColor & color,
    ShadeRole role,
    qreal contrast,
    qreal chromaAdjust = 0.0 ) [static]
```

**Parameters**

<i>color</i>	The color base color
<i>role</i>	The color role
<i>contrast</i>	Amount roughly specifying the contrast by which to adjust the base color, between -1.0 and 1.0 (values between 0.0 and 1.0 correspond to the value from <a href="#">SchemeManager::contrastF</a> )
<i>chromaAdjust</i>	(optional) Amount by which to adjust the chroma of the shade (1.0 means no adjustment)

**Note**

Shades are chosen such that all shades would contrast with the base color. This means that if base is very dark, the 'dark' shades will be lighter than the base color, with `midlight() == shadow()`. Conversely, if the base color is very light, the 'light' shades will be darker than the base color, with `light() == mid()`.

**6.1248.4.12 shade() [3/3]**

```
QColor Digikam::SchemeManager::shade (
    ShadeRole role ) const
```

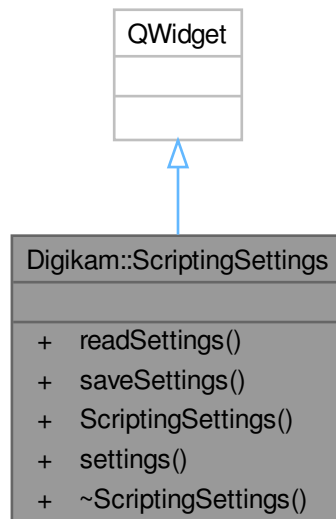

Retrieve the requested shade color, using `SchemeManager::background(SchemeManager::NormalBackground)` as the base color and the contrast setting from the `KConfig` used to create this `SchemeManager` instance (the system contrast setting, if no `KConfig` was specified).

**Note**

Shades are chosen such that all shades would contrast with the base color. This means that if base is very dark, the 'dark' shades will be lighter than the base color, with `midlight() == shadow()`. Conversely, if the base color is very light, the 'light' shades will be darker than the base color, with `light() == mid()`.

## 6.1272.1 Detailed Description

[Filter](#) model for searches that can filter by search type

## 6.1272.2 Member Function Documentation

### 6.1272.2.1 isFiltering()

```
bool Digikam::SearchFilterModel::isFiltering ( ) const [override], [virtual]
```

Returns if the currently applied filters will result in any filtering.

#### Returns

`true` if the current selected filter could result in any filtering without checking if this really happens.

Reimplemented from [Digikam::CheckableAlbumFilterModel](#).

### 6.1272.2.2 matches()

```
bool Digikam::SearchFilterModel::matches (
    Album * album ) const [override], [protected], [virtual]
```

This method provides the basic match checking algorithm. Return true if this single album matches the current criteria. This method can be overridden to provide custom filtering.

#### Parameters

<i>album</i>	the album to tell if it matches the filter criteria or not.
--------------	---

Reimplemented from [Digikam::CheckableAlbumFilterModel](#).

### 6.1272.2.3 setFilterSearchType()

```
void Digikam::SearchFilterModel::setFilterSearchType (
    DatabaseSearch::Type type )
```

Set the DatabaseSearch::Type.

### 6.1272.2.4 setListTemporarySearches()

```
void Digikam::SearchFilterModel::setListTemporarySearches (
    bool list )
```

Sets if temporary search albums shall be listed

## 6.1276.1 Constructor & Destructor Documentation

### 6.1276.1.1 [searchModel\(\)](#)

```
Digikam::searchModel::searchModel (
    QObject *const parent = nullptr ) [explicit]
```

Create a model containing searches

## 6.1276.2 Member Function Documentation

### 6.1276.2.1 [albumData\(\)](#)

```
QVariant Digikam::searchModel::albumData (
    Album * a,
    int role ) const [override], [protected], [virtual]
```

#### Note

these can be reimplemented in a subclass

Reimplemented from [Digikam::AbstractCheckableAlbumModel](#).

### 6.1276.2.2 albumForId()

```
Album * Digikam::SearchModel::albumForId (
    int id ) const [override], [protected], [virtual]
```

Implements [Digikam::AbstractCountingAlbumModel](#).

### 6.1276.2.3 setPixmapForNormalSearches()

```
void Digikam::SearchModel::setPixmapForNormalSearches (
    const QPixmap & pix )
```

Set pixmaps for the DecorationRole

### 6.1276.2.4 setReplaceNames()

```
void Digikam::SearchModel::setReplaceNames (
    const QHash< QString, QString > & replaceNames )
```

Set a hash of internal names (key) that shall be replaced by a user-visible string (value). This affects Qt::DisplayRole and AlbumTitleRole.

## 6.1277 Digikam::SearchModificationHelper Class Reference

Inheritance diagram for Digikam::SearchModificationHelper:

### Public Slots

- void [slotCreateFuzzySearchFromDropped](#) (const QString &name, const QString &filePath, float threshold, float maxThreshold, const QList< int > &targetAlbums, bool overwriteIfExisting)
- void [slotCreateFuzzySearchFromImage](#) (const QString &name, const [ItemInfo](#) &image, float threshold, float maxThreshold, const QList< int > &targetAlbums, bool overwriteIfExisting=false)
- void [slotCreateFuzzySearchFromSketch](#) (const QString &name, [SketchWidget](#) \*sketchWidget, unsigned int numberOfResults, const QList< int > &targetAlbums, bool overwriteIfExisting=false)
- [SAlbum](#) \* [slotCreateTimeLineSearch](#) (const QString &desiredName, const [DateRangeList](#) &dateRanges, bool overwriteIfExisting=false)
- void [slotSearchDelete](#) ([SAlbum](#) \*searchAlbum)
- void [slotSearchRename](#) ([SAlbum](#) \*searchAlbum)

## Public Member Functions

- [SAlbum](#) \* [createFuzzySearchFromDropped](#) (const QString &name, const QString &filePath, float threshold, float maxThreshold, const QList< int > &targetAlbums, bool overwriteIfExists=false)
- [SAlbum](#) \* [createFuzzySearchFromImage](#) (const QString &name, const [ItemInfo](#) &image, float threshold, float maxThreshold, const QList< int > &targetAlbums, bool overwriteIfExists=false)
- [SAlbum](#) \* [createFuzzySearchFromSketch](#) (const QString &name, [SketchWidget](#) \*sketchWidget, unsigned int numberOfResults, const QList< int > &targetAlbums, bool overwriteIfExists=false)
- [SearchModificationHelper](#) (QObject \*const parent, QWidget \*const dialogParent)
- [~SearchModificationHelper](#) () override

### 6.1277.1 Detailed Description

Utility class providing methods to modify search albums ([SAlbum](#)) in a way useful to implement views.

#### Author

jwienke

### 6.1277.2 Constructor & Destructor Documentation

#### 6.1277.2.1 SearchModificationHelper()

```
Digikam::SearchModificationHelper::SearchModificationHelper (
    QObject *const parent,
    QWidget *const dialogParent )
```

Constructor.

#### Parameters

<i>parent</i>	the parent for qt parent child mechanism
<i>dialogParent</i>	parent widget for dialogs displayed by this object

#### 6.1277.2.2 ~SearchModificationHelper()

```
Digikam::SearchModificationHelper::~~SearchModificationHelper ( ) [override]
```

Destructor.

### 6.1277.3 Member Function Documentation

#### 6.1277.3.1 createFuzzySearchFromDropped()

```
SAlbum * Digikam::SearchModificationHelper::createFuzzySearchFromDropped (
    const QString & name,
    const QString & filePath,
    float threshold,
    float maxThreshold,
    const QList< int > & targetAlbums,
    bool overwriteIfExists = false )
```

See also

[slotCreateFuzzySearchFromDropped\(\)](#)

Returns

the newly created album

### 6.1277.3.2 createFuzzySearchFromImage()

```
SAlbum * Digikam::SearchModificationHelper::createFuzzySearchFromImage (
    const QString & name,
    const ItemInfo & image,
    float threshold,
    float maxThreshold,
    const QList< int > & targetAlbums,
    bool overwriteIfExists = false )
```

See also

[slotCreateFuzzySearchFromImage\(\)](#)

Returns

the newly created album

### 6.1277.3.3 createFuzzySearchFromSketch()

```
SAlbum * Digikam::SearchModificationHelper::createFuzzySearchFromSketch (
    const QString & name,
    SketchWidget * sketchWidget,
    unsigned int numberOfResults,
    const QList< int > & targetAlbums,
    bool overwriteIfExists = false )
```

See also

[slotCreateFuzzySearchFromSketch\(\)](#)

Returns

the newly created album

### 6.1277.3.4 slotCreateFuzzySearchFromDropped

```
void Digikam::SearchModificationHelper::slotCreateFuzzySearchFromDropped (
    const QString & name,
    const QString & filePath,
    float threshold,
    float maxThreshold,
    const QList< int > & targetAlbums,
    bool overwriteIfExists ) [slot]
```

Creates a new fuzzy search for finding similar photos based on the file path of a photo and selects it in the album manager after creation.

## Parameters

<i>name</i>	of the new search
<i>filePath</i>	path of the image to base this search on
<i>threshold</i>	minimum threshold for image search
<i>maxThreshold</i>	maximum threshold for image search
<i>targetAlbums</i>	The image must be in one of these albums
<i>overwriteIfExists</i>	if true, an existing search with the desired name will be overwritten without prompting the user for a new name

## 6.1277.3.5 slotCreateFuzzySearchFromImage

```
void Digikam::SearchModificationHelper::slotCreateFuzzySearchFromImage (
    const QString & name,
    const ItemInfo & image,
    float threshold,
    float maxThreshold,
    const QList< int > & targetAlbums,
    bool overwriteIfExists = false ) [slot]
```

Creates a new fuzzy search for finding similar photos based on one photo and selects it in the album manager after creation.

## Parameters

<i>name</i>	of the new search
<i>image</i>	the image to base this search on
<i>threshold</i>	the threshold for image search, $0 \leq \text{threshold} \leq 1$
<i>maxThreshold</i>	the maximum threshold of similarity.
<i>targetAlbums</i>	The image must be in one of these albums
<i>overwriteIfExists</i>	if true, an existing search with the desired name will be overwritten without prompting the user for a new name

## 6.1277.3.6 slotCreateFuzzySearchFromSketch

```
void Digikam::SearchModificationHelper::slotCreateFuzzySearchFromSketch (
    const QString & name,
    SketchWidget * sketchWidget,
    unsigned int numberOfResults,
    const QList< int > & targetAlbums,
    bool overwriteIfExists = false ) [slot]
```

Creates a new fuzzy search based on a sketch created by the user and selects it in the [AlbumManager](#) after creation.

## Parameters

<i>name</i>	the name of the new sketch search
<i>sketchWidget</i>	the widget containing the sketch of the user
<i>numberOfResults</i>	max number of results to display
<i>targetAlbums</i>	The image must be in one of these albums
<i>overwriteIfExists</i>	if true, an existing search with the desired name will be overwritten without prompting the

### 6.1277.3.7 slotCreateTimeLineSearch

```
SAlbum * Digikam::SearchModificationHelper::slotCreateTimeLineSearch (
    const QString & desiredName,
    const DateRangeList & dateRanges,
    bool overwriteIfExists = false ) [slot]
```

Creates a new timeline search.

#### Parameters

<i>desiredName</i>	desired name for the search. If this name already exists and <code>overwriteIfExists</code> is false, then the user will be prompted for a new name
<i>dateRanges</i>	date ranges to contain in this timeline search. If this is empty, no search will be created.
<i>overwriteIfExists</i>	if true, an existing search with the desired name will be overwritten without prompting the user for a new name

### 6.1277.3.8 slotSearchDelete

```
void Digikam::SearchModificationHelper::slotSearchDelete (
    SAlbum * searchAlbum ) [slot]
```

Deletes the given search after prompting the user.

#### Parameters

<i>searchAlbum</i>	search to delete
--------------------	------------------

### 6.1277.3.9 slotSearchRename

```
void Digikam::SearchModificationHelper::slotSearchRename (
    SAlbum * searchAlbum ) [slot]
```

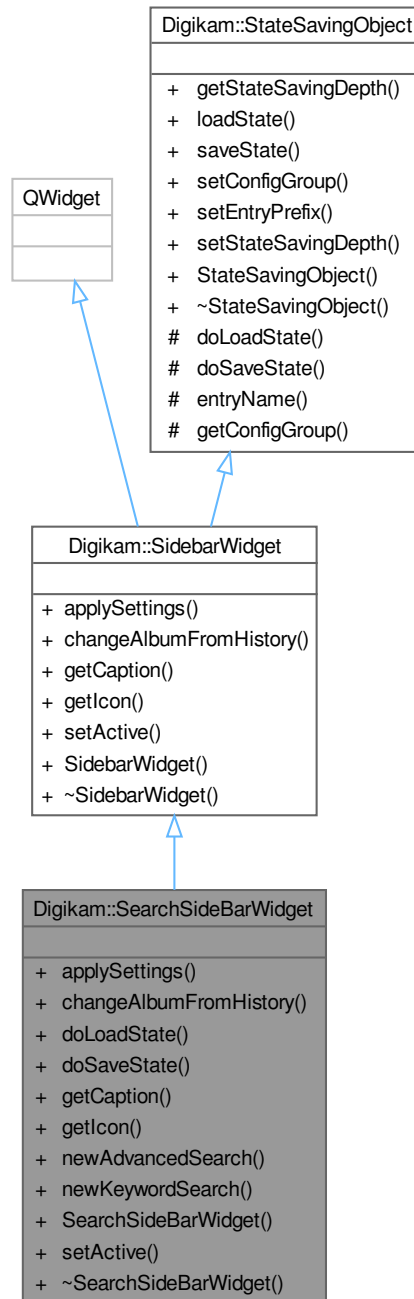

Renames the given search via a dialog.

#### Parameters

<i>searchAlbum</i>	search to rename
--------------------	------------------

## 6.1278 Digikam::SearchSideBarWidget Class Reference

Inheritance diagram for Digikam::SearchSideBarWidget:

### Public Member Functions

- void `applySettings()` override
- void `changeAlbumFromHistory` (const QList< Album \* > &album) override

- void [doLoadState](#) () override
- void [doSaveState](#) () override
- const QString [getCaption](#) () override
- const QIcon [getIcon](#) () override
- void [newAdvancedSearch](#) ()
- void [newKeywordSearch](#) ()
- [SearchSideBarWidget](#) (QWidget \*const parent, [searchModel](#) \*const searchModel, [SearchModificationHelper](#) \*const searchModificationHelper)
- void [setActive](#) (bool active) override

### Public Member Functions inherited from [Digikam::SidebarWidget](#)

- [SidebarWidget](#) (QWidget \*const parent)
- [~SidebarWidget](#) () override=default

### Public Member Functions inherited from [Digikam::StateSavingObject](#)

- [StateSavingDepth](#) [getStateSavingDepth](#) () const
- void [loadState](#) ()
- void [saveState](#) ()
- virtual void [setConfigGroup](#) (const KConfigGroup &group)
- virtual void [setEntryPrefix](#) (const QString &prefix)
- void [setStateSavingDepth](#) (const [StateSavingDepth](#) depth)
- [StateSavingObject](#) (QObject \*const host)
- virtual [~StateSavingObject](#) ()

### Additional Inherited Members

### Public Types inherited from [Digikam::StateSavingObject](#)

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }

### Signals inherited from [Digikam::SidebarWidget](#)

- void [requestActiveTab](#) ([SidebarWidget](#) \*)
- void [signalNotificationError](#) (const QString &message, int type)

### Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- KConfigGroup [getConfigGroup](#) () const

## 6.1278.1 Member Function Documentation

### 6.1278.1.1 [applySettings\(\)](#)

```
void Digikam::SearchSideBarWidget::applySettings ( ) [override], [virtual]
```

This method is invoked when the application settings should be (re-) applied to this widget.

Implements [Digikam::SidebarWidget](#).

### 6.1278.1.2 changeAlbumFromHistory()

```
void Digikam::SearchSideBarWidget::changeAlbumFromHistory (
    const QList< Album * > & album ) [override], [virtual]
```

This is called on this widget when the history requires to move back to the specified album

Implements [Digikam::SidebarWidget](#).

### 6.1278.1.3 doLoadState()

```
void Digikam::SearchSideBarWidget::doLoadState ( ) [override], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1278.1.4 doSaveState()

```
void Digikam::SearchSideBarWidget::doSaveState ( ) [override], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1278.1.5 getCaption()

```
const QString Digikam::SearchSideBarWidget::getCaption ( ) [override], [virtual]
```

Must be implemented to return the title of this sidebar's tab.

#### Returns

localized title string

Implements [Digikam::SidebarWidget](#).

### 6.1278.1.6 getIcon()

```
const QIcon Digikam::SearchSideBarWidget::getIcon ( ) [override], [virtual]
```

Must be implemented and return the icon that shall be visible for this sidebar widget.

#### Returns

pixmap icon

Implements [Digikam::SidebarWidget](#).

### 6.1278.1.7 setActive()

```
void Digikam::SearchSideBarWidget::setActive (
    bool active ) [override], [virtual]
```

This method is called if the visible sidebar widget is changed.

## Parameters

<i>active</i>	if true, this widget is the new active widget, if false another widget is active
---------------	--

Implements [Digikam::SidebarWidget](#).

## 6.1279 Digikam::SearchTabHeader Class Reference

Inheritance diagram for Digikam::SearchTabHeader:

### Public Slots

- void `copySearch` ([SAlbum](#) \*album)
- void `editSearch` ([SAlbum](#) \*album)
- void `newAdvancedSearch` ()
- void `newKeywordSearch` ()
- void `selectedSearchChanged` ([Album](#) \*album)

### Signals

- void `searchShallBeSelected` (const QList< [Album](#) \* > &albums)

### Public Member Functions

- `SearchTabHeader` ([QWidget](#) \*const parent)

## 6.1280 Digikam::SearchTextBar Class Reference

Inheritance diagram for Digikam::SearchTextBar:

### Public Types

- enum `HighlightState` { `NEUTRAL` , `HAS_RESULT` , `NO_RESULT` }

## Public Types inherited from [Digikam::StateSavingObject](#)

- void [doSaveState](#) () override

## Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- QString [entryName](#) (const QString &base) const
- KConfigGroup [getConfigGroup](#) () const

## 6.1280.1 Detailed Description

A text input for searching entries with visual feedback. Can be used on QAbstractItemModels.

## 6.1280.2 Member Enumeration Documentation

### 6.1280.2.1 HighlightState

```
enum Digikam::SearchTextBar::HighlightState
```

Possible highlighting states a [SearchTextBar](#) can have.

Enumerator

NEUTRAL	No highlighting at all. Background is colored in a neutral way according to the theme.
HAS_RESULT	The background color of the text input indicates that a result was found.
NO_RESULT	The background color indicates that no result was found.

## 6.1280.3 Member Function Documentation

### 6.1280.3.1 doLoadState()

```
void Digikam::SearchTextBar::doLoadState ( ) [override], [protected], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1280.3.2 doSaveState()

```
void Digikam::SearchTextBar::doSaveState ( ) [override], [protected], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1280.3.3 getCurrentHighlightState()

```
SearchTextBar::HighlightState Digikam::SearchTextBar::getCurrentHighlightState ( ) const
```

Tells the current highlighting state of the text input indicated via the background color.

Returns

current highlight state

### 6.1280.3.4 setCaseSensitive()

```
void Digikam::SearchTextBar::setCaseSensitive (
    bool b )
```

Indicate whether this search text bar can be toggled to between case- sensitive and -insensitive or if always case-insensitive shall be used.

## Parameters

<i>b</i>	if <code>true</code> the user can decide the toggle between case sensitivity, on <code>false</code> every search is case- insensitive
----------	---

**6.1280.3.5 setHighlightOnResult()**

```
void Digikam::SearchTextBar::setHighlightOnResult (
    bool highlight )
```

Tells whether highlighting for found search results shall be used or not (green and red).

Default behavior has highlighting enabled.

## Parameters

<i>highlight</i>	<code>true</code> activates green and red highlighting, with <code>false</code> the normal widget background color will be displayed always
------------------	---

## 6.1281 Digikam::SearchTextBarDb Class Reference

### 6.1281.1 Detailed Description

A text input for searching entries with visual feedback. Can be used on Database Models.

#### Author

Gilles Caulier

### 6.1281.2 Member Function Documentation

#### 6.1281.2.1 [setFilterModel\(\)](#)

```
void Digikam::SearchTextBarDb::setFilterModel (
    AlbumFilterModel *const filterModel )
```

Sets the filter model this text bar shall use to invoke filtering on and reading the result for highlighting from.

#### Parameters

<i>filterModel</i>	filter model to use for filtering. <code>null</code> means there is no model to use and external connections need to be created with <code>signalSearchTextSettings</code> and <code>slotSearchResult</code>
--------------------	--

#### 6.1281.2.2 [setModel\(\)](#) [1/2]

```
void Digikam::SearchTextBarDb::setModel (
    AbstractAlbumModel *const model )
```

Sets the album model this text bar shall use to invoke filtering on and reading the result for highlighting from.

#### Parameters

<i>model</i>	album model to use for filtering. <code>null</code> means there is no model to use and external connections need to be created with <code>signalSearchTextSettings</code> and <code>slotSearchResult</code>
--------------	---

#### 6.1281.2.3 [setModel\(\)](#) [2/2]

```
void Digikam::SearchTextBarDb::setModel (
    QAbstractItemModel * model,
    int uniqueIdRole,
    int displayRole = Qt::DisplayRole )
```

If the given model is `!= null`, the model is used to populate the completion for this text field.

## Parameters

<i>model</i>	to fill from or null for manual mode
<i>uniqueIdRole</i>	a role for which the model will return a unique integer for each entry
<i>displayRole</i>	the role to retrieve the text for completion, default is Qt::DisplayRole.

## 6.1282 Digikam::SearchTextFilterSettings Class Reference

Inheritance diagram for Digikam::SearchTextFilterSettings:

### Public Types

- enum `TextFilterFields` {

## 6.1285.1 Member Function Documentation

### 6.1285.1.1 addGroupToLayout()

```
void Digikam::SearchView::addGroupToLayout (
    SearchGroup * group ) [override], [protected], [virtual]
```

Implements [Digikam::AbstractSearchGroupContainer](#).

### 6.1285.1.2 bottomBarPixmap()

```
QPixmap Digikam::SearchView::bottomBarPixmap (
    int w,
    int h ) [override], [virtual]
```

Implements [Digikam::SearchViewThemedPartsCache](#).

### 6.1285.1.3 createSearchGroup()

```
SearchGroup * Digikam::SearchView::createSearchGroup ( ) [override], [protected], [virtual]
```

Implements [Digikam::AbstractSearchGroupContainer](#).

### 6.1285.1.4 groupLabelPixmap()

```
QPixmap Digikam::SearchView::groupLabelPixmap (
    int w,
    int h ) [override], [virtual]
```

Implements [Digikam::SearchViewThemedPartsCache](#).

## 6.1286 Digikam::SearchViewBottomBar Class Reference

Inheritance diagram for Digikam::SearchViewBottomBar:

### Signals

- void **addGroupPressed** ()
- void **cancelPressed** ()
- void **okPressed** ()
- void **resetPressed** ()
- void **tryoutPressed** ()

### Public Member Functions

- **SearchViewBottomBar** ([SearchViewThemedPartsCache](#) \*const cache, QWidget \*const parent=nullptr)

### Protected Member Functions

- void **paintEvent** (QPaintEvent \*) override

### Protected Attributes

- QPushButton \* **m\_addGroupsButton** = nullptr
- QDialogButtonBox \* **m\_buttonBox** = nullptr
- QHBoxLayout \* **m\_mainLayout** = nullptr
- QPushButton \* **m\_resetButton** = nullptr
- [SearchViewThemedPartsCache](#) \* **m\_themeCache** = nullptr

## 6.1287 Digikam::SearchViewThemedPartsCache Class Reference

Inheritance diagram for Digikam::SearchViewThemedPartsCache:

### Public Member Functions

- virtual QPixmap **bottomBarPixmap** (int w, int h)=0
- virtual QPixmap **groupLabelPixmap** (int w, int h)=0

## 6.1288 Digikam::SearchWindow Class Reference

Inheritance diagram for Digikam::SearchWindow:

### Signals

- void [searchEdited](#) (int id, const QString &query)

### Public Member Functions

- void [readSearch](#) (int id, const QString &query)
- void [reset](#) ()
- QString [search](#) () const
- [SearchWindow](#) ()

### Protected Slots

- void [searchCancel](#) ()
- void [searchOk](#) ()
- void [searchTryout](#) ()

### Protected Member Functions

- void [keyPressEvent](#) (QKeyEvent \*) override

## 6.1288.1 Constructor & Destructor Documentation

### 6.1288.1.1 SearchWindow()

```
Digikam::SearchWindow::SearchWindow ( )
```

Create a new [SearchWindow](#) with an empty advanced search

## 6.1288.2 Member Function Documentation

### 6.1288.2.1 readSearch()

```
void Digikam::SearchWindow::readSearch (
    int id,
    const QString & query )
```

Read the given search into the search widgets. The id will be emitted with the searchEdited signal.

### 6.1288.2.2 reset()

```
void Digikam::SearchWindow::reset ( )
```

Reset the search widget to an empty search. Current id is -1.

### 6.1288.2.3 search()

```
QString Digikam::SearchWindow::search ( ) const
```

Returns the currently produced search string

### 6.1288.2.4 searchEdited

```
void Digikam::SearchWindow::searchEdited (
    int id,
    const QString & query ) [signal]
```

Signals that the user has finished editing the search. The given query is the same as [search\(\)](#).

## Additional Inherited Members

## Protected Member Functions inherited from [Digikam::SearchXmlReader](#)

- SearchXml::Operator `readOperator` (const QString &, SearchXml::Operator) const
- SearchXml::Relation `readRelation` (const QString &, SearchXml::Relation) const

## 6.1289.1 Constructor & Destructor Documentation

### 6.1289.1.1 SearchXmlCachingReader()

```
Digikam::SearchXmlCachingReader::SearchXmlCachingReader (  
    const QString & xml ) [explicit]
```

This class has the same semantics as [SearchXmlReader](#), but performs some caching and is thus much more relaxed than [SearchXmlReader](#) about the calling order of methods: With this class, you can access properties of a group until the next group is read, access properties and the value of a field until the next field is read, with all calls possible multiple times.

## 6.1290 Digikam::SearchXmlReader Class Reference

Inheritance diagram for Digikam::SearchXmlReader:

### Public Member Functions

- SearchXml::Relation **readRelation** (const QString &, SearchXml::Relation) const

### Protected Attributes

- SearchXml::Operator **m\_defaultFieldOperator**

## 6.1290.1 Member Function Documentation

### 6.1290.1.1 defaultFieldOperator()

```
SearchXml::Operator Digikam::SearchXmlReader::defaultFieldOperator ( ) const
```

Returns the default field operator. This operator can be overridden by a specific [fieldOperator\(\)](#).

### 6.1290.1.2 fieldOperator()

```
SearchXml::Operator Digikam::SearchXmlReader::fieldOperator ( ) const
```

Returns the field attributes. Only valid if the current element is a field. `fieldOperator` returns the default operator if the field has not specified any.

### 6.1290.1.3 groupCaption()

```
QString Digikam::SearchXmlReader::groupCaption ( ) const
```

Returns the (optional) group caption. Only valid if the current element is a group.

### 6.1290.1.4 groupOperator()

```
SearchXml::Operator Digikam::SearchXmlReader::groupOperator ( ) const
```

Returns the group operator. Only valid if the current element is a group.

### 6.1290.1.5 isFieldElement()

```
bool Digikam::SearchXmlReader::isFieldElement ( ) const
```

Returns if the current element is a field element (start or end element).

### 6.1290.1.6 isGroupElement()

```
bool Digikam::SearchXmlReader::isGroupElement ( ) const
```

Returns if the current element is a group element (start or end element).

### 6.1290.1.7 readNext()

```
SearchXml::Element Digikam::SearchXmlReader::readNext ( )
```

Continue parsing the document. Returns the type of the current element.

### 6.1290.1.8 readToEndOfElement()

```
void Digikam::SearchXmlReader::readToEndOfElement ( )
```

General helper method: Reads XML until the end element of the current start element is reached.

### 6.1290.1.9 readToFirstField()

```
void Digikam::SearchXmlReader::readToFirstField ( )
```

General helper method: Reads XML until the first field of the next or first found group is reached.

**6.1290.1.10 readToStartOfElement()**

```
bool Digikam::SearchXmlReader::readToStartOfElement (
    const QString & name )
```

General helper method: Reads XML a start element with the given name is found. The method goes to the next start element, and from there down the hierarchy, but not further up in the hierarchy. Returns false if the element is not found.

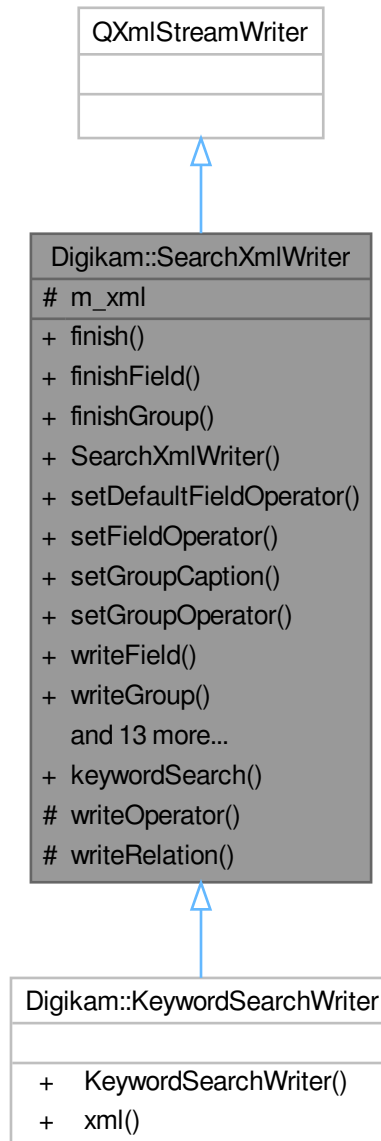

**6.1290.1.11 value()**

```
QString Digikam::SearchXmlReader::value ( )
```

Returns the field values. Only valid if the current element is a field. This reads to the end element of the field, and converts the found text/elements to the desired output.

## 6.1291 Digikam::SearchXmlWriter Class Reference

Inheritance diagram for Digikam::SearchXmlWriter:

### Public Member Functions

- void [finish](#) ()
- void [finishField](#) ()
- void [finishGroup](#) ()
- [SearchXmlWriter](#) ()
- void [setDefaultFieldOperator](#) (SearchXml::Operator op)

- void [setFieldOperator](#) (SearchXml::Operator op)
- void [setGroupCaption](#) (const QString &caption)
- void [setGroupOperator](#) (SearchXml::Operator op)
- void [writeField](#) (const QString &name, SearchXml::Relation relation)
- void [writeGroup](#) ()
- void [writeValue](#) (const QDateTime &dateTime)
- void [writeValue](#) (const QList< double > &valueList, int precision=8)
- void [writeValue](#) (const QList< float > &valueList, int precision=6)
- void [writeValue](#) (const QList< int > &valueList)
- void [writeValue](#) (const QList< QDateTime > &valueList)
- void [writeValue](#) (const QList< qlonglong > &valueList)
- void [writeValue](#) (const QString &value)
- void [writeValue](#) (const QStringList &valueList)
- void [writeValue](#) (double value, int precision=8)
- void [writeValue](#) (float value, int precision=6)
- void [writeValue](#) (int value)
- void [writeValue](#) (qlonglong value)
- QString [xml](#) () const

### Static Public Member Functions

- static QString [keywordSearch](#) (const QString &keyword)

### Protected Member Functions

- void [writeOperator](#) (const QString &, SearchXml::Operator)
- void [writeRelation](#) (const QString &, SearchXml::Relation)

### Protected Attributes

- QString [m\\_xml](#)

## 6.1291.1 Constructor & Destructor Documentation

### 6.1291.1.1 SearchXmlWriter()

```
Digikam::SearchXmlWriter::SearchXmlWriter ( ) [explicit]
```

Note that [SearchXmlWriter](#) and [SearchXmlGroupWriter](#) rely on you calling the methods following the restrictions set by the documentation; Otherwise you will not produce the desired output.

## 6.1291.2 Member Function Documentation

### 6.1291.2.1 finish()

```
void Digikam::SearchXmlWriter::finish ( )
```

Finish the XML. No further group can be added after calling this. You need to call this before you can get the resulting XML from [xml\(\)](#).

### 6.1291.2.2 finishField()

```
void Digikam::SearchXmlWriter::finishField ( )
```

Finish writing the current field. You shall call this method before adding another field, or closing the group.

### 6.1291.2.3 finishGroup()

```
void Digikam::SearchXmlWriter::finishGroup ( )
```

Finish the current group. You cannot add anymore fields after calling this. Note that you will want to call this before writing another group if you want the group on the same level. You can as well add nested groups and call this to close the group afterwards.

### 6.1291.2.4 keywordSearch()

```
QString Digikam::SearchXmlWriter::keywordSearch (
    const QString & keyword ) [static]
```

Returns ready-made XML for a query of type "keyword" with the specified text as keyword.

### 6.1291.2.5 setDefaultFieldOperator()

```
void Digikam::SearchXmlWriter::setDefaultFieldOperator (
    SearchXml::Operator op )
```

Sets the default operator for fields in this group "(field1 AND field2 AND ... fieldn)". The default operator can in each field be overridden. Default value is AND.

### 6.1291.2.6 setFieldOperator()

```
void Digikam::SearchXmlWriter::setFieldOperator (
    SearchXml::Operator op )
```

Adds an optional operator overriding the default field operator of the group.

### 6.1291.2.7 setGroupCaption()

```
void Digikam::SearchXmlWriter::setGroupCaption (
    const QString & caption )
```

Sets an optional caption.

### 6.1291.2.8 setGroupOperator()

```
void Digikam::SearchXmlWriter::setGroupOperator (
    SearchXml::Operator op )
```

Sets the operator applied to the group as a whole "OR (field1 ... fieldn)". Default value is OR.

### 6.1291.2.9 writeField()

```
void Digikam::SearchXmlWriter::writeField (
    const QString & name,
    SearchXml::Relation relation )
```

Adds a new field with the given name (entity) and relation, "Rating less than ...". Ensure that you closed the previous field with [finishField\(\)](#). For a reference of valid field names, look into [ItemQueryBuilder](#). The general rule is that names are like the database fields, but all lower-case.

### 6.1291.2.10 writeGroup()

```
void Digikam::SearchXmlWriter::writeGroup ( )
```

Adds a group. Use the returned group writer to add fields.

### 6.1291.2.11 writeValue()

```
void Digikam::SearchXmlWriter::writeValue (
    const QString & value )
```

Adds the value, "4" in the case of "Rating less than 4".

### 6.1291.2.12 xml()

```
QString Digikam::SearchXmlWriter::xml ( ) const
```

Get the created XML. The value is only valid if [finish\(\)](#) has been called.

### 6.1293.1.1 parseOperation()

```
QString Digikam::SequenceNumberOption::parseOperation (
    ParseSettings & settings,
    const QRegularExpressionMatch & match ) [override], [protected], [virtual]
```

TODO: describe me

**Parameters**

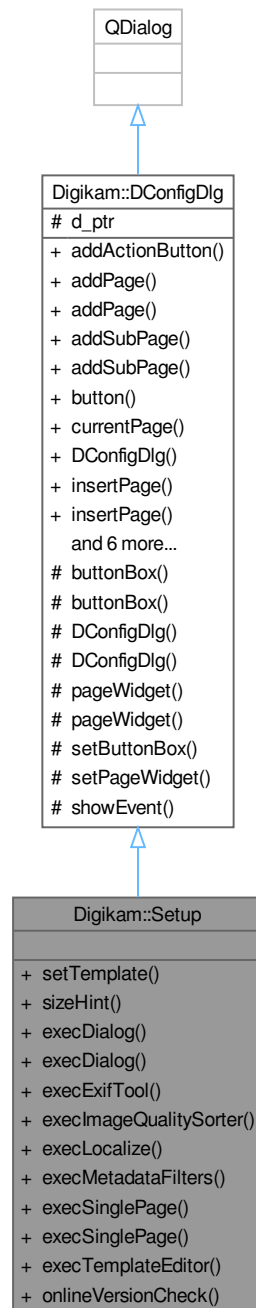

<i>settings</i>	contains settings
<i>match</i>	result of the regular expression match done in <code>Option::parse()</code>

**Returns**

Implements [Digikam::Option](#).

## 6.1298.1 Member Function Documentation

### 6.1298.1.1 createItemWidgets()

```
QList< QWidget * > Digikam::SetupCollectionDelegate::createItemWidgets (
    const QModelIndex & index ) const [override], [virtual]
```

Creates the list of widgets needed for an item.

#### Note

No initialization of the widgets is supposed to happen here. The widgets will be initialized based on needs for a given item.

If you want to connect some widget signals to any slot, you should do it here.

- index the index to create widgets for.

#### Note

If you want to know the index for which you are creating widgets, it is available as a QModelIndex Q\_↔ PROPERTY called "goya:creatingWidgetsForIndex". Ensure to add Q\_DECLARE\_METATYPE(QModelIndex) before your method definition to tell QVariant about QModelIndex.

#### Returns

the list of newly created widgets which will be used to interact with an item.

#### See also

[updateItemWidgets\(\)](#)

Implements [Digikam::DWItemDelegate](#).

### 6.1298.1.2 updateItemWidgets()

```
void Digikam::SetupCollectionDelegate::updateItemWidgets (
    const QList< QWidget * > & widgets,
    const QStyleOptionViewItem & option,
    const QPersistentModelIndex & index ) const [override], [virtual]
```

Updates a list of widgets for its use inside of the delegate (painting or event handling).

#### Note

All the positioning and sizing should be done in item coordinates.

#### Warning

Do not make widget connections in here, since this method will be called very regularly.

**Parameters**

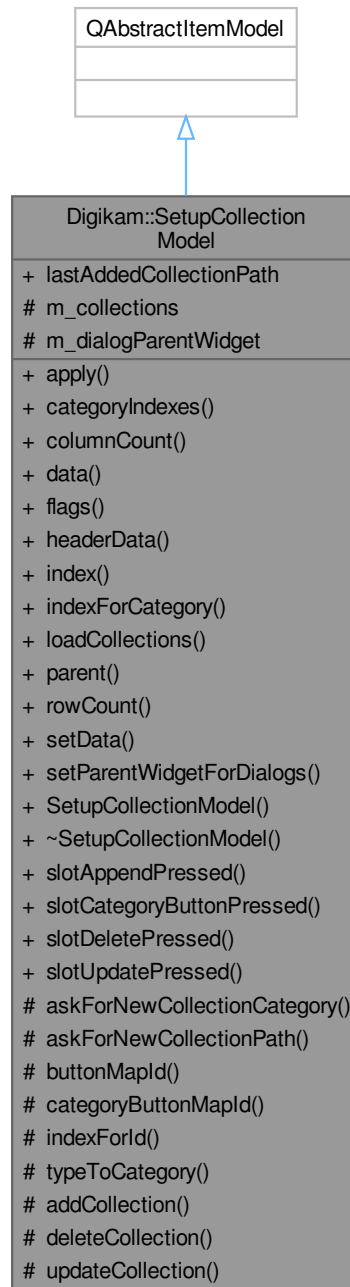

<i>widgets</i>	the widgets to update
<i>option</i>	the current set of style options for the view.
<i>index</i>	the model index of the item currently manipulated.

Implements [Digikam::DWItemDelegate](#).

## 6.1299 Digikam::SetupCollectionModel Class Reference

## 6.1299.1 Member Enumeration Documentation

### 6.1299.1.1 SetupCollectionDataRole

```
enum Digikam::SetupCollectionModel::SetupCollectionDataRole
```

[SetupCollectionModel](#) is a model specialized for use in [SetupCollectionTreeView](#). It provides a reads the current collections from [CollectionManager](#), displays them in three categories, and supports adding and removing collections

#### Enumerator

IsCategoryRole	Returns true if the model index is the index of a category.
CategoryButtonDisplayRole	The text for the category button.
IsAppendRole	Returns true if the model index is the index of a button.
AppendDecorationRole	The pixmap of the button.
IsUpdateRole	Returns true if the model index is the index of a button.
UpdateDecorationRole	The pixmap of the button.
IsDeleteRole	Returns true if the model index is the index of a button.
DeleteDecorationRole	The pixmap of the button.

## 6.1299.2 Constructor & Destructor Documentation

### 6.1299.2.1 SetupCollectionModel()

```
Digikam::SetupCollectionModel::SetupCollectionModel (
    QObject *const parent = nullptr ) [explicit]
```

Internal data structure:

The category entries get a model index with INTERNALID and are identified by their row(). The item entries get the index in m\_collections as INTERNALID. No item is ever removed from m\_collections, deleted entries are only marked as such.

Items have a location, a parentId, and a name and label field. parentId always contains the category, needed to implement parent(). The location is the location if it exists, or is null if the item was added. Name and label are null if unchanged, then the values from location are used. They are valid if edited (label) or the location was added (both valid, location null).

## 6.1299.3 Member Function Documentation

### 6.1299.3.1 slotAppendPressed

```
void Digikam::SetupCollectionModel::slotAppendPressed (
    int mappedId ) [slot]
```

Forward button clicked signals to this slot. mappedId is retrieved with the ButtonMapId role for the model index of the button

### 6.1299.3.2 slotCategoryButtonPressed

```
void Digikam::SetupCollectionModel::slotCategoryButtonPressed (
    int mappedId ) [slot]
```

Forward category button clicked signals to this slot. mappedId is retrieved with the CategoryButtonMapId role for the model index of the button

## 6.1300 Digikam::SetupCollectionModel::Item Class Reference

## 6.1321.1 Member Function Documentation

### 6.1321.1.1 `accessMode()`

```
LoadSaveThread::AccessMode Digikam::SharedLoadingTask::accessMode ( ) const [override], [virtual]
```

Implements [Digikam::LoadingProcessListener](#).

### 6.1321.1.2 `addListener()`

```
void Digikam::SharedLoadingTask::addListener (
    LoadingProcessListener *const listener ) [override], [virtual]
```

Implements [Digikam::LoadingProcess](#).

### 6.1321.1.3 `cacheKey()`

```
QString Digikam::SharedLoadingTask::cacheKey ( ) const [override], [virtual]
```

Implements [Digikam::LoadingProcess](#).

### 6.1321.1.4 `completed()`

```
bool Digikam::SharedLoadingTask::completed ( ) const [override], [virtual]
```

Implements [Digikam::LoadingProcess](#).

### 6.1321.1.5 `execute()`

```
void Digikam::SharedLoadingTask::execute ( ) [override], [virtual]
```

Reimplemented from [Digikam::LoadingTask](#).

### 6.1321.1.6 loadSaveNotifier()

```
LoadSaveNotifier * Digikam::SharedLoadingTask::loadSaveNotifier ( ) const [override], [virtual]
```

Implements [Digikam::LoadingProcessListener](#).

### 6.1321.1.7 notifyNewLoadingProcess()

```
void Digikam::SharedLoadingTask::notifyNewLoadingProcess (
    LoadingProcess *const process,
    const LoadingDescription & description ) [override], [virtual]
```

Implements [Digikam::LoadingProcess](#).

### 6.1321.1.8 progressInfo()

```
void Digikam::SharedLoadingTask::progressInfo (
    float progress ) [override], [virtual]
```

Reimplemented from [Digikam::LoadingTask](#).

### 6.1321.1.9 querySendNotifyEvent()

```
bool Digikam::SharedLoadingTask::querySendNotifyEvent ( ) const [override], [virtual]
```

Implements [Digikam::LoadingProcessListener](#).

### 6.1321.1.10 removeListener()

```
void Digikam::SharedLoadingTask::removeListener (
    LoadingProcessListener *const listener ) [override], [virtual]
```

Implements [Digikam::LoadingProcess](#).

### 6.1321.1.11 setResult()

```
void Digikam::SharedLoadingTask::setResult (
    const LoadingDescription & loadingDescription,
    const DImg & img ) [override], [virtual]
```

Implements [Digikam::LoadingProcessListener](#).

## 6.1325.1 Constructor & Destructor Documentation

### 6.1325.1.1 SharpenFilter()

```
Digikam::SharpenFilter::SharpenFilter (
    DImgThreadedFilter *const parentFilter,
    const DImg & orgImage,
    const DImg & destImage,
    int progressBegin = 0,
    int progressEnd = 100,
    double radius = 0.0,
    double sigma = 1.0 )
```

Constructor for slave mode: execute immediately in current thread with specified master filter

## 6.1325.2 Member Function Documentation

### 6.1325.2.1 filterAction()

```
FilterAction Digikam::SharpenFilter::filterAction ( ) [override], [virtual]
```

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1325.2.2 filterIdentifier()

```
QString Digikam::SharpenFilter::filterIdentifier ( ) const [inline], [override], [virtual]
```

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1325.2.3 readParameters()

```
void Digikam::SharpenFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

- `QAbstractItemView * m_view = nullptr`

### Additional Inherited Members

### Signals inherited from [Digikam::ItemDelegateOverlay](#)

- `void hideNotification ()`
- `void requestNotification (const QModelIndex &index, const QString &message)`
- `void update (const QModelIndex &index)`

## 6.1328.1 Member Function Documentation

### 6.1328.1.1 checkIndex()

```
bool Digikam::ShowHideVersionsOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Return true here if you want to show the overlay for the given index. The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.1328.1.2 createButton()

```
ItemViewHoverButton * Digikam::ShowHideVersionsOverlay::createButton ( ) [override], [protected],
[virtual]
```

Create your widget here. Pass view() as parent.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 6.1328.1.3 setActive()

```
void Digikam::ShowHideVersionsOverlay::setActive (
    bool active ) [override], [virtual]
```

Will call [createButton\(\)](#).

Reimplemented from [Digikam::HoverButtonDelegateOverlay](#).

### 6.1328.1.4 updateButton()

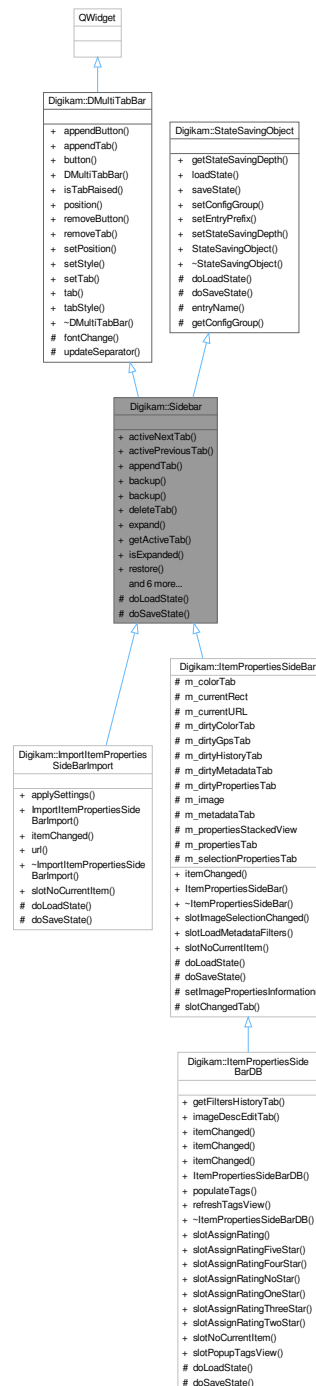

```
void Digikam::ShowHideVersionsOverlay::updateButton (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Called when a new index is entered. Reposition your button here, adjust and store state.

Implements [Digikam::HoverButtonDelegateOverlay](#).

**6.1329.1 Detailed Description**

This class handles a sidebar view

Since this class derives from [StateSavingObject](#), you can call [StateSavingObject::loadState\(\)](#) and [StateSavingObject::saveState\(\)](#) for loading/saving of settings. However, if you use multiple sidebar instances in your program, you have to remember to either call [QObject::setObjectName\(\)](#), [StateSavingObject::setEntryPrefix\(\)](#) or [StateSavingObject::setConfigGroup\(\)](#) first.

**6.1329.2 Constructor & Destructor Documentation****6.1329.2.1 Sidebar()**

```
Digikam::Sidebar::Sidebar (
    QWidget *const parent,
    SidebarSplitter *const sp,
    Qt::Edge side = Qt::LeftEdge,
    bool minimizedDefault = false ) [explicit]
```

Creates a new sidebar

## Parameters

<i>parent</i>	sidebar's parent
<i>sp</i>	sets the splitter, which should handle the width. The splitter normally is part of the main view. Internally, the width of the widget stack can be changed by a QSplitter.
<i>side</i>	where the sidebar should be displayed. At the left or right border. Use Qt::LeftEdge or Qt::RightEdge.
<i>minimizedDefault</i>	hide the sidebar when the program is started the first time.

### 6.1329.3 Member Function Documentation

#### 6.1329.3.1 activeNextTab()

```
void Digikam::Sidebar::activeNextTab ( )
```

Activates a next tab from current one. If current one is last, first one is activated.

#### 6.1329.3.2 activePreviousTab()

```
void Digikam::Sidebar::activePreviousTab ( )
```

Activates a previous tab from current one. If current one is first, last one is activated.

#### 6.1329.3.3 appendTab()

```
void Digikam::Sidebar::appendTab (
    QWidget *const w,
    const QIcon & pic,
    const QString & title )
```

Appends a new tab to the sidebar

## Parameters

<i>w</i>	widget which is activated by this tab
<i>pic</i>	icon which is shown in this tab
<i>title</i>	text which is shown it this tab

#### 6.1329.3.4 backup() [1/2]

```
void Digikam::Sidebar::backup ( )
```

Hide sidebar and backup minimized state.

### 6.1329.3.5 backup() [2/2]

```
void Digikam::Sidebar::backup (
    const QList< QWidget * > & thirdWidgetsToBackup,
    QList< int > *const sizes )
```

Hide sidebar and backup minimized state. If there are other widgets in this splitter, stores their sizes in the provided list.

### 6.1329.3.6 deleteTab()

```
void Digikam::Sidebar::deleteTab (
    QWidget *const w )
```

Deletes a tab from the tabbar

### 6.1329.3.7 doLoadState()

```
void Digikam::Sidebar::doLoadState ( ) [override], [protected], [virtual]
```

Load the last view state from disk - called by [StateSavingObject::loadState\(\)](#)

Implements [Digikam::StateSavingObject](#).

### 6.1329.3.8 doSaveState()

```
void Digikam::Sidebar::doSaveState ( ) [override], [protected], [virtual]
```

Save the view state to disk - called by [StateSavingObject::saveState\(\)](#)

Implements [Digikam::StateSavingObject](#).

### 6.1329.3.9 expand()

```
void Digikam::Sidebar::expand ( )
```

Redisplays the whole sidebar

### 6.1329.3.10 getActiveTab()

```
QWidget * Digikam::Sidebar::getActiveTab ( ) const
```

Returns the currently activated tab, or 0 if no tab is active

### 6.1329.3.11 isExpanded()

```
bool Digikam::Sidebar::isExpanded ( ) const
```

Return the visible status of current sidebar tab.

**6.1329.3.12 restore()** [1/2]

```
void Digikam::Sidebar::restore ( )
```

Show sidebar and restore minimized state.

**6.1329.3.13 restore()** [2/2]

```
void Digikam::Sidebar::restore (
    const QList< QWidget * > & thirdWidgetsToRestore,
    const QList< int > & sizes )
```

Show sidebar and restore minimized state. Restores other widgets' sizes in splitter.

**6.1329.3.14 setActiveTab()**

```
void Digikam::Sidebar::setActiveTab (
    QWidget *const w )
```

Activates a tab

**6.1329.3.15 shrink()**

```
void Digikam::Sidebar::shrink ( )
```

Hides the sidebar (display only the activation buttons)

**6.1329.3.16 signalChangedTab**

```
void Digikam::Sidebar::signalChangedTab (
    QWidget * w ) [signal]
```

Is emitted, when another tab is activated

**6.1329.3.17 signalViewChanged**

```
void Digikam::Sidebar::signalViewChanged ( ) [signal]
```

Is emitted, when tab is shrink or expanded

## 6.1330 Digikam::Sidebar::Private Class Reference

### Public Attributes

- int **activeTab** = -1

### 6.1330.1 Member Data Documentation

#### 6.1330.1.1 isMinimized

```
bool Digikam::Sidebar::Private::isMinimized = false
```

Backup of shrinked status before [backup\(\)](#), restored by [restore\(\)](#)

**Note**

when sidebar is hidden, only icon bar is affected. If sidebar view is visible, this one must be shrink and restored accordingly.

**6.1331 Digikam::SidebarSplitter Class Reference**

Inheritance diagram for Digikam::SidebarSplitter:

**Classes**

- class [Private](#)

**Public Member Functions**

- void **addSplitterCollapserButton** (QWidget \*const widget)
- void [restoreState](#) (KConfigGroup &group)
- void [restoreState](#) (KConfigGroup &group, const QString &key)
- void [saveState](#) (KConfigGroup &group)
- void [saveState](#) (KConfigGroup &group, const QString &key)

- void **setSize** (QWidget \*const widget, int [size](#))
- void [setSize](#) ([Sidebar](#) \*const bar, int [size](#))
- **SidebarSplitter** (Qt::Orientation orientation, QWidget \*const parent=nullptr)
- [SidebarSplitter](#) (QWidget \*const parent=nullptr)
- int [size](#) (QWidget \*const widget) const
- int [size](#) ([Sidebar](#) \*const bar) const

### Static Public Attributes

- static const QString **DEFAULT\_CONFIG\_KEY** = QLatin1String("SplitterState")

### Friends

- class [Sidebar](#)

## 6.1331.1 Constructor & Destructor Documentation

### 6.1331.1.1 SidebarSplitter()

```
Digikam::SidebarSplitter::SidebarSplitter (
    QWidget *const parent = nullptr ) [explicit]
```

This is a QSplitter with better support for storing its state in config files, especially if Sidebars are contained in the splitter.

## 6.1331.2 Member Function Documentation

### 6.1331.2.1 restoreState() [1/2]

```
void Digikam::SidebarSplitter::restoreState (
    KConfigGroup & group )
```

Restores the splitter state from group, handling minimized sidebars correctly. DEFAULT\_CONFIG\_KEY is used for restoring the state.

### 6.1331.2.2 restoreState() [2/2]

```
void Digikam::SidebarSplitter::restoreState (
    KConfigGroup & group,
    const QString & key )
```

Restores the splitter state from group, handling minimized sidebars correctly. This version uses a specified key in the config group.

### 6.1331.2.3 saveState() [1/2]

```
void Digikam::SidebarSplitter::saveState (
    KConfigGroup & group )
```

Saves the splitter state to group, handling minimized sidebars correctly. DEFAULT\_CONFIG\_KEY is used for storing the state.

### 6.1331.2.4 saveState() [2/2]

```
void Digikam::SidebarSplitter::saveState (
    KConfigGroup & group,
    const QString & key )
```

Saves the splitter state to group, handling minimized sidebars correctly. This version uses a specified key in the config group.

### 6.1331.2.5 setSize()

```
void Digikam::SidebarSplitter::setSize (
    Sidebar *const bar,
    int size )
```

Sets the splitter size for the given sidebar or splitter child widget to size. Special value -1: Sets the minimum size hint of the widget.

### 6.1331.2.6 size()

```
int Digikam::SidebarSplitter::size (
    Sidebar *const bar ) const
```

Returns the value of sizes() that corresponds to the given [Sidebar](#) or splitter child widget.

### 6.1334.1 Detailed Description

Abstract base class for widgets that are use in one of digikams's sidebars.

### 6.1334.2 Constructor & Destructor Documentation

#### 6.1334.2.1 SidebarWidget()

```
Digikam::SidebarWidget::SidebarWidget (
    QWidget *const parent ) [explicit]
```

Constructor.

Parameters

<i>parent</i>	the parent of this widget, may be null
---------------	--

#### 6.1334.2.2 ~SidebarWidget()

```
Digikam::SidebarWidget::~~SidebarWidget ( ) [override], [default]
```

Destructor.

### 6.1334.3 Member Function Documentation

#### 6.1334.3.1 applySettings()

```
virtual void Digikam::SidebarWidget::applySettings ( ) [pure virtual]
```

This method is invoked when the application settings should be (re-) applied to this widget.

Implemented in [Digikam::AlbumFolderViewSideBarWidget](#), [Digikam::DateFolderViewSideBarWidget](#), [Digikam::FuzzySearchSideBarV](#), [Digikam::GPSSearchSideBarWidget](#), [Digikam::LabelsSideBarWidget](#), [Digikam::PeopleSideBarWidget](#), [Digikam::SearchSideBarWidg](#), [Digikam::TagViewSideBarWidget](#), and [Digikam::TimelineSideBarWidget](#).

### 6.1334.3.2 `changeAlbumFromHistory()`

```
virtual void Digikam::SidebarWidget::changeAlbumFromHistory (
    const QList< Album * > & album ) [pure virtual]
```

This is called on this widget when the history requires to move back to the specified album

Implemented in [Digikam::AlbumFolderViewSideBarWidget](#), [Digikam::DateFolderViewSideBarWidget](#), [Digikam::FuzzySearchSideBarV](#), [Digikam::GPSSearchSideBarWidget](#), [Digikam::LabelsSideBarWidget](#), [Digikam::PeopleSideBarWidget](#), [Digikam::SearchSideBarWidg](#), [Digikam::TagViewSideBarWidget](#), and [Digikam::TimelineSideBarWidget](#).

### 6.1334.3.3 `getCaption()`

```
virtual const QString Digikam::SidebarWidget::getCaption ( ) [pure virtual]
```

Must be implemented to return the title of this sidebar's tab.

#### Returns

localized title string

Implemented in [Digikam::AlbumFolderViewSideBarWidget](#), [Digikam::DateFolderViewSideBarWidget](#), [Digikam::FuzzySearchSideBarV](#), [Digikam::GPSSearchSideBarWidget](#), [Digikam::LabelsSideBarWidget](#), [Digikam::PeopleSideBarWidget](#), [Digikam::SearchSideBarWidg](#), [Digikam::TagViewSideBarWidget](#), and [Digikam::TimelineSideBarWidget](#).

### 6.1334.3.4 `getIcon()`

```
virtual const QIcon Digikam::SidebarWidget::getIcon ( ) [pure virtual]
```

Must be implemented and return the icon that shall be visible for this sidebar widget.

#### Returns

pixmap icon

Implemented in [Digikam::AlbumFolderViewSideBarWidget](#), [Digikam::DateFolderViewSideBarWidget](#), [Digikam::FuzzySearchSideBarV](#), [Digikam::GPSSearchSideBarWidget](#), [Digikam::LabelsSideBarWidget](#), [Digikam::PeopleSideBarWidget](#), [Digikam::SearchSideBarWidg](#), [Digikam::TagViewSideBarWidget](#), and [Digikam::TimelineSideBarWidget](#).

### 6.1334.3.5 `requestActiveTab`

```
void Digikam::SidebarWidget::requestActiveTab (
    SidebarWidget * ) [signal]
```

This signal can be emitted if this sidebar widget wants to be the one that is active.

### 6.1334.3.6 `setActive()`

```
virtual void Digikam::SidebarWidget::setActive (
    bool active ) [pure virtual]
```

This method is called if the visible sidebar widget is changed.

## Parameters

<i>active</i>	if true, this widget is the new active widget, if false another widget is active
---------------	--

Implemented in [Digikam::AlbumFolderViewSideBarWidget](#), [Digikam::DateFolderViewSideBarWidget](#), [Digikam::FuzzySearchSideBarWidget](#), [Digikam::GPSSearchSideBarWidget](#), [Digikam::LabelsSideBarWidget](#), [Digikam::PeopleSideBarWidget](#), [Digikam::SearchSideBarWidget](#), [Digikam::TagViewSideBarWidget](#), and [Digikam::TimelineSideBarWidget](#).

## 6.1334.3.7 signalNotificationError

```
void Digikam::SidebarWidget::signalNotificationError (
    const QString & message,
    int type ) [signal]
```

To dispatch error message to temporized pop-up notification widget hosted with icon-view.

## 6.1335 Digikam::SidecarFinder Class Reference

## 6.1336.1 Member Function Documentation

### 6.1336.1.1 clearImageSimilarity()

```
void Digikam::SimilarityDb::clearImageSimilarity (
    FuzzyAlgorithm algorithm = FuzzyAlgorithm::Haar )
```

This method removes all image similarity entries for the algorithm.

#### Parameters

<i>algorithm</i>	The algorithm.
------------------	----------------

### 6.1336.1.2 copySimilarityAttributes()

```
void Digikam::SimilarityDb::copySimilarityAttributes (
    qlonglong srcId,
    qlonglong destId )
```

Copies all similarity-specific information, from image srcId to destId.

### 6.1336.1.3 getDirtyOrMissingFingerprints()

```
QList< qlonglong > Digikam::SimilarityDb::getDirtyOrMissingFingerprints (
    const QList< ItemInfo > & imageInfos,
    FuzzyAlgorithm algorithm = FuzzyAlgorithm::Haar )
```

Returns a list of all item ids (images, videos,...) where either no fingerprint for the given algorithm exists or is outdated because the file is identified as changed since the generation of the fingerprint.

#### Parameters

<i>imageInfos</i>	The image info objects representing the items.
<i>algorithm</i>	The algorithm.

**Returns**

The ids of the items whose fingerprints are dirty or missing.

**6.1336.1.4 getDirtyOrMissingFingerprintURLs()**

```
QStringList Digikam::SimilarityDb::getDirtyOrMissingFingerprintURLs (
    const QList< ItemInfo > & imageInfos,
    FuzzyAlgorithm algorithm = FuzzyAlgorithm::Haar )
```

Returns a list of the URLs of all items (images, videos,...) where either no fingerprint for the given algorithm exists or is outdated because the file is identified as changed since the generation of the fingerprint.

**Parameters**

<i>imageInfos</i>	The image info objects representing the items.
<i>algorithm</i>	The algorithm.

**Returns**

The URLs of the items whose fingerprints are dirty or missing.

**6.1336.1.5 getImageSimilarity()**

```
double Digikam::SimilarityDb::getImageSimilarity (
    qulonglong imageID1,
    qulonglong imageID2,
    FuzzyAlgorithm algorithm = FuzzyAlgorithm::Haar )
```

Returns the similarity value for two images. A value of -1 means nonexistence. A value of -2 means that there is a value that cannot be converted into a double

**6.1336.1.6 getImageSimilarityAlgorithms()**

```
QList< FuzzyAlgorithm > Digikam::SimilarityDb::getImageSimilarityAlgorithms (
    qulonglong imageID1,
    qulonglong imageID2 )
```

Returns the algorithms for which a similarity value exists for the given image ids.

**Parameters**

<i>imageID1</i>	The first image id.
<i>imageID2</i>	The second image id.

**Returns**

a list of all algorithms for which a similarity value exists.

### 6.1336.1.7 getLegacySetting()

```
QString Digikam::SimilarityDb::getLegacySetting (
    const QString & keyword )
```

Returns the legacy settings with the keyword name.

#### Parameters

<i>keyword</i>	The setting entry name.
----------------	-------------------------

#### Returns

The setting value.

### 6.1336.1.8 getSetting()

```
QString Digikam::SimilarityDb::getSetting (
    const QString & keyword )
```

Returns the setting with the keyword name.

#### Parameters

<i>keyword</i>	The setting entry name.
----------------	-------------------------

#### Returns

The setting value.

### 6.1336.1.9 hasDirtyOrMissingFingerprint()

```
bool Digikam::SimilarityDb::hasDirtyOrMissingFingerprint (
    const ItemInfo & imageInfo,
    FuzzyAlgorithm algorithm = FuzzyAlgorithm::Haar ) const
```

Checks if the given image has a dirty fingerprint or even none for the given algorithm.

#### Parameters

<i>imageInfo</i>	The image info object representing the item.
<i>algorithm</i>	The algorithm used for the fingerprint.

#### Returns

True, if the image either has no or a dirty fingerprint.

**6.1336.1.10 hasFingerprint()**

```
bool Digikam::SimilarityDb::hasFingerprint (
    qlonglong imageId,
    FuzzyAlgorithm algorithm ) const
```

This method checks if the given image has a fingerprint for the given algorithm.

**Parameters**

<i>imageId</i>	The Id of the image to check.
<i>algorithm</i>	The algorithm.

**Returns**

True, if there is a fingerprint.

**6.1336.1.11 hasFingerprints() [1/2]**

```
bool Digikam::SimilarityDb::hasFingerprints ( )
```

This method checks if there are any fingerprints for any algorithm present.

**Returns**

True, if fingerprints exist.

**6.1336.1.12 hasFingerprints() [2/2]**

```
bool Digikam::SimilarityDb::hasFingerprints (
    FuzzyAlgorithm algorithm ) const
```

This method checks if there are any fingerprints for the given algorithm.

**Parameters**

<i>algorithm</i>	The algorithm.
------------------	----------------

**Returns**

true, if there are fingerprints and false, otherwise.

**6.1336.1.13 integrityCheck()**

```
bool Digikam::SimilarityDb::integrityCheck ( )
```

This method checks the integrity of the similarity database.

**Returns**

true, if the integrity check was passed and false, else.

**6.1336.1.14 registeredImageIds()**

```
QSet< qulonglong > Digikam::SimilarityDb::registeredImageIds ( ) const
```

This method returns all image ids that are present in the similarity db tables.

**Returns**

a set of all present image ids.

**6.1336.1.15 removeImageFingerprint()**

```
void Digikam::SimilarityDb::removeImageFingerprint (
    qulonglong imageID,
    FuzzyAlgorithm algorithm = FuzzyAlgorithm::Haar )
```

This method removes the fingerprint entry for the given imageId and algorithm. Also, this automatically removes the entries in the ImageSimilarities table for the given algorithm and image id.

**Parameters**

<i>imageID</i>	The image id.
<i>algorithm</i>	The algorithm.

**6.1336.1.16 removeImageSimilarity() [1/2]**

```
void Digikam::SimilarityDb::removeImageSimilarity (
    qulonglong imageID,
    FuzzyAlgorithm algorithm = FuzzyAlgorithm::Haar )
```

This method removes the image similarity entries for the imageID and algorithm.

**Parameters**

<i>imageID</i>	The image id.
<i>algorithm</i>	The algorithm.

**6.1336.1.17 removeImageSimilarity() [2/2]**

```
void Digikam::SimilarityDb::removeImageSimilarity (
    qulonglong imageID1,
    qulonglong imageID2,
    FuzzyAlgorithm algorithm = FuzzyAlgorithm::Haar )
```

This method removes the image similarity entry for the imageIDs and algorithm.

#### Parameters

<i>imageID1</i>	The first image id.
<i>imageID2</i>	The second image id.
<i>algorithm</i>	The algorithm.

#### 6.1336.1.18 setSetting()

```
bool Digikam::SimilarityDb::setSetting (
    const QString & keyword,
    const QString & value )
```

Set the database setting entry given by keyword to the given value.

#### Parameters

<i>keyword</i>	The keyword, i.e. setting name.
<i>value</i>	The value.

#### Returns

True, if the value was set and false, else..

#### 6.1336.1.19 vacuum()

```
void Digikam::SimilarityDb::vacuum ( )
```

This method shrinks the database.

## 6.1337 Digikam::SimilarityDbAccess Class Reference

### Public Member Functions

- [SimilarityDbBackend](#) \* **backend** () const
- [SimilarityDb](#) \* **db** () const
- QString **lastError** () const
- void **setLastError** (const QString &error)
- [SimilarityDbAccess](#) ()

### Static Public Member Functions

- static bool **checkReadyForUse** ([InitializationObserver](#) \*const observer)
- static void **cleanUpDatabase** ()
- static void **initDbEngineErrorHandler** ([DbEngineErrorHandler](#) \*const errorhandler)
- static bool **isInitialized** ()
- static [DbEngineParameters](#) **parameters** ()
- static void **setParameters** (const [DbEngineParameters](#) &parameters)

## 6.1337.1 Constructor & Destructor Documentation

### 6.1337.1.1 SimilarityDbAccess()

```
Digikam::SimilarityDbAccess::SimilarityDbAccess ( )
```

This class is written in analogy to [CoreDbAccess](#) (some features stripped off). For documentation, see [coredbaccess.h](#)

## 6.1337.2 Member Function Documentation

### 6.1337.2.1 checkReadyForUse()

```
bool Digikam::SimilarityDbAccess::checkReadyForUse (
    InitializationObserver *const observer ) [static]
```

This static method checks if the similarity db is ready for use.

#### Parameters

<i>observer</i>	the observer.
-----------------	---------------

#### Returns

true, if the database is ready for use.

### 6.1337.2.2 cleanUpDatabase()

```
void Digikam::SimilarityDbAccess::cleanUpDatabase ( ) [static]
```

This static method removes the connection to the similarity database.

### 6.1337.2.3 initDbEngineErrorHandler()

```
void Digikam::SimilarityDbAccess::initDbEngineErrorHandler (
    DbEngineErrorHandler *const errorhandler ) [static]
```

This static method initialises the error handler for the similarity db.

#### Parameters

<i>errorhandler</i>	The error handler.
---------------------	--------------------

### 6.1337.2.4 isInitialized()

```
bool Digikam::SimilarityDbAccess::isInitialized ( ) [static]
```

This static method returns if the similarity db is initialised.

**Returns**

true, if the similarityDb is initialised.

**6.1337.2.5 parameters()**

```
DbEngineParameters Digikam::SimilarityDbAccess::parameters ( ) [static]
```

This static method returns the current db parameters.

**Returns**

the current db parameters.

**6.1337.2.6 setLastError()**

```
void Digikam::SimilarityDbAccess::setLastError (
    const QString & error )
```

Set the "last error" message. This method is not for public use.

**6.1337.2.7 setParameters()**

```
void Digikam::SimilarityDbAccess::setParameters (
    const DbEngineParameters & parameters ) [static]
```

This static method sets the database parameters that are needed to initialise the db connection.

**Parameters**

<i>parameters</i>	The db parameters.
-------------------	--------------------

### Additional Inherited Members

### Public Types inherited from [Digikam::BdEngineBackend](#)

- enum **DbType** { [SQLite](#) , [MySQL](#) }
- enum **QueryOperationStatus** { [ExecuteNormal](#) , [Wait](#) , [AbortQueries](#) }
- enum **QueryStateEnum** { [NoErrors](#) , [SQLError](#) , [ConnectionError](#) }
- enum **Status** { [Unavailable](#) , [Open](#) , [OpenSchemaChecked](#) }

## Protected Attributes inherited from Digikam::BdEngineBackend

- `BdEngineBackendPrivate` \*const `d_ptr` = nullptr

### 6.1338.1 Member Function Documentation

#### 6.1338.1.1 initSchema()

```
bool Digikam::SimilarityDbBackend::initSchema (
    SimilarityDbSchemaUpdater *const updater )
```

Initialize the database schema to the current version, carry out upgrades if necessary. Shall only be called from the thread that called `open()`.

## 6.1339 Digikam::SimilarityDbSchemaUpdater Class Reference

### Public Member Functions

- void `setObserver` (`InitializationObserver` \*const observer)
- `SimilarityDbSchemaUpdater` (`SimilarityDbAccess` \*const dbAccess)
- bool `update` ()

### Static Public Member Functions

- static int `schemaVersion` ()

## 6.1340 Digikam::SimpleCollectionScannerObserver Class Reference

Inheritance diagram for Digikam::SimpleCollectionScannerObserver:

## 6.1343.1 Member Function Documentation

### 6.1343.1.1 addItem()

```
void Digikam::SinglePhotoPreviewLayout::addItem (
    GraphicsDImgItem *const item )
```

Set the item to layout. For a SinglePhoto layout, typically, you can add only one item.

**6.1343.1.2 maxZoomFactor()**

```
double Digikam::SinglePhotoPreviewLayout::maxZoomFactor ( ) const
```

The zoom range for incrementing and decrementing.

**6.1343.1.3 setGraphicsView()**

```
void Digikam::SinglePhotoPreviewLayout::setGraphicsView (
    GraphicsDImgView *const view )
```

Set the graphics view, and associated scene, to operate on.

**6.1343.1.4 setScaleFitToWindow()**

```
void Digikam::SinglePhotoPreviewLayout::setScaleFitToWindow (
    bool value )
```

Set to true to scale small images to fit to window.

## 6.1344 Digikam::SketchWidget Class Reference

## 6.1344.1 Member Function Documentation

### 6.1344.1.1 setSketchImageFromXML()

```
bool Digikam::SketchWidget::setSketchImageFromXML (
    QXmlStreamReader & reader )
```

This method set sketch image using XML data based on drawing line history. Return true if data are imported successfully.

### 6.1344.1.2 sketchImageToXML()

```
void Digikam::SketchWidget::sketchImageToXML (
    QXmlStreamWriter & writer )
```

This method return the drawing line history as XML, to be stored in database as [SAAlbum](#) data.

### 6.1351.1 Detailed Description

This widget is a QComboBox, but then a little bit different. It only shows the right part of the items depending on de size of the widget. When it is not possible to show the complete item, it will be shortened and "..." will be prepended.

### 6.1351.2 Constructor & Destructor Documentation

#### 6.1351.2.1 SqueezedComboBox()

```
Digikam::SqueezedComboBox::SqueezedComboBox (
    QWidget *const parent = nullptr,
    const char * name = nullptr ) [explicit]
```

Constructor

#### Parameters

<i>parent</i>	the parent widget
<i>name</i>	the name to give to the widget

#### 6.1351.2.2 ~SqueezedComboBox()

```
Digikam::SqueezedComboBox::~SqueezedComboBox ( ) [override]
```

destructor

### 6.1351.3 Member Function Documentation

#### 6.1351.3.1 addSqueezedItem()

```
void Digikam::SqueezedComboBox::addSqueezedItem (
    const QString & newItem,
    const QVariant & userData = QVariant() )
```

Append an item.

## Parameters

<i>newItem</i>	the original (long version) of the item which needs to be added to the combobox
<i>userData</i>	custom meta-data assigned to new item.

**6.1351.3.2 contains()**

```
bool Digikam::SqueezedComboBox::contains (
    const QString & text ) const
```

Returns true if the combobox contains the original (not-squeezed) version of text.

## Parameters

<i>text</i>	the original (not-squeezed) text to check for
-------------	---

**6.1351.3.3 findOriginalText()**

```
int Digikam::SqueezedComboBox::findOriginalText (
    const QString & text,
    Qt::CaseSensitivity cs = Qt::CaseSensitive ) const
```

Returns the index of the combobox if found the original (not-squeezed) version of text.

## Parameters

<i>text</i>	the original (not-squeezed) text to find for
<i>cs</i>	case sensitive or case insensitive search

**6.1351.3.4 insertSqueezedItem()**

```
void Digikam::SqueezedComboBox::insertSqueezedItem (
    const QString & newItem,
    int index,
    const QVariant & userData = QVariant() )
```

This inserts a item to the list. See `QComboBox::insertItem()` for details. Please do not use `QComboBox::insertItem()` to this widget, as that will fail.

## Parameters

<i>newItem</i>	the original (long version) of the item which needs to be added to the combobox
<i>index</i>	the position in the widget.
<i>userData</i>	custom meta-data assigned to new item.

### 6.1351.3.5 insertSqueezedList()

```
void Digikam::SqueezedComboBox::insertSqueezedList (
    const QStringList & newItems,
    int index )
```

This inserts items to the list. See `QComboBox::insertItems()` for details. Please do not use `QComboBox::insertItems()` to this widget, as that will fail.

#### Parameters

<i>newItems</i>	the originals (long version) of the items which needs to be added to the combobox
<i>index</i>	the position in the widget.

### 6.1351.3.6 item()

```
QString Digikam::SqueezedComboBox::item (
    int index ) const
```

This method returns the full text (not squeezed) for the index.

#### Parameters

<i>index</i>	the position in the widget.
--------------	-----------------------------

#### Returns

full text of the item

### 6.1351.3.7 itemHighlighted()

```
QString Digikam::SqueezedComboBox::itemHighlighted ( ) const
```

This method returns the full text (not squeezed) of the currently highlighted item.

#### Returns

full text of the highlighted item

### 6.1351.3.8 setCurrent()

```
void Digikam::SqueezedComboBox::setCurrent (
    const QString & itemText )
```

Set the current item to the one matching the given text.

## Parameters

<i>itemText</i>	the original (long version) of the item text
-----------------	--

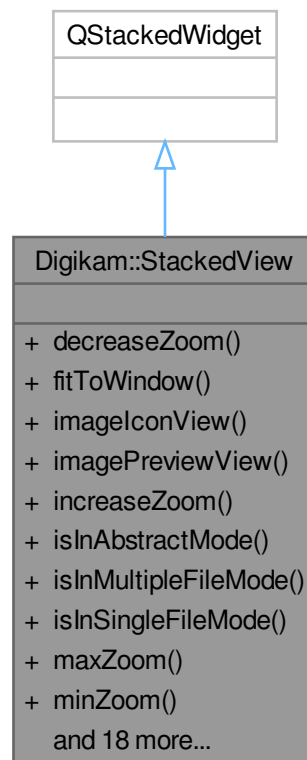

**6.1351.3.9 sizeHint()**

```
QSize Digikam::SqueezedComboBox::sizeHint ( ) const [override]
```

Sets the [sizeHint\(\)](#) of this widget.

**6.1352 Digikam::StackedView Class Reference**

Inheritance diagram for Digikam::StackedView:

**Public Types**

### 6.1355.1 Detailed Description

An interface-like class with utility methods and a general public interface to support state saving and restoring for objects via KConfig. Use this class as a Mixin.

The public interface for loading and saving state is implemented designed as template methods. To store or restore the state of a class, inherit from this class via multiple inheritance and implement [doLoadState\(\)](#) and [doSaveState\(\)](#). In these methods always use the protected method [getConfigGroup\(\)](#) to access a config group. Also always use the [entryName\(\)](#) method for generating keys in the config (for prefixes, see below).

Ensure that this class is inherited after a QObject-based class and pass "this" as constructor argument.

By default a config group based on Qt's object name of the class is used. This behaviour can be changed by setting a dedicated config group via [setConfigGroup\(\)](#). This is useful for to externally control the config group and shouldn't be used inside the implementing class.

Additionally to setting the config group, also a prefix for each config group entry can be defined via [setEntryPrefix\(\)](#). This may be useful if multiple instances of the same class shall be stored in the same config group or can generally be a good idea to make the config more readable and recognizable. By default this prefix is empty.

This class also supports recursive saving / loading invocations based on the QT object hierarchy. As default, calls to [loadState\(\)](#) or [saveState\(\)](#) only invoke the [doLoadState\(\)](#) or [doSaveState\(\)](#) method of the called instance. This behaviour can be changed with [setStateSavingDepth\(\)](#) to automatically call children of the instance. Various modes are supported as documented in [StateSavingDepth](#).

#### Author

jwienke

### 6.1355.2 Member Enumeration Documentation

#### 6.1355.2.1 StateSavingDepth

```
enum Digikam::StateSavingObject::StateSavingDepth
```

This enum defines the "depth" of the [StateSavingObject::loadState\(\)](#) and [StateSavingObject::saveState\(\)](#) methods.

## Enumerator

INSTANCE	Only the instance the saving / restoring was invoked on is saved / restored.
DIRECT_CHILDREN	The instance itself and all direct children of this instance implementing <a href="#">StateSavingObject</a> are saved / restored.
RECURSIVE	The instance and all children in the complete hierarchy are saved / restored.

## 6.1355.3 Constructor & Destructor Documentation

### 6.1355.3.1 StateSavingObject()

```
Digikam::StateSavingObject::StateSavingObject (
    QObject *const host ) [explicit]
```

Constructor. Must be called after any QObject-based constructor.

## Parameters

<i>host</i>	self-reference to access the object name, simply pass "this" as argument
-------------	--

### 6.1355.3.2 ~StateSavingObject()

```
Digikam::StateSavingObject::~~StateSavingObject ( ) [virtual]
```

Destructor.

## 6.1355.4 Member Function Documentation

### 6.1355.4.1 doLoadState()

```
virtual void Digikam::StateSavingObject::doLoadState ( ) [protected], [pure virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implemented in [Digikam::DateFolderView](#), [Digikam::FilterSideBarWidget](#), [Digikam::AlbumFolderViewSideBarWidget](#), [Digikam::DateFolderViewSideBarWidget](#), [Digikam::FuzzySearchSideBarWidget](#), [Digikam::GPSSearchSideBarWidget](#), [Digikam::LabelsSideBarWidget](#), [Digikam::PeopleSideBarWidget](#), [Digikam::SearchSideBarWidget](#), [Digikam::TagViewSideBarWidget](#), [Digikam::TimelineSideBarWidget](#), [Digikam::MapWidgetView](#), [Digikam::TableView](#), [Digikam::AbstractAlbumTreeView](#), [Digikam::AbstractCheckableAlbumTreeView](#), [Digikam::LabelsTreeView](#), [Digikam::ImportItemPropertiesSideBarImport](#), [Digikam::ItemPropertiesSideBar](#), [Digikam::ItemPropertiesSideBarDB](#), [Digikam::TagsManager](#), [Digikam::TagCheckView](#), [Digikam::Sidebar](#), [Digikam::SearchTextBar](#), [ShowFoto::ShowfotoFolderViewSideBar](#), [ShowFoto::ShowfotoStackViewSideBar](#), [Digikam::FaceScanWidget](#), [Digikam::FuzzySearchView](#), and [Digikam::GPSSearchView](#).

### 6.1355.4.2 doSaveState()

```
virtual void Digikam::StateSavingObject::doSaveState ( ) [protected], [pure virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implemented in [Digikam::DateFolderView](#), [Digikam::FilterSideBarWidget](#), [Digikam::AlbumFolderViewSideBarWidget](#), [Digikam::DateFolderViewSideBarWidget](#), [Digikam::FuzzySearchSideBarWidget](#), [Digikam::GPSSearchSideBarWidget](#), [Digikam::LabelsSideBarWidget](#), [Digikam::PeopleSideBarWidget](#), [Digikam::SearchSideBarWidget](#), [Digikam::TagViewSideBarWidget](#), [Digikam::TimelineSideBarWidget](#), [Digikam::MapWidgetView](#), [Digikam::TableView](#), [Digikam::AbstractAlbumTreeView](#), [Digikam::AbstractCheckableAlbumTreeView](#), [Digikam::LabelsTreeView](#), [Digikam::ImportItemPropertiesSideBarImport](#), [Digikam::ItemPropertiesSideBar](#), [Digikam::ItemPropertiesSideBarDB](#), [Digikam::TagsManager](#), [Digikam::TagCheckView](#), [Digikam::Sidebar](#), [Digikam::SearchTextBar](#), [ShowFoto::ShowfotoFolderViewSideBar](#), [ShowFoto::ShowfotoStackViewSideBar](#), [Digikam::FaceScanWidget](#), [Digikam::FuzzySearchView](#), and [Digikam::GPSSearchView](#).

### 6.1355.4.3 entryName()

```
QString Digikam::StateSavingObject::entryName (
    const QString & base ) const [protected]
```

Always use this method to create config group entry names. This allows to manipulate the entry keys externally by eg. setting a prefix.

#### Parameters

<i>base</i>	original name planned for the config group entry
-------------	--

#### Returns

entry name after manipulating it with externally set parameters

### 6.1355.4.4 getConfigGroup()

```
KConfigGroup Digikam::StateSavingObject::getConfigGroup ( ) const [protected]
```

Returns the config group that must be used for state saving and loading.

#### Returns

config group for state saving and loading

### 6.1355.4.5 getStateSavingDepth()

```
StateSavingObject::StateSavingDepth Digikam::StateSavingObject::getStateSavingDepth ( ) const
```

Returns the depth used for state saving or loading. Default is [StateSavingDepth::INSTANCE](#).

#### Returns

state saving / restoring depth

#### 6.1355.4.6 loadState()

```
void Digikam::StateSavingObject::loadState ( )
```

Invokes loading the class' state.

#### 6.1355.4.7 saveState()

```
void Digikam::StateSavingObject::saveState ( )
```

Invokes saving the class' state.

#### 6.1355.4.8 setConfigGroup()

```
void Digikam::StateSavingObject::setConfigGroup (
    const KConfigGroup & group ) [virtual]
```

Sets a dedicated config group that will be used to store and reload the state from. If this method is not called, a group based on the object name is used.

You can re-implement this method to pass the group set here to child objects. Don't forget to call this method in your implementation.

##### Parameters

<i>group</i>	config group to use for state saving and restoring
--------------	--

Reimplemented in [Digikam::DateFolderView](#), [Digikam::FilterSideBarWidget](#), [Digikam::FuzzySearchView](#), and [Digikam::GPSSearchView](#).

#### 6.1355.4.9 setEntryPrefix()

```
void Digikam::StateSavingObject::setEntryPrefix (
    const QString & prefix ) [virtual]
```

Define a prefix that will be used for every entry in the config group. The default prefix is empty.

You can re-implement this method to pass the prefix set here to child objects. Don't forget to call this method in your implementation.

##### Parameters

<i>prefix</i>	the prefix to use for the config entries
---------------	--

#### 6.1355.4.10 setStateSavingDepth()

```
void Digikam::StateSavingObject::setStateSavingDepth (
    const StateSavingDepth depth )
```

Sets the depth used for state saving or loading.

#### Parameters

<i>depth</i>	new depth to use
--------------	------------------

## 6.1356 Digikam::StatusBarProgressWidget Class Reference

Inheritance diagram for Digikam::StatusBarProgressWidget:

#### Public Slots

- void `slotClean` ()
- void `slotProgressItemAdded` ([ProgressItem](#) \*i)
- void `slotProgressItemCompleted` ([ProgressItem](#) \*i)
- void `slotProgressItemProgress` ([ProgressItem](#) \*i, unsigned int value)

**Public Member Functions**

- **StatusbarProgressWidget** ([ProgressView](#) \*const progressView, QWidget \*const parent, bool button=true)

**Protected Slots**

- void **slotBusyIndicator** ()
- void **slotProgressViewVisible** (bool)
- void **slotShowItemDelayed** ()
- void **updateBusyMode** ()

**Protected Member Functions**

- void **activateSingleItemMode** ()
- void **connectSingleItem** ()
- bool **eventFilter** (QObject \*, QEvent \*) override
- void **setMode** ()

**6.1357 Digikam::StatusProgressBar Class Reference**

Inheritance diagram for Digikam::StatusProgressBar:

### Public Types

- enum **StatusProgressBarMode** { **TextMode** = 0 , **ProgressBarMode** , **CancelProgressBarMode** }

### Public Slots

- void **setProgressText** (const QString &text)
- void **setProgressValue** (int v)
- void **setText** (const QString &text)

### Signals

- void **signalCancelButtonPressed** ()

### Public Member Functions

- int **progressTotalSteps** () const
- int **progressValue** () const
- void **setAlignment** (Qt::Alignment a)
- void **setNotificationTitle** (const QString &title, const QIcon &icon)
- void **setNotify** (bool b)
- void **setProgressBarMode** (int mode, const QString &text=QString())
- void **setProgressTotalSteps** (int v)
- **StatusProgressBar** (QWidget \*const parent=nullptr)

## 6.1358 Digikam::StayPoppedUpComboBox Class Reference

Inheritance diagram for Digikam::StayPoppedUpComboBox:

### Public Member Functions

- [StayPoppedUpComboBox](#) (QWidget \*const parent=nullptr)

## Public Member Functions inherited from [Digikam::ModelIndexBasedComboBox](#)

- QModelIndex **currentIndex** () const
- void **hidePopup** () override
- [ModelIndexBasedComboBox](#) (QWidget \*const parent=nullptr)
- void **setCurrentIndex** (const QModelIndex &index)
- void **showPopup** () override

## Protected Member Functions

- bool **eventFilter** (QObject \*watched, QEvent \*event) override
- void **installView** (QAbstractItemView \*view)
- virtual void **sendViewportEventToView** (QEvent \*e)=0

## Protected Attributes

- QAbstractItemView \* **m\_view** = nullptr

## Protected Attributes inherited from [Digikam::ModelIndexBasedComboBox](#)

- QPersistentModelIndex **m\_currentIndex**

## 6.1358.1 Constructor & Destructor Documentation

### 6.1358.1.1 StayPoppedUpComboBox()

```
Digikam::StayPoppedUpComboBox::StayPoppedUpComboBox (
    QWidget *const parent = nullptr ) [explicit]
```

This class provides an abstract QComboBox with a custom view (which is created by implementing subclasses) instead of the usual QListView. The Pop-up of the combo box will stay open after selecting an item; it will be closed by clicking outside, but not inside the widget. You need three steps: Construct the object, call `setModel()` with an appropriate QAbstractItemModel, then call [installView\(\)](#) to replace the standard combo box view with a view.

## 6.1358.2 Member Function Documentation

### 6.1358.2.1 installView()

```
void Digikam::StayPoppedUpComboBox::installView (
    QAbstractItemView * view ) [protected]
```

Replace the standard combo box list view with the given view. The view will be set as the view of the combo box (including re-parenting) and be stored in the `m_view` variable.

### 6.1358.2.2 sendViewportEventToView()

```
virtual void Digikam::StayPoppedUpComboBox::sendViewportEventToView (  
    QEvent * e ) [protected], [pure virtual]
```

Implement in subclass: Send the given event to the viewportEvent() method of m\_view. This method is protected for a usual QAbstractItemView. You can override, pass a view, and call parent implementation. The existing view will be used. You must then also reimplement sendViewportEventToView.

Implemented in [Digikam::AbstractAlbumTreeViewSelectComboBox](#), [Digikam::TreeViewComboBox](#), and [Digikam::ListViewComboBox](#).

## 6.1359 Digikam::StretchFilter Class Reference

Inheritance diagram for Digikam::StretchFilter:

### Public Member Functions

- [FilterAction filterAction \(\)](#) override
- [QString filterIdentifier \(\)](#) const override

- void [readParameters](#) (const [FilterAction](#) &action) override

  - *To prevent signals bombarding with progress indicator value in [postProgress\(\)](#).*
- int **m\_progressSpan** = 0
- **DImgThreadedFilter** \* m\_slave = nullptr
- int **m\_version** = 1
- bool **m\_wasCancelled** = false

## 6.1359.1 Member Function Documentation

### 6.1359.1.1 filterAction()

```
FilterAction Digikam::StretchFilter::filterAction ( ) [override], [virtual]
```

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1359.1.2 filterIdentifier()

```
QString Digikam::StretchFilter::filterIdentifier ( ) const [inline], [override], [virtual]
```

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

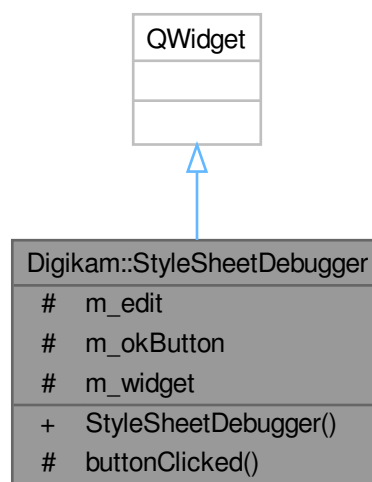

### 6.1359.1.3 readParameters()

```
void Digikam::StretchFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.1360 Digikam::StyleSheetDebugger Class Reference

Inheritance diagram for Digikam::StyleSheetDebugger:

## Public Member Functions

- [StyleSheetDebugger](#) (QWidget \*const object)

## Protected Slots

- void **buttonClicked** ()

## Protected Attributes

- QTextEdit \* **m\_edit** = nullptr
- QPushButton \* **m\_okButton** = nullptr
- QWidget \* **m\_widget** = nullptr

## 6.1360.1 Constructor & Destructor Documentation

### 6.1360.1.1 StyleSheetDebugger()

```
Digikam::StyleSheetDebugger::StyleSheetDebugger (  
    QWidget *const object ) [explicit]
```

This widget is for development purpose only: It allows the developer to change the style sheet on a widget dynamically. If you want to develop or debug the stylesheet on your widget, add temporary code: `new StyleSheetDebugger(myWidget);` That's all. Change the style sheet by editing it and pressing Ok.

## 6.1361 Digikam::SubjectData Class Reference

### Public Member Functions

- **SubjectData** (const QString &n, const QString &m, const QString &d)

### Public Attributes

- QString **detail**  
*English and Detail Name of subject.*
- QString **matter**  
*English and Matter Name of subject.*

## 6.1368.1 Member Function Documentation

### 6.1368.1.1 doLoadState()

```
void Digikam::TableView::doLoadState ( ) [override], [protected], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1368.1.2 doSaveState()

```
void Digikam::TableView::doSaveState ( ) [override], [protected], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1368.1.3 invertSelection()

```
void Digikam::TableView::invertSelection ( )
```

## 6.1368.1.4 selectAll()

```
void Digikam::TableView::selectAll ( )
```

## 6.1368.1.5 slotAwayFromSelection

```
void Digikam::TableView::slotAwayFromSelection ( ) [slot]
```

## 6.1368.1.6 slotDeleteSelected

```
void Digikam::TableView::slotDeleteSelected (
    const ItemViewUtilities::DeleteMode deleteMode = ItemViewUtilities::DeleteUseTrash
) [slot]
```

## 6.1368.1.7 slotSetCurrentWhenAvailable

```
void Digikam::TableView::slotSetCurrentWhenAvailable (
    const qulonglong id ) [slot]
```

## 6.1369 Digikam::TableViewColumn Class Reference

Inheritance diagram for Digikam::TableViewColumn:

## 6.1369.1 Member Function Documentation

### 6.1369.1.1 columnAffectedByChangeset()

```
bool Digikam::TableViewColumn::columnAffectedByChangeset (
    const ImageChangeset & imageChangeset ) const [virtual]
```

Reimplemented in [Digikam::TableViewColumns::ColumnDigikamProperties](#).

### 6.1369.1.2 compare()

```
TableViewColumn::ColumnCompareResult Digikam::TableViewColumn::compare (
    TableViewModel::Item *const itemA,
    TableViewModel::Item *const itemB ) const [virtual]
```

This function should never be called, because subclasses have to do the comparison on their own. But it can not be pure, since then every subclass which does not do custom comparison would have to implement an empty stub.

Reimplemented in [Digikam::TableViewColumns::ColumnAudioVideoProperties](#), [Digikam::TableViewColumns::ColumnDigikamProperties](#), [Digikam::TableViewColumns::ColumnFileProperties](#), [Digikam::TableViewColumns::ColumnGeoProperties](#), [Digikam::TableViewColumns::ColumnItemProperties](#) and [Digikam::TableViewColumns::ColumnPhotoProperties](#).

### 6.1369.1.3 data()

```
QVariant Digikam::TableViewColumn::data (
    TableViewModel::Item *const item,
    const int role ) const [virtual]
```

Reimplemented in [Digikam::TableViewColumns::ColumnDigikamProperties](#), [Digikam::TableViewColumns::ColumnFileProperties](#), [Digikam::TableViewColumns::ColumnGeoProperties](#), [Digikam::TableViewColumns::ColumnItemProperties](#), and [Digikam::TableViewColumns::ColumnPhotoProperties](#).

### 6.1369.1.4 getColumnFlags()

```
TableViewColumn::ColumnFlags Digikam::TableViewColumn::getColumnFlags ( ) const [virtual]
```

Reimplemented in [Digikam::TableViewColumns::ColumnAudioVideoProperties](#).

### 6.1369.1.5 paint()

```
bool Digikam::TableViewColumn::paint (
    QPainter *const painter,
    const QStyleOptionViewItem & option,
    TableViewModel::Item *const item ) const [virtual]
```

Reimplemented in [Digikam::TableViewColumns::ColumnThumbnail](#).

### 6.1369.1.6 sizeHint()

```
QSize Digikam::TableViewColumn::sizeHint (
    const QStyleOptionViewItem & option,
    TableViewModel::Item *const item ) const [virtual]
```

## 6.1375.1 Member Function Documentation

### 6.1375.1.1 compare()

```
TableViewColumn::ColumnCompareResult Digikam::TableViewColumns::ColumnAudioVideoProperties↔
::compare (
    TableViewModel::Item *const itemA,
    TableViewModel::Item *const itemB ) const [override], [virtual]
```

This function should never be called, because subclasses have to do the comparison on their own. But it can not be pure, since then every subclass which does not do custom comparison would have to implement an empty stub.

Reimplemented from [Digikam::TableViewColumn](#).

### 6.1375.1.2 data()

```
QVariant Digikam::TableViewColumns::ColumnAudioVideoProperties::data (
    TableViewModel::Item *const item,
    const int role ) const [override], [virtual]
```

Reimplemented from [Digikam::TableViewColumn](#).

### 6.1375.1.3 getColumnFlags()

```
TableViewColumn::ColumnFlags Digikam::TableViewColumns::ColumnAudioVideoProperties::get↔
ColumnFlags ( ) const [override], [virtual]
```

Reimplemented from [Digikam::TableViewColumn](#).

### 6.1375.1.4 getTitle()

```
QString Digikam::TableViewColumns::ColumnAudioVideoProperties::getTitle ( ) const [override],
[virtual]
```

Implements [Digikam::TableViewColumn](#).

### 6.1375.1.5 setConfiguration()

```
void Digikam::TableViewColumns::ColumnAudioVideoProperties::setConfiguration (
    const TableViewColumnConfiguration & newConfiguration ) [override], [virtual]
```

Reimplemented from [Digikam::TableViewColumn](#).

## 6.1376 Digikam::TableViewColumns::ColumnDigikamProperties Class Reference

Inheritance diagram for Digikam::TableViewColumns::ColumnDigikamProperties:

```
TableViewColumn::ColumnCompareResult Digikam::TableViewColumns::ColumnItemProperties::compare (
    TableViewModel::Item *const itemA,
    TableViewModel::Item *const itemB ) const [override], [virtual]
```

This function should never be called, because subclasses have to do the comparison on their own. But it can not be pure, since then every subclass which does not do custom comparison would have to implement an empty stub.

Reimplemented from [Digikam::TableViewColumn](#).

### 6.1381.1.2 data()

```
QVariant Digikam::TableViewColumns::ColumnItemProperties::data (
    TableViewModel::Item *const item,
    const int role ) const [override], [virtual]
```

Reimplemented from [Digikam::TableViewColumn](#).

### 6.1381.1.3 getColumnFlags()

```
TableViewColumn::ColumnFlags Digikam::TableViewColumns::ColumnItemProperties::getColumnFlags (
) const [override], [virtual]
```

Reimplemented from [Digikam::TableViewColumn](#).

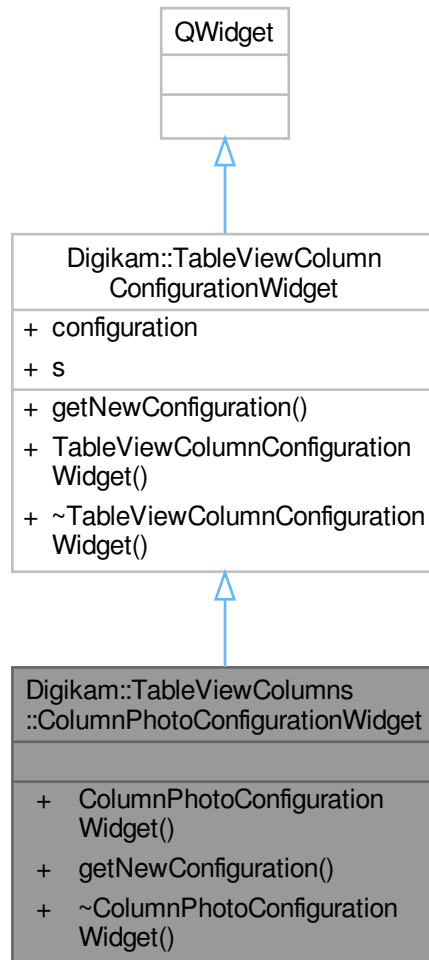

### 6.1381.1.4 getTitle()

```
QString Digikam::TableViewColumns::ColumnItemProperties::getTitle ( ) const [override], [virtual]
```

Implements [Digikam::TableViewColumn](#).

### 6.1391.1 Detailed Description

### 6.1391.2 Member Function Documentation

#### 6.1391.2.1 dragDropHandler()

```
AbstractItemDragDropHandler * Digikam::TableViewTreeView::dragDropHandler ( ) const [override],
[protected], [virtual]
```

You need to implement these three methods Returns the drag drop handler.

Implements [Digikam::DragDropViewImplementation](#).

#### 6.1391.2.2 hasHiddenGroupedImages()

```
bool Digikam::TableViewTreeView::hasHiddenGroupedImages (
    const ItemInfo & ) const [override], [protected], [virtual]
```

Reimplemented from [Digikam::GroupingViewImplementation](#).

### 6.1391.2.3 mapIndexForDragDrop()

```
QModelIndex Digikam::TableViewTreeView::mapIndexForDragDrop (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Maps the given index of the view's model to an index of the handler's model, which can be a source model of the view's model.

Implements [Digikam::DragDropViewImplementation](#).

### 6.1391.2.4 pixmapForDrag()

```
QPixmap Digikam::TableViewTreeView::pixmapForDrag (
    const QList< QModelIndex > & indexes ) const [override], [protected], [virtual]
```

Creates a pixmap for dragging the given indexes.

Implements [Digikam::DragDropViewImplementation](#).

## 6.1392 Digikam::TagChangeset Class Reference

### Public Types

- enum [Operation](#) {

## 6.1393.1 Member Function Documentation

### 6.1393.1.1 `addCustomContextMenuActions()`

```
void Digikam::TagCheckView::addCustomContextMenuActions (
    ContextMenuHelper & cmh,
    Album * album ) [override], [protected], [virtual]
```

Hook method to add custom actions to the generated context menu.

#### Parameters

<i>cmh</i>	helper object to create the context menu
<i>album</i>	tag on which the context menu will be created. May be null if it is requested on no tag entry

Reimplemented from [Digikam::AbstractAlbumTreeView](#).

Reimplemented in [Digikam::TagFilterView](#).

### 6.1393.1.2 `checkedTagsChanged`

```
void Digikam::TagCheckView::checkedTagsChanged (
    const QList< TAlbum * > & includedTags,
    const QList< TAlbum * > & excludedTags ) [signal]
```

## Parameters

<i>includedTags</i>	a list of selected tag ids processed.
<i>excludedTags</i>	a list of tag ids ignored.

**6.1393.1.3 doLoadState()**

```
void Digikam::TagCheckView::doLoadState ( ) [override], [virtual]
```

Implements state loading for the album tree view in a somewhat clumsy procedure because the model may not be fully loaded when this method is called. Therefore the config is first parsed into `d->statesByAlbumId` which holds the state of all tree view entries indexed by album id. Afterwards an initial sync run is done restoring the state of all model entries that are already present at this time. Every processed entry is removed from `d->statesByAlbumId`. If there are still entries left in this map we assume that the model is not fully loaded at the moment. Therefore the `rowsInserted` signal is connected to a slot that restores the state of new rows based on the remaining entries in `d->statesByAlbumId`.

Reimplemented from [Digikam::AbstractCheckableAlbumTreeView](#).

**6.1393.1.4 doSaveState()**

```
void Digikam::TagCheckView::doSaveState ( ) [override], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Reimplemented from [Digikam::AbstractCheckableAlbumTreeView](#).

**6.1393.1.5 setCheckNewTags()**

```
void Digikam::TagCheckView::setCheckNewTags (
    bool checkNewTags )
```

## Parameters

<i>checkNewTags</i>	is switched on, a tag that is created from <i>within</i> this view, typically via the context menu, will automatically be set checked.
---------------------	--

## 6.1394 Digikam::TagCompleter Class Reference

Inheritance diagram for Digikam::TagCompleter:

### Signals

- void **signalActivated** (const [TaggingAction](#) &action)
- void **signalHighlighted** (const [TaggingAction](#) &action)

### Public Member Functions

- void [setContextParentTag](#) (int parentTagId)
- void [setSupportingTagModel](#) ([TagModel](#) \*const supportingModel)
- void **setTagFilterModel** ([AlbumFilterModel](#) \*const supportingModel)
- [TagCompleter](#) (QObject \*const parent=nullptr)
- void [update](#) (const QString &fragment)

### 6.1394.1 Constructor & Destructor Documentation

#### 6.1394.1.1 TagCompleter()

```

Digikam::TagCompleter::TagCompleter (
    QObject *const parent = nullptr ) [explicit]
  
```

A completion object operating on a [TagModel](#)

## 6.1394.2 Member Function Documentation

### 6.1394.2.1 setContextParentTag()

```
void Digikam::TagCompleter::setContextParentTag (
    int parentTagId )
```

Set a parent tag which may by the user be considered as a parent for a new tag during completion

### 6.1394.2.2 setSupportingTagModel()

```
void Digikam::TagCompleter::setSupportingTagModel (
    TagModel *const supportingModel )
```

Set a supporting model from which the completer may get data for its display. Optional.

### 6.1394.2.3 update()

```
void Digikam::TagCompleter::update (
    const QString & fragment )
```

Update the completer for the given fragment

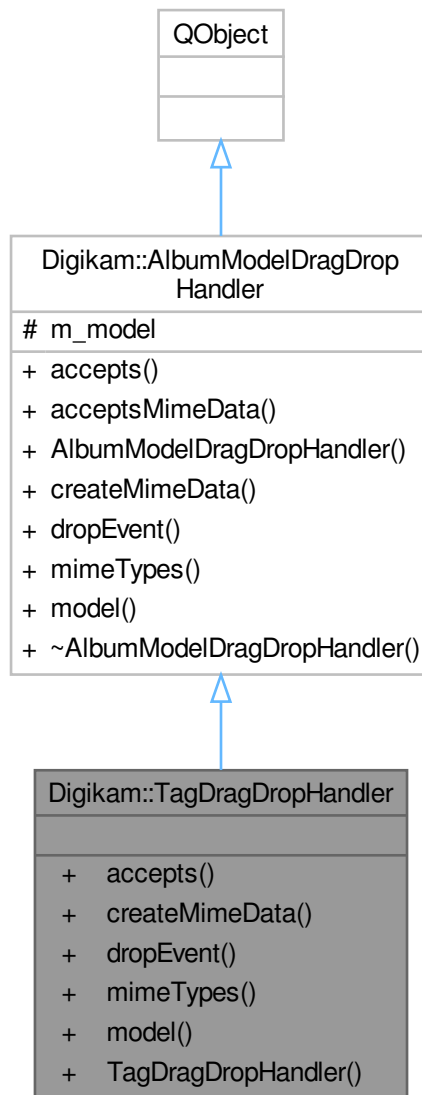

## 6.1395 Digikam::TagData Struct Reference

### Public Attributes

- QString **tagName**
- Type **tagType** = TypeChild
- QString **tipName**

## 6.1396 Digikam::TagDragDropHandler Class Reference

Inheritance diagram for Digikam::TagDragDropHandler:

### Signals

- void **assignTags** (const QList< qlonglong > &imageIDs, const QList< int > &tagIDs)

### Public Member Functions

- Qt::DropAction **accepts** (const QDropEvent \*e, const QModelIndex &dropIndex) override
- QMimeData \* **createMimeData** (const QList< Album \* > &) override

- bool [dropEvent](#) (QAbstractItemView \*view, const QDropEvent \*e, const QModelIndex &droppedOn) override
- QStringList [mimeTypes](#) () const override
- [TagModel](#) \* **model** () const
- [TagDragDropHandler](#) ([TagModel](#) \*const model)

## Public Member Functions inherited from [Digikam::AlbumModelDragDropHandler](#)

- virtual bool [acceptsMimeData](#) (const QMimeData \*data)
- [AlbumModelDragDropHandler](#) ([AbstractAlbumModel](#) \*model)
- [AbstractAlbumModel](#) \* **model** () const

## Additional Inherited Members

## Protected Attributes inherited from [Digikam::AlbumModelDragDropHandler](#)

- [AbstractAlbumModel](#) \* **m\_model** = nullptr

## 6.1396.1 Member Function Documentation

### 6.1396.1.1 [accepts\(\)](#)

```
Qt::DropAction Digikam::TagDragDropHandler::accepts (
    const QDropEvent * e,
    const QModelIndex & dropIndex ) [override], [virtual]
```

Returns if the given mime data is accepted for drop on dropIndex. Returns the proposed action, or Qt::IgnoreAction if not accepted.

Reimplemented from [Digikam::AlbumModelDragDropHandler](#).

### 6.1396.1.2 [createMimeData\(\)](#)

```
QMimeData * Digikam::TagDragDropHandler::createMimeData (
    const QList< Album * > & ) [override], [virtual]
```

Create a mime data object for starting a drag from the given Albums

Reimplemented from [Digikam::AlbumModelDragDropHandler](#).

### 6.1396.1.3 [dropEvent\(\)](#)

```
bool Digikam::TagDragDropHandler::dropEvent (
    QAbstractItemView * view,
    const QDropEvent * e,
    const QModelIndex & droppedOn ) [override], [virtual]
```

Gives the view and the occurring drop event. The index is the index where the drop was dropped on. It may be invalid (dropped on decoration, viewport) Returns true if the event is to be accepted.

Reimplemented from [Digikam::AlbumModelDragDropHandler](#).

### 6.1396.1.4 mimeTypees()

```
QStringList Digikam::TagDragDropHandler::mimeTypees ( ) const [override], [virtual]
```

Returns the supported mime types. Called by the default implementation of model's [mimeTypees\(\)](#).

Reimplemented from [Digikam::AlbumModelDragDropHandler](#).

## 6.1397 Digikam::TagEditDlg Class Reference

Inheritance diagram for Digikam::TagEditDlg:

### Public Member Functions

- QString **icon** () const
- QKeySequence **shortcut** () const
- **TagEditDlg** (QWidget \*const parent, [TAlbum](#) \*const album, bool create=false)
- QString **title** () const

## Static Public Member Functions

- static AlbumList [createTAlbum](#) (TAlbum \*const mainRootAlbum, const QString &tagStr, const QString &icon, const QKeySequence &ks, QMap< QString, QString > &errMap)
- static void **showtagsListCreationError** (QWidget \*const parent, const QMap< QString, QString > &errMap)
- static bool **tagCreate** (QWidget \*const parent, TAlbum \*const album, QString &title, QString &icon, QKeySequence &ks)
- static bool **tagEdit** (QWidget \*const parent, TAlbum \*const album, QString &title, QString &icon, QKeySequence &ks)

## 6.1397.1 Member Function Documentation

### 6.1397.1.1 createTAlbum()

```
AlbumList Digikam::TagEditDlg::createTAlbum (  
    TAlbum *const mainRootAlbum,  
    const QString & tagStr,  
    const QString & icon,  
    const QKeySequence & ks,  
    QMap< QString, QString > & errMap ) [static]
```

Create a list of new Tag album using a list of tags hierarchies separated by ",". A hierarchy of tags is a string path of tags name separated by "/". If a hierarchy start by "/" or if mainRootAlbum is null, it will be created from root tag album, else it will be created from mainRootAlbum as parent album. 'errMap' is Map of TAlbum path and error message if tag creation failed. Return the list of created Albums.

### 6.1398.1 Detailed Description

A view to filter the currently displayed album by tags.

Author

jwienke

### 6.1398.2 Constructor & Destructor Documentation

#### 6.1398.2.1 TagFilterView()

```
Digikam::TagFilterView::TagFilterView (  
    QWidget *const parent,  
    TagModel *const tagFilterModel ) [explicit]
```

Constructor.

## Parameters

<i>parent</i>	the parent for qt parent child mechanism
<i>tagFilterModel</i>	tag model to work on

**6.1398.2.2 ~TagFilterView()**

```
Digikam::TagFilterView::~TagFilterView ( ) [override]
```

Destructor.

**6.1398.3 Member Function Documentation****6.1398.3.1 addCustomContextMenuActions()**

```
void Digikam::TagFilterView::addCustomContextMenuActions (
    ContextMenuHelper & cmh,
    Album * album ) [override], [protected], [virtual]
```

Hook method to add custom actions to the generated context menu.

## Parameters

<i>cmh</i>	helper object to create the context menu
<i>album</i>	tag on which the context menu will be created. May be null if it is requested on no tag entry

Reimplemented from [Digikam::TagCheckView](#).

**6.1398.3.2 handleCustomContextMenuAction()**

```
void Digikam::TagFilterView::handleCustomContextMenuAction (
    QAction * action,
    const AlbumPointer< Album > & album ) [override], [protected], [virtual]
```

Hook method to handle the custom context menu actions that were added with addCustomContextMenuActions.

## Parameters

<i>action</i>	the action that was chosen by the user, may be null if none of the custom actions were selected
<i>album</i>	the tag on which the context menu was requested. May be null if there was no

Reimplemented from [Digikam::AbstractAlbumTreeView](#).

## 6.1399.1 Constructor & Destructor Documentation

### 6.1399.1.1 TagFolderView()

```
Digikam::TagFolderView::TagFolderView (
    QWidget *const parent,
    TagModel *const model )
```

Constructor.

Parameters

<i>parent</i>	the parent for Qt's parent child mechanism
<i>model</i>	tag model to display

This ensures that the View appears sorted

### 6.1399.1.2 ~TagFolderView()

```
Digikam::TagFolderView::~~TagFolderView ( ) [override]
```

Destructor.

## 6.1399.2 Member Function Documentation

### 6.1399.2.1 addCustomContextMenuActions()

```
void Digikam::TagFolderView::addCustomContextMenuActions (
    ContextMenuHelper & cmh,
    Album * album ) [override], [protected], [virtual]
```

Hook method to add custom actions to the generated context menu.

The default implementation adds actions to reset the tag icon and to find duplicates in a tag album. If you want to use these actions, remember to call this class' implementation of this method and the `handleCustomContextMenuAction` in your derived class.

#### Parameters

<i>cmh</i>	helper object to create the context menu
<i>album</i>	tag on which the context menu will be created. May be null if it is requested on no tag entry

Reimplemented from [Digikam::AbstractAlbumTreeView](#).

### 6.1399.2.2 contextMenuEvent()

```
void Digikam::TagFolderView::contextMenuEvent (
    QContextMenuEvent * event ) [override], [protected]
```

Reimplement `contextMenuEvent` from `AbstractAlbumTree` to support multiple selection

#### Parameters

<i>event</i>	context menu event triggered by right click
--------------	---

If no item is selected append root tag

### 6.1399.2.3 contextMenuTitle()

```
QString Digikam::TagFolderView::contextMenuTitle ( ) const [override], [protected], [virtual]
```

Hook method to implement that returns the title for the context menu.

#### Returns

title for the context menu

Reimplemented from [Digikam::AbstractAlbumTreeView](#).

**6.1399.2.4 handleCustomContextMenuAction()**

```
void Digikam::TagFolderView::handleCustomContextMenuAction (
    QAction * action,
    const AlbumPointer< Album > & album ) [override], [protected], [virtual]
```

Hook method to handle the custom context menu actions that were added with addCustomContextMenuActions.

**Parameters**

<i>action</i>	the action that was chosen by the user, may be null if none of the custom actions were selected
<i>album</i>	the tag on which the context menu was requested. May be null if there was no

Reimplemented from [Digikam::AbstractAlbumTreeView](#).

**6.1399.2.5 setContextMenuItems()**

```
void Digikam::TagFolderView::setContextMenuItems (
    ContextMenuHelper & cmh,
    const QList< TAlbum * > & albums ) [protected], [virtual]
```

Implementation of AddCustomContextMenuActions(see above) that handle multiple selection. If only one element is selected, only AddCustomContextMenuActions is called

**Parameters**

<i>cmh</i>	- helper object to create context menu
<i>albums</i>	- vector of selected albums to be used on menu actions

Reimplemented in [Digikam::TagMngrTreeView](#).

**6.1399.2.6 setShowDeleteFaceTagsAction()**

```
void Digikam::TagFolderView::setShowDeleteFaceTagsAction (
    bool show )
```

Define whether to show the "Delete People Tags" action in context menus or not.

**Parameters**

<i>show</i>	if <code>true</code> the action to delete people tags in the tag album is displayed
-------------	---

**6.1399.2.7 setShowFindDuplicateAction()**

```
void Digikam::TagFolderView::setShowFindDuplicateAction (
    bool show )
```

Define whether to show the "find duplicate" action in context menus or not.

## Parameters

<code>show</code>	if <code>true</code> the action to find duplicate images in the tag album is displayed
-------------------	--

**6.1399.2.8 tagPropsEdit()**

```
void Digikam::TagFolderView::tagPropsEdit ( )
```

Open tag for editing.

**6.1400 Digikam::TaggingAction Class Reference****Public Types**

- enum [Type](#) { [NoAction](#) , [AssignTag](#) , [CreateNewTag](#) }

**Public Member Functions**

- bool **isValid** () const
- QString **newTagName** () const
  - If shallCreateNewTag(), returns the tag name and the parent tag id, 0 for toplevel tag.*
- bool **operator==** (const [TaggingAction](#) &other) const
- int **parentTagId** () const
- bool **shallAssignTag** () const
- bool **shallCreateNewTag** () const
- [TaggingAction](#) ()=default
- [TaggingAction](#) (const QString &name, int parentTagId)
- [TaggingAction](#) (int tagId)
- int **tagId** () const
  - If shallAssignTag(), returns the tag id.*
- [Type](#) **type** () const

**Protected Attributes**

- int **m\_tagId** = -1
- QString **m\_tagName**
- [Type](#) **m\_type** = NoAction

**6.1400.1 Member Enumeration Documentation****6.1400.1.1 Type**

```
enum Digikam::TaggingAction::Type
```

Describes two possible actions: Assigning an existing tag, known by tag id, or creation of a new tag, with a given tag name and a parent tag.

## 6.1400.2 Constructor & Destructor Documentation

### 6.1400.2.1 TaggingAction() [1/3]

```
Digikam::TaggingAction::TaggingAction ( ) [default]
```

Create a NoAction

### 6.1400.2.2 TaggingAction() [2/3]

```
Digikam::TaggingAction::TaggingAction (
    int tagId ) [explicit]
```

Assign the existing tag with given id

### 6.1400.2.3 TaggingAction() [3/3]

```
Digikam::TaggingAction::TaggingAction (
    const QString & name,
    int parentTagId )
```

Create a new tag with the given name. The parent shall be the tag with the given id, or 0 for a toplevel tag.

## 6.1401 Digikam::TaggingActionFactory Class Reference

### Classes

- class [ConstraintInterface](#)

### Public Types

- enum [NameMatchMode](#) { [MatchStartingWithFragment](#) , [MatchContainingFragment](#) }

### Public Member Functions

- [QList< TaggingAction > actions](#) () const  
*Returns the sorted list of suggested tagging actions, based on the above settings.*
- [ConstraintInterface \\* constraintInterface](#) () const
- [TaggingAction defaultTaggingAction](#) () const  
*Returns one single action, which is decided to be the presumably best action based on the settings.*
- [QString fragment](#) () const
- [int indexOfDefaultAction](#) () const  
*Returns the index of the default action in the list returned by generate()*
- [int indexOfLastRecentAction](#) () const  
*Returns the index of the last recent action in the list returned by actions()*
- [NameMatchMode nameMatchMode](#) () const
- [int parentTagId](#) () const

- void **reset** ()  
*reset all settings to the default (no fragment, no actions)*
- void **setConstraintInterface** ([ConstraintInterface](#) \*const iface)
- void **setFragment** (const QString &fragment)  
*Set a fragment of a tag name to generate possible tags, as known from completers.*
- void **setNameMatchMode** ([NameMatchMode](#) mode)  
*Set the matching mode for the tag name.*
- void **setParentTag** (int parentTagId)  
*Set a tag which may by the user be intended to be the parent of a newly created tag.*
- QString **suggestedUIString** (const [TaggingAction](#) &action) const  
*Returns a string to be used in the UI for the given [TaggingAction](#), interpreted in the context of the current settings.*

### Static Public Member Functions

- static [TaggingAction](#) **defaultTaggingAction** (const QString &tagName, int parentTagId=0)

## 6.1401.1 Member Enumeration Documentation

### 6.1401.1.1 NameMatchMode

enum [Digikam::TaggingActionFactory::NameMatchMode](#)

#### Enumerator

MatchStartingWithFragment	Default: use the "startingWith" method.
MatchContainingFragment	use the "contains" method

## 6.1401.2 Member Function Documentation

### 6.1401.2.1 setConstraintInterface()

```
void Digikam::TaggingActionFactory::setConstraintInterface (
    ConstraintInterface *const iface )
```

Allows to filter the scope of suggested tags. Pass an implementation of [ConstraintInterface](#) (reamins in your ownership). [actions\(\)](#) will then only suggest to assign tags for which [matches\(\)](#) is true

## 6.1402 Digikam::TaggingActionFactory::ConstraintInterface Class Reference

Inheritance diagram for Digikam::TaggingActionFactory::ConstraintInterface:

### Public Member Functions

- virtual bool **matches** (int tagId)=0

## 6.1403 Digikam::TagInfo Class Reference

### Public Types

- typedef QList< [TagInfo](#) > **List**

### Public Member Functions

- bool **isNull** () const
- bool **operator**< (const [TagInfo](#) &info) const

## Public Attributes

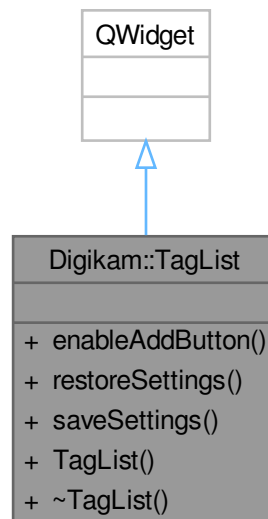

- QString **icon**
- qlonglong **iconId** = 0
- int **id** = 0
- QString **name**
- int **pid** = 0

### 6.1403.1 Detailed Description

A container class for transporting tag information from the database to [AlbumManager](#)

## 6.1404 Digikam::TagList Class Reference

Inheritance diagram for Digikam::TagList:

## Public Member Functions

- void **enableAddButton** (bool value)  
*enableAddButton* - disable Add Button when selection is empty or only root tag is selected
- void **restoreSettings** ()  
*restoreSettings* - read settings from `digikam_tagsmanagerrc` config and populate model with data
- void **saveSettings** ()  
*saveSettings* - save settings to `digiKam_tagsmanagerrc KConfig`
- **TagList** ([TagMgrTreeView](#) \*const treeView, QWidget \*const parent)

## 6.1404.1 Member Function Documentation

### 6.1404.1.1 restoreSettings()

```
void Digikam::TagList::restoreSettings ( )
```

If config is empty add generic All Tags

Use this map to find all List Items that contain specific tag usually to remove deleted tag

"All Tags" item should be selected

## 6.1405 Digikam::TagMgrListModel Class Reference

Inheritance diagram for Digikam::TagMgrListModel:

## Public Member Functions

- `ListItem * addItem (QList< QVariant > values)`  
*addItem* - add new item to list
- `QList< ListItem * > allItems () const`  
*allItems* - return all items from List, usually to be saved in KConfig
- `int columnCount (const QModelIndex &parent=QModelIndex()) const override`
- `QVariant data (const QModelIndex &index, int role) const override`
- `void deleteItem (ListItem *const item)`
- `bool dropMimeData (const QMimeData *data, Qt::DropAction action, int row, int column, const QModelIndex &parent) override`
- `Qt::ItemFlags flags (const QModelIndex &index) const override`
- `QList< int > getDragNewSelection () const`
- `QVariant headerData (int section, Qt::Orientation orientation, int role=Qt::DisplayRole) const override`
- `QModelIndex index (int row, int column, const QModelIndex &parent=QModelIndex()) const override`
- `QMimeData * mimeData (const QModelIndexList &indexes) const override`
- `QStringList mimeTypes () const override`
- `QModelIndex parent (const QModelIndex &index) const override`
- `int rowCount (const QModelIndex &parent=QModelIndex()) const override`
- `bool setData (const QModelIndex &index, const QVariant &value, int role) override`
- `Qt::DropActions supportedDropActions () const override`
- `TagMngrListModel (QObject *const parent=nullptr)`

## 6.1405.1 Member Function Documentation

### 6.1405.1.1 addItem()

```
ListItem * Digikam::TagMngrListModel::addItem (
    QList< QVariant > values )
```

#### Parameters

<i>values</i>	- A list of data for item: Name as QString, QBrush as background and qlonglong as id
---------------	--

#### Returns

- pointer to newly created listitem

containsItem will return a valid pointer if item with the same values is already added to it's children list.

### 6.1405.1.2 data()

```
QVariant Digikam::TagMngrListModel::data (
    const QModelIndex & index,
    int role ) const [override]
```

Standard methods to be implemented when subclassing QAbstractListModel

### 6.1405.1.3 dropMimeData()

```
bool Digikam::TagMngrListModel::dropMimeData (
    const QMimeData * data,
    Qt::DropAction action,
    int row,
    int column,
    const QModelIndex & parent ) [override]
```

After drag-n-drop selection is messed up, store the interval were new items are and TagsMngrListView will update selection

### 6.1405.1.4 supportedDropActions()

```
Qt::DropActions Digikam::TagMngrListModel::supportedDropActions ( ) const [override]
```

Reimplemented methods for handling drag-n-drop, encoding and decoding mime types

## 6.1406 Digikam::TagMngrListView Class Reference

Inheritance diagram for Digikam::TagMngrListView:

### Public Slots

- void **slotDeleteSelected** ()  
*slotDeleteSelected* - delete selected item from Quick Access List

## Public Member Functions

- QModelIndexList **mySelectedIndexes** ()
- **TagMngrListView** (QWidget \*const parent=nullptr)

## Protected Member Functions

- void **contextMenuEvent** (QContextMenuEvent \*event) override  
*contextMenuEvent - reimplemented method from QListView to handle custom context menu*
- void **dropEvent** (QDropEvent \*e) override
- QModelIndex **indexVisuallyAt** (const QPoint &p)
- void **startDrag** (Qt::DropActions supportedActions) override

## 6.1406.1 Member Function Documentation

### 6.1406.1.1 startDrag()

```
void Digikam::TagMngrListView::startDrag (  
    Qt::DropActions supportedActions ) [override], [protected]
```

Reimplemented methods to enable custom drag-n-drop in QListView

## 6.1407 Digikam::TagMgrTreeView Class Reference

## 6.1407.1 Member Function Documentation

### 6.1407.1.1 contextMenuEvent()

```
void Digikam::TagMngrTreeView::contextMenuEvent (
    QContextMenuEvent * event ) [override], [protected]
```

#### Parameters

<i>event</i>	context menu event triggered by right click
--------------	---

Append root tag if no nodes are selected

### 6.1407.1.2 setContextMenuItems()

```
void Digikam::TagMngrTreeView::setContextMenuItems (
    ContextMenuHelper & cmh,
    const QList< TAlbum * > & albums ) [override], [protected], [virtual]
```

#### Parameters

<i>cmh</i>	<a href="#">ContextMenuHelper</a> class to help setting some basic actions
<i>albums</i>	List of currently selected albums

This is a dummy action, delete is disable for root tag

Reimplemented from [Digikam::TagFolderView](#).

## 6.1408.1 Constructor & Destructor Documentation

### 6.1408.1.1 TagModel()

```
Digikam::TagModel::TagModel (
    RootAlbumBehavior rootBehavior = IncludeRootAlbum,
    QObject *const parent = nullptr ) [explicit]
```

Create a model containing all tags

## 6.1408.2 Member Function Documentation

### 6.1408.2.1 albumData()

```
QVariant Digikam::TagModel::albumData (
    Album * a,
    int role ) const [override], [protected], [virtual]
```

#### Note

these can be reimplemented in a subclass

Reimplemented from [Digikam::AbstractCheckableAlbumModel](#).

### 6.1408.2.2 albumForId()

```
Album * Digikam::TagModel::albumForId (
    int id ) const [override], [protected], [virtual]
```

Implements [Digikam::AbstractCountingAlbumModel](#).

### 6.1408.2.3 decorationRoleData()

```
QVariant Digikam::TagModel::decorationRoleData (
    Album * a ) const [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractAlbumModel](#).

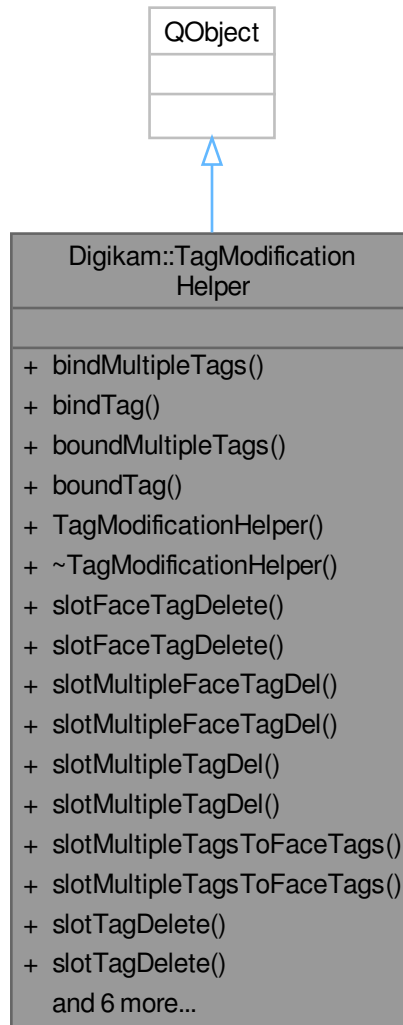

### 6.1408.2.4 fontRoleData()

```
QVariant Digikam::TagModel::fontRoleData (
    Album * a ) const [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractAlbumModel](#).

## 6.1409 Digikam::TagModificationHelper Class Reference

Inheritance diagram for Digikam::TagModificationHelper:

### Public Slots

## Public Member Functions

- void `bindMultipleTags` (QAction \*action, const QList< TAIbum \* > &tags)
- void `bindTag` (QAction \*action, TAIbum \*parent) const
- QList< TAIbum \* > `boundMultipleTags` (QObject \*sender)
- TAIbum \* `boundTag` (QObject \*action) const
- `TagModificationHelper` (QObject \*const parent, QWidget \*const dialogParent)
- `~TagModificationHelper` () override

### 6.1409.1 Detailed Description

Utility class providing methods to modify tag albums (TAIbum) in a way useful to implement views.

This class can do background processing for batch tag operations. So be sure that the signals indicating the progress of these operations are used.

#### Author

jwienke

### 6.1409.2 Constructor & Destructor Documentation

#### 6.1409.2.1 TagModificationHelper()

```
Digikam::TagModificationHelper::TagModificationHelper (
    QObject *const parent,
    QWidget *const dialogParent ) [explicit]
```

Constructor.

#### Parameters

<i>parent</i>	the parent for qt parent child mechanism
<i>dialogParent</i>	parent widget for dialogs displayed by this object

### 6.1409.2.2 ~TagModificationHelper()

```
Digikam::TagModificationHelper::~TagModificationHelper ( ) [override]
```

Destructor.

## 6.1409.3 Member Function Documentation

### 6.1409.3.1 bindMultipleTags()

```
void Digikam::TagModificationHelper::bindMultipleTags (
    QAction * action,
    const QList< TAlbum * > & tags )
```

Set QVector's pointer into action's data. Make sure that QVector is not a local object and it's not destroyed before boundMultipleTags are called

#### Parameters

<i>action</i>	- action to store pointer
<i>tags</i>	- QVector pointer to be stored

### 6.1409.3.2 bindTag()

```
void Digikam::TagModificationHelper::bindTag (
    QAction * action,
    TAlbum * parent ) const
```

Sets the tag that the given action operates on. You must call bindTag and then connect the action's triggered to the desired slot, [slotTagNew\(\)](#), [slotTagEdit\(\)](#) or [slotTagDelete\(\)](#). Note: Changes the Action's user data.

### 6.1409.3.3 boundMultipleTags()

```
QList< TAlbum * > Digikam::TagModificationHelper::boundMultipleTags (
    QObject * sender )
```

Return QVector pointer bound with bindMultipleTags. Use when context menu should delete more than one item: multiple-selection.

### 6.1409.3.4 boundTag()

```
TAlbum * Digikam::TagModificationHelper::boundTag (
    QObject * action ) const
```

Returns the tag bound with bindTag. The given QObject shall be a QAction, but for convenience the given object will be checked with `qobject_cast` first, so you can pass `QObject::sender()`.

### 6.1409.3.5 slotFaceTagDelete [1/2]

```
void Digikam::TagModificationHelper::slotFaceTagDelete ( ) [slot]
```

must use bindTag and a QAction

### 6.1409.3.6 slotFaceTagDelete [2/2]

```
void Digikam::TagModificationHelper::slotFaceTagDelete (
    TAlbum * tag ) [slot]
```

Deletes the given face tag and after prompting the user for this. The tag itself is not deleted. Only its property as face tag.

#### Parameters

<i>tag</i>	the face tag to delete
------------	------------------------

### 6.1409.3.7 slotMultipleFaceTagDel [1/2]

```
void Digikam::TagModificationHelper::slotMultipleFaceTagDel ( ) [slot]
```

must use bindMultipleTags and a QAction

### 6.1409.3.8 slotMultipleFaceTagDel [2/2]

```
void Digikam::TagModificationHelper::slotMultipleFaceTagDel (
    const QList< TAlbum * > & tags ) [slot]
```

Delete multiple face tags and prompt user only once for all The tags itself are not deleted. Only their properties as face tags.

#### Parameters

<i>tags</i>	face tags to be deleted.
-------------	--------------------------

### 6.1409.3.9 slotMultipleTagDel [1/2]

```
void Digikam::TagModificationHelper::slotMultipleTagDel ( ) [slot]
```

must use bindMultipleTags and a QAction

### 6.1409.3.10 slotMultipleTagDel [2/2]

```
void Digikam::TagModificationHelper::slotMultipleTagDel (
    const QList< TAlbum * > & tags ) [slot]
```

Delete multiple tags and prompt user only once for all

**Parameters**

<i>tags</i>	the tags to be deleted, without root tag
-------------	--

Tags must be deleted from children to parents, if we don't want to step on invalid index. Use QMap to order them by distance to root tag

QMultimap doesn't provide reverse iterator, use QList.

**6.1409.3.11 slotMultipleTagsToFaceTags [1/2]**

```
void Digikam::TagModificationHelper::slotMultipleTagsToFaceTags ( ) [slot]
```

must use bindMultipleTags and a QAction

**6.1409.3.12 slotMultipleTagsToFaceTags [2/2]**

```
void Digikam::TagModificationHelper::slotMultipleTagsToFaceTags (
    const QList< TAlbum * > & tags ) [slot]
```

Marks the tags as face tags if they are not already.

**Parameters**

<i>tags</i>	the tags to mark.
-------------	-------------------

**6.1409.3.13 slotTagDelete [1/2]**

```
void Digikam::TagModificationHelper::slotTagDelete ( ) [slot]
```

must use bindTag and a QAction

**6.1409.3.14 slotTagDelete [2/2]**

```
void Digikam::TagModificationHelper::slotTagDelete (
    TAlbum * tag ) [slot]
```

Deletes the given tag and after prompting the user for this.

**Parameters**

<i>tag</i>	the tag to delete, must not be the root tag album
------------	---

**6.1409.3.15 slotTagEdit [1/2]**

```
void Digikam::TagModificationHelper::slotTagEdit ( ) [slot]
```

must use bindTag and a QAction

**6.1409.3.16 slotTagEdit [2/2]**

```
void Digikam::TagModificationHelper::slotTagEdit (
    TAlbum * tag ) [slot]
```

Edits the given tag via a user dialog.

**Parameters**

<i>tag</i>	the tag to change
------------	-------------------

**6.1409.3.17 slotTagNew [1/2]**

```
TAlbum * Digikam::TagModificationHelper::slotTagNew ( ) [slot]
```

Same as above, but this slot can be triggered from a QAction if a parent tag is bound to this action, see below. Without this mechanism, will add a toplevel tag.

**Returns**

new tag created or 0 if no tag was created

**6.1409.3.18 slotTagNew [2/2]**

```
TAlbum * Digikam::TagModificationHelper::slotTagNew (
    TAlbum * parent,
    const QString & title = QString(),
    const QString & iconName = QString() ) [slot]
```

Creates one ore more new tags under the given parent. If only the parent is given, then a dialog is shown to create new tags. Else, if also a title and optionally an icon are given, then these values will be used directly to create the tag.

**Parameters**

<i>parent</i>	the parent tag album under which to create the new tags. May be 0 to use the root album
<i>title</i>	if this isn't an empty string, then this tag name is suggested
<i>iconName</i>	an optional name for the icon to suggest for the new tag

**Returns**

new tag album or 0 if not created

**6.1409.3.19 slotTagToFaceTag [1/2]**

```
void Digikam::TagModificationHelper::slotTagToFaceTag ( ) [slot]
```

must use bindTag and a QAction

**6.1409.3.20 slotTagToFaceTag [2/2]**

```
void Digikam::TagModificationHelper::slotTagToFaceTag (
    TAlbum * tag ) [slot]
```

Marks the tag as face tag if it is not already.

**Parameters**

<i>tag</i>	the tag to mark
------------	-----------------

**6.1410 Digikam::TagProperties Class Reference****Public Member Functions**

- void [addProperty](#) (const QString &key, const QString &value)
- bool [hasProperty](#) (const QString &key) const

## Static Public Member Functions

- static [TagProperties](#) `getOrCreate` (const QString &tagPath)

## 6.1410.1 Constructor & Destructor Documentation

### 6.1410.1.1 TagProperties() [1/2]

```
Digikam::TagProperties::TagProperties ( )
```

This class provides a wrapper over the Database methods to access the properties of a tag. It is meant to be a short-lived object, it does not listen to external database changes.

### 6.1410.1.2 TagProperties() [2/2]

```
Digikam::TagProperties::TagProperties (
    int tagId ) [explicit]
```

Access the properties of the given tag.

## 6.1410.2 Member Function Documentation

### 6.1410.2.1 addProperty()

```
void Digikam::TagProperties::addProperty (
    const QString & key,
    const QString & value )
```

Adds the given property. Does not change any previous occurrences of this property, allowing multiple properties with the same key.

### 6.1410.2.2 getOrCreate()

```
TagProperties Digikam::TagProperties::getOrCreate (
    const QString & tagPath ) [static]
```

Finds the tag for the given tag path or creates a new tag. Then returns the tag properties for this tag.

### 6.1410.2.3 hasProperty() [1/2]

```
bool Digikam::TagProperties::hasProperty (
    const QString & key ) const
```

Returns true if the property is set.

#### 6.1410.2.4 hasProperty() [2/2]

```
bool Digikam::TagProperties::hasProperty (
    const QString & key,
    const QString & value ) const
```

Returns true if the property is set, with exactly the given value.

#### 6.1410.2.5 value()

```
QString Digikam::TagProperties::value (
    const QString & key ) const
```

Returns the value of the given property. If the property is not set, a null string is returned. But a null string is also returned if the property is set, but without a value. Use hasProperty to check that case.

## 6.1411 Digikam::TagPropertiesFilterModel Class Reference

Inheritance diagram for Digikam::TagPropertiesFilterModel:

### 6.1411.1 Detailed Description

[Filter](#) model for tags that can filter by tag property

### 6.1411.2 Member Function Documentation

#### 6.1411.2.1 [isFiltering\(\)](#)

```
bool Digikam::TagPropertiesFilterModel::isFiltering ( ) const [override], [virtual]
```

Returns if the currently applied filters will result in any filtering.

#### Returns

`true` if the current selected filter could result in any filtering without checking if this really happens.

Reimplemented from [Digikam::CheckableAlbumFilterModel](#).

#### 6.1411.2.2 [matches\(\)](#)

```
bool Digikam::TagPropertiesFilterModel::matches (
    Album * album ) const [override], [protected], [virtual]
```

This method provides the basic match checking algorithm. Return true if this single album matches the current criteria. This method can be overridden to provide custom filtering.

#### Parameters

<i>album</i>	the album to tell if it matches the filter criteria or not.
--------------	---

Reimplemented from [Digikam::CheckableAlbumFilterModel](#).

Reimplemented in [Digikam::TagsManagerFilterModel](#).

## Protected Attributes

- Type `m_type` = Invalid
- QVariant `m_value`

## 6.1415.1 Constructor & Destructor Documentation

### 6.1415.1.1 TagRegion() [1/3]

```
Digikam::TagRegion::TagRegion ( ) [default]
```

Use this small class to convert between the formatted textual representation of a tag region in the database and the corresponding object. Construct an invalid region.

### 6.1415.1.2 TagRegion() [2/3]

```
Digikam::TagRegion::TagRegion (
    const QString & descriptor ) [explicit]
```

Construct with the textual descriptor.

### 6.1415.1.3 TagRegion() [3/3]

```
Digikam::TagRegion::TagRegion (
    const QRect & rect ) [explicit]
```

Construct with the region.

## 6.1415.2 Member Function Documentation

### 6.1415.2.1 absoluteToRelative()

```
QRectF Digikam::TagRegion::absoluteToRelative (
    const QRect & region,
    const QSize & fullSize ) [static]
```

Takes absolute region and full size to return the original relative region. Used to write back rectangles into image's XMP. see [MetadataHub::write](#).

### 6.1415.2.2 adjustToOrientation()

```
QSize Digikam::TagRegion::adjustToOrientation (
    QRect & region,
    int orientation,
    const QSize & fullSize ) [static]
```

Rotate and flip region to [MetaEngine::ImageOrientation](#). The value region are calculated for the new image orientation.

### 6.1415.2.3 intersects()

```
bool Digikam::TagRegion::intersects (
    const TagRegion & other,
    double fraction = 0 )
```

Returns true if this and the other region intersect. *fraction* describes the relative overlap area needed to return true: If *fraction* is 0, returns true if the regions intersect at all. If *fraction* is 1, returns true only if other is completely contained in this region. If *fraction* is *x*,  $0 < x < 1$ , returns true if the area of this region covered by the other is greater than *x*. Invalid areas never intersect.

### 6.1415.2.4 mapToOriginalSize() [1/2]

```
QRect Digikam::TagRegion::mapToOriginalSize (
    const DImg & reducedSizeImage,
    const QRect & reducedSizeDetail ) [static]
```

Takes the original and reduced size from the [DImg](#).

### 6.1415.2.5 mapToOriginalSize() [2/2]

```
QRect Digikam::TagRegion::mapToOriginalSize (
    const QSize & fullImageSize,
    const QSize & reducedImageSize,
    const QRect & reducedSizeDetail ) [static]
```

Converts detail rectangles taken from a reduced size image to the original size, and vice versa.

### 6.1415.2.6 relativeToAbsolute() [1/2]

```
QRect Digikam::TagRegion::relativeToAbsolute (
    const QRectF & region,
    const DImg & reducedSizeImage ) [static]
```

Takes the original and reduced size from the [DImg](#), maps to original size.

### 6.1415.2.7 relativeToAbsolute() [2/2]

```
QRect Digikam::TagRegion::relativeToAbsolute (
    const QRectF & region,
    const QSize & fullSize ) [static]
```

Takes a relative region and a full size and returns the absolute region.

### 6.1415.2.8 reverseToOrientation()

```
void Digikam::TagRegion::reverseToOrientation (
    QRect & region,
    int orientation,
    const QSize & fullSize ) [static]
```

Reverse rotate and flip region to [MetaEngine::ImageOrientation](#). The value region are calculated for the new image orientation.

**6.1415.2.9 toRect()**

```
QRect Digikam::TagRegion::toRect ( ) const
```

If type is Rect, returns the contained rectangle.

**6.1415.2.10 toVariant()**

```
QVariant Digikam::TagRegion::toVariant ( ) const
```

Stores in / loads from a variant. Will only use native QVariant types.

**6.1415.2.11 toXml()**

```
QString Digikam::TagRegion::toXml ( ) const
```

Returns an XML textual representation of this region.

**6.1416 Digikam::TagsActionMngr Class Reference**

Inheritance diagram for Digikam::TagsActionMngr:

## Signals

- void **signalShortcutPressed** (const QString &shortcut, int val)

## Public Member Functions

- QList< KActionCollection \* > [actionCollections](#) () const
- QString **colorShortcutPrefix** () const
- QString **pickShortcutPrefix** () const
- QString **ratingShortcutPrefix** () const
- void **registerActionsToWidget** (QWidget \*const wdg)
- void [registerLabelsActions](#) (KActionCollection \*const ac)
- void [registerTagsActionCollections](#) ()
- **TagsActionMngr** (QWidget \*const parent)
- QString **tagShortcutPrefix** () const
- void [updateTagShortcut](#) (int tagId, const QKeySequence &ks, bool delAction=true)

## Static Public Member Functions

- static [TagsActionMngr](#) \* **defaultManager** ()

## 6.1416.1 Member Function Documentation

### 6.1416.1.1 actionCollections()

```
QList< KActionCollection * > Digikam::TagsActionMngr::actionCollections ( ) const
```

Return the list of whole action collections managed.

### 6.1416.1.2 registerLabelsActions()

```
void Digikam::TagsActionMngr::registerLabelsActions (
    KActionCollection *const ac )
```

Register all labels actions to collections managed with keyboard shortcuts. Unlike tags actions, labels shortcuts are stored in XML GUI file of each root windows, to be able to customize it through KDE keyboards shortcuts config panel. This method must be called before to `DXmlGuiWindow::createGUI()`, typically when window actions are registered to ActionCollection instance.

### 6.1416.1.3 registerTagsActionCollections()

```
void Digikam::TagsActionMngr::registerTagsActionCollections ( )
```

Register all tag actions to collections managed with keyboard shortcuts. Because Tags shortcuts are stored in database this method must be called after database initialization and after that all root window instances have been created.

### 6.1416.1.4 updateTagShortcut()

```
void Digikam::TagsActionMngr::updateTagShortcut (
    int tagId,
    const QKeySequence & ks,
    bool delAction = true )
```

Updates the shortcut action for a tag. Call this when a shortcut was added, removed or changed.

## 6.1417 Digikam::TagsCache Class Reference

- class **TagsCacheCreator**

## 6.1417.1 Member Enumeration Documentation

### 6.1417.1.1 LeadingSlashPolicy

```
enum Digikam::TagsCache::LeadingSlashPolicy
```

#### Enumerator

NoLeadingSlash	Ex: "Places/Cities/Paris".
IncludeLeadingSlash	Ex: "/Places/Cities/Paris".

## 6.1417.2 Member Function Documentation

### 6.1417.2.1 canBeWrittenToMetadata()

```
bool Digikam::TagsCache::canBeWrittenToMetadata (
    int tagId ) const
```

Returns if a tag shall be written to the metadata of a file. Always returns false if the tag is a program-internal tag.

### 6.1417.2.2 colorLabelForTag()

```
int Digikam::TagsCache::colorLabelForTag (
    int tagId )
```

Return color label id corresponding of internal tags ID. see ColorLabel values from globals.h. Return -1 if not it's found.

### 6.1417.2.3 colorLabelFromTags()

```
int Digikam::TagsCache::colorLabelFromTags (
    const QList< int > & tagIds )
```

From the given list of tags, returns the color label corresponding to the first encountered tag which is a color label tag. Returns -1 if no tag in the list is a color label tag.

#### 6.1417.2.4 colorLabelTags()

```
QVector< int > Digikam::TagsCache::colorLabelTags ( )
```

Returns all color label tags, where index is the label id and value the tag id.

#### 6.1417.2.5 containsPublicTags()

```
bool Digikam::TagsCache::containsPublicTags (
    const QList< int > & tagIds ) const
```

Returns true if the given list of tag ids contains at least one non-internal tag.

#### 6.1417.2.6 createTag()

```
int Digikam::TagsCache::createTag (
    const QString & tagPathToCreate )
```

Add the tag described by the given tag path, and all missing parent tags, to the database. Returns the tag id. Use this if you know that tag path does not exist. If you are unsure, use `getOrCreateTag`.

#### 6.1417.2.7 getOrCreateInternalTag()

```
int Digikam::TagsCache::getOrCreateInternalTag (
    const QString & tagName )
```

For the given tag name (not path!), find the existing tag or creates a new internal tags under the usual tag path used for internal tags.

#### 6.1417.2.8 getOrCreateTag()

```
int Digikam::TagsCache::getOrCreateTag (
    const QString & tagPath )
```

A combination of `tagForPath` and `createTag`: Finds ids for the given tagPaths. If a tag does not exist yet and `create` is true, it will be created. Otherwise the id 0 is returned for this path.

#### 6.1417.2.9 getOrCreateTagWithProperty()

```
int Digikam::TagsCache::getOrCreateTagWithProperty (
    const QString & tagPath,
    const QString & property,
    const QString & value = QString() )
```

Calls `getOrCreateTag` for the given path, and ensures that the tag has assigned the given property. If you pass a null string as value, then the value is not checked and not changed.

### 6.1417.2.10 hasProperty()

```
bool Digikam::TagsCache::hasProperty (
    int tagId,
    const QString & property,
    const QString & value = QString() ) const
```

Tests if the tag has the given property: a) just has the property. b) has the property with the given value (value not null).

### 6.1417.2.11 hasTag()

```
bool Digikam::TagsCache::hasTag (
    int id ) const
```

Returns true if the tag for the given id exists.

### 6.1417.2.12 isInternalTag()

```
bool Digikam::TagsCache::isInternalTag (
    int tagId ) const
```

Returns if a tag is to be regarded program-internal, that is, a technical implementation detail not visible to the user at any time.

### 6.1417.2.13 parentTag()

```
int Digikam::TagsCache::parentTag (
    int id ) const
```

Returns the parent tag id, or 0 if a toplevel tag or tag does not exist.

### 6.1417.2.14 parentTags()

```
QList< int > Digikam::TagsCache::parentTags (
    int id ) const
```

Returns the parent tag ids of the given tag, starting with the toplevel tag, ending with the direct parent tag. If the tag is a toplevel tag or does not exist, an empty list is returned.

### 6.1417.2.15 pickLabelForTag()

```
int Digikam::TagsCache::pickLabelForTag (
    int tagId )
```

Return pick label id corresponding of internal tags ID. see PickLabel values from globals.h. Return -1 if not it's found.

### 6.1417.2.16 pickLabelFromTags()

```
int Digikam::TagsCache::pickLabelFromTags (
    const QList< int > & tagIds )
```

From the given list of tags, returns the pick label corresponding to the first encountered tag which is a pick label tag. Returns -1 if no tag in the list is a pick label tag.

### 6.1417.2.17 pickLabelTags()

```
QVector< int > Digikam::TagsCache::pickLabelTags ( )
```

Returns all pick label tags, where index is the label id and value the tag id.

### 6.1417.2.18 properties()

```
QMap< QString, QString > Digikam::TagsCache::properties (
    int tagId ) const
```

Returns a list or a map of the properties of the tag. Note: The list and map may be constructed for each call. Prefer [hasProperty\(\)](#) and [property\(\)](#).

### 6.1417.2.19 propertyValue()

```
QString Digikam::TagsCache::propertyValue (
    int tagId,
    const QString & property ) const
```

Returns the value of the property. Returning a null string cannot distinguish between the property set with a null value, or the property not set. The first method returns any property, if multiple are set with the same key.

### 6.1417.2.20 publicTags()

```
QList< int > Digikam::TagsCache::publicTags (
    const QList< int > & tagIds ) const
```

From the given list of tag ids, filter out any internal tags and return only public tags.

### 6.1417.2.21 shortenedTagPaths()

```
QStringList Digikam::TagsCache::shortenedTagPaths (
    const QList< int > & ids,
    LeadingSlashPolicy slashPolicy = IncludeLeadingSlash,
    HiddenTagsPolicy hiddenTagsPolicy = IncludeHiddenTags ) const
```

Utility method. Orders the given tag paths. If tags begin with the same path (parent tags), the relevant part is cut off in the second line. The second variant allows you to pass a list as return parameter. This list will contain, upon return, the tag id corresponding to each tag in the returned, sorted list of shortened paths.

### 6.1417.2.22 tagAdded

```
void Digikam::TagsCache::tagAdded (
    int tagId ) [signal]
```

These signals are provided for convenience; for finer grained information use [CoreDbWatch](#). Use a queued connection if you carry out longer operations from slots connected to these signals.

### 6.1417.2.23 tagForColorLabel()

```
int Digikam::TagsCache::tagForColorLabel (
    int label )
```

Return internal tags ID corresponding of color label id. see ColorLabel values from globals.h. Return 0 if not it's found.

### 6.1417.2.24 tagForName()

```
int Digikam::TagsCache::tagForName (
    const QString & tagName,
    int parentId = 0 ) const
```

Returns the id of the tag with the given name and parent tag. If parentId is 0, the tag is a toplevel tag. Returns 0 if there is no such tag.

### 6.1417.2.25 tagForPath()

```
int Digikam::TagsCache::tagForPath (
    const QString & path ) const
```

Returns the tag matched exactly by the given path. The path can be given with or without leading slash. Returns 0 if there is no such tag, or if path is empty. If you want to create the tag if it does not yet exist, use `getOrCreateTag`.

### 6.1417.2.26 tagForPickLabel()

```
int Digikam::TagsCache::tagForPickLabel (
    int label )
```

Return internal tags ID corresponding of pick label id. see PickLabel values from globals.h. Return 0 if not it's found.

### 6.1417.2.27 tagName()

```
QString Digikam::TagsCache::tagName (
    int id ) const
```

Returns the name of the tag with the given id. For the tag Places/Cities/Paris, this is Paris. If there is no tag for the given id a null string is returned.

### 6.1417.2.28 tagPath()

```
QString Digikam::TagsCache::tagPath (
    int id,
    LeadingSlashPolicy slashPolicy = IncludeLeadingSlash ) const
```

Returns the path of the tag with the given id. For the tag Places/Cities/Paris, this is Places/Cities/Paris. If there is no tag for the given id a null string is returned.

### 6.1417.2.29 tagsContaining()

```
QList< int > Digikam::TagsCache::tagsContaining (
    const QString & fragment,
    Qt::CaseSensitivity caseSensitivity = Qt::CaseInsensitive,
    HiddenTagsPolicy hiddenTagsPolicy = NoHiddenTags )
```

Returns a list of tag ids whose tag name (not path) starts with / contains the given fragment

### 6.1417.2.30 tagsForName()

```
QList< int > Digikam::TagsCache::tagsForName (
    const QString & tagName,
    HiddenTagsPolicy hiddenTagsPolicy = NoHiddenTags ) const
```

Finds all tags with the given name. For "Paris", this may give "Places/Cities/Paris" and "Places/USA/Texas/Paris". If there is no tag with the given name at all, returns an empty list.

### 6.1417.2.31 tagsWithProperty()

```
QList< int > Digikam::TagsCache::tagsWithProperty (
    const QString & property,
    const QString & value = QString() ) const
```

Finds all tags with the given property. The tag: a) just has the property. b) has the property with the given value (value not null). Note: The returned list is sorted.

### 6.1417.2.32 tagsWithPropertyCached()

```
QList< int > Digikam::TagsCache::tagsWithPropertyCached (
    const QString & property ) const
```

This method is equivalent to calling tagsWithProperty(property), but the immediate result will be cached for subsequent calls. Use it for queries for which you know that they will be issued very often, so that it's worth caching the result of the already pretty fast tagsWithProperty().

## 6.1418 Digikam::TagsDBJobInfo Class Reference

Inheritance diagram for Digikam::TagsDBJobInfo:

### Public Member Functions

- bool **isFaceFoldersJob** () const
- void **setFaceFoldersJob** ()

## 6.1423.1 Member Function Documentation

### 6.1423.1.1 createWidget()

```
QWidget * Digikam::TagsLineEditOverlay::createWidget ( ) [override], [protected], [virtual]
```

Create your widget here. When creating the object, pass [parentWidget\(\)](#) as parent widget. Ownership of the object is passed. It will be deleted in [setActive\(false\)](#).

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.1423.1.2 hide()

```
void Digikam::TagsLineEditOverlay::hide ( ) [override], [protected], [virtual]
```

Called when the widget shall be hidden (mouse cursor left index, viewport, uninstalled etc.). Default implementation [hide\(\)](#)s `m_widget`.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.1423.1.3 setActive()

```
void Digikam::TagsLineEditOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots. If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.1423.1.4 slotEntered()

```
void Digikam::TagsLineEditOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Default implementation shows the widget iff the index is valid and `checkIndex` returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.1423.1.5 visualChange()

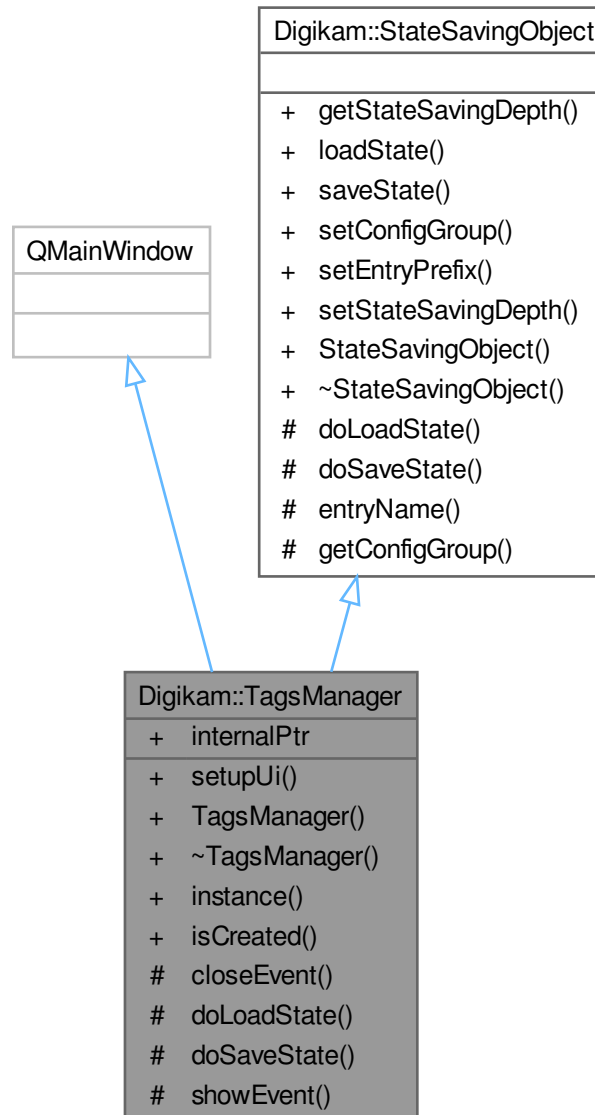

```
void Digikam::TagsLineEditOverlay::visualChange ( ) [override], [protected], [virtual]
```

Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change

Reimplemented from [Digikam::ItemDelegateOverlay](#).

## 6.1424 Digikam::TagsManager Class Reference

Inheritance diagram for Digikam::TagsManager:

### Signals

- void **signalSelectionChanged** ([TAlbum](#) \*album)

### Public Member Functions

- void **setupUi** ()  
*setupUi setup all gui elements for Tag Manager*

- KConfigGroup [getConfigGroup](#) () const

## Additional Inherited Members

## Public Types inherited from Digikam::StateSavingObject

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }

### 6.1424.1 Member Function Documentation

#### 6.1424.1.1 doLoadState()

```
void Digikam::TagsManager::doLoadState ( ) [override], [protected], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

**6.1424.1.2 doSaveState()**

```
void Digikam::TagsManager::doSaveState ( ) [override], [protected], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1425.1 Member Function Documentation

#### 6.1425.1.1 matches()

```
bool Digikam::TagsManagerFilterModel::matches (
    Album * album ) const [override], [protected], [virtual]
```

This method provides the basic match checking algorithm. Return true if this single album matches the current criteria. This method can be overridden to provide custom filtering.

#### Parameters

<i>album</i>	the album to tell if it matches the filter criteria or not.
--------------	---

Reimplemented from [Digikam::TagPropertiesFilterModel](#).

### 6.1426 Digikam::TagsPopupMenu Class Reference

Inheritance diagram for `Digikam::TagsPopupMenu`:

## 6.1429.1 Member Function Documentation

### 6.1429.1.1 applySettings()

```
void Digikam::TagViewSideBarWidget::applySettings ( ) [override], [virtual]
```

This method is invoked when the application settings should be (re-) applied to this widget.

Implements [Digikam::SidebarWidget](#).

### 6.1429.1.2 changeAlbumFromHistory()

```
void Digikam::TagViewSideBarWidget::changeAlbumFromHistory (
    const QList< Album * > & album ) [override], [virtual]
```

This is called on this widget when the history requires to move back to the specified album

Implements [Digikam::SidebarWidget](#).

### 6.1429.1.3 doLoadState()

```
void Digikam::TagViewSideBarWidget::doLoadState ( ) [override], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1429.1.4 doSaveState()

```
void Digikam::TagViewSideBarWidget::doSaveState ( ) [override], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1429.1.5 getCaption()

```
const QString Digikam::TagViewSideBarWidget::getCaption ( ) [override], [virtual]
```

Must be implemented to return the title of this sidebar's tab.

#### Returns

localized title string

Implements [Digikam::SidebarWidget](#).

### 6.1429.1.6 `getIcon()`

```
const QIcon Digikam::TagViewSideBarWidget::getIcon ( ) [override], [virtual]
```

Must be implemented and return the icon that shall be visible for this sidebar widget.

#### Returns

pixmap icon

Implements [Digikam::SidebarWidget](#).

### 6.1429.1.7 `setActive()`

```
void Digikam::TagViewSideBarWidget::setActive (
    bool active ) [override], [virtual]
```

This method is called if the visible sidebar widget is changed.

## Parameters

<i>active</i>	if true, this widget is the new active widget, if false another widget is active
---------------	--

Implements [Digikam::SidebarWidget](#).

## 6.1430 Digikam::TAlbum Class Reference

Inheritance diagram for Digikam::TAlbum:

## Public Member Functions

- [CoreDbUrl databaseUrl](#) () const override

- void [setTitle](#) (const QString &title)
- virtual [~Album](#) ()

### 6.1430.1 Detailed Description

A Tag [Album](#) representation

### 6.1430.2 Member Function Documentation

#### 6.1430.2.1 [databaseUrl\(\)](#)

```
CoreDbUrl Digikam::TAlbum::databaseUrl ( ) const [override], [virtual]
```

##### Returns

the kde url of the album

Implements [Digikam::Album](#).

#### 6.1430.2.2 [tagPath\(\)](#)

```
QString Digikam::TAlbum::tagPath (
    bool leadingSlash = true ) const
```

##### Returns

The tag path, e.g. "/People/Friend/John" if leadingSlash is true, "People/Friend/John" if leadingSlash if false.  
The root [TAlbum](#) returns "/" resp. "".

## 6.1431 Digikam::Template Class Reference

- QString [m\\_templateTitle](#)

## 6.1431.1 Member Function Documentation

### 6.1431.1.1 isEmpty()

```
bool Digikam::Template::isEmpty ( ) const
```

Return true if [Template](#) contents is empty

### 6.1431.1.2 isNull()

```
bool Digikam::Template::isNull ( ) const
```

Return true if [Template](#) title is null

### 6.1431.1.3 merge()

```
void Digikam::Template::merge (
    const Template & t )
```

Merge the metadata from another [Template](#)

### 6.1431.1.4 operator==( )

```
bool Digikam::Template::operator==(
    const Template & t ) const
```

Compare for metadata equality, not including "templateTitle" value.

## 6.1431.2 Member Data Documentation

### 6.1431.2.1 m\_authors

```
QStringList Digikam::Template::m_authors [protected]
```

List of author names.

### 6.1431.2.2 m\_authorsPosition

```
QString Digikam::Template::m_authorsPosition [protected]
```

Description of authors position.

### 6.1431.2.3 m\_contactInfo

```
IptcCoreContactInfo Digikam::Template::m_contactInfo [protected]
```

IPTC Contact Information.

#### 6.1431.2.4 m\_copyright

`MetaEngine::AltLangMap` Digikam::Template::m\_copyright [protected]

Language alternative copyright notices.

#### 6.1431.2.5 m\_credit

`QString` Digikam::Template::m\_credit [protected]

Credit description.

#### 6.1431.2.6 m\_instructions

`QString` Digikam::Template::m\_instructions [protected]

Special instructions to process with contents.

#### 6.1431.2.7 m\_locationInfo

`IptcCoreLocationInfo` Digikam::Template::m\_locationInfo [protected]

IPTC Location Information.

#### 6.1431.2.8 m\_rightUsageTerms

`MetaEngine::AltLangMap` Digikam::Template::m\_rightUsageTerms [protected]

Language alternative right term usages.

#### 6.1431.2.9 m\_source

`QString` Digikam::Template::m\_source [protected]

Descriptions of contents source.

#### 6.1431.2.10 m\_subjects

`QStringList` Digikam::Template::m\_subjects [protected]

IPTC Subjects Information.

#### 6.1431.2.11 m\_templateTitle

`QString` Digikam::Template::m\_templateTitle [protected]

`Template` title used internally. This value always exist and cannot be empty.

## 6.1440.1 Member Function Documentation

### 6.1440.1.1 filterAction()

`FilterAction` Digikam::TextureFilter::filterAction ( ) [override], [virtual]

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1440.1.2 filterIdentifier()

`QString` Digikam::TextureFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1440.1.3 readParameters()

```
void Digikam::TextureFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.1441 Digikam::TextureSettings Class Reference

### 6.1445.1 Detailed Description

A dock widget specifically designed for thumbnail bars (class ThumbNailView or one of its descendants). It provides the same look as a toolbar.

### 6.1445.2 Member Function Documentation

#### 6.1445.2.1 getToggleAction()

```
QAction * Digikam::ThumbBarDock::getToggleAction (
    QObject *const parent,
    const QString & caption = QString() ) const
```

Return an Action to show and hide the thumbnail bar.

#### 6.1445.2.2 reInitialize()

```
void Digikam::ThumbBarDock::reInitialize ( )
```

Measure the orientation and size of the widget and adjust the containing thumbnail bar accordingly. Normally not needed, but useful when the dock widget has changed location and/or size and the appropriate signals aren't emitted.

#### 6.1445.2.3 shouldBeVisible()

```
bool Digikam::ThumbBarDock::shouldBeVisible ( ) const
```

The normal show() and hide() functions don't apply that well, because there are two orthogonal reasons to hide the thumbbar: the user doesn't want it, and the window with the thumbbar isn't shown. The restoreVisibility() function will set the visibility status to what it should be according to the user setting. The setShouldBeVisible() function can change this setting. showThumbBar() can be used to hide and show the thumbbar according to the user preference. [shouldBeVisible\(\)](#) tells whether the thumbbar should be shown according to the user.

- static QString [identifierForDetail](#) (const [ThumbnailInfo](#) &info, const QRect &rect)

## 6.1447.1 Constructor & Destructor Documentation

### 6.1447.1.1 ThumbnailCreator() [1/2]

```
Digikam::ThumbnailCreator::ThumbnailCreator (
    StorageMethod method ) [explicit]
```

Create a thumbnail creator object. You must call [setThumbnailSize](#) before load.

### 6.1447.1.2 ThumbnailCreator() [2/2]

```
Digikam::ThumbnailCreator::ThumbnailCreator (
    int thumbnailSize,
    StorageMethod method )
```

Create a thumbnail creator object, and set the thumbnail size.

## 6.1447.2 Member Function Documentation

### 6.1447.2.1 deleteThumbnailsFromDisk()

```
void Digikam::ThumbnailCreator::deleteThumbnailsFromDisk (
    const QString & filePath ) const
```

Deletes all available thumbnails from the on-disk thumbnail cache. A subsequent call to [load\(\)](#) will recreate the thumbnail.

### 6.1447.2.2 errorString()

```
QString Digikam::ThumbnailCreator::errorString ( ) const
```

Returns the last error that occurred. It is valid if load returned a null QImage object.

### 6.1447.2.3 fileThumbnailInfo()

```
ThumbnailInfo Digikam::ThumbnailCreator::fileThumbnailInfo (
    const QString & path ) [static]
```

Creates a default [ThumbnailInfo](#) for the given path using [QFileInfo](#) only

### 6.1447.2.4 identifierForDetail()

```
QString Digikam::ThumbnailCreator::identifierForDetail (
    const ThumbnailInfo & info,
    const QRect & rect ) [static]
```

Returns the customIdentifier for the detail thumbnail

### 6.1447.2.5 load()

```
QImage Digikam::ThumbnailCreator::load (
    const ThumbnailIdentifier & identifier,
    bool onlyStorage = false ) const
```

Create a thumbnail for the specified file.

### 6.1447.2.6 loadDetail()

```
QImage Digikam::ThumbnailCreator::loadDetail (
    const ThumbnailIdentifier & identifier,
    const QRect & detailRect,
    bool onlyStorage = false ) const
```

Creates a thumbnail for the specified detail of the file. A suitable custom identifier (for cache key etc.) is inserted as `image.text("customIdentifier")`.

### 6.1447.2.7 pregenerate()

```
void Digikam::ThumbnailCreator::pregenerate (
    const ThumbnailIdentifier & identifier ) const
```

Ensures that the thumbnail is pregenerated in the database, but does not load it from there.

### 6.1447.2.8 setExifRotate()

```
void Digikam::ThumbnailCreator::setExifRotate (
    bool rotate )
```

Set the Exif rotation property. If `exifRotate` is true, the thumbnail will be rotated according to the Exif information. Default value is true.

### 6.1447.2.9 setLoadingProperties()

```
void Digikam::ThumbnailCreator::setLoadingProperties (
    DImgLoaderObserver *const observer,
    const DRawDecoding & settings )
```

If you plan to load thumbnail from the context of the threadimageio framework, you can specify the relevant parameters. They will be passed if a thumbnail is created by loading with [DImg](#). Note that [DImg](#) is not used in most cases (Raw files, JPEG)

### 6.1447.2.10 setOnlyLargeThumbnails()

```
void Digikam::ThumbnailCreator::setOnlyLargeThumbnails (
    bool onlyLarge )
```

If you enable this property, the thumbnail creator will create only large thumbnails on disk (256x256 as described in FreeDesktop paper). Normally, for requested sizes below 128, thumbnails of 128x128 will be cached on disk. Default value is false.

### 6.1447.2.11 setRemoveAlphaChannel()

```
void Digikam::ThumbnailCreator::setRemoveAlphaChannel (
    bool removeAlpha )
```

If you enable this property, the returned QImage objects will not have an alpha channel. Images with transparency will be blended over an opaque background.

### 6.1447.2.12 setThumbnailInfoProvider()

```
void Digikam::ThumbnailCreator::setThumbnailInfoProvider (
    ThumbnailInfoProvider *const provider )
```

Set a [ThumbnailInfoProvider](#) to provide custom ThumbnailInfos

### 6.1447.2.13 setThumbnailSize()

```
void Digikam::ThumbnailCreator::setThumbnailSize (
    int thumbnailSize )
```

Sets the thumbnail size. This is the maximum size of the QImage returned by load.

### 6.1447.2.14 store()

```
void Digikam::ThumbnailCreator::store (
    const QString & path,
    const QImage & image ) const
```

Store the given image as thumbnail of the given path. Image should at least have [storedSize\(\)](#).

### 6.1447.2.15 storedSize()

```
int Digikam::ThumbnailCreator::storedSize ( ) const
```

Return the stored image size, the size of the image that is stored on disk (according to Storage Method). This size is possibly larger than thumbnailSize. Possible values: 128 or 256.

### 6.1447.2.16 thumbnailSize()

```
int Digikam::ThumbnailCreator::thumbnailSize ( ) const
```

Return the thumbnail size, the maximum size of the QImage returned by load.

## 6.1448 Digikam::ThumbnailCreator::Private Class Reference

## 6.1449 Digikam::ThumbnailIdentifier Class Reference

Inheritance diagram for Digikam::ThumbnailIdentifier:

### Public Member Functions

- **ThumbnailIdentifier** (const QString &path)

### Public Attributes

- QString `filePath`
- qlonglong `id` = 0

### 6.1449.1 Member Data Documentation

#### 6.1449.1.1 filePath

QString Digikam::ThumbnailIdentifier::filePath

The file path from which the thumbnail shall be generated

## 6.1449.1.2 id

```
qlonglong Digikam::ThumbnailIdentifier::id = 0
```

The database id, which needs to be translated to uniqueHash + fileSize

## 6.1450 Digikam::ThumbnailImage Class Reference

## Public Member Functions

- bool **isNull** () const

## Public Attributes

- int **exifOrientation** = DMetadata::ORIENTATION\_UNSPECIFIED
- QImage **qimage**

## 6.1451 Digikam::ThumbnailImageCatcher Class Reference

Inheritance diagram for Digikam::ThumbnailImageCatcher:

**Classes**

- class [Private](#)

**Public Slots**

- void [cancel](#) ()
- void [setActive](#) (bool active)

**Public Member Functions**

- int [enqueue](#) ()
- void **setThumbnailLoadThread** ([ThumbnailLoadThread](#) \*const thread)
- [ThumbnailLoadThread](#) \* **thread** () const
- [ThumbnailImageCatcher](#) (QObject \*const parent=nullptr)
- **ThumbnailImageCatcher** ([ThumbnailLoadThread](#) \*const thread, QObject \*const parent=nullptr)
- QList< QImage > **waitForThumbnails** ()

**Protected Slots**

- void **slotThumbnailLoaded** (const [LoadingDescription](#) &, const QImage &)

**6.1451.1 Constructor & Destructor Documentation****6.1451.1.1 ThumbnailImageCatcher()**

```
Digikam::ThumbnailImageCatcher::ThumbnailImageCatcher (
    QObject *const parent = nullptr ) [explicit]
```

Use this class to get a thumbnail synchronously.

1. Create the [ThumbnailImageCatcher](#) object with your [ThumbnailLoadThread](#)
2. a) Request a thumbnail b) Call [enqueue\(\)](#)
3. Call [waitForThumbnails](#) which returns the thumbnail QImage(s).

Note: Not meant for loading QPixmap thumbnails.

**6.1451.2 Member Function Documentation****6.1451.2.1 cancel**

```
void Digikam::ThumbnailImageCatcher::cancel ( ) [slot]
```

If the catcher is waiting in [waitForThumbnails\(\)](#) in a different thread, cancels the waiting. The results will be returned as received so far.

### 6.1451.2.2 enqueue()

```
int Digikam::ThumbnailImageCatcher::enqueue ( )
```

After requesting a thumbnail from the thread, call [enqueue\(\)](#) each time. Enqueue records the requested loading operation in an internal list. A loading operation can result in the return of more than one thumbnail, so [enqueue\(\)](#) returns the number of expected results. Then call [waitForThumbnails](#). The returned list is the sum of previous calls to [enqueue](#), one entry per expected result, in order. If stopped prematurely or loading failed, the respective entries will be null.

### 6.1451.2.3 setActive

```
void Digikam::ThumbnailImageCatcher::setActive (
    bool active ) [slot]
```

The catcher is active per default after construction. Deactivate it if you use the catcher as a longer-lived object and do not use it for some time, then activate it before you request a thumbnail from the thread again.

## 6.1452 Digikam::ThumbnailImageCatcher::Private Class Reference

### Classes

- class [CatcherResult](#)

- QString [customIdentifier](#)
- QString [fileName](#)
- qlonglong **fileSize** = 0
- bool [isAccessible](#) = false
- QString [mimeType](#)
- QDateTime [modificationDate](#)
- int [orientationHint](#) = DMetadata::ORIENTATION\_UNSPECIFIED
- QString [uniqueHash](#)

## Public Attributes inherited from [Digikam::ThumbnailIdentifier](#)

- QString [filePath](#)
- qlonglong [id](#) = 0

## Additional Inherited Members

## Public Member Functions inherited from [Digikam::ThumbnailIdentifier](#)

- [ThumbnailIdentifier](#) (const QString &path)

## 6.1454.1 Member Data Documentation

### 6.1454.1.1 customIdentifier

```
QString Digikam::ThumbnailInfo::customIdentifier
```

A custom identifier, if neither filePath nor uniqueHash are applicable.

### 6.1454.1.2 fileName

```
QString Digikam::ThumbnailInfo::fileName
```

The file name (the name, not the directory)

### 6.1454.1.3 isAccessible

```
bool Digikam::ThumbnailInfo::isAccessible = false
```

If the original file is at all accessible on disk. May be false if a file on a removable device is used.

### 6.1454.1.4 mimeType

```
QString Digikam::ThumbnailInfo::mimeType
```

The mime type of the original file. Currently "image" or "video" otherwise empty.

### 6.1454.1.5 modificationDate

```
QDateTime Digikam::ThumbnailInfo::modificationDate
```

The modification date of the original file. Thumbnail will be regenerated if thumb's modification date is older than this.

### 6.1454.1.6 orientationHint

```
int Digikam::ThumbnailInfo::orientationHint = DMetadata::ORIENTATION_UNSPECIFIED
```

Gives a hint at the orientation of the image. This can be used to supersede the Exif information in the file. Will not be used if DMetadata::ORIENTATION\_UNSPECIFIED (default value)

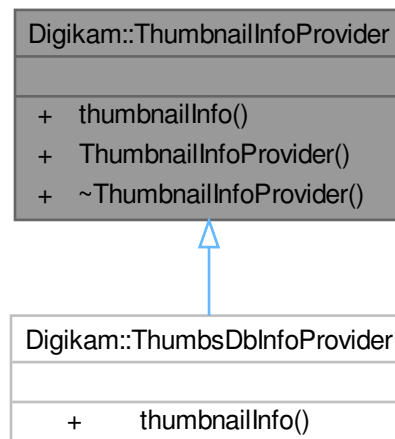

### 6.1454.1.7 uniqueHash

```
QString Digikam::ThumbnailInfo::uniqueHash
```

If available, the uniqueHash + fileSize pair for identification of the original file by content.

## 6.1457.1 Member Function Documentation

### 6.1457.1.1 [defaultThread\(\)](#)

```
ThumbnailLoadThread * Digikam::ThumbnailLoadThread::defaultThread ( ) [static]
```

Return application-wide default thumbnail threads. It is perfectly all right to create an extra object of the class, but it is useful to have default object

### 6.1457.1.2 deleteThumbnail()

```
void Digikam::ThumbnailLoadThread::deleteThumbnail (
    const QString & filePath ) [static]
```

This is a tool to force regeneration of thumbnails. All thumbnail files for the given file will be removed from disk, and the cached instances will be removed as well. Use this method if you know that the contents of the file has changed. This method works independently from the multithreaded thumbnail loading.

### 6.1457.1.3 find() [1/5]

```
void Digikam::ThumbnailLoadThread::find (
    const ThumbnailIdentifier & identifier )
```

Find a thumbnail. This method sends the signals and does not return values like the method above. If you certainly need asynchronous return, connect with Qt::QueuedConnection to the signals. If you connect directly, the signals may be sent from within the method call.

### 6.1457.1.4 find() [2/5]

```
bool Digikam::ThumbnailLoadThread::find (
    const ThumbnailIdentifier & identifier,
    const QRect & rect,
    QPixmap & pixmap )
```

All tastes of [find\(\)](#) methods, for loading the thumbnail of a detail

### 6.1457.1.5 find() [3/5]

```
void Digikam::ThumbnailLoadThread::find (
    const ThumbnailIdentifier & identifier,
    int size )
```

Same as above, but does not use the global size, but an extra specified size.

### 6.1457.1.6 find() [4/5]

```
bool Digikam::ThumbnailLoadThread::find (
    const ThumbnailIdentifier & identifier,
    QPixmap & pixmap )
```

Find a thumbnail. If the pixmap is found in the cache, returns true and sets pixmap to the found QPixmap. If the pixmap is not found in the cache, [load\(\)](#) is called to start the loading process, false is returned and pixmap is not touched.

**6.1457.1.7 find() [5/5]**

```
bool Digikam::ThumbnailLoadThread::find (
    const ThumbnailIdentifier & identifier,
    QPixmap & pixmap,
    int size,
    bool onlyStorage = false )
```

Same as above, but does not use the global size, but an extra specified size.

**6.1457.1.8 findBuffered()**

```
bool Digikam::ThumbnailLoadThread::findBuffered (
    const ThumbnailIdentifier & identifier,
    const QRect & rect,
    QPixmap & pixmap,
    int size )
```

Find the thumbnail pixmap in the buffered cache to avoid flickering while loading a new thumbnail.

**6.1457.1.9 findGroup()**

```
void Digikam::ThumbnailLoadThread::findGroup (
    QList< ThumbnailIdentifier > & identifiers )
```

Find a group of thumbnails. The items will be loaded in order and signals will be sent. Can be used to ensure that thumbnails are loaded in a particular order

**6.1457.1.10 initializeNoThumbnailStorage()**

```
void Digikam::ThumbnailLoadThread::initializeNoThumbnailStorage ( ) [static]
```

Disable storing thumbnails in the disk cache. This shall be called once at application startup. This need not be called, then the FreeDesktop standard is used.

**6.1457.1.11 initializeThumbnailDatabase()**

```
void Digikam::ThumbnailLoadThread::initializeThumbnailDatabase (
    const DbEngineParameters & params,
    ThumbnailInfoProvider *const provider = nullptr ) [static]
```

Enable loading of thumbnails from a thumbnail database. This shall be called once at application startup. This need not be called, then the FreeDesktop standard is used. You can optionally provide a thumbnail info provider.

**6.1457.1.12 lastDescriptions()**

```
QList< LoadingDescription > Digikam::ThumbnailLoadThread::lastDescriptions ( ) const
```

Returns the descriptions used by the last call to any of the above methods. After calling single-thumbnail methods (find, preload) the list will have size 1, after the group methods (findGroup, preloadGroup, pregenerateGroup) the list can be larger than 1. There is no information if the description was ever scheduled in the thread, already processed, skipped or canceled.

### 6.1457.1.13 load()

```
void Digikam::ThumbnailLoadThread::load (
    const LoadingDescription & description )
```

Load a thumbnail. You do not need to use this method directly, it will not access the pixmap cache. Use [find\(\)](#). The [LoadingDescription](#) shall be constructed with the constructor for preview/thumbnail jobs. (in the description constructor, you need to specify file path, thumbnail size and Exif rotation)

### 6.1457.1.14 maximumThumbnailSize()

```
int Digikam::ThumbnailLoadThread::maximumThumbnailSize ( ) [static]
```

Returns the maximum possible size of a thumbnail. If you request a larger size, the thumbnail will not load. The size of the pixmap can slightly differ, especially when highlighting.

### 6.1457.1.15 pixmapToThumbnailSize()

```
int Digikam::ThumbnailLoadThread::pixmapToThumbnailSize (
    int size ) const
```

Computes the thumbnail size for the give pixmap size.

### 6.1457.1.16 pregenerateGroup()

```
void Digikam::ThumbnailLoadThread::pregenerateGroup (
    const QList< ThumbnailIdentifier > & identifiers )
```

Pregenerate the thumbnail group. No signals will be emitted when these are loaded.

### 6.1457.1.17 preload()

```
void Digikam::ThumbnailLoadThread::preload (
    const ThumbnailIdentifier & identifier )
```

Preload the thumbnail or thumbnail group. This is essentially the same as loading, but with a lower priority.

### 6.1457.1.18 setDisplayingWidget()

```
void Digikam::ThumbnailLoadThread::setDisplayingWidget (
    QWidget *const widget ) [static]
```

For color management, this sets the widget the thumbnails will be color managed for. (currently it is only possible to set one global widget)

### 6.1457.1.19 setHighlightPixmap()

```
void Digikam::ThumbnailLoadThread::setHighlightPixmap (
    bool highlight )
```

If you enable this, a highlighting border will be drawn around the pixmap. This option has only an effect if `pixmapRequested` is true. Default value: Enabled.

### 6.1457.1.20 setPixmapRequested()

```
void Digikam::ThumbnailLoadThread::setPixmapRequested (
    bool wantPixmap )
```

If you enable this, the signal `thumbnailLoaded(LoadingDescription, QPixmap)` will be emitted. If you do not enable this, only the QImage-based signal (see [LoadSaveThread](#)) will be emitted.

If you disable this, pay attention to the (global) setting of the [LoadingCache](#), which per default does not cache the images !!

Default value: Enabled.

### 6.1457.1.21 setSendSurrogatePixmap()

```
void Digikam::ThumbnailLoadThread::setSendSurrogatePixmap (
    bool send )
```

If you enable this, the thread will try hard to send a pixmap if thumbnail loading failed. It will use standard system icons to replace the real thumbnail. If you disable this, a null QPixmap will be sent. This does not influence the QImage-based signal; this signal will be emitted with a null QImage regardless of this setting here, if the loading failed. Default value: Enabled.

### 6.1457.1.22 setThumbnailSize()

```
void Digikam::ThumbnailLoadThread::setThumbnailSize (
    int size,
    bool forFace = false )
```

#### Note

If the thread is currently loading thumbnails, there is no guarantee as to when the property change by one of the following methods takes effect. Set the requested thumbnail size. Default value: 128

### 6.1457.1.23 storeDetailThumbnail()

```
void Digikam::ThumbnailLoadThread::storeDetailThumbnail (
    const QString & filePath,
    const QRect & detailRect,
    const QImage & image,
    bool isFace = false )
```

Stores the given detail thumbnail on disk. Use this if possible because generation of detail thumbnails is potentially slower. The image should at least have `storedSize()`.

### 6.1457.1.24 thumbnailLoaded()

```
void Digikam::ThumbnailLoadThread::thumbnailLoaded (
    const LoadingDescription & loadingDescription,
    const QImage & img ) [override], [protected], [virtual]
```

virtual method overridden from [LoadSaveNotifier](#), implemented first by [LoadSaveThread](#) called by ThumbnailTask from working thread

Reimplemented from [Digikam::LoadSaveThread](#).

### 6.1457.1.25 thumbnailToPixmapSize()

```
int Digikam::ThumbnailLoadThread::thumbnailToPixmapSize (
    int size ) const
```

Computes the pixmap size for the give thumbnail size. These can differ when highlighting is turned on.

### Friends

- class `ThumbsDbAccess`

## 6.1462.1 Member Function Documentation

### 6.1462.1.1 findAll()

```
QList< int > Digikam::ThumbsDb::findAll ( )
```

Returns the thumbnail ids of all thumbnails in the database.

### 6.1462.1.2 findByFilePath()

```
ThumbsDbInfo Digikam::ThumbsDb::findByFilePath (
    const QString & path,
    const QString & uniqueHash )
```

This is findByFilePath with extra security: Pass the uniqueHash which you have. If an entry is found by file path, and the entry is referenced by any uniqueHash, which is different from the given hash, a null info is returned. If uniqueHash is null, equivalent to the simple findByFilePath.

### 6.1462.1.3 integrityCheck()

```
bool Digikam::ThumbsDb::integrityCheck ( )
```

Returns true if the integrity of the database is preserved.

### 6.1462.1.4 removeByFilePath()

```
BdEngineBackend::QueryState Digikam::ThumbsDb::removeByFilePath (
    const QString & path )
```

Removes thumbnail data associated to the given file path

### 6.1462.1.5 removeByUniqueHash()

```
BdEngineBackend::QueryState Digikam::ThumbsDb::removeByUniqueHash (
    const QString & uniqueHash,
    qlonglong fileSize )
```

Removes thumbnail data associated to the given uniqueHash/fileSize

### 6.1462.1.6 vacuum()

```
void Digikam::ThumbsDb::vacuum ( )
```

Shrinks the database.

## 6.1463 Digikam::ThumbsDbAccess Class Reference

### Public Member Functions

- static void **setParameters** (const [DbEngineParameters](#) &parameters)

## 6.1463.1 Constructor & Destructor Documentation

### 6.1463.1.1 ThumbsDbAccess()

```
Digikam::ThumbsDbAccess::ThumbsDbAccess ( )
```

This class is written in analogy to [CoreDbAccess](#) (some features stripped off). For documentation, see `coredbaccess.h`

## 6.1463.2 Member Function Documentation

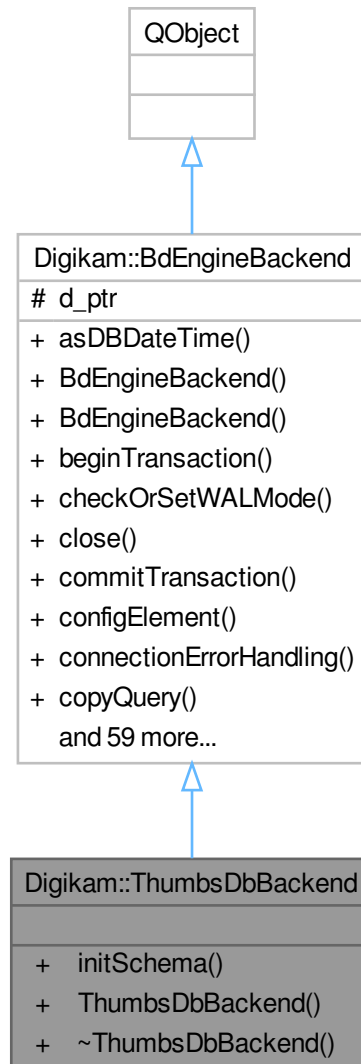

### 6.1463.2.1 setLastError()

```
void Digikam::ThumbsDbAccess::setLastError (
    const QString & error )
```

Set the "last error" message. This method is not for public use.

## 6.1464 Digikam::ThumbsDbBackend Class Reference

### 6.1464.1 Member Function Documentation

#### 6.1464.1.1 `initSchema()`

```
bool Digikam::ThumbsDbBackend::initSchema (
    ThumbsDbSchemaUpdater *const updater )
```

Initialize the database schema to the current version, carry out upgrades if necessary. Shall only be called from the thread that called `open()`.

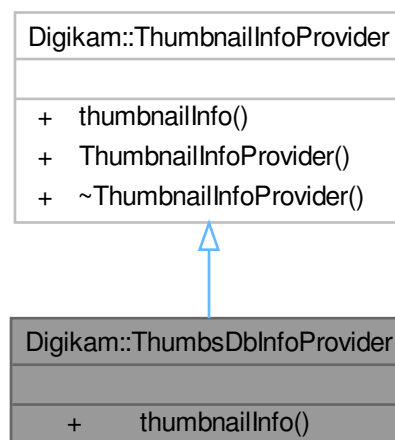

## 6.1465 Digikam::ThumbsDbInfo Class Reference

### Public Attributes

- QByteArray **data**
- int **id** = -1
- QDateTime **modificationDate**
- int **orientationHint** = 0
- DatabaseThumbnail::Type **type** = DatabaseThumbnail::UndefinedType

## 6.1466 Digikam::ThumbsDbInfoProvider Class Reference

Inheritance diagram for Digikam::ThumbsDbInfoProvider:

## Public Member Functions

- [ThumbnailInfo thumbnailInfo](#) (const [ThumbnailIdentifier](#) &identifier) override

## 6.1466.1 Member Function Documentation

### 6.1466.1.1 thumbnailInfo()

```
ThumbnailInfo Digikam::ThumbsDbInfoProvider::thumbnailInfo (  
    const ThumbnailIdentifier & identifier ) [override], [virtual]
```

Implements [Digikam::ThumbnailInfoProvider](#).

- void **removeChild** ([ProgressItem](#) \*const kiddo)
- void **reset** ()
 

*Reset the progress value of this item to 0 and the status string to the empty string.*
- void **setComplete** ()
 

*Tell the item it has finished. This will emit [progressItemCompleted\(\)](#) result in the destruction of the item after all slots connected to this signal have executed. This is the only way to get rid of an item and needs to be called even if the item is canceled. Don't use the item after this has been called on it.*
- bool **setCompletedItems** (unsigned int v)
- void [setLabel](#) (const QString &v)
- void [setProgress](#) (unsigned int v)
 

*Set the progress (percentage of completion) value of this item.*
- void [setShowAtStart](#) (bool [showAtStart](#))
 

*Set the property to pop-up item when it's added in progress manager. Use this method if you consider that item is important to be notified to end-user.*
- void [setStatus](#) (const QString &v)
 

*Set the string to be used for showing this item's current status.*
- void [setThumbnail](#) (const QIcon &icon)
 

*Sets whether this item has a thumbnail.*
- void **setTotalItems** (unsigned int v)
- void [setUsesBusyIndicator](#) (bool useBusyIndicator)
 

*Sets whether this item uses a busy indicator instead of real progress for its progress bar. If it uses a busy indicator, you are still responsible for calling [setProgress\(\)](#) from time to time to update the busy indicator.*
- bool [showAtStart](#) () const
- const QString & [status](#) () const
- bool **totalCompleted** () const
- unsigned int **totalItems** () const
- void **updateProgress** ()
 

*Recalculate progress according to total/completed items and update.*
- bool [usesBusyIndicator](#) () const

## Additional Inherited Members

### Public Slots inherited from [Digikam::MaintenanceTool](#)

- void **start** ()

### Signals inherited from [Digikam::MaintenanceTool](#)

- void **signalCanceled** ()
- void **signalComplete** ()

### Signals inherited from [Digikam::ProgressItem](#)

- void **progressItemAdded** ([ProgressItem](#) \*item)  
*Emitted when a new [ProgressItem](#) is added.*
- void **progressItemCanceled** ([ProgressItem](#) \*item)  
*Emitted when an item was canceled. It will not go away immediately, only when the owner sets it complete, which will usually happen. Can be used to visually indicate the canceled status of an item. Should be used by the owner of the item to make sure it is set completed even if it is canceled. There is a [ProgressManager::slotStandardCancelHandler](#) which simply sets the item completed and can be used if no other work needs to be done on cancel.*
- void **progressItemCanceledById** (const [QString](#) &id)
- void **progressItemCompleted** ([ProgressItem](#) \*item)  
*Emitted when a progress item was completed. The item will be deleted afterwards, so slots connected to this are the last chance to work with this item.*
- void **progressItemLabel** ([ProgressItem](#) \*item, const [QString](#) &label)  
*Emitted when the label of an item changed. Should be used by progress dialogs to update the label of an item.*
- void **progressItemProgress** ([ProgressItem](#) \*item, unsigned int v)  
*Emitted when the progress value of an item changes.*
- void **progressItemStatus** ([ProgressItem](#) \*item, const [QString](#) &mess)  
*Emitted when the status message of an item changed. Should be used by progress dialogs to update the status message for an item.*
- void **progressItemThumbnail** ([ProgressItem](#) \*item, const [QPixmap](#) &thumb)  
*Emitted when the thumbnail data must be set in item.*
- void **progressItemUsesBusyIndicator** ([ProgressItem](#) \*item, bool value)  
*Emitted when the busy indicator state of an item changes. Should be used by progress dialogs so that they can adjust the display of the progress bar to the new mode.*

### Protected Slots inherited from [Digikam::MaintenanceTool](#)

- virtual void **slotDone** ()
- virtual void **slotStart** ()

## 6.1468.1 Constructor & Destructor Documentation

### 6.1468.1.1 ThumbsGenerator() [1/2]

```
Digikam::ThumbsGenerator::ThumbsGenerator (
    const bool rebuildAll,
    int albumId,
    ProgressItem *const parent = nullptr ) [explicit]
```

Constructor using [Album](#) Id as argument. If Id = -1, whole Albums collection is processed.

### 6.1468.1.2 ThumbsGenerator() [2/2]

```
Digikam::ThumbsGenerator::ThumbsGenerator (
    const bool rebuildAll,
    const AlbumList & list,
    ProgressItem *const parent = nullptr )
```

Constructor using AlbumList as argument. If list is empty, whole Albums collection is processed.

## 6.1468.2 Member Function Documentation

### 6.1468.2.1 setUseMultiCoreCPU()

```
void Digikam::ThumbsGenerator::setUseMultiCoreCPU (
    bool ) [override], [virtual]
```

Re-implement this method if your tool is able to use multi-core CPU to process item in parallel

Reimplemented from [Digikam::MaintenanceTool](#).

- bool **updUseExifTool** = false
- bool **updXMPDate** = false
- bool **updXMPVideo** = false

### 6.1472.1 Detailed Description

Container that store all timestamp adjustments.

### 6.1472.2 Member Function Documentation

#### 6.1472.2.1 atLeastOneUpdateToProcess()

```
bool Digikam::TimeAdjustContainer::atLeastOneUpdateToProcess ( ) const
```

Check if at least one option is selected

### 6.1472.3 Member Data Documentation

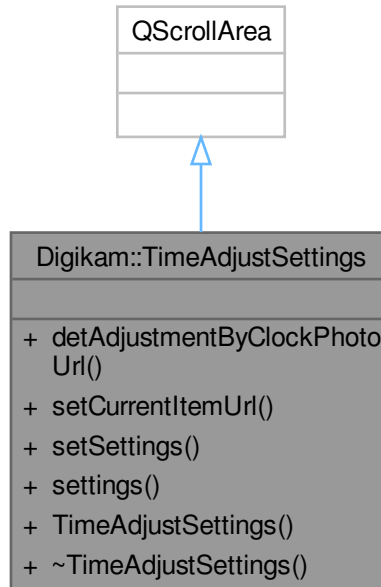

#### 6.1472.3.1 enableExifTool

```
bool Digikam::TimeAdjustContainer::enableExifTool = false
```

Only a temporary variable, will not be saved

## 6.1473 Digikam::TimeAdjustSettings Class Reference

Inheritance diagram for Digikam::TimeAdjustSettings:

### Signals

- void **signalSettingsChanged** ()
- void **signalSettingsChangedTool** ()
- void **signalSrcTimestampChanged** ()

### Public Member Functions

- void [detAdjustmentByClockPhotoUrl](#) (const `QUrl` &url)
- void **setCurrentItemUrl** (const `QUrl` &url)
- void **setSettings** (const [TimeAdjustContainer](#) &settings)
- [TimeAdjustContainer](#) **settings** () const
- **TimeAdjustSettings** (`QWidget` \*const parent, bool timeAdjustTool=false)

### 6.1473.1 Member Function Documentation

#### 6.1473.1.1 detAdjustmentByClockPhotoUrl()

```
void Digikam::TimeAdjustSettings::detAdjustmentByClockPhotoUrl (
    const QUrl & url )
```

When user press the clock photo button, a dialog is displayed and set the results to the proper widgets.

## 6.1474 Digikam::TimelineSideBarWidget Class Reference

Inheritance diagram for Digikam::TimelineSideBarWidget:

### Public Member Functions

- void `applySettings()` override
- void `changeAlbumFromHistory(const QList< Album * > &album)` override

## 6.1474.1 Member Function Documentation

### 6.1474.1.1 [applySettings\(\)](#)

```
void Digikam::TimelineSideBarWidget::applySettings ( ) [override], [virtual]
```

This method is invoked when the application settings should be (re-) applied to this widget.

Implements [Digikam::SidebarWidget](#).

### 6.1474.1.2 `changeAlbumFromHistory()`

```
void Digikam::TimelineSideBarWidget::changeAlbumFromHistory (
    const QList< Album * > & album ) [override], [virtual]
```

This is called on this widget when the history requires to move back to the specified album

Implements [Digikam::SidebarWidget](#).

### 6.1474.1.3 `doLoadState()`

```
void Digikam::TimelineSideBarWidget::doLoadState ( ) [override], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1474.1.4 `doSaveState()`

```
void Digikam::TimelineSideBarWidget::doSaveState ( ) [override], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1474.1.5 `getCaption()`

```
const QString Digikam::TimelineSideBarWidget::getCaption ( ) [override], [virtual]
```

Must be implemented to return the title of this sidebar's tab.

#### Returns

localized title string

Implements [Digikam::SidebarWidget](#).

### 6.1474.1.6 `getIcon()`

```
const QIcon Digikam::TimelineSideBarWidget::getIcon ( ) [override], [virtual]
```

Must be implemented and return the icon that shall be visible for this sidebar widget.

#### Returns

pixmap icon

Implements [Digikam::SidebarWidget](#).

### 6.1474.1.7 `setActive()`

```
void Digikam::TimelineSideBarWidget::setActive (
    bool active ) [override], [virtual]
```

This method is called if the visible sidebar widget is changed.

## Parameters

<i>active</i>	if true, this widget is the new active widget, if false another widget is active
---------------	--

Implements [Digikam::SidebarWidget](#).

## 6.1475 Digikam::TimeLineWidget Class Reference

Inheritance diagram for Digikam::TimeLineWidget:

## Public Types

- enum [ScaleMode](#) { [LinScale](#) = 0 , [LogScale](#) }
- enum [SelectionMode](#) { [Unselected](#) = 0 , [FuzzySelection](#) , [Selected](#) }

- void [setTimeUnit](#) (TimeUnit timeUnit)
- [TimeLineWidget](#) (QWidget \*const parent=nullptr)
- TimeUnit [timeUnit](#) () const
- int [totalIndex](#) () const

## 6.1475.1 Member Enumeration Documentation

### 6.1475.1.1 ScaleMode

enum [Digikam::TimeLineWidget::ScaleMode](#)

#### Enumerator

<a href="#">LinScale</a>	Linear scale.
<a href="#">LogScale</a>	Logarithmic scale.

### 6.1475.1.2 SelectionMode

```
enum Digikam::TimeLineWidget::SelectionMode
```

#### Enumerator

Unselected	No selection.
FuzzySelection	Partially selected.
Selected	Fully selected.

## 6.1475.2 Member Function Documentation

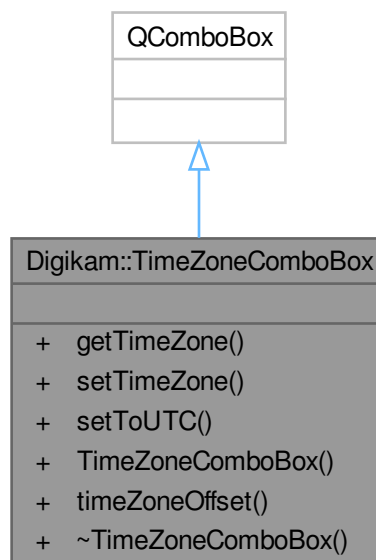

### 6.1475.2.1 selectedDateRange()

```
DateRangeList Digikam::TimeLineWidget::selectedDateRange (
    int & totalCount ) const
```

Return a list of Date-Range based on selection performed on days-map

## 6.1476 Digikam::TimeZoneComboBox Class Reference

Inheritance diagram for Digikam::TimeZoneComboBox:

### Public Member Functions

- QString **getTimeZone** () const
- void **setTimeZone** (const QString &timeStr)
- void **setToUTC** ()
- **TimeZoneComboBox** (QWidget \*const parent)
- int **timeZoneOffset** () const

## 6.1477 Digikam::Token Class Reference

Token is the smallest parsing unit in AdvancedRename utility

Inheritance diagram for Digikam::Token:

### Signals

- void [signalTokenTriggered](#) (const QString &)

### Public Member Functions

- QAction \* [action](#) () const
- QString [description](#) () const
- QString [id](#) () const
- **Token** (const QString &[id](#), const QString &[description](#))

## 6.1477.1 Detailed Description

The Token class represents the smallest parsing unit for the [Parser](#) class. Every string you enter as a renaming pattern is a combination of tokens and literal text. For example  
`"[file]{upper}_###_abc.[ext]{lower}"`

is composed of five tokens

```
[file]
{upper}
###
.[ext]
{lower}
```

and two literals

```
_
_abc
```

A rule must assign at least one token object, to make parsing work. More than one token can be assigned to a Rule.

See also

[Rule::addToken\(\)](#)

## 6.1477.2 Member Function Documentation

### 6.1477.2.1 action()

```
QAction * Digikam::Token::action ( ) const
```

#### Returns

The action of the token. This action can be connected to a button or menu item. If triggered, high-level classes like [AdvancedRenameWidget](#) can connect to the signal and display the emitted text in the line edit input widget.

### 6.1477.2.2 description()

```
QString Digikam::Token::description ( ) const
```

#### Returns

The description of the token. It can be used for example in the tooltip of the [AdvancedRenameWidget](#).

### 6.1477.2.3 id()

```
QString Digikam::Token::id ( ) const
```

#### Returns

The ID of the token. This is the actual token string, for example  
`"[file]"`

This id will be emitted as a signal by `slotTriggered()`.

#### 6.1477.2.4 signalTokenTriggered

```
void Digikam::Token::signalTokenTriggered (
    const QString & ) [signal]
```

This signal is emitted when the action of the token is triggered.

## 6.1479.1 Member Function Documentation

### 6.1479.1.1 filterAction()

`FilterAction` Digikam::TonalityFilter::filterAction ( ) [override], [virtual]

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1479.1.2 filterIdentifier()

`QString` Digikam::TonalityFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

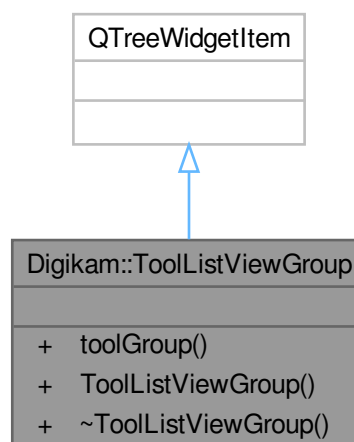

### 6.1479.1.3 readParameters()

```
void Digikam::TonalityFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.1480 Digikam::ToolListViewGroup Class Reference

- static bool [disconnectAndSchedule](#) (const QObject \*sender, const char \*signal, const [WorkerObject](#) \*receiver, const char \*method)

## 6.1498.1 Member Function Documentation

### 6.1498.1.1 [aboutToDeactivate\(\)](#)

```
void Digikam::TrainerWorker::aboutToDeactivate ( ) [override], [protected], [virtual]
```

Called from [deactivate\(\)](#), typically from a different thread than the worker thread, possibly the UI thread. You can stop any extra controlled threads here. Immediately afterwards, an event will be sent to the working thread which will cause the event loop to quit. ([aboutToQuitLoop\(\)](#))

Reimplemented from [Digikam::WorkerObject](#).

### 6.1498.1.2 [process](#)

```
void Digikam::TrainerWorker::process (
    const FacePipelineExtendedPackage::Ptr & package ) [slot]
```

TODO: investigate this method.

## 6.1499 Digikam::TrainingDataProvider Class Reference

Inheritance diagram for Digikam::TrainingDataProvider:

### Public Member Functions

- virtual [ImageListProvider](#) \* `images` (const [Identity](#) &identity)=0
- virtual [ImageListProvider](#) \* `newImages` (const [Identity](#) &identity)=0

### 6.1499.1 Detailed Description

A [TrainingDataProvider](#) provides a call-back interface for the training process to retrieve the necessary information. It is not specified, but depends on the backend which of the methods in which order and for which identities will be called.

### 6.1499.2 Member Function Documentation

#### 6.1499.2.1 `images()`

```
virtual ImageListProvider * Digikam::TrainingDataProvider::images (
    const Identity & identity ) [pure virtual]
```

Provides all images known for the given identity. Ownership of the returned object stays with the [TrainingDataProvider](#).

Implemented in [Digikam::RecognitionTrainingProvider](#).

### 6.1499.2.2 newImages()

```
virtual ImageListProvider * Digikam::TrainingDataProvider::newImages (
    const Identity & identity ) [pure virtual]
```

Provides those images for the given identity that have not yet been supplied for training. Ownership of the returned object stays with the [TrainingDataProvider](#).

Implemented in [Digikam::RecognitionTrainingProvider](#).

## 6.1500 Digikam::TransactionItem Class Reference

Inheritance diagram for Digikam::TransactionItem:

## 6.1505.1 Member Function Documentation

### 6.1505.1.1 getThumbnailSize()

```
ThumbnailSize Digikam::TrashView::getThumbnailSize ( ) const
```

#### Returns

current thumbnail size

### 6.1505.1.2 lastSelectedItemUrl()

```
QUrl Digikam::TrashView::lastSelectedItemUrl ( ) const
```

#### Returns

QUrl to the last selected item in view

### 6.1505.1.3 model()

```
DTrashItemModel * Digikam::TrashView::model ( ) const
```

#### Returns

model used for the view

### 6.1505.1.4 setThumbnailSize()

```
void Digikam::TrashView::setThumbnailSize (
    const ThumbnailSize & thumbSize )
```

#### Parameters

<i>thumbSize</i>	size to set
------------------	-------------

### 6.1505.1.5 statusBarText()

```
QString Digikam::TrashView::statusBarText ( ) const
```

#### Returns

text for the main status bar

## 6.1506 Digikam::TreeBranch Class Reference

### Public Attributes

- QString **data**
- QString **help**
- QList< TreeBranch \* > **newChildren**
- QList< TreeBranch \* > **oldChildren**
- TreeBranch \* **parent** = nullptr
- QPersistentModelIndex **sourceIndex**
- QList< TreeBranch \* > **spacerChildren**
- Type **type** = TypeChild

## 6.1507 Digikam::TreeProxyModel Class Reference

Inheritance diagram for Digikam::TreeProxyModel:

### Signals

- void **signalFilterAccepts** (bool)

### Public Member Functions

- int **columnCount** (const QModelIndex &) const override
- **TreeProxyModel** (QObject \*const parent=nullptr)

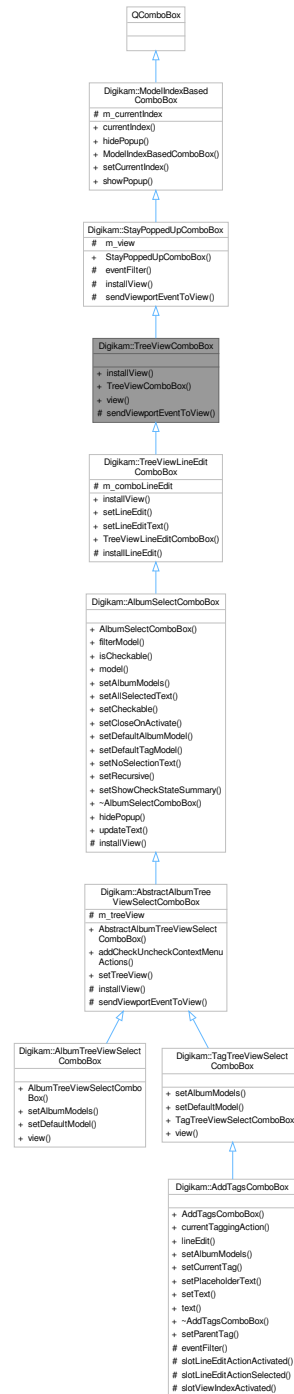

### Protected Member Functions

- bool **filterAcceptsRow** (int srow, const QModelIndex &sparent) const override

## 6.1508 Digikam::TreeViewComboBox Class Reference

Inheritance diagram for Digikam::TreeViewComboBox:

### Public Member Functions

- virtual void [installView](#) (QAbstractItemView \*[view](#)=nullptr)
- [TreeViewComboBox](#) (QWidget \*[parent](#)=nullptr)
- QTreeView \* [view](#) () const

## Public Member Functions inherited from [Digikam::StayPoppedUpComboBox](#)

- [StayPoppedUpComboBox](#) (QWidget \*const parent=nullptr)

## Public Member Functions inherited from [Digikam::ModelIndexBasedComboBox](#)

- QModelIndex **currentIndex** () const
- void **hidePopup** () override
- [ModelIndexBasedComboBox](#) (QWidget \*const parent=nullptr)
- void **setCurrentIndex** (const QModelIndex &index)
- void **showPopup** () override

## Protected Member Functions

- void [sendViewportEventToView](#) (QEvent \*e) override

## Protected Member Functions inherited from [Digikam::StayPoppedUpComboBox](#)

- bool **eventFilter** (QObject \*watched, QEvent \*event) override
- void [installView](#) (QAbstractItemView \*view)

## Additional Inherited Members

## Protected Attributes inherited from [Digikam::StayPoppedUpComboBox](#)

- QAbstractItemView \* **m\_view** = nullptr

## Protected Attributes inherited from [Digikam::ModelIndexBasedComboBox](#)

- QPersistentModelIndex **m\_currentIndex**

## 6.1508.1 Constructor & Destructor Documentation

### 6.1508.1.1 [TreeViewComboBox\(\)](#)

```
Digikam::TreeViewComboBox::TreeViewComboBox (
    QWidget * parent = nullptr ) [explicit]
```

This class provides a QComboBox with a QTreeView instead of the usual QListView. You need three steps↔: Construct the object, call setModel() with an appropriate QAbstractItemModel, then call [installView\(\)](#) to replace the standard combo box view with a QTreeView.

## 6.1508.2 Member Function Documentation

### 6.1508.2.1 installView()

```
void Digikam::TreeViewComboBox::installView (
    QAbstractItemView * view = nullptr ) [virtual]
```

Replace the standard combo box list view with a QTreeView. Call this after installing an appropriate model.

Reimplemented in [Digikam::AlbumSelectComboBox](#), [Digikam::AbstractAlbumTreeViewSelectComboBox](#), and [Digikam::TreeViewLineEditComboBox](#).

### 6.1508.2.2 sendViewportEventToView()

```
void Digikam::TreeViewComboBox::sendViewportEventToView (
    QEvent * e ) [override], [protected], [virtual]
```

Implement in subclass: Send the given event to the viewportEvent() method of m\_view. This method is protected for a usual QAbstractItemView. You can override, pass a view, and call parent implementation. The existing view will be used. You must then also reimplement sendViewportEventToView.

Implements [Digikam::StayPoppedUpComboBox](#).

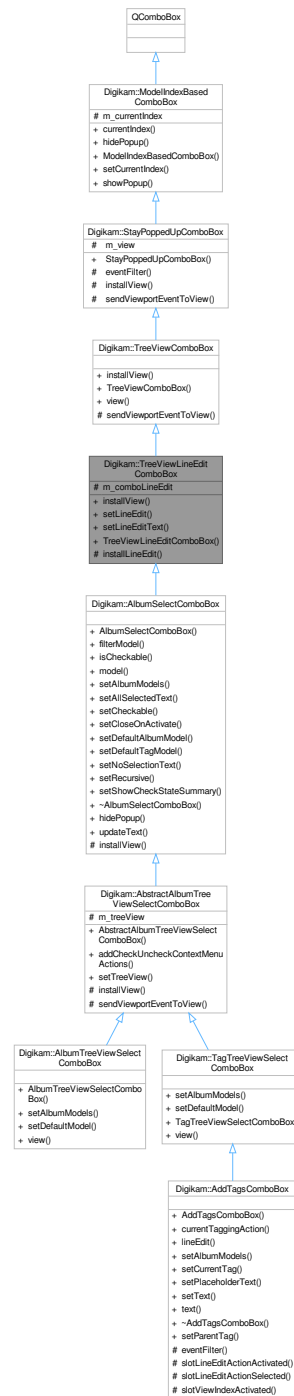

### 6.1508.2.3 view()

```
QTreeView * Digikam::TreeViewComboBox::view ( ) const
```

Returns the QTreeView of this class. Valid after [installView\(\)](#) has been called

## 6.1509 Digikam::TreeViewLineEditComboBox Class Reference

Inheritance diagram for Digikam::TreeViewLineEditComboBox:

### Public Member Functions

- void [installView](#) (QAbstractItemView \*[view](#)=nullptr) override
- void [setLineEdit](#) (QLineEdit \*[edit](#))
- void [setLineEditText](#) (const QString &[text](#))
- [TreeViewLineEditComboBox](#) (QWidget \*[parent](#)=nullptr)

### Public Member Functions inherited from [Digikam::TreeViewComboBox](#)

- [TreeViewComboBox](#) (QWidget \*parent=nullptr)
- QTreeView \* [view](#) () const

### Public Member Functions inherited from [Digikam::StayPoppedUpComboBox](#)

- [StayPoppedUpComboBox](#) (QWidget \*const parent=nullptr)

### Public Member Functions inherited from [Digikam::ModelIndexBasedComboBox](#)

- QModelIndex [currentIndex](#) () const
- void [hidePopup](#) () override
- [ModelIndexBasedComboBox](#) (QWidget \*const parent=nullptr)
- void [setCurrentIndex](#) (const QModelIndex &index)
- void [showPopup](#) () override

### Protected Member Functions

- virtual void [installLineEdit](#) ()

### Protected Member Functions inherited from [Digikam::TreeViewComboBox](#)

- void [sendViewportEventToView](#) (QEvent \*e) override

### Protected Member Functions inherited from [Digikam::StayPoppedUpComboBox](#)

- bool [eventFilter](#) (QObject \*watched, QEvent \*event) override
- void [installView](#) (QAbstractItemView \*view)

### Protected Attributes

- QLineEdit \* [m\\_comboLineEdit](#) = nullptr

### Protected Attributes inherited from [Digikam::StayPoppedUpComboBox](#)

- QAbstractItemView \* [m\\_view](#) = nullptr

### Protected Attributes inherited from [Digikam::ModelIndexBasedComboBox](#)

- QPersistentModelIndex [m\\_currentIndex](#)

## 6.1509.1 Constructor & Destructor Documentation

### 6.1509.1.1 `TreeViewLineEditComboBox()`

```
Digikam::TreeViewLineEditComboBox::TreeViewLineEditComboBox (
    QWidget *const parent = nullptr ) [explicit]
```

This class provides a [TreeViewComboBox](#) with a read-only line edit. The text in the line edit can be adjusted. The combo box will open on a click on the line edit. You need three steps: Construct the object, call `setModel()` with an appropriate `QAbstractItemModel`, then call [installView\(\)](#) to replace the standard combo box view with a `QTreeView`.

## 6.1509.2 Member Function Documentation

### 6.1509.2.1 `installLineEdit()`

```
void Digikam::TreeViewLineEditComboBox::installLineEdit ( ) [protected], [virtual]
```

Sets a line edit. Called by [installView\(\)](#). The default implementation is described above. An empty implementation will keep the default `QComboBox` line edit.

### 6.1509.2.2 `installView()`

```
void Digikam::TreeViewLineEditComboBox::installView (
    QAbstractItemView * view = nullptr ) [override], [virtual]
```

Replace the standard combo box list view with a `QTreeView`. Call this after installing an appropriate model.

Reimplemented from [Digikam::TreeViewComboBox](#).

### 6.1509.2.3 `setLineEditText()`

```
void Digikam::TreeViewLineEditComboBox::setLineEditText (
    const QString & text )
```

Set the text of the line edit (the text that is visible if the popup is not opened). Applicable only for default [installLineEdit\(\)](#) implementation.

## 6.1510 Digikam::TrimmedModifier Class Reference

Inheritance diagram for Digikam::TrimmedModifier:

### Public Member Functions

- QString [parseOperation](#) ([ParseSettings](#) &settings, const QRegularExpressionMatch &match) override

## Public Member Functions inherited from [Digikam::Modifier](#)

- **Modifier** (const QString &name, const QString &description)
- **Modifier** (const QString &name, const QString &description, const QString &icon)

## Public Member Functions inherited from [Digikam::Rule](#)

- QString **description** () const

## Static Public Member Functions inherited from [Digikam::Rule](#)

- static QString **escapeToken** (const QString &token)

## Protected Slots inherited from [Digikam::Rule](#)

- virtual void **slotTokenTriggered** (const QString &)

## Protected Member Functions inherited from [Digikam::Rule](#)

- bool **addToken** (const QString &id, const QString &description, const QString &actionName=QString())
- void **setDescription** (const QString &desc)
- void **setIcon** (const QString &pixmap)
- void **setRegExp** (const QRegularExpression &regExp)
- void **setUseTokenMenu** (bool value)

## 6.1510.1 Member Function Documentation

### 6.1510.1.1 parseOperation()

```
QString Digikam::TrimmedModifier::parseOperation (
    ParseSettings & settings,
    const QRegularExpressionMatch & match ) [override], [virtual]
```

TODO: describe me

## Parameters

<i>settings</i>	contains settings
<i>match</i>	result of the regular expression match done in <code>Option::parse()</code>

## Returns

Implements [Digikam::Modifier](#).

## 6.1511 Digikam::TwoProgressItemsContainer Class Reference

Inheritance diagram for Digikam::TwoProgressItemsContainer:

**Protected Member Functions**

- void **advance** (QAtomicPointer< [ProgressItem](#) > &ptr, int n)

### 6.1512.1 Detailed Description

USB Mass Storage camera Implementation of abstract type [DKCamera](#)

### 6.1512.2 Member Function Documentation

#### 6.1512.2.1 `cameraAbout()`

```
bool Digikam::UMSCamera::cameraAbout (
    QString & about ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 6.1512.2.2 `cameraDriverType()`

```
DKCamera::CameraDriverType Digikam::UMSCamera::cameraDriverType ( ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 6.1512.2.3 `cameraManual()`

```
bool Digikam::UMSCamera::cameraManual (
    QString & manual ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 6.1512.2.4 cameraMD5ID()

```
QByteArray Digikam::UMSCamera::cameraMD5ID ( ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 6.1512.2.5 cameraSummary()

```
bool Digikam::UMSCamera::cameraSummary (
    QString & summary ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 6.1512.2.6 cancel()

```
void Digikam::UMSCamera::cancel ( ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 6.1512.2.7 capture()

```
bool Digikam::UMSCamera::capture (
    CamItemInfo & itemInfo ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 6.1512.2.8 deleteItem()

```
bool Digikam::UMSCamera::deleteItem (
    const QString & folder,
    const QString & itemName ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 6.1512.2.9 doConnect()

```
bool Digikam::UMSCamera::doConnect ( ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

#### 6.1512.2.10 downloadItem()

```
bool Digikam::UMSCamera::downloadItem (
    const QString & folder,
    const QString & itemName,
    const QString & saveFile ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.1512.2.11 getFolders()

```
bool Digikam::UMSCamera::getFolders (
    const QString & folder ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.1512.2.12 getFreeSpace()

```
bool Digikam::UMSCamera::getFreeSpace (
    quint64 & bytesSize,
    quint64 & bytesAvail ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.1512.2.13 getItemInfo()

```
void Digikam::UMSCamera::getItemInfo (
    const QString & folder,
    const QString & itemName,
    CamItemInfo & info,
    bool useMetadata ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.1512.2.14 getItemsInfoList()

```
bool Digikam::UMSCamera::getItemsInfoList (
    const QString & folder,
    bool useMetadata,
    CamItemInfoList & infoList ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.1512.2.15 getMetadata()

```
bool Digikam::UMSCamera::getMetadata (
    const QString & folder,
    const QString & itemName,
    DMetadata & meta ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.1512.2.16 getPreview()

```
bool Digikam::UMSCamera::getPreview (
    QImage & preview ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.1512.2.17 getThumbnail()

```
bool Digikam::UMSCamera::getThumbnail (
    const QString & folder,
    const QString & itemName,
    QImage & thumbnail ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.1512.2.18 setLockItem()

```
bool Digikam::UMSCamera::setLockItem (
    const QString & folder,
    const QString & itemName,
    bool lock ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.1512.2.19 uploadItem()

```
bool Digikam::UMSCamera::uploadItem (
    const QString & folder,
    const QString & itemName,
    const QString & localFile,
    CamItemInfo & info ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

## 6.1513 Digikam::UndoAction Class Reference

Inheritance diagram for Digikam::UndoAction:

### Public Member Functions

- void [clear](#) ()
- void [clearFrom](#) (int level)
- [DImg](#) [getData](#) (int level) const
- bool [putData](#) (int level, const [DImg](#) &img) const

### 6.1516.1 Member Function Documentation

#### 6.1516.1.1 clear()

```
void Digikam::UndoCache::clear ( )
```

Delete all cache files

#### 6.1516.1.2 clearFrom()

```
void Digikam::UndoCache::clearFrom (
    int level )
```

Delete all cache files starting from the given level upwards

#### 6.1516.1.3 getData()

```
DImg Digikam::UndoCache::getData (
    int level ) const
```

Get the image data from a cache file

#### 6.1516.1.4 putData()

```
bool Digikam::UndoCache::putData (
    int level,
    const DImg & img ) const
```

Write the image data into a cache file

## 6.1517 Digikam::UndoManager Class Reference

### Public Member Functions

- void **setRegExp** (const QRegularExpression &regExp)
- void **setUseTokenMenu** (bool value)

## 6.1520.1 Member Function Documentation

### 6.1520.1.1 parseOperation()

```
QString Digikam::UniqueModifier::parseOperation (
    ParseSettings & settings,
    const QRegularExpressionMatch & match ) [override], [virtual]
```

TODO: describe me

## Parameters

<i>settings</i>	contains settings
<i>match</i>	result of the regular expression match done in <code>Option::parse()</code>

## Returns

Implements [Digikam::Modifier](#).

**6.1520.1.2 reset()**

```
void Digikam::UniqueModifier::reset ( ) [override], [virtual]
```

Resets the parser to its initial state

Reimplemented from [Digikam::Rule](#).

## 6.1521 Digikam::UnsharpMaskFilter Class Reference

Inheritance diagram for Digikam::UnsharpMaskFilter:

### Public Member Functions

- [FilterAction filterAction \(\)](#) override

## 6.1521.1 Member Function Documentation

### 6.1521.1.1 filterAction()

`FilterAction` Digikam::UnsharpMaskFilter::filterAction ( ) [override], [virtual]

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1521.1.2 filterIdentifier()

`QString` Digikam::UnsharpMaskFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1521.1.3 readParameters()

```
void Digikam::UnsharpMaskFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.1522 Digikam::VersionFileInfo Class Reference

### Public Member Functions

- `QString` **filePath** ( ) const
- `QUrl` **fileUrl** ( ) const
- `bool` **isNull** ( ) const
- **VersionFileInfo** (const `QString` &path, const `QString` &fileName, const `QString` &format)

### Public Attributes

- `QString` **fileName**
- `QString` **format**
- `QString` **path**

## 6.1523 Digikam::VersionFileOperation Class Reference

### Public Types

- enum `Task` {  
    `NewFile` = 1 << 0 , `Replace` = 1 << 1 , `SaveAndDelete` = 1 << 2 , `MoveToIntermediate` = 1 << 3 ,  
    `StoreIntermediates` = 1 << 4 }

## Public Member Functions

- QStringList [allFilePaths](#) () const
- [VersionFileOperation](#) ()=default

## Public Attributes

- [VersionFileInfo](#) [intermediateForLoadedFile](#)
- QMap< int, [VersionFileInfo](#) > [intermediates](#)
- [VersionFileInfo](#) [loadedFile](#)
- [VersionFileInfo](#) [saveFile](#)
- Tasks [tasks](#)

## 6.1523.1 Member Enumeration Documentation

### 6.1523.1.1 Task

```
enum Digikam::VersionFileOperation::Task
```

#### Enumerator

NewFile	saveFile is a new file. Excludes Replace.
Replace	loadedFile and saveFile are the same - replace. Excludes NewFile.
SaveAndDelete	Similar to Replace, but the new file name differs from the old one, which should be removed.
MoveToIntermediate	Move loadedFile to loadedFileToIntermediate.
StoreIntermediates	Store additional snapshots from within history.

## 6.1523.2 Constructor & Destructor Documentation

### 6.1523.2.1 VersionFileOperation()

```
Digikam::VersionFileOperation::VersionFileOperation ( ) [explicit], [default]
```

This class describes an operation necessary for storing an image under version control. The loadedFile and current history is given to the [VersionManager](#). The saveFile is the destination of the save operation. If the loadedFile shall be moved to an intermediate, the name is given in intermediateForLoadedFile. The intermediates map may contain name of intermediates to save the state after action i of the history ( $\text{initialResolvedHistory.size()} \leq i < \text{currentHistory.size()} - 1$ ).

## 6.1523.3 Member Function Documentation

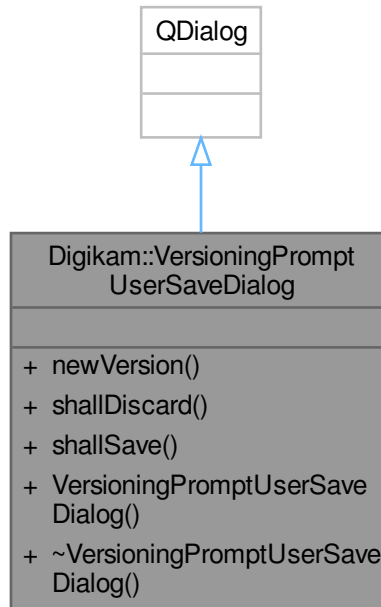

### 6.1523.3.1 allFilePaths()

```
QStringList Digikam::VersionFileOperation::allFilePaths ( ) const
```

Returns a list with all saving locations, for main result or intermediates

## 6.1524 Digikam::VersioningPromptUserSaveDialog Class Reference

Inheritance diagram for Digikam::VersioningPromptUserSaveDialog:

### Public Member Functions

- `bool newVersion () const`
- `bool shallDiscard () const`
- `bool shallSave () const`
- `VersioningPromptUserSaveDialog (QWidget *const parent)`

## 6.1525 Digikam::VersionItemFilterSettings Class Reference

### Public Member Functions

- `bool isExemptedBySettings (const ItemInfo &info) const`
- `bool isFiltering () const`  
*Returns if images will be filtered by these criteria at all.*
- `bool isFilteringByTags () const`  
*Returns if the tag is a filter criteria.*
- `bool isHiddenBySettings (const ItemInfo &info) const`
- `bool matches (const ItemInfo &info) const`
- `bool operator== (const VersionItemFilterSettings &other) const`
- `void setExceptionList (const QList< qulonglong > &idlist, const QString &id)`
- `void setVersionManagerSettings (const VersionManagerSettings &settings)`  
*— Tags filter —*
- `VersionItemFilterSettings (const VersionManagerSettings &settings)`

## Protected Attributes

- QHash< QString, QList< qlonglong > > **m\_exceptionLists**
- int **m\_exceptionTagFilter** = 0
- QList< int > **m\_excludeTagFilter**  
*DatabaseFields::Set watchFlags() const: Would return 0.*
- int **m\_includeTagFilter** = 0

## 6.1525.1 Member Function Documentation

### 6.1525.1.1 matches()

```
bool Digikam::VersionItemFilterSettings::matches (
    const ItemInfo & info ) const
```

Returns true if the given [ItemInfo](#) matches the filter criteria.

### 6.1525.1.2 setExceptionList()

```
void Digikam::VersionItemFilterSettings::setExceptionList (
    const QList< qlonglong > & idlist,
    const QString & id )
```

Add list with exceptions: These images will be exempted from filtering by this filter

## 6.1526 Digikam::VersionManager Class Reference

Inheritance diagram for Digikam::VersionManager:

### Public Types

- enum **FileNameType** { **CurrentVersionName** , **NewVersionName** }

### Public Member Functions

- void **writeToConfig** (KConfigGroup &group) const

### Public Attributes

- EditorClosingMode **editorClosingMode** = AlwaysAsk
- bool **enabled** = true
- QString **format** = QLatin1String("JPG")  
*Image format string as defined for database, in upper case.*
- IntermediateBehavior **saveIntermediateVersions** = NoIntermediates
- ShowInViewFlags **showInViewFlags** = ShowOriginal

## 6.1528 Digikam::VersionNamingScheme Class Reference

Inheritance diagram for Digikam::VersionNamingScheme:

### Public Member Functions

- virtual QString [baseName](#) (const QString &path, const QString &filename, QVariant \*counter=nullptr, QVariant \*intermediateCounter=nullptr)=0
- virtual QString [directory](#) (const QString &path, const QString &filename)=0
- virtual QVariant [incrementedCounter](#) (const QVariant &counter)=0
- virtual QVariant [initialCounter](#) ()=0
- virtual QString [intermediateDirectory](#) (const QString &currentPath, const QString &fileName)=0
- virtual QString [intermediateFileName](#) (const QString &path, const QString &filename, const QVariant &version, const QVariant &counter)=0
- virtual QString [versionFileName](#) (const QString &path, const QString &baseName, const QVariant &counter)=0
- [VersionNamingScheme](#) ()=default

## 6.1528.1 Constructor & Destructor Documentation

### 6.1528.1.1 VersionNamingScheme()

```
Digikam::VersionNamingScheme::VersionNamingScheme ( ) [default]
```

Creates and analyzes file names of versioned files.

## 6.1528.2 Member Function Documentation

### 6.1528.2.1 baseName()

```
virtual QString Digikam::VersionNamingScheme::baseName (
    const QString & path,
    const QString & filename,
    QVariant * counter = nullptr,
    QVariant * intermediateCounter = nullptr ) [pure virtual]
```

Analyzes the given file name. Returns the basename in the sense of stripping the file name of all added version information: A scheme that appends a number, like "MyFile-1.jpg", shall return "MyFile". Path is the directory, filename the file name, so path + filename is the file path. If counter is given, and the given file name has a version number, write it to counter. If intermediateCounter is given, and the given file name has an intermediate counter number, write it to counter. If not available, do not touch the given counters. See [initialCounter\(\)](#) for the valid counter formats.

Implemented in [Digikam::DefaultVersionNamingScheme](#).

### 6.1528.2.2 directory()

```
virtual QString Digikam::VersionNamingScheme::directory (
    const QString & path,
    const QString & filename ) [pure virtual]
```

For a loaded file in directory path and with file name filename, returns the directory in which a new version (a new intermediate version, resp.) shall be stored.

Implemented in [Digikam::DefaultVersionNamingScheme](#).

### 6.1528.2.3 incrementedCounter()

```
virtual QVariant Digikam::VersionNamingScheme::incrementedCounter (
    const QVariant & counter ) [pure virtual]
```

Returns the given counter "incremented", that is, changed in a steady, repeatable fashion. You shall never return the given counter.

Implemented in [Digikam::DefaultVersionNamingScheme](#).

#### 6.1528.2.4 initialCounter()

```
virtual QVariant Digikam::VersionNamingScheme::initialCounter ( ) [pure virtual]
```

Returns an initial counter value for version and intermediate number counters. There are two places where you shall generate counters You will receive the given QVariant in [incrementedCounter\(\)](#), [versionFileName\(\)](#) and [baseName\(\)](#), and you shall read a counter value from a generated file name in [baseName\(\)](#).

Implemented in [Digikam::DefaultVersionNamingScheme](#).

#### 6.1528.2.5 intermediateFileName()

```
virtual QString Digikam::VersionNamingScheme::intermediateFileName (
    const QString & path,
    const QString & filename,
    const QVariant & version,
    const QVariant & counter ) [pure virtual]
```

Creates a version file name for an intermediate file in given directory, as previously returned by [directory\(\)](#), given baseName, as previously returned by [baseName\(\)](#), version and intermediate number counter. Do not append a file suffix. You do not need to check if the file exists.

Implemented in [Digikam::DefaultVersionNamingScheme](#).

#### 6.1528.2.6 versionFileName()

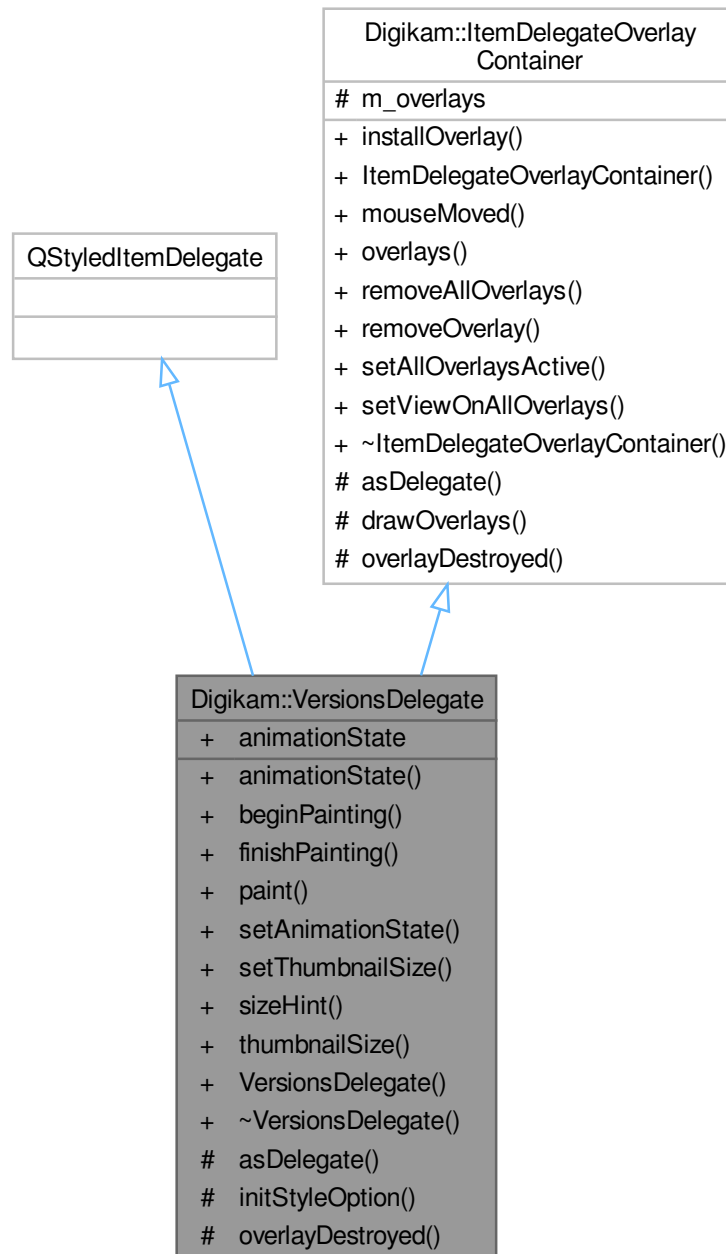

```
virtual QString Digikam::VersionNamingScheme::versionFileName (
    const QString & path,
    const QString & baseName,
    const QVariant & counter ) [pure virtual]
```

Creates a version file name for a file in given directory, as previously returned by [directory\(\)](#), given baseName, as previously returned by [baseName\(\)](#), and version counter. Do not append a file suffix. You do not need to check if the file exists.

Implemented in [Digikam::DefaultVersionNamingScheme](#).

## 6.1529 Digikam::VersionsDelegate Class Reference

Inheritance diagram for Digikam::VersionsDelegate:

### Signals

- void **animationStateChanged** ()

- [AbstractItemDragDropHandler](#) \* **m\_dragDropHandler** = nullptr
- bool **m\_showToolTip** = false
- [ToolTip](#) \* **m\_toolTip** = nullptr

## 6.1530.1 Member Function Documentation

### 6.1530.1.1 dragDropHandler()

```
AbstractItemDragDropHandler * Digikam::VersionsTreeView::dragDropHandler ( ) const [override],
[protected], [virtual]
```

You need to implement these three methods Returns the drag drop handler.

Implements [Digikam::DragDropViewImplementation](#).

### 6.1530.1.2 mapIndexForDragDrop()

```
QModelIndex Digikam::VersionsTreeView::mapIndexForDragDrop (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Maps the given index of the view's model to an index of the handler's model, which can be a source model of the view's model.

Implements [Digikam::DragDropViewImplementation](#).

### 6.1530.1.3 pixmapForDrag()

```
QPixmap Digikam::VersionsTreeView::pixmapForDrag (
    const QList< QModelIndex > & indexes ) const [override], [protected], [virtual]
```

Creates a pixmap for dragging the given indexes.

Implements [Digikam::DragDropViewImplementation](#).

### Public Member Functions

- `QStringList defaultFFmpegSearchPaths () const`
- void `readSettings (const KConfigGroup &group)`
- int `videoBitRate () const`  
*Return the current video bit rate.*
- `QString videoCodec () const`  
*Return the current video ffmpeg codec name.*
- `QString videoFormat () const`  
*Return the current video format extension.*
- qreal `videoFrameRate () const`  
*Return the current video frame rate.*
- `QSize videoSize () const`  
*Return the current video size.*
- void `writeSettings (KConfigGroup &group)`

### Static Public Member Functions

- static bool `isVideoTVFormat (VidType type)`  
*Return true if type is a video TV format. If false is returned type is computer graphics screen format.*
- static `QMap< VidBitRate, QString > videoBitRateNames ()`
- static `QMap< VidCodec, QString > videoCodecNames ()`
- static `QMap< VidFormat, QString > videoFormatNames ()`
- static `QMap< VidPlayer, QString > videoPlayerNames ()`
- static `QSize videoSizeFromType (VidType type)`  
*Return the current size from a type of video.*
- static `QMap< VidStd, QString > videoStdNames ()`
- static `QMap< VidType, QString > videoTypeNames ()`

**Public Attributes**

- int **abitRate** = 64000  
*Encoded Audio stream bit rate in bit/s.*
- QString **audioTrack**  
*Soundtrack stream.*
- FileSaveConflictBox::ConflictRule **conflictRule** = FileSaveConflictBox::OVERWRITE
- bool **equalize** = false  
*Equalize filter to applying while encoding video from frames.*
- QMap< QString, QString > **ffmpegCodecs**  
*Map of FFmpeg codec names and features.*
- QMap< QString, QString > **ffmpegFormats**  
*Map of FFmpeg format names and features.*
- QString **ffmpegPath**  
*Path to FFmpeg binary.*
- QString **filesList**  
*Path to list of frame files to encode.*
- DInfoInterface \* **iface** = nullptr  
*Plugin host interface to handle item properties.*
- int **imgFrames** = 125  
*Amount of frames by image to encode in video (ex: 125 frames = 5 s at 25 img/s).*
- QList< QUrl > **inputImages**  
*Images stream.*
- FrameOsdSettings **osdSettings**  
*On Screen Display parameters.*
- QString **outputDir** = QStandardPaths::writableLocation(QStandardPaths::MoviesLocation)
- QString **outputFile**  
*Path to encoded video.*
- VidPlayer **outputPlayer** = INTERNAL  
*Open video stream in player at end.*
- QString **outputVideo**  
*Target video file encoded at end.*
- Selection **selMode** = IMAGES  
*Items selection mode.*
- QTime **soundtrackLength**  
*Duration of the soundtrack.*
- int **strength** = 5  
*Equalization strength factor.*
- QString **tempDir**  
*To store temporary frames.*
- TransitionMngr::TransType **transition** = TransitionMngr::None  
*Transition type between images.*
- VidBitRate **vbitRate** = VBR12  
*Encoded Video stream bit rate in bit/s.*
- VidCodec **vCodec** = X264  
*Encoded video codec.*
- EffectMngr::EffectType **vEffect** = EffectMngr::None  
*Encoded video effect while displaying images.*
- VidFormat **vFormat** = MP4  
*Encoded video container format.*
- VidStd **vStandard** = PAL  
*Encoded Video standard => frame rate in img/s.*
- VidType **vType** = BLUERAY  
*Encoded video type.*

## 6.1541.1 Member Enumeration Documentation

### 6.1541.1.1 Selection

enum `Digikam::VidSlideSettings::Selection`

Images selection mode

### 6.1541.1.2 VidBitRate

enum `Digikam::VidSlideSettings::VidBitRate`

Video rates in bits per seconds.

Enumerator

VBR04	400000
VBR05	500000
VBR10	1000000
VBR12	1200000
VBR15	1500000
VBR20	2000000
VBR25	2500000
VBR30	3000000
VBR40	4000000
VBR45	4500000
VBR50	5000000
VBR60	6000000
VBR80	8000000

### 6.1541.1.3 VidCodec

enum `Digikam::VidSlideSettings::VidCodec`

Video Codecs

Enumerator

X264	<a href="https://en.wikipedia.org/wiki/X264">https://en.wikipedia.org/wiki/X264</a>

## Enumerator

UW16K	15360 x 8640 - 16:9 - Computer Graphics
-------	---

## 6.1541.2 Member Function Documentation

### 6.1541.2.1 readSettings()

```
void Digikam::VidSlideSettings::readSettings (
    const KConfigGroup & group )
```

Read and write settings in config file between sessions.

### 6.1541.2.2 videoTypeNames()

```
QMap< VidSlideSettings::VidType, QString > Digikam::VidSlideSettings::videoTypeNames ( )
[static]
```

Helper methods to fill combobox from GUI.

## 6.1541.3 Member Data Documentation

### 6.1541.3.1 conflictRule

```
FileSaveConflictBox::ConflictRule Digikam::VidSlideSettings::conflictRule = FileSaveConflict↔
Box::OVERWRITE
```

[Rule](#) to follow if video file already exists.

### 6.1541.3.2 outputDir

```
QString Digikam::VidSlideSettings::outputDir = QStandardPaths::writableLocation(QStandard↔
Paths::MoviesLocation)
```

Encoded video stream directory.

## 6.1542 Digikam::VidSlideTask Class Reference

Inheritance diagram for Digikam::VidSlideTask:

### Signals

- void **signalDone** (bool)
- void **signalMessage** (const QString &, bool)

### Signals inherited from [Digikam::ActionJob](#)

- void [signalDone](#) ()

## Protected Member Functions

- void [allSteps](#) ()
- virtual void [beginStatusChange](#) ()
- void [step](#) ()

## 6.1544.1 Member Function Documentation

### 6.1544.1.1 addObject()

```
void Digikam::VisibilityController::addObject (
    VisibilityObject *const object )
```

Add an object implementing the [VisibilityObject](#) interface. You can use this if you have your widgets grouped in intermediate objects.

### 6.1544.1.2 addWidget()

```
void Digikam::VisibilityController::addWidget (
    QWidget *const widget )
```

Add a widget to this controller.

### 6.1544.1.3 isVisible()

```
bool Digikam::VisibilityController::isVisible ( ) const
```

Returns true if the contained objects are visible or becoming visible.

### 6.1544.1.4 setContainerWidget()

```
void Digikam::VisibilityController::setContainerWidget (
    QWidget *const widget )
```

Set the widget containing the widgets added to this controller

## 6.1546.1 Member Data Documentation

### 6.1546.1.1 black

```
double Digikam::WBContainer::black = 0.0
```

Neutral color temperature settings.

## 6.1547 Digikam::WBFilter Class Reference

## 6.1547.1 Member Function Documentation

### 6.1547.1.1 `autoWBAdjustementFromColor()`

```
void Digikam::WBFilter::autoWBAdjustementFromColor (
    const QColor & tc,
    double & temperature,
    double & green ) [static]
```

This is a dichotomic search based on Blue and Red layers ratio to find the matching temperature adapted from `ufraw (0.12.1) RGB_to_Temperature`

### 6.1547.1.2 `filterAction()`

```
FilterAction Digikam::WBFilter::filterAction ( ) [override], [virtual]
```

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1547.1.3 `filterIdentifier()`

```
QString Digikam::WBFilter::filterIdentifier ( ) const [inline], [override], [virtual]
```

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

#### 6.1547.1.4 filterImage()

```
void Digikam::WBFilter::filterImage ( ) [override], [protected], [virtual]
```

Main image filter method. Override in subclass.

Implements [Digikam::DImgThreadedFilter](#).

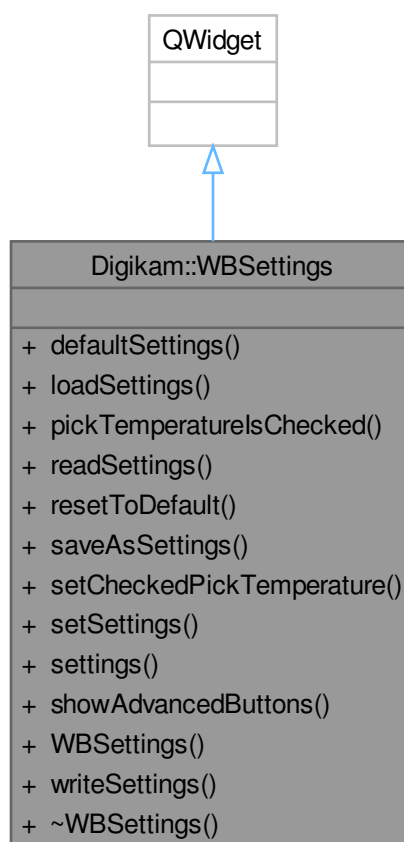

#### 6.1547.1.5 readParameters()

```
void Digikam::WBFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.1548 Digikam::WBSettings Class Reference

- class **WorkerObjectRunnable**

## 6.1554.1 Member Enumeration Documentation

### 6.1554.1.1 DeactivatingMode

```
enum Digikam::WorkerObject::DeactivatingMode
```

#### Enumerator

FlushSignals	Already sent signals are cleared.
KeepSignals	The thread is stopped, but already sent signals remain in the queue.
PhaseOut	The thread is stopped when all signals emitted until now have been processed.

## 6.1554.2 Constructor & Destructor Documentation

### 6.1554.2.1 WorkerObject()

```
Digikam::WorkerObject::WorkerObject ( ) [explicit]
```

Deriving from a worker object allows you to execute your slots in a thread. Implement any slots and connect signals just as usual. Call [schedule\(\)](#) before or when signals are emitted. The object will have moved to a thread when the signals are received by the slots. Call [deactivate\(\)](#) to stop computation. Note that without calling [schedule\(\)](#), no signal will ever be processed. You can use the connectAndSchedule convenience connection to avoid having to call [schedule\(\)](#) directly. Note that you cannot make this QObject the child of another QObject. Please check if you need to call shutDown from your destructor (see below).

## 6.1554.3 Member Function Documentation

### 6.1554.3.1 aboutToDeactivate()

```
void Digikam::WorkerObject::aboutToDeactivate ( ) [protected], [virtual]
```

Called from [deactivate\(\)](#), typically from a different thread than the worker thread, possibly the UI thread. You can stop any extra controlled threads here. Immediately afterwards, an event will be sent to the working thread which will cause the event loop to quit. ([aboutToQuitLoop\(\)](#))

Reimplemented in [Digikam::RecognitionWorker](#), and [Digikam::TrainerWorker](#).

### 6.1554.3.2 aboutToQuitLoop()

```
void Digikam::WorkerObject::aboutToQuitLoop ( ) [protected], [virtual]
```

Called from within thread's event loop to quit processing. Quit any blocking operation. Immediately afterwards, the event loop will be quit.

### 6.1554.3.3 connectAndSchedule()

```
bool Digikam::WorkerObject::connectAndSchedule (
    const QObject * sender,
    const char * signal,
    const char * method,
    Qt::ConnectionType type = Qt::AutoConnection ) const
```

You must normally call [schedule\(\)](#) to ensure that the object is active when you send a signal with work data. Instead, you can use these [connect\(\)](#) methods when connecting your signal to this object, the signal that carries work data. Then the object will be scheduled each time you emit the signal.

### 6.1554.3.4 deactivate

```
void Digikam::WorkerObject::deactivate (
    DeactivatingMode mode = FlushSignals ) [slot]
```

Quits execution of this worker object. If mode is `FlushSignals`, all already emitted signals will be cleared. If mode is `KeepSignals`, already emitted signals are not cleared and will be kept in the event queue until destruction or [schedule\(\)](#) is called. If mode is `PhaseOut`, already emitted signals will be processed and the thread quit immediately afterwards.

### 6.1554.3.5 schedule

```
void Digikam::WorkerObject::schedule ( ) [slot]
```

Starts execution of this worker object: The object is moved to a thread and an event loop started, so that queued signals will be received.

### 6.1554.3.6 setPriority()

```
void Digikam::WorkerObject::setPriority (
    QThread::Priority priority )
```

Sets the priority for this dynamic thread. Can be set anytime. If the thread is currently not running, the priority will be set when it is run next time. When you set QThread::InheritPriority (default), the priority is not changed but inherited from the thread pool.

### 6.1554.3.7 shutDown()

```
void Digikam::WorkerObject::shutDown ( ) [protected]
```

If you are deleting data in your destructor which is accessed from the thread, do one of the following from your destructor to guarantee a safe shutdown: 1) Call this method 2) Call stop() and wait(), knowing that nothing will call start() anymore after this 3) Be sure the thread will never be running at destruction. Note: This irrevocably stops this object. Note: It is not sufficient that your parent class does this. Calling this method, or providing one of the above mentioned equivalent guarantees, must be done by every single last class in the hierarchy with an implemented destructor deleting data. (the base class destructor is always called after the derived class)

## 6.1555 Digikam::Workflow Class Reference

### Public Attributes

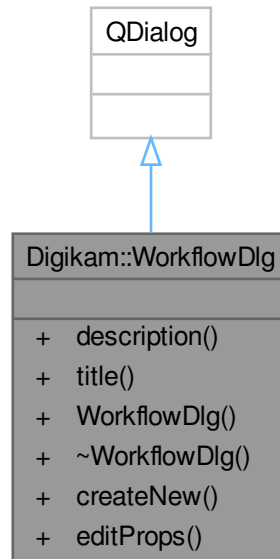

- [BatchSetList](#) **aTools**
- QString **desc**
- [QueueSettings](#) **qSettings**
- QString **title**

### 6.1555.1 Detailed Description

This container group all queue common settings plus all assigned batch tools.

## 6.1556 Digikam::WorkflowDlg Class Reference

Inheritance diagram for Digikam::WorkflowDlg:

### Public Member Functions

- `QString` **description** () const
- `QString` **title** () const
- **WorkflowDlg** (const [Workflow](#) &wf, bool create=false)

### Static Public Member Functions

- static bool **createNew** ([Workflow](#) &wf)
- static bool **editProps** ([Workflow](#) &wf)

## 6.1557 Digikam::WorkflowItem Class Reference

Inheritance diagram for Digikam::WorkflowItem:

### Public Member Functions

- `int count () const`
- `void setItem (const QString &title=QString(), const QString &desc=QString(), int count=0)`
- `QString title () const`
- `WorkflowItem (WorkflowList *const parent, const QString &name)`

## 6.1558 Digikam::WorkflowList Class Reference

Inheritance diagram for Digikam::WorkflowList:

### Public Slots

- void **slotAddQueueSettings** (const QString &title)
- void **slotRemoveQueueSettings** (const QString &title)

### Signals

- void **signalAssignQueueSettings** (const QString &)
- void **signalUpdateQueueSettings** (const QString &)

### Public Member Functions

- **WorkflowList** (QWidget \*const parent)

## 6.1559 Digikam::WorkflowManager Class Reference

Inheritance diagram for Digikam::WorkflowManager:

### Signals

- void **signalQueueSettingsAdded** (const QString &)
- void **signalQueueSettingsRemoved** (const QString &)

### Public Member Functions

- void **clear** ()
- [Workflow](#) **findByTitle** (const QString &title) const
- void **insert** (const [Workflow](#) &q)
- bool **load** (QStringList &failed)
- QList< [Workflow](#) > **queueSettingsList** () const
- void **remove** (const [Workflow](#) &q)
- bool **save** ()

### Static Public Member Functions

- static [WorkflowManager](#) \* **instance** ()

**Friends**

- class **WorkflowManagerCreator**

**6.1559.1 Member Function Documentation****6.1559.1.1 load()**

```
bool Digikam::WorkflowManager::load (
    QStringList & failed )
```

Load all [Workflow](#) from XML settings file. Fill 'failed' list with incompatible [Workflow](#) title/description not loaded.

**6.1559.1.2 save()**

```
bool Digikam::WorkflowManager::save ( )
```

Save all [Workflow](#) to XML settings file.

**6.1560 Digikam::WorkingWidget Class Reference**

Inheritance diagram for Digikam::WorkingWidget:

**Public Slots**

- void **toggleTimer** (bool turnOn=false)

## Signals

- void **animationStep** ()

## Public Member Functions

- **WorkingWidget** (QWidget \*const parent=nullptr)

## 6.1561 Digikam::WSAlbum Class Reference

### Public Member Functions

- void **setBaseAlbum** (const [WSAlbum](#) &album)

### Public Attributes

- QString **description**
- QString **id**
- bool **isRoot** = true
- QString **location**
- QString **parentID**
- QString **title**
- bool **uploadable** = true
- QString **url**

### 6.1561.1 Member Function Documentation

#### 6.1561.1.1 setBaseAlbum()

```
void Digikam::WSAlbum::setBaseAlbum (  
    const WSAlbum & album ) [inline]
```

This method is used by derived class of [WSAlbum](#), to set the attributes inherited from [WSAlbum](#), knowing a [WSAlbum](#).

## 6.1562 Digikam::WSComboBoxIntermediate Class Reference

Inheritance diagram for Digikam::WSComboBoxIntermediate:

### Public Member Functions

- void [setIntermediate](#) (bool)
- [WSComboBoxIntermediate](#) (QWidget \*const = nullptr, const QString &=QString())

### 6.1562.1 Constructor & Destructor Documentation

#### 6.1562.1.1 WSComboBoxIntermediate()

```

Digikam::WSComboBoxIntermediate::WSComboBoxIntermediate (
    QWidget * const parent = nullptr,
    const QString & text = QString() ) [explicit]
  
```

Initialize the combobox with a parent and a string to indicate the intermediate state.

### 6.1562.2 Member Function Documentation

#### 6.1562.2.1 setIntermediate()

```

void Digikam::WSComboBoxIntermediate::setIntermediate (
    bool state )
  
```

Set the state of the combobox to intermediate. The intermediate state is 'unset' when another index is selected.

## 6.1563 Digikam::WSLoginDialog Class Reference

Inheritance diagram for Digikam::WSLoginDialog:

### Public Member Functions

- `QString login () const`
- `QString password () const`
- `void setLogin (const QString &)`
- `void setPassword (const QString &)`
- `WSLoginDialog (QWidget *const parent, const QString &prompt, const QString &header=QString(), const QString &passwd=QString())`
- `~WSLoginDialog ()`

### Protected Slots

- `void slotAccept ()`

## 6.1564 Digikam::WSNewAlbumDialog Class Reference

Inheritance diagram for Digikam::WSNewAlbumDialog:

### Public Member Functions

- void **addToMainLayout** (QWidget \*const widget)
- QGroupBox \* **getAlbumBox** () const
- QDialogButtonBox \* **getButtonBox** () const
- QDateTimeEdit \* **getDateTimeEdit** () const
- [DTextEdit](#) \* **getDescEdit** () const
- [DTextEdit](#) \* **getLocEdit** () const
- QWidget \* **getMainWidget** () const
- [DTextEdit](#) \* **getTitleEdit** () const
- void **hideDateTime** ()
- void **hideDesc** ()
- void **hideLocation** ()
- void **setAlbumSuggestion** (const QString &title)
- **WSNewAlbumDialog** (QWidget \*const parent, const QString &toolName)

### Protected Member Functions

- void **getBaseAlbumProperties** ([WSAlbum](#) &baseAlbum)

## 6.1565 Digikam::WSSelectUserDlg Class Reference

Inheritance diagram for Digikam::WSSelectUserDlg:

### Public Member Functions

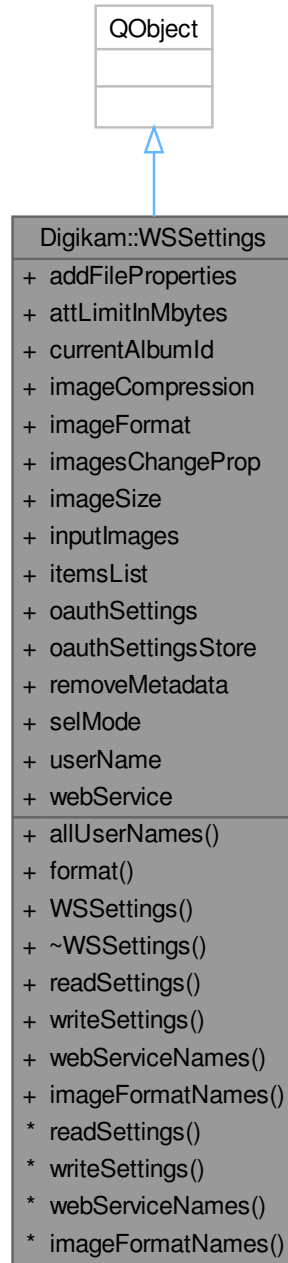

- `QString` **getUserName** () const
- void **reactivate** ()
- **WSSelectUserDlg** (`QWidget *const parent, const QString &serviceName`)

### Protected Slots

- void **slotNewAccountClicked** ()
- void **slotOkClicked** ()

## 6.1566 Digikam::WSSettings Class Reference

Inheritance diagram for Digikam::WSSettings:

### Public Types

- enum `ImageFormat` { `JPEG = 0` , `PNG` }
- enum `Selection` { `EXPORT = 0` , `IMPORT` }

*Images selection mode.*

- enum **WebService** {  
**FLICKR** = 0 , **DROPBOX** , **IMGUR** , **FACEBOOK** ,  
**SMUGMUG** , **GDRIVE** , **GPHOTO** }

### Public Member Functions

- QStringList **allUserNames** (const QString &serviceName)  
*Helper method to list all user accounts (of all web service) that user logged in before.*
- QString **format** () const
- **WSSettings** (QObject \*const parent=nullptr)
  
- void **readSettings** (const KConfigGroup &group)  
*Read and write settings in config file between sessions.*
- void **writeSettings** (KConfigGroup &group)

### Static Public Member Functions

- static QMap< WebService, QString > **webServiceNames** ()  
*Helper methods to fill settings from GUI.*
- static QMap< ImageFormat, QString > **imageFormatNames** ()

### Public Attributes

- bool **addFileProperties** = false
- qint64 **attLimitInMbytes** = 17
- QString **currentAlbumId**  
*Selected album to upload to.*
- int **imageCompression** = 75
- ImageFormat **imageFormat** = JPEG
- bool **imagesChangeProp** = false
- int **imageSize** = 1024
- QList< QUrl > **inputImages**  
*Selected items to upload.*
- QMap< QUrl, QUrl > **itemsList**  
*Map of original item and attached item (can be resized).*
- QSettings \* **oauthSettings** = nullptr
- O0SettingsStore \* **oauthSettingsStore** = nullptr
- bool **removeMetadata** = false
- Selection **selMode** = EXPORT  
*Items selection mode.*
- QString **userName**
- WebService **webService** = FLICKR

## 6.1567 Digikam::WSSettingsWidget Class Reference

Inheritance diagram for Digikam::WSSettingsWidget:

### Public Member Functions

- void **addWidgetToSettingsBox** (QWidget \*const widget)
- QGroupBox \* **getAccountBox** () const
- QGridLayout \* **getAccountBoxLayout** () const
- QGroupBox \* **getAlbumBox** () const
- QGridLayout \* **getAlbumBoxLayout** () const

## 6.1572.1 Member Function Documentation

### 6.1572.1.1 getMetadataTitle()

```
QString Digikam::XmpWidget::getMetadataTitle ( ) const [override], [virtual]
```

Implements [Digikam::MetadataWidget](#).

### 6.1572.1.2 getTagDescription()

```
QString Digikam::XmpWidget::getTagDescription (
    const QString & key ) [override], [virtual]
```

Reimplemented from [Digikam::MetadataWidget](#).

### 6.1572.1.3 getTagTitle()

```
QString Digikam::XmpWidget::getTagTitle (
    const QString & key ) [override], [virtual]
```

Reimplemented from [Digikam::MetadataWidget](#).

### 6.1572.1.4 loadFromURL()

```
bool Digikam::XmpWidget::loadFromURL (
    const QUrl & url ) [override], [virtual]
```

Implements [Digikam::MetadataWidget](#).

## 6.1573 ShowFoto::NoDuplicatesShowfotoFilterModel Class Reference

## 6.1576.1 Member Function Documentation

### 6.1576.1.1 addOverlay()

```
void ShowFoto::ShowfotoCategorizedView::addOverlay (
    ItemDelegateOverlay * overlay,
    ShowfotoDelegate * delegate = nullptr )
```

Add and remove an overlay. It will as well be removed automatically when destroyed. Unless you pass a different delegate, the current delegate will be used.

### 6.1576.1.2 deselected

```
void ShowFoto::ShowfotoCategorizedView::deselected (
    const QList< ShowfotoItemInfo > & nowDeselectedInfos ) [signal]
```

Emitted when items are deselected. There may be other selected infos left. This signal is not emitted when the model is reset; then only selectionCleared is emitted.

### 6.1576.1.3 dragDropHandler()

```
AbstractItemDragDropHandler * ShowFoto::ShowfotoCategorizedView::dragDropHandler ( ) const
[override], [protected], [virtual]
```

You need to implement these three methods Returns the drag drop handler.

Implements [Digikam::DragDropViewImplementation](#).

### 6.1576.1.4 filterModel()

```
QSortFilterProxyModel * ShowFoto::ShowfotoCategorizedView::filterModel ( ) const [override],
[protected], [virtual]
```

Implements [Digikam::ItemViewCategorized](#).

### 6.1576.1.5 hintAt

```
void ShowFoto::ShowfotoCategorizedView::hintAt (
    const ShowfotoItemInfo & info ) [slot]
```

Does something to gain attention for info, but not changing current selection

### 6.1576.1.6 indexActivated()

```
void ShowFoto::ShowfotoCategorizedView::indexActivated (
    const QModelIndex & index,
    Qt::KeyboardModifiers modifiers ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

### 6.1576.1.7 modelChanged

```
void ShowFoto::ShowfotoCategorizedView::modelChanged ( ) [signal]
```

Emitted when a new model is set.

### 6.1576.1.8 nextIndexHint()

```
QModelIndex ShowFoto::ShowfotoCategorizedView::nextIndexHint (
    const QModelIndex & indexToAnchor,
    const QItemSelectionRange & removed ) const [override], [protected], [virtual]
```

Assuming the given indexes would be removed (hypothetically!), return the index to be selected instead, starting from anchor. The default implementation returns the next remaining sibling.

Reimplemented from [Digikam::ItemViewCategorized](#).

### 6.1576.1.9 nextInOrder()

```
ShowfotoItemInfo ShowFoto::ShowfotoCategorizedView::nextInOrder (
    const ShowfotoItemInfo & startingPoint,
    int nth )
```

Returns the n-th info after the given one. Specifically, return the previous info for  $n = -1$  and the next info for  $n = 1$ . Returns a null info if either *startingPoint* or the *nth* info are not contained in the model

### 6.1576.1.10 selected

```
void ShowFoto::ShowfotoCategorizedView::selected (
    const QList< ShowfotoItemInfo > & newSelectedInfos ) [signal]
```

Emitted when new items are selected. The parameter includes only the newly selected infos, there may be other already selected infos.

### 6.1576.1.11 setCurrentInfo

```
void ShowFoto::ShowfotoCategorizedView::setCurrentInfo (
    const ShowfotoItemInfo & info ) [slot]
```

Set as current item the item identified by the [ShowfotoItemInfo](#)

### 6.1576.1.12 setCurrentUrl

```
void ShowFoto::ShowfotoCategorizedView::setCurrentUrl (
    const QUrl & url ) [slot]
```

Set as current item the item identified by its file url

### 6.1576.1.13 setCurrentWhenAvailable

```
void ShowFoto::ShowfotoCategorizedView::setCurrentWhenAvailable (
    qlonglong ShowfotoItemId ) [slot]
```

Scroll the view to the given item when it becomes available

### 6.1576.1.14 setSelectedShowfotoItemInfos

```
void ShowFoto::ShowfotoCategorizedView::setSelectedShowfotoItemInfos (
    const QList< ShowfotoItemInfo > & infos ) [slot]
```

Set selected items

### 6.1576.1.15 setSelectedUrls

```
void ShowFoto::ShowfotoCategorizedView::setSelectedUrls (
    const QList< QUrl > & urlList ) [slot]
```

Set selected items identified by their file urls

### 6.1576.1.16 showContextMenuOnIndex()

```
void ShowFoto::ShowfotoCategorizedView::showContextMenuOnIndex (
    QContextMenuEvent * event,
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

### 6.1576.1.17 showfotoFilterModel()

```
ShowfotoFilterModel * ShowFoto::ShowfotoCategorizedView::showfotoFilterModel ( ) const
```

Returns any [ShowfotoFilterModel](#) in chain. May not be sourceModel()

### 6.1576.1.18 showfotoItemInfoActivated

```
void ShowFoto::ShowfotoCategorizedView::showfotoItemInfoActivated (
    const ShowfotoItemInfo & info ) [signal]
```

Emitted when the given [ShowfotoItemInfo](#) is activated. Info is never null.

### 6.1576.1.19 showfotoThumbnailModel()

```
ShowfotoThumbnailModel * ShowFoto::ShowfotoCategorizedView::showfotoThumbnailModel ( ) const
```

Returns 0 if the [ShowfotoItemModel](#) is not an [ShowfotoThumbnailModel](#)

## 6.1576.1.20 toIndex()

```
void ShowFoto::ShowfotoCategorizedView::toIndex (
    const QUrl & url )
```

Selects the index as current and scrolls to it

## 6.1577 ShowFoto::ShowfotoCoordinatesOverlay Class Reference

### Protected Slots inherited from [Digikam::ItemDelegateOverlay](#)

## 6.1577.1 Member Function Documentation

### 6.1577.1.1 `checkIndex()`

```
bool ShowFoto::ShowfotoCoordinatesOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Return true here if you want to show the overlay for the given index. The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.1577.1.2 `createWidget()`

```
QWidget * ShowFoto::ShowfotoCoordinatesOverlay::createWidget ( ) [override], [protected],
[virtual]
```

Create your widget here. When creating the object, pass `parentWidget()` as parent widget. Ownership of the object is passed. It will be deleted in `setActive(false)`.

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

**6.1577.1.3 setActive()**

```
void ShowFoto::ShowfotoCoordinatesOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots. If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

**6.1577.1.4 slotEntered()**

```
void ShowFoto::ShowfotoCoordinatesOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Default implementation shows the widget iff the index is valid and checkIndex returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

**6.1577.1.5 visualChange()**

```
void ShowFoto::ShowfotoCoordinatesOverlay::visualChange ( ) [override], [protected], [virtual]
```

Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change

Reimplemented from [Digikam::ItemDelegateOverlay](#).

## 6.1579.1 Member Function Documentation

### 6.1579.1.1 acceptsActivation()

```
bool ShowFoto::ShowfotoDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect = nullptr ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

**6.1579.1.2 acceptsToolTip()**

```
bool ShowFoto::ShowfotoDelegate::acceptsToolTip (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * tooltipRect = nullptr ) const [override], [virtual]
```

These methods take four parameters: The position on viewport, the rect on viewport, the index, and optionally a parameter into which, if the return value is true, a rectangle can be written for which the return value will be true as well.

Implements [Digikam::DItemDelegate](#).

**6.1579.1.3 clearCaches()**

```
void ShowFoto::ShowfotoDelegate::clearCaches ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::DItemDelegate](#).

**6.1579.1.4 clearModelDataCaches()**

```
void ShowFoto::ShowfotoDelegate::clearModelDataCaches ( ) [protected], [virtual]
```

Reimplement to clear caches based on model indexes (hash on row number etc.) Change signals are listened to this is called whenever such properties become invalid.

**6.1579.1.5 imageInformationRect()**

```
QRect ShowFoto::ShowfotoDelegate::imageInformationRect ( ) const [override], [virtual]
```

Returns the area where the image information is drawn, or null if empty / not supported. The image information is textual or graphical information, but not the pixmap. The ratingRect() will e.g. typically be contained in this area.

Reimplemented from [ShowFoto::ShowfotoItemViewDelegate](#).

**6.1579.1.6 pixmapForDrag()**

```
QPixmap ShowFoto::ShowfotoDelegate::pixmapForDrag (
    const QStyleOptionViewItem & option,
    const QList< QModelIndex > & indexes ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

**6.1579.1.7 pixmapRect()**

```
QRect ShowFoto::ShowfotoDelegate::pixmapRect ( ) const [override], [virtual]
```

Returns the area where the pixmap is drawn, or null if not supported

Reimplemented from [ShowFoto::ShowfotoItemViewDelegate](#).

### 6.1579.1.8 retrieveThumbnailPixmap()

```
QPixmap ShowFoto::ShowfotoDelegate::retrieveThumbnailPixmap (
    const QModelIndex & index,
    int thumbnailSize ) [static]
```

Retrieve the thumbnail pixmap in given size for the [ShowfotoItemModel::ThumbnailRole](#) for the given index from the given index, which must adhere to [ShowfotoThumbnailModel](#) semantics.

### 6.1579.1.9 setDefaultViewOptions()

```
void ShowFoto::ShowfotoDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

Style option with standard values to use for cached rendering. option.rect shall be the viewport rectangle. Call on resize, font change.

Implements [Digikam::DItemDelegate](#).

Reimplemented in [ShowFoto::ShowfotoThumbnailDelegate](#).

### 6.1579.1.10 updateContentWidth()

```
void ShowFoto::ShowfotoDelegate::updateContentWidth ( ) [protected], [virtual]
```

Reimplement this to set contentWidth. This is the maximum width of all content rectangles, typically excluding margins on both sides.

Reimplemented in [ShowFoto::ShowfotoThumbnailDelegate](#).

### 6.1579.1.11 updateRects()

```
virtual void ShowFoto::ShowfotoDelegate::updateRects ( ) [protected], [pure virtual]
```

In a subclass, you need to implement this method to set up the rects for drawing. The paint() method operates depending on these rects.

Implemented in [ShowFoto::ShowfotoThumbnailDelegate](#), and [ShowFoto::ShowfotoNormalDelegate](#).

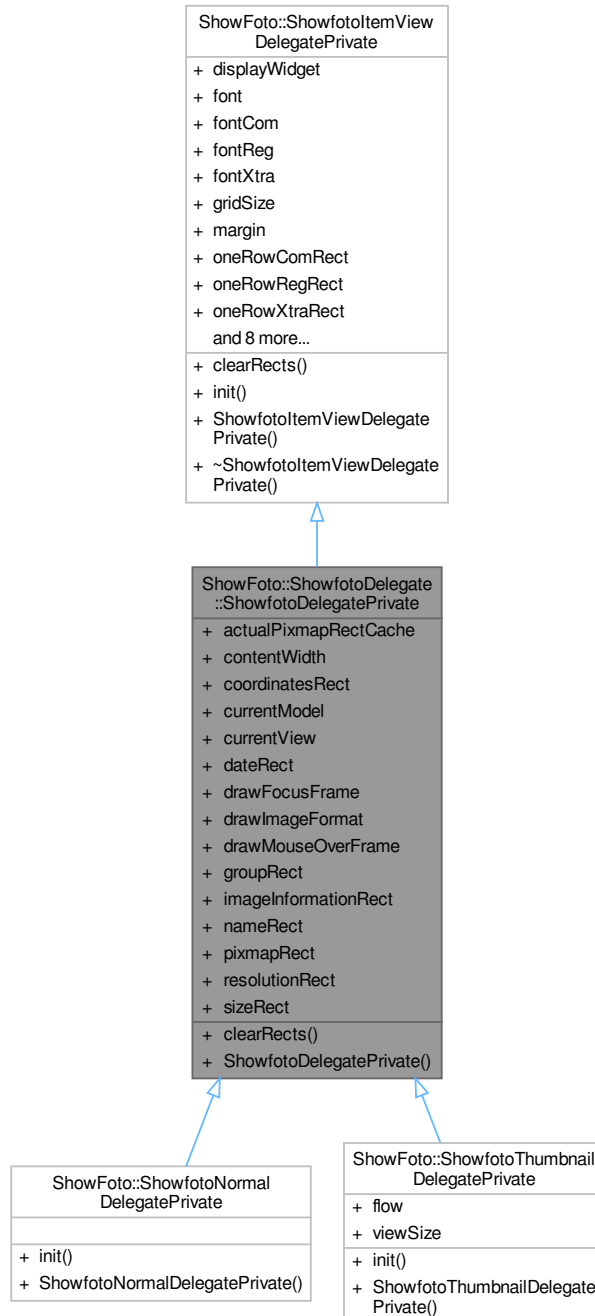

### 6.1579.1.12 updateSizeRectsAndPixmaps()

```
void ShowFoto::ShowfotoDelegate::updateSizeRectsAndPixmaps ( ) [override], [protected], [virtual]
```

Implements [ShowFoto::ShowfotoItemViewDelegate](#).

## 6.1580 ShowFoto::ShowfotoDelegate::ShowfotoDelegatePrivate Class Reference

## 6.1580.1 Member Function Documentation

### 6.1580.1.1 clearRects()

```
void ShowFoto::ShowfotoDelegate::ShowfotoDelegatePrivate::clearRects ( ) [override], [virtual]
```

Reimplemented from [ShowFoto::ShowfotoItemViewDelegatePrivate](#).

## 6.1581 ShowFoto::ShowfotoDragDropHandler Class Reference

Inheritance diagram for ShowFoto::ShowfotoDragDropHandler:

### Signals

- void **signalDroppedUrls** (const QList< QUrl > &droppedUrls, bool dropped, const QUrl &current)

### Public Member Functions

- Qt::DropAction **accepts** (const QDropEvent \*e, const QModelIndex &dropIndex) override

- `QMimeData * createMimeData` (const QList< QModelIndex > &) override
- bool `dropEvent` (QAbstractItemView \*view, const QDropEvent \*e, const QModelIndex &droppedOn) override
- QStringList `mimeTypes` () const override
- `ShowfotoItemModel * model` () const
- `ShowfotoDragDropHandler` (`ShowfotoItemModel *const model`)

## Public Member Functions inherited from [Digikam::AbstractItemDragDropHandler](#)

- `AbstractItemDragDropHandler` (QAbstractItemModel \*const model)
- virtual bool `acceptsMimeData` (const QMimeData \*data)
- QAbstractItemModel \* `model` () const

## Additional Inherited Members

## Protected Attributes inherited from [Digikam::AbstractItemDragDropHandler](#)

- QAbstractItemModel \* `m_model` = nullptr

## 6.1581.1 Member Function Documentation

### 6.1581.1.1 `accepts()`

```
Qt::DropAction ShowFoto::ShowfotoDragDropHandler::accepts (
    const QDropEvent * e,
    const QModelIndex & dropIndex ) [override], [virtual]
```

Returns if the given mime data is accepted for drop on dropIndex. Returns the proposed action, or Qt::IgnoreAction if not accepted.

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 6.1581.1.2 `createMimeData()`

```
QMimeData * ShowFoto::ShowfotoDragDropHandler::createMimeData (
    const QList< QModelIndex > & ) [override], [virtual]
```

Create a mime data object for starting a drag from the given Albums

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 6.1581.1.3 `dropEvent()`

```
bool ShowFoto::ShowfotoDragDropHandler::dropEvent (
    QAbstractItemView * view,
    const QDropEvent * e,
    const QModelIndex & droppedOn ) [override], [virtual]
```

Gives the view and the occurring drop event. The index is the index where the drop was dropped on. It may be invalid (dropped on decoration, viewport) Returns true if the event is to be accepted.

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

#### 6.1581.1.4 mimeTypees()

```
QStringList ShowFoto::ShowfotoDragDropHandler::mimeTypees ( ) const [override], [virtual]
```

Returns the supported mime types. Called by the default implementation of model's [mimeTypees\(\)](#).

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

## 6.1582 ShowFoto::ShowfotoFilterModel Class Reference

Inheritance diagram for ShowFoto::ShowfotoFilterModel:

### Public Types

## 6.1582.1 Member Enumeration Documentation

### 6.1582.1.1 ShowfotoFilterModelRoles

```
enum ShowFoto::ShowfotoFilterModel::ShowfotoFilterModelRoles
```

## Enumerator

CategorizationModeRole	Returns the current categorization mode.
SortOrderRole	Returns the current sort order.
CategoryFormatRole	Returns the format of the index which is used for category.
ShowfotoFilterModelPointerRole	Returns true if the given showfoto item is a group leader, and the group is opened. TODO: GroupsOpenRole = ShowfotoItemModel::FilterModelRoles + 4

## 6.1582.2 Member Function Documentation

### 6.1582.2.1 categoryIdentifier()

```
QString ShowFoto::ShowfotoFilterModel::categoryIdentifier (
    const ShowfotoItemInfo & info ) const [protected], [virtual]
```

Returns a unique identifier for the category if info. The string need not be for user display.

### 6.1582.2.2 compareCategories()

```
int ShowFoto::ShowfotoFilterModel::compareCategories (
    const QModelIndex & left,
    const QModelIndex & right ) const [override], [protected], [virtual]
```

This method compares the category of the `left` index with the category of the `right` index.

Internally and if not reimplemented, this method will ask for `left` and `right` models for role `CategorySortRole`. In order to correctly sort categories, the `data()` method of the model should return a `qulonglong` (or numeric) value, or a `QString` object. `QString` objects will be sorted with `QString::localeAwareCompare` if `sortCategoriesByNaturalComparison()` is true.

#### Note

Please have present that: `QString(QChar(QChar::ObjectReplacementCharacter)) > QString(QChar(QChar::ReplacementCharacter)) > [ all possible strings ] > QString();`

This means that `QString()` will be sorted the first one, while `QString(QChar(QChar::ObjectReplacementCharacter))` and `QString(QChar(QChar::ReplacementCharacter))` will be sorted in last position.

#### Warning

Please note that `data()` method of the model should return always information of the same type. If you return a `QString` for an index, you should return always `QStrings` for all indexes for role `CategorySortRole` in order to correctly sort categories. You can't mix by returning a `QString` for one index, and a `qulonglong` for other.

#### Note

If you need a more complex layout, you will have to reimplement this method.

#### Returns

A negative value if the category of `left` should be placed before the category of `right`. 0 if `left` and `right` are on the same category, and a positive value if the category of `left` should be placed after the category of `right`.

Reimplemented from [Digikam::DCategorizedSortFilterProxyModel](#).

### 6.1582.2.3 compareInfosCategories()

```
int ShowFoto::ShowfotoFilterModel::compareInfosCategories (
    const ShowfotoItemInfo & left,
    const ShowfotoItemInfo & right ) const [protected], [virtual]
```

Reimplement to customize category sorting. Return negative if category of left < category right, Return 0 if left and right are in the same category, else return positive.

### 6.1582.2.4 infosLessThan()

```
bool ShowFoto::ShowfotoFilterModel::infosLessThan (
    const ShowfotoItemInfo & left,
    const ShowfotoItemInfo & right ) const [protected], [virtual]
```

Reimplement to customize sorting. Do not take categories into account here.

### 6.1582.2.5 setDirectSourceShowfotoModel()

```
void ShowFoto::ShowfotoFilterModel::setDirectSourceShowfotoModel (
    ShowfotoItemModel *const sourceModel ) [override], [protected], [virtual]
```

Reimplemented from [ShowFoto::ShowfotoSortFilterModel](#).

### 6.1582.2.6 showfotoFilterModel()

```
ShowfotoFilterModel * ShowFoto::ShowfotoFilterModel::showfotoFilterModel ( ) const [override],
[virtual]
```

Reimplemented from [ShowFoto::ShowfotoSortFilterModel](#).

### 6.1582.2.7 showfotoItemInfosAdded

```
void ShowFoto::ShowfotoFilterModel::showfotoItemInfosAdded (
    const QList< ShowfotoItemInfo > & infos ) [signal]
```

These signals need to be explicitly enabled with [setSendItemInfoSignals\(\)](#).

### 6.1582.2.8 subSortLessThan()

```
bool ShowFoto::ShowfotoFilterModel::subSortLessThan (
    const QModelIndex & left,
    const QModelIndex & right ) const [override], [protected], [virtual]
```

This method has a similar purpose as [lessThan\(\)](#) has on [QSortFilterProxyModel](#). It is used for sorting items that are in the same category.

#### Returns

Returns true if the item `left` is less than the item `right` when sorting.

Reimplemented from [Digikam::DCategorizedSortFilterProxyModel](#).

## 6.1583 ShowFoto::ShowfotoFolderViewBar Class Reference

Inheritance diagram for ShowFoto::ShowfotoFolderViewBar:

Inheritance diagram for ShowFoto::ShowfotoFolderViewItem:

### Public Member Functions

- QString **path** () const
- void **setPath** (const QString &)
- **ShowfotoFolderViewItemBookmarkItem** (QTreeWidgetItem \*const parent)

## 6.1586 ShowFoto::ShowfotoFolderViewBookmarkList Class Reference

Inheritance diagram for ShowFoto::ShowfotoFolderViewBookmarkList:

### Signals

- void **signalAddBookmark** (const QString &path)
- void **signalLoadContents** (const QString &path)

### Public Member Functions

- QString **bookmarkBaseName** (const QString &path) const
- [ShowfotoFolderViewBookmarkItem](#) \* **bookmarkExists** (const QString &path) const
- **ShowfotoFolderViewBookmarkList** ([ShowfotoFolderViewBookmarks](#) \*const parent)

## 6.1587 ShowFoto::ShowfotoFolderViewBookmarks Class Reference

Inheritance diagram for ShowFoto::ShowfotoFolderViewBookmarks:

### Signals

- void **signalLoadContents** ()

### Public Member Functions

- `QList< QAction * >` **pluginActions** () const
- void **readSettings** (const `KConfigGroup &`)
- void **saveSettings** (`KConfigGroup &`)
- **ShowfotoFolderViewBookmarks** (`ShowfotoFolderViewSideBar *const sidebar`)
- `QAction *` **toolBarAction** (const `QString &name`) const
- `QTreeWidgetItem *` **topBookmarksItem** () const

## 6.1588 ShowFoto::ShowfotoFolderViewList Class Reference

Inheritance diagram for ShowFoto::ShowfotoFolderViewList:

### Public Types

- enum `FolderViewMode` { `ShortView = 0` , `DetailedView` }
- enum `FolderViewRole` { `FileName = 0` , `FileSize` , `FileType` , `FileDate` }

### Public Slots

- void `slotIconSizeChanged` (int)

### Signals

- void `signalAddBookmark` ()

### Public Member Functions

- `ShowfotoFolderViewList` (`ShowfotoFolderViewSideBar` \*const view, `ShowfotoFolderViewBar` \*const bar)

## 6.1588.1 Member Enumeration Documentation

### 6.1588.1.1 FolderViewRole

```
enum ShowFoto::ShowfotoFolderViewList::FolderViewRole
```

Enumerator

FileDate	Modifier date.
----------	----------------

## 6.1589 ShowFoto::ShowfotoFolderViewModel Class Reference

Inheritance diagram for ShowFoto::ShowfotoFolderViewModel:

### Public Member Functions

- `QStringList currentFilePath ()` const
- `QVariant data (const QModelIndex &index, int role)` const override
- `ShowfotoFolderViewModel (ShowfotoFolderViewList *const view)`

### Static Public Member Functions

- static int `maxIconSize ()`

## 6.1589.1 Member Function Documentation

### 6.1589.1.1 currentFilePath()

```
QStringList ShowFoto::ShowfotoFolderViewModel::currentFilePath ( ) const
```

List all file paths from the current model root index selected in the view.

## 6.1590 ShowFoto::ShowfotoFolderViewSideBar Class Reference

Inheritance diagram for ShowFoto::ShowfotoFolderViewSideBar:

### Public Slots

- void **slotAppendContents** ()
- void **slotGoHome** ()

- void **slotGoUp** ()
- void **slotLoadContents** ()
- void **slotRedo** ()
- void **slotUndo** ()

## Signals

- void **signalAddBookmark** ()
- void **signalAppendContentsFromFiles** (const QStringList &files, const QString &current)
- void **signalLoadContentsFromFiles** (const QStringList &files, const QString &current)
- void **signalLoadContentsFromPath** (const QString &path)
- void **signalSetup** ()

## Public Member Functions

- QString **currentFolder** () const
- QString **currentPath** () const
- void **doLoadState** () override
- void **doSaveState** () override
- const QString **getCaption** ()
- const QIcon **getIcon** ()
- void **loadContents** (const QModelIndex &index, bool append=false)
- QList< QAction \* > **pluginActions** () const
- void **registerPluginActions** (const QList< DPluginAction \* > &actions)

- void **setSortRole** (int role)
- **ShowfotoFolderViewSideBar** ([Showfoto](#) \*const parent)

## Public Member Functions inherited from [Digikam::StateSavingObject](#)

- [StateSavingDepth](#) **getStateSavingDepth** () const
- void **loadState** ()
- void **saveState** ()
- virtual void **setConfigGroup** (const KConfigGroup &group)
- virtual void **setEntryPrefix** (const QString &prefix)
- void **setStateSavingDepth** (const [StateSavingDepth](#) depth)
- [StateSavingObject](#) (QObject \*const host)
- virtual [~StateSavingObject](#) ()

## Additional Inherited Members

## Public Types inherited from [Digikam::StateSavingObject](#)

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }

## Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- QString **entryName** (const QString &base) const
- KConfigGroup **getConfigGroup** () const

## 6.1590.1 Member Function Documentation

### 6.1590.1.1 doLoadState()

```
void ShowFoto::ShowfotoFolderViewSideBar::doLoadState ( ) [override], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1590.1.2 doSaveState()

```
void ShowFoto::ShowfotoFolderViewSideBar::doSaveState ( ) [override], [virtual]
```

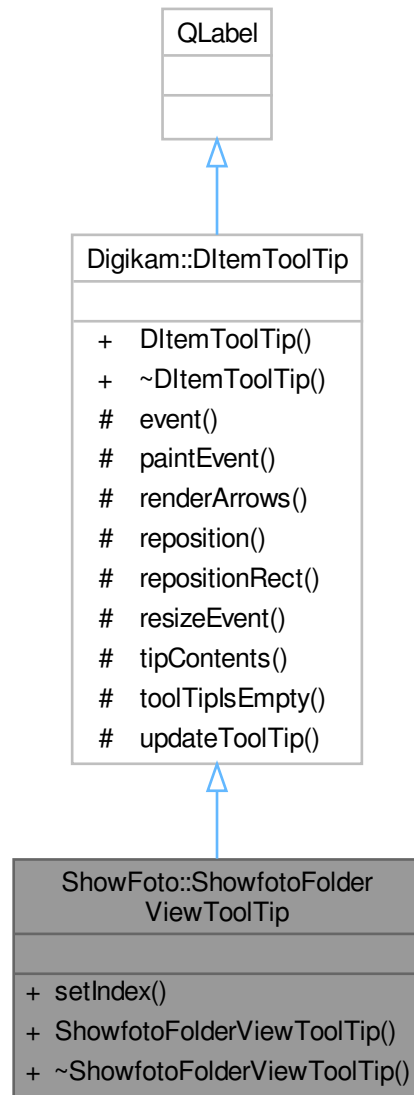

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

## 6.1591 ShowFoto::ShowfotoFolderViewToolTip Class Reference

Inheritance diagram for ShowFoto::ShowfotoFolderViewToolTip:

### Public Member Functions

- void **setIndex** (const QModelIndex &index)
- **ShowfotoFolderViewToolTip** (ShowfotoFolderViewList \*const view)

### Public Member Functions inherited from Digikam::DItemToolTip

- **DItemToolTip** (QWidget \*const parent=nullptr)

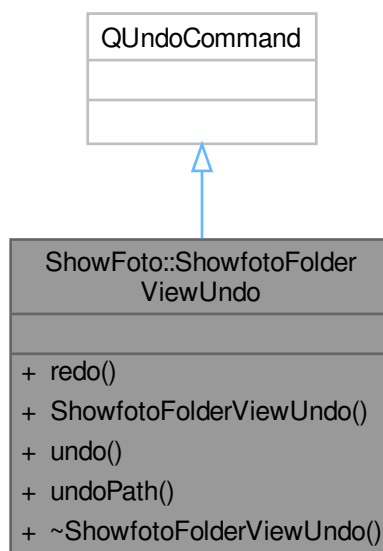

### Additional Inherited Members

### Protected Member Functions inherited from [Digikam::DItemToolTip](#)

- bool **event** (QEvent \*) override
- void **paintEvent** (QPaintEvent \*) override
- void **renderArrows** ()
- void **reposition** ()
- void **resizeEvent** (QResizeEvent \*) override
- bool **toolTipsEmpty** () const
- void **updateToolTip** ()

## 6.1592 ShowFoto::ShowfotoFolderViewUndo Class Reference

Inheritance diagram for ShowFoto::ShowfotoFolderViewUndo:

### Public Member Functions

- void **redo** ()
- **ShowfotoFolderViewUndo** ([ShowfotoFolderViewSideBar](#) \*const view, const QString &newPath)
- void **undo** ()
- QString **undoPath** () const

## 6.1593 ShowFoto::ShowfotoInfolface Class Reference

Inheritance diagram for ShowFoto::ShowfotoInfolface:

### Public Member Functions

- void [openSetupPage](#) (SetupPage page) override  
*Open configuration dialog page.*
- **ShowfotoInfolface** (QObject \*const parent, const QList< QUrl > &lst, const QUrl &currentActive)

## Public Member Functions inherited from [Digikam::DMetalInfoface](#)

- [QList< QUrl > allAlbumItems \(\)](#) const override
- [QUrl currentActiveItem \(\)](#) const override
- [QList< QUrl > currentAlbumItems \(\)](#) const override
- [QList< QUrl > currentSelectedItems \(\)](#) const override
  - Low level items and albums methods.*
- [QUrl defaultUploadUrl \(\)](#) const override
  - Url to upload new items without to use album selector.*
- void [deleteImage \(const QUrl &url\)](#) override
  - Manipulate with item.*

- [DInfoMap itemInfo \(const QUrl &\)](#) const override
- void [parseAlbumItemsRecursive \(\)](#) override
- void [setItemInfo \(const QUrl &, const DInfoMap &\)](#) override
- Q\_SIGNAL void **signalItemChanged** (const QUrl &url)
- Q\_SIGNAL void **signalRemoveImageFromAlbum** (const QUrl &)
- Q\_SLOT void [slotDateTimeForUrl \(const QUrl &url, const QDateTime &dt, bool updModDate\)](#) override
  - Slot to call when date time stamp from item is changed.*
- Q\_SLOT void [slotMetadataChangedForUrl \(const QUrl &url\)](#) override
  - Slot to call when something in metadata from item is changed.*
- bool [supportAlbums \(\)](#) const override
- [QUrl uploadUrl \(\)](#) const override
- QWidget \* [uploadWidget \(QWidget \\*const parent\)](#) const override
  - Album selector view methods (to upload items from an external place).*

## Public Member Functions inherited from [Digikam::DInfoInterface](#)

- **DInfoInterface** (QObject \*const parent)
- virtual QMap< QString, QString > [passShortcutActionsToWidget \(QWidget \\*const\)](#) const
  - Pass extra shortcut actions to widget and return prefixes of shortcuts.*
- Q\_SIGNAL void **signalAlbumItemsRecursiveCompleted** (const QList< QUrl > &imageList)
- Q\_SIGNAL void **signalSetupChanged** ()
- Q\_SIGNAL void **signalShortcutPressed** (const QString &shortcut, int val)
- virtual QAbstractItemModel \* [tagFilterModel \(\)](#)
  - Return an instance of tag filter model if host application support this feature, else null pointer.*
  
- virtual QList< QUrl > **albumItems (int)** const
- virtual QList< QUrl > **albumsItems (const DAlbumIDs &)** const
- virtual [DInfoMap albumInfo \(int\)](#) const
- virtual void **setAlbumInfo (int, const DInfoMap &)** const
- Q\_SIGNAL void **signalLastItemUrl** (const QUrl &)
  
- virtual QWidget \* [albumChooser \(QWidget \\*const parent\)](#) const
  - Albums chooser view methods (to use items from albums before to process).*
- virtual [DAlbumIDs albumChooserItems \(\)](#) const
- Q\_SIGNAL void **signalAlbumChooserSelectionChanged** ()
  
- Q\_SIGNAL void **signalUploadUrlChanged** ()
- Q\_SIGNAL void **signalImportedImage** (const QUrl &)

## Additional Inherited Members

### Public Types inherited from [Digikam::DInfoInterface](#)

- typedef `QList< int >` **DAlbumIDs**  
*List of [Album](#) ids.*
- typedef `QMap< QString, QVariant >` **DInfoMap**  
*Map of properties name and value.*
- enum **SetupPage** { `ExifToolPage = 0` , `ImageQualityPage` }

### Public Attributes inherited from [Digikam::DInfoInterface](#)

- bool **forceAlbumSelection** = false

## 6.1593.1 Member Function Documentation

### 6.1593.1.1 openSetupPage()

```
void ShowFoto::ShowfotoInfoIface::openSetupPage (  
    SetupPage page ) [override], [virtual]
```

Reimplemented from [Digikam::DInfoInterface](#).

## 6.1594 ShowFoto::ShowfotoItemInfo Class Reference

### Public Member Functions

- bool **isNull** () const
- bool **operator!=** (const [ShowfotoItemInfo](#) &info) const
- bool **operator==** (const [ShowfotoItemInfo](#) &info) const

### Static Public Member Functions

- static [ShowfotoItemInfo](#) **itemInfoFromFile** (const `QFileInfo` &inf)

## Public Attributes

- QDateTime **ctime**  
*camera date stamp*
- QDateTime **dtime**  
*creation time on disk*
- QString **folder**  
*Folder path to access to file.*
- int **height** = 0  
*Image height in pixels.*
- qlonglong **id** = -1  
*Unique image id.*
- QString **mime**  
*Type mime of file.*
- QString **name**  
*File name in file-system.*
- [PhotoInfoContainer](#) **photoInfo**
- qint64 **size** = -1  
*Static values.*
- QUrl **url**  
*file Url*
- int **width** = 0  
*Image width in pixels.*

## 6.1594.1 Member Function Documentation

### 6.1594.1.1 isNull()

```
bool ShowFoto::ShowfotoItemInfo::isNull ( ) const
```

Return true if all member in this container are null.

### 6.1594.1.2 operator==( )

```
bool ShowFoto::ShowfotoItemInfo::operator== (
    const ShowfotoItemInfo & info ) const
```

Compare for information equality and un-equality, not including variable values.

## 6.1594.2 Member Data Documentation

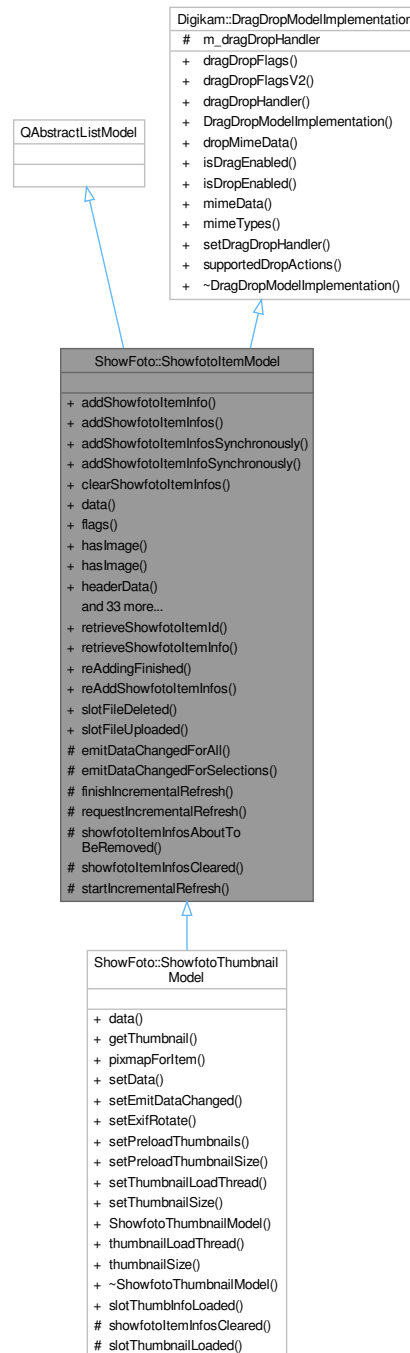

### 6.1594.2.1 size

```
qint64 ShowFoto::ShowfotoItemInfo::size = -1
```

file size in bytes.

## 6.1595 ShowFoto::ShowfotoItemModel Class Reference

Inheritance diagram for ShowFoto::ShowfotoItemModel:

### Public Types

- enum [ShowfotoItemModelRoles](#) {  
[ShowfotoItemModelPointerRole](#) = Qt::UserRole , [ShowfotoItemModelInternalId](#) = Qt::UserRole + 1 ,

## 6.1595.1 Member Enumeration Documentation

### 6.1595.1.1 ShowfotoItemModelRoles

```
enum ShowFoto::ShowfotoItemModel::ShowfotoItemModelRoles
```

## Enumerator

ShowfotoItemModelPointerRole	An ShowfotoItemModel* pointer to this model
ThumbnailRole	Returns a thumbnail pixmap. May be implemented by subclasses. Returns either a valid pixmap or a null QVariant.
ExtraDataRole	Return (optional) extraData field
ExtraDataDuplicateCount	Returns the number of duplicate indexes for the same image id

## 6.1595.2 Member Function Documentation

### 6.1595.2.1 addShowfotoItemInfoSynchronously()

```
void ShowFoto::ShowfotoItemModel::addShowfotoItemInfoSynchronously (
    const ShowfotoItemInfo & info )
```

addShowfotoItemInfo() is asynchronous if a preprocessor is set. This method first adds the info, synchronously. Only afterwards, the preprocessor will have the opportunity to process it. This method also bypasses any incremental updates.

### 6.1595.2.2 allRefreshingFinished

```
void ShowFoto::ShowfotoItemModel::allRefreshingFinished ( ) [signal]
```

Signals that the model has finished currently with all scheduled refreshing, full or incremental, and all preprocessing. The model is in polished, clean situation right now.

### 6.1595.2.3 clearShowfotoItemInfos()

```
void ShowFoto::ShowfotoItemModel::clearShowfotoItemInfos ( )
```

Clears the ShowfotoItemInfos and resets the model.

### 6.1595.2.4 indexForShowfotoItemInfo()

```
QModelIndex ShowFoto::ShowfotoItemModel::indexForShowfotoItemInfo (
    const ShowfotoItemInfo & info ) const
```

Return the index of a given [ShowfotoItemInfo](#), if it exists in the model.

### 6.1595.2.5 indexForUrl()

```
QModelIndex ShowFoto::ShowfotoItemModel::indexForUrl (
    const QUrl & fileUrl ) const
```

Returns the index or [ShowfotoItemInfo](#) object from the underlying data for the given file url. In case of multiple occurrences of the same file, the simpler overrides returns any one found first, use the QList methods to retrieve all occurrences.

### 6.1595.2.6 itemInfosAboutToBeAdded

```
void ShowFoto::ShowfotoItemModel::itemInfosAboutToBeAdded (
    const QList< ShowfotoItemInfo > & infos ) [signal]
```

Informs that ItemInfos will be added to the model. This signal is sent before the model data is changed and views are informed.

### 6.1595.2.7 itemInfosAboutToBeRemoved

```
void ShowFoto::ShowfotoItemModel::itemInfosAboutToBeRemoved (
    const QList< ShowfotoItemInfo > & infos ) [signal]
```

Informs that ShowfotoItemInfos will be removed from the model. This signal is sent before the model data is changed and views are informed. Note: You need to explicitly enable sending of this signal. It is not sent in [clearShowfotoItemInfos\(\)](#).

### 6.1595.2.8 itemInfosAdded

```
void ShowFoto::ShowfotoItemModel::itemInfosAdded (
    const QList< ShowfotoItemInfo > & infos ) [signal]
```

Informs that ItemInfos have been added to the model. This signal is sent after the model data is changed and views are informed.

### 6.1595.2.9 itemInfosRemoved

```
void ShowFoto::ShowfotoItemModel::itemInfosRemoved (
    const QList< ShowfotoItemInfo > & infos ) [signal]
```

Informs that ShowfotoItemInfos have been removed from the model. This signal is sent after the model data is changed and views are informed. Note: You need to explicitly enable sending of this signal. It is not sent in [clearShowfotoItemInfos\(\)](#).

### 6.1595.2.10 preprocess

```
void ShowFoto::ShowfotoItemModel::preprocess (
    const QList< ShowfotoItemInfo > & infos ) [signal]
```

Connect to this signal only if you are the current preprocessor.

### 6.1595.2.11 readyForIncrementalRefresh

```
void ShowFoto::ShowfotoItemModel::readyForIncrementalRefresh ( ) [signal]
```

Signals that the model is right now ready to start an incremental refresh. This is guaranteed only for the scope of emitting this signal.

### 6.1595.2.12 removeIndex()

```
void ShowFoto::ShowfotoItemModel::removeIndex (
    const QModelIndex & index )
```

Remove the given infos or indexes directly from the model.

### 6.1595.2.13 requestIncrementalRefresh()

```
void ShowFoto::ShowfotoItemModel::requestIncrementalRefresh ( ) [protected]
```

As soon as the model is ready to start an incremental refresh, the signal [readyForIncrementalRefresh\(\)](#) will be emitted. The signal will be emitted inline if the model is ready right now.

### 6.1595.2.14 retrieveShowfotoItemInfo()

```
ShowfotoItemInfo ShowFoto::ShowfotoItemModel::retrieveShowfotoItemInfo (
    const QModelIndex & index ) [static]
```

Retrieve the [ShowfotoItemInfo](#) object from the data() function of the given index The index may be from a [QSortFilterProxyModel](#) as long as an [ShowfotoItemModel](#) is at the end.

### 6.1595.2.15 rowCount()

```
int ShowFoto::ShowfotoItemModel::rowCount (
    const QModelIndex & parent ) const [override]
```

QAbstractListModel implementations

### 6.1595.2.16 setKeepsFileUrlCache()

```
void ShowFoto::ShowfotoItemModel::setKeepsFileUrlCache (
    bool keepCache )
```

If a cache is kept, lookup by file path is fast, without a cache it is O(n). Default is false.

### 6.1595.2.17 setSendRemovalSignals()

```
void ShowFoto::ShowfotoItemModel::setSendRemovalSignals (
    bool send )
```

DragDrop methods Enable sending of [itemInfosAboutToBeRemoved](#) and [itemsInfosRemoved](#) signals. Default: false

### 6.1595.2.18 setShowfotoItemInfos()

```
void ShowFoto::ShowfotoItemModel::setShowfotoItemInfos (
    const QList< ShowfotoItemInfo > & infos )
```

Clears and adds infos.

**6.1595.2.19 showfotoItemInfo()** [1/2]

```
ShowfotoItemInfo ShowFoto::ShowfotoItemModel::showfotoItemInfo (
    const QModelIndex & index ) const
```

Returns the [ShowfotoItemInfo](#) object, reference from the underlying data pointed to by the index. For [ShowfotoItemInfo](#) and [ShowfotoItemInfoRef](#) If the index is not valid they will return a null [ShowfotoItemInfo](#), and 0 respectively, [ShowfotoItemInfoRef](#) must not be called with an invalid index as it will crash.

**6.1595.2.20 showfotoItemInfo()** [2/2]

```
ShowfotoItemInfo ShowFoto::ShowfotoItemModel::showfotoItemInfo (
    int row ) const
```

Returns the [ShowfotoItemInfo](#) object, reference from the underlying data of the given row (parent is the invalid QModelIndex, column is 0). Note that [ShowfotoItemInfoRef](#) must not be called with an invalid index as it will crash.

**6.1595.2.21 showfotoItemInfosAboutToBeRemoved()**

```
virtual void ShowFoto::ShowfotoItemModel::showfotoItemInfosAboutToBeRemoved (
    int ,
    int ) [inline], [protected], [virtual]
```

Called before [rowsAboutToBeRemoved](#)

**6.1595.2.22 showfotoItemInfosCleared()**

```
virtual void ShowFoto::ShowfotoItemModel::showfotoItemInfosCleared ( ) [inline], [protected],
[virtual]
```

Called when the internal storage is cleared.

Reimplemented in [ShowFoto::ShowfotoThumbnailModel](#).

**6.1595.2.23 startIncrementalRefresh()**

```
void ShowFoto::ShowfotoItemModel::startIncrementalRefresh ( ) [protected]
```

Starts an incremental refresh operation. You shall only call this method from a slot connected to [readyForIncrementalRefresh\(\)](#). To initiate an incremental refresh, call [requestIncrementalRefresh\(\)](#).

**6.1596 ShowFoto::ShowfotoItemSortSettings Class Reference****Public Types**

- enum **CategorizationMode** { **NoCategories** , **CategoryByFolder** , **CategoryByFormat** }

## 6.1596.1 Member Enumeration Documentation

### 6.1596.1.1 SortOrder

enum [ShowFoto::ShowfotoItemSortSettings::SortOrder](#)

#### Enumerator

DefaultOrder	sort order depends on the chosen sort role
--------------	--

## 6.1596.2 Member Function Documentation

### 6.1596.2.1 compare()

```
int ShowFoto::ShowfotoItemSortSettings::compare (
    const ShowfotoItemInfo & left,
    const ShowfotoItemInfo & right ) const
```

Compares the showfotoItemInfos left and right. Return -1 if left is less than right, 1 if left is greater than right, and 0 if left equals right comparing the current sort role's value. Adheres to set sort role and sort order.

### 6.1596.2.2 compareByOrder()

```
static int ShowFoto::ShowfotoItemSortSettings::compareByOrder (
    int compareResult,
    Qt::SortOrder sortOrder ) [inline], [static]
```

Takes a typical result from a compare method (0 is equal, -1 is less than, 1 is greater than) and applies the given sort order to it.

### 6.1596.2.3 compareCategories()

```
int ShowFoto::ShowfotoItemSortSettings::compareCategories (
    const ShowfotoItemInfo & left,
    const ShowfotoItemInfo & right ) const
```

Compares the categories of left and right ShowfotoItemInfos. It returns -1 if the left [ShowfotoItemInfo](#) is less than right, and 0 if both fall in the same category, and 1 if the left [ShowfotoItemInfo](#) is greater than right. Adheres to set categorization mode and current category sort order.

### 6.1596.2.4 compareValue()

```
template<typename T >
static int ShowFoto::ShowfotoItemSortSettings::compareValue (
    const T & a,
    const T & b ) [inline], [static]
```

Returns the usual compare result of -1, 0, or 1 for lessThan, equals and greaterThan.

### 6.1596.2.5 lessThan() [1/2]

```
bool ShowFoto::ShowfotoItemSortSettings::lessThan (
    const QVariant & left,
    const QVariant & right ) const
```

Returns true if left QVariant is less than right. Adheres to current sort role and sort order.

### 6.1596.2.6 lessThan() [2/2]

```
bool ShowFoto::ShowfotoItemSortSettings::lessThan (
    const ShowfotoItemInfo & left,
    const ShowfotoItemInfo & right ) const
```

Returns true if left is less than right. Adheres to current sort role and sort order.

### 6.1596.2.7 lessThanByOrder()

```
template<typename T >
static bool ShowFoto::ShowfotoItemSortSettings::lessThanByOrder (
    const T & a,
    const T & b,
    Qt::SortOrder sortOrder ) [inline], [static]
```

Returns  $a < b$  if sortOrder is Ascending, or  $b < a$  if order is descending

### 6.1596.2.8 naturalCompare()

```
static int ShowFoto::ShowfotoItemSortSettings::naturalCompare (
    const QString & a,
    const QString & b,
    Qt::SortOrder sortOrder,
    Qt::CaseSensitivity caseSensitive = Qt::CaseSensitive ) [inline], [static]
```

Compares the two string by natural comparison and adheres to given sort order

## 6.1596.3 Member Data Documentation

### 6.1596.3.1 currentCategorizationSortOrder

```
Qt::SortOrder ShowFoto::ShowfotoItemSortSettings::currentCategorizationSortOrder = Qt::←
AscendingOrder
```

Only Ascending or Descending, never be DefaultOrder

- static `QString squeezedText` (`const QFontMetrics &fm`, `int width`, `const QString &text`)

## 6.1597.1 Member Function Documentation

### 6.1597.1.1 acceptsActivation()

```
bool ShowFoto::ShowfotoItemViewDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect = nullptr ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 6.1597.1.2 acceptsToolTip()

```
bool ShowFoto::ShowfotoItemViewDelegate::acceptsToolTip (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * tooltipRect = nullptr ) const [override], [virtual]
```

These methods take four parameters: The position on viewport, the rect on viewport, the index, and optionally a parameter into which, if the return value is true, a rectangle can be written for which the return value will be true as well.

Implements [Digikam::DItemDelegate](#).

### 6.1597.1.3 asDelegate()

```
QAbstractItemDelegate * ShowFoto::ShowfotoItemViewDelegate::asDelegate ( ) [override], [protected], [virtual]
```

Implements [Digikam::ItemDelegateOverlayContainer](#).

### 6.1597.1.4 gridSize()

```
QSize ShowFoto::ShowfotoItemViewDelegate::gridSize ( ) const [override], [virtual]
```

Returns the gridsize to be set by the view. It's sizeHint plus spacing.

Implements [Digikam::DItemDelegate](#).

### 6.1597.1.5 imageInformationRect()

```
QRect ShowFoto::ShowfotoItemViewDelegate::imageInformationRect ( ) const [virtual]
```

Returns the area where the image information is drawn, or null if empty / not supported. The image information is textual or graphical information, but not the pixmap. The `ratingRect()` will e.g. typically be contained in this area.

Reimplemented in [ShowFoto::ShowfotoDelegate](#).

### 6.1597.1.6 mouseMoved()

```
void ShowFoto::ShowfotoItemViewDelegate::mouseMoved (
    QMouseEvent * e,
    const QRect & visualRect,
    const QModelIndex & index ) [override], [virtual]
```

#### Note

to be called by ItemViewCategorized only

Implements [Digikam::DItemDelegate](#).

### 6.1597.1.7 pixmapRect()

```
QRect ShowFoto::ShowfotoItemViewDelegate::pixmapRect ( ) const [virtual]
```

Returns the area where the pixmap is drawn, or null if not supported

Reimplemented in [ShowFoto::ShowfotoDelegate](#).

### 6.1597.1.8 setDefaultViewOptions()

```
void ShowFoto::ShowfotoItemViewDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

Style option with standard values to use for cached rendering. option.rect shall be the viewport rectangle. Call on resize, font change.

Implements [Digikam::DItemDelegate](#).

Reimplemented in [ShowFoto::ShowfotoThumbnailDelegate](#).

### 6.1597.1.9 setSpacing()

```
void ShowFoto::ShowfotoItemViewDelegate::setSpacing (
    int spacing ) [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 6.1597.1.10 setThumbnailSize()

```
void ShowFoto::ShowfotoItemViewDelegate::setThumbnailSize (
    const ThumbnailSize & thumbSize ) [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

## 6.1598 ShowFoto::ShowfotoItemViewDelegatePrivate Class Reference

Inheritance diagram for ShowFoto::ShowfotoItemViewDelegatePrivate:

### Public Member Functions

- virtual void `clearRects()`
  - Resets cached rects. Remember to reimplement in subclass for added rects.*
- void `init>ShowfotoItemViewDelegatePrivate *const _q, QWidget *const _widget)`

## Public Attributes

- [ThumbnailSize](#) **thumbSize** = [ThumbnailSize](#)(0)

## 6.1598.1 Member Function Documentation

### 6.1598.1.1 clearRects()

```
void ShowFoto::ShowfotoItemViewDelegatePrivate::clearRects ( ) [virtual]
```

Reimplemented in [ShowFoto::ShowfotoDelegate::ShowfotoDelegatePrivate](#).

## 6.1599 ShowFoto::ShowfotoKineticScroller Class Reference

Inheritance diagram for ShowFoto::ShowfotoKineticScroller:

### Public Member Functions

- void [enableKineticScrollFor](#) (QAbstractScrollArea \*const scrollArea)
- void **setScrollFlow** (QListView::Flow flow)
- **ShowfotoKineticScroller** (QObject \*const parent=nullptr)

### Protected Member Functions

- bool **eventFilter** (QObject \*object, QEvent \*event) override  
*intercepts mouse events to make the scrolling work*

### 6.1599.1 Detailed Description

Vertical kinetic scroller implementation without overshoot and bouncing. A temporary solution to get kinetic-like scrolling on Symbian.

### 6.1599.2 Member Function Documentation

#### 6.1599.2.1 enableKineticScrollFor()

```
void ShowFoto::ShowfotoKineticScroller::enableKineticScrollFor (
    QAbstractScrollArea *const scrollArea )
```

NOTE: enabled for one widget only, new calls remove previous association

## 6.1600.1 Member Function Documentation

### 6.1600.1.1 updateRects()

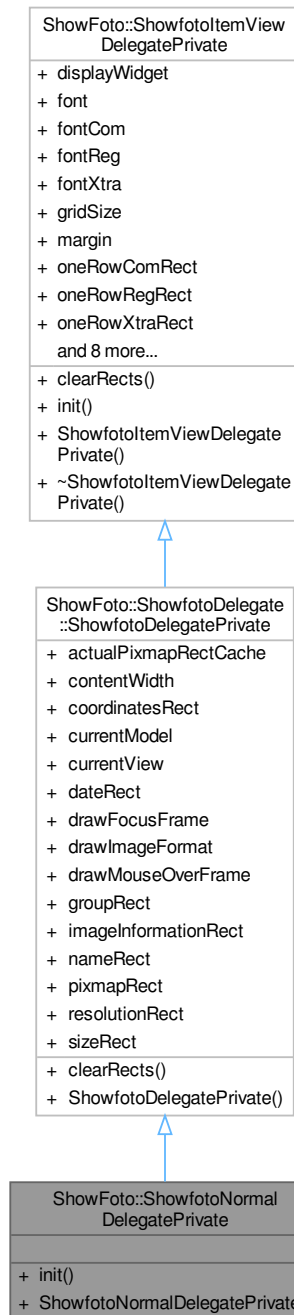

```
void ShowFoto::ShowfotoNormalDelegate::updateRects ( ) [override], [protected], [virtual]
```

In a subclass, you need to implement this method to set up the rects for drawing. The paint() method operates depending on these rects.

Implements [ShowFoto::ShowfotoDelegate](#).

## 6.1603.1 Member Function Documentation

### 6.1603.1.1 [execSinglePage\(\)](#)

```
bool ShowFoto::ShowfotoSetup::execSinglePage (
    Page page ) [static]
```

Show a setup dialog. Only the specified page will be available.

## 6.1604 ShowFoto::ShowfotoSetupMetadata Class Reference

Inheritance diagram for ShowFoto::ShowfotoSetupMetadata:

### Public Types

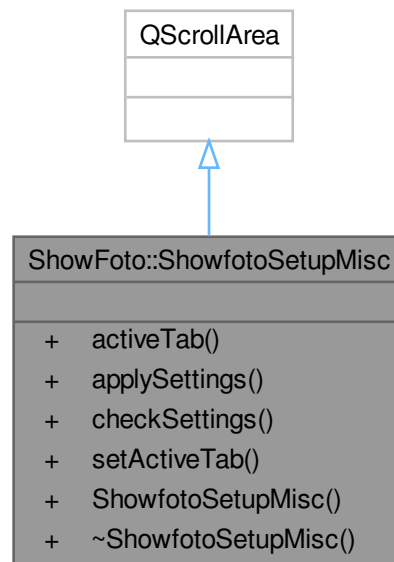

- enum **MetadataTab** {  
    **Behavior** = 0 , **ExifViewer** , **MakernotesViewer** , **IptcViewer** ,  
    **XmpViewer** , **ExifTool** }

### Public Member Functions

### Protected Attributes

- ShowfotoSortFilterModel \* **m\_chainedModel** = nullptr

## Additional Inherited Members

### Public Types inherited from [Digikam::DCategorizedSortFilterProxyModel](#)

- enum [AdditionalRoles](#) { [CategoryDisplayRole](#) = 0x17CE990A , [CategorySortRole](#) = 0x27857E60 }

## 6.1609.1 Member Function Documentation

### 6.1609.1.1 [mapToSourceShowfotoModel\(\)](#)

```
QModelIndex ShowFoto::ShowfotoSortFilterModel::mapToSourceShowfotoModel (
    const QModelIndex & proxyIndex ) const
```

Convenience methods mapped to [ShowfotoItemModel](#). Mentioned indexes returned come from the source [Showfoto](#) image model.

### 6.1609.1.2 [setDirectSourceShowfotoModel\(\)](#)

```
void ShowFoto::ShowfotoSortFilterModel::setDirectSourceShowfotoModel (
    ShowfotoItemModel *const sourceModel ) [protected], [virtual]
```

Reimplemented in [ShowFoto::ShowfotoFilterModel](#).

### 6.1609.1.3 [showfotoFilterModel\(\)](#)

```
ShowfotoFilterModel * ShowFoto::ShowfotoSortFilterModel::showfotoFilterModel ( ) const [virtual]
```

Reimplemented in [ShowFoto::ShowfotoFilterModel](#).

### 6.1609.1.4 [showfotoItemInfosSorted\(\)](#)

```
QList< ShowfotoItemInfo > ShowFoto::ShowfotoSortFilterModel::showfotoItemInfosSorted ( ) const
```

Returns a list of all showfoto infos, sorted according to this model. If you do not need a sorted list, use [ShowfotoItemModel](#)'s [showfotoItemInfo\(\)](#) method.

## 6.1610 ShowFoto::ShowfotoStackViewFavoriteItem Class Reference

Inheritance diagram for ShowFoto::ShowfotoStackViewFavoriteItem:

### Public Types

- enum `FavoriteType` { `FavoriteRoot` = -1 , `FavoriteFolder` , `FavoriteItem` }

### Public Member Functions

- `QUrl` **currentUrl** () const
- `QDate` **date** () const
- `QString` **description** () const
- `int` **favoriteType** () const
- `QString` **hierarchy** () const
- `QString` **name** () const
- `void` **setCurrentUrl** (const `QUrl` &url)
- `void` **setDate** (const `QDate` &date)
- `void` **setDescription** (const `QString` &desc)
- `void` **setFavoriteType** (int favoriteType)

- void **setHierarchy** (const QString &desc)

- void **setUrls** (const QList< QUrl > &)
- **ShowfotoStackViewFavoriteItem** (QTreeWidgetItem \*const parent)
- **ShowfotoStackViewFavoriteItem** (QTreeWidgetItem \*const parent, int favType)
- QList< QUrl > **urls** () const
- QStringList **urlsToPaths** () const

### Static Public Member Functions

- static QString **hierarchyFromParent** (const QString &name, [ShowfotoStackViewFavoriteItem](#) \*const pitem)

## 6.1610.1 Member Enumeration Documentation

### 6.1610.1.1 FavoriteType

```
enum ShowFoto::ShowfotoStackViewFavoriteItem::FavoriteType
```

#### Enumerator

FavoriteRoot	Favorite is root item from hierarchy.
FavoriteFolder	Favorite is a simple folder in hierarchy.
FavoriteItem	Favorite is a hierarchy item including all properties.

## 6.1610.2 Member Function Documentation

### 6.1610.2.1 hierarchyFromParent()

```
QString ShowFoto::ShowfotoStackViewFavoriteItem::hierarchyFromParent (
    const QString & name,
    ShowfotoStackViewFavoriteItem *const pitem ) [static]
```

Helper static method to get hierarchy path from item. 'name' is the title and 'pitem" the parent instance.

### 6.1610.2.2 urlsToPaths()

```
QStringList ShowFoto::ShowfotoStackViewFavoriteItem::urlsToPaths ( ) const
```

Helper method to get a list local paths from image urls included in favorite item.

## 6.1611 ShowFoto::ShowfotoStackViewFavoriteItemDlg Class Reference

Inheritance diagram for ShowFoto::ShowfotoStackViewFavoriteItemDlg:

### Public Member Functions

- `QUrl` **currentUrl** () const
- `QDate` **date** () const
- `QString` **description** () const
- `int` **favoriteType** () const

### Protected Member Functions

- void **showEvent** (QShowEvent \*) override

## 6.1612 ShowFoto::ShowfotoStackViewFavoriteList Class Reference

Inheritance diagram for ShowFoto::ShowfotoStackViewFavoriteList:

### Public Slots

- void **slotLoadContents** ()

## Signals

- void **signalAddFavorite** ()
- void **signalAddFavorite** (const QList< QUrl > &, const QUrl &current)
- void **signalLoadContentsFromFiles** (const QStringList &files, const QString &current)
- void **signalSearchResult** (int)

## Public Member Functions

- QString **filter** () const
- **ShowfotoStackViewFavoriteItem** \* **findFavoriteByHierarchy** (const QString &hierarchy)
- void **setFilter** (const QString &filter, Qt::CaseSensitivity cs)
- **ShowfotoStackViewFavoriteList** (**ShowfotoStackViewFavorites** \*const parent)

## 6.1612.1 Member Function Documentation

### 6.1612.1.1 filter()

```
QString ShowFoto::ShowfotoStackViewFavoriteList::filter ( ) const
```

Return the current string used to filter the favorites list.

### 6.1612.1.2 setFilter()

```
void ShowFoto::ShowfotoStackViewFavoriteList::setFilter (
    const QString & filter,
    Qt::CaseSensitivity cs )
```

Set the string used to filter the favorites list. [signalSearchResult\(\)](#) is emitted when all is done.

### 6.1612.1.3 signalSearchResult

```
void ShowFoto::ShowfotoStackViewFavoriteList::signalSearchResult (
    int ) [signal]
```

Signal emitted when filtering is done through `slotSetFilter()`. Number of favorites found is sent when item relevant of filtering match the query.

## 6.1613 ShowFoto::ShowfotoStackViewFavorites Class Reference

Inheritance diagram for ShowFoto::ShowfotoStackViewFavorites:

## 6.1618.1 Member Function Documentation

### 6.1618.1.1 setModelsFiltered()

```
void ShowFoto::ShowfotoThumbnailBar::setModelsFiltered (
    ShowfotoItemModel * model,
    ShowfotoSortFilterModel * filterModel )
```

This installs a duplicate filter model, if the ShwofotoItemModel may contain duplicates. Otherwise, just use `setModels()`.

### 6.1618.1.2 setScrollBarPolicy()

```
void ShowFoto::ShowfotoThumbnailBar::setScrollBarPolicy (
    Qt::ScrollBarPolicy policy )
```

Sets the policy always for the one scroll bar which is relevant, depending on orientation.

## 6.1619 ShowFoto::ShowfotoThumbnailDelegate Class Reference

## 6.1619.1 Member Function Documentation

### 6.1619.1.1 acceptsActivation()

```
bool ShowFoto::ShowfotoThumbnailDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect ) const [override], [virtual]
```

Reimplemented from [ShowFoto::ShowfotoDelegate](#).

### 6.1619.1.2 maximumSize()

```
int ShowFoto::ShowfotoThumbnailDelegate::maximumSize ( ) const
```

Returns the minimum or maximum viewport size in the limiting dimension, width or height, depending on current flow.

### 6.1619.1.3 setDefaultViewOptions()

```
void ShowFoto::ShowfotoThumbnailDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

Style option with standard values to use for cached rendering. option.rect shall be the viewport rectangle. Call on resize, font change.

Reimplemented from [ShowFoto::ShowfotoDelegate](#).

### 6.1619.1.4 updateContentWidth()

```
void ShowFoto::ShowfotoThumbnailDelegate::updateContentWidth ( ) [override], [protected],
[virtual]
```

Reimplement this to set contentWidth. This is the maximum width of all content rectangles, typically excluding margins on both sides.

Reimplemented from [ShowFoto::ShowfotoDelegate](#).

### 6.1619.1.5 updateRects()

```
void ShowFoto::ShowfotoThumbnailDelegate::updateRects ( ) [override], [protected], [virtual]
```

In a subclass, you need to implement this method to set up the rects for drawing. The paint() method operates depending on these rects.

Implements [ShowFoto::ShowfotoDelegate](#).

## 6.1621.1 Constructor & Destructor Documentation

### 6.1621.1.1 ShowfotoThumbnailModel()

```
ShowFoto::ShowfotoThumbnailModel::ShowfotoThumbnailModel (
    QWidget *const parent ) [explicit]
```

An ItemModel that supports thumbnail loading. You need to set a ThumbnailLoadThread to enable thumbnail loading. Adjust the thumbnail size to your needs. Note that setKeepsFilePatindexesForPathhCache is enabled per default.

## 6.1621.2 Member Function Documentation

### 6.1621.2.1 data()

```
QVariant ShowFoto::ShowfotoThumbnailModel::data (
    const QModelIndex & index,
    int role = Qt::DisplayRole ) const [override]
```

Handles the ThumbnailRole. If the pixmap is available, returns it in the QVariant. If it still needs to be loaded, returns a null QVariant and emits thumbnailAvailable() as soon as it is available.

### 6.1621.2.2 setData()

```
bool ShowFoto::ShowfotoThumbnailModel::setData (
    const QModelIndex & index,
    const QVariant & value,
    int role = Qt::DisplayRole ) [override]
```

You can override the current thumbnail size by giving an integer value for ThumbnailRole. Set a null QVariant to use the thumbnail size set by [setThumbnailSize\(\)](#) again. The index given here is ignored for this purpose.

### 6.1621.2.3 setEmitDataChanged()

```
void ShowFoto::ShowfotoThumbnailModel::setEmitDataChanged (
    bool emitSignal )
```

Enable emitting dataChanged() when a thumbnail becomes available. The thumbnailAvailable() signal will be emitted in any case. Default is true.

### 6.1621.2.4 setPreloadThumbnails()

```
void ShowFoto::ShowfotoThumbnailModel::setPreloadThumbnails (
    bool preload )
```

Enable preloading of thumbnails: If preloading is enabled, for every entry in the model a thumbnail generation is started. Default: false.

### 6.1621.2.5 setPreloadThumbnailSize()

```
void ShowFoto::ShowfotoThumbnailModel::setPreloadThumbnailSize (
    const ThumbnailSize & thumbSize )
```

If you want to fix a size for preloading, do it here.

### 6.1621.2.6 setThumbnailLoadThread()

```
void ShowFoto::ShowfotoThumbnailModel::setThumbnailLoadThread (
    ThumbnailLoadThread * thread )
```

Enable thumbnail loading and set the thread that shall be used. The thumbnail size of this thread will be adjusted.

### 6.1621.2.7 `setThumbnailSize()`

```
void ShowFoto::ShowfotoThumbnailModel::setThumbnailSize (
    const ThumbnailSize & thumbSize )
```

Set the thumbnail size to use.

### 6.1621.2.8 `showfotoItemInfosCleared()`

```
void ShowFoto::ShowfotoThumbnailModel::showfotoItemInfosCleared ( ) [override], [protected],
[virtual]
```

Called when the internal storage is cleared.

Reimplemented from [ShowFoto::ShowfotoItemModel](#).
