## 6.457.1 Member Function Documentation

### 6.457.1.1 [alignFace\(\)](#) [1/2]

```
cv::Mat Digikam::DNNSFaceExtractor::alignFace (
    const cv::Mat & inputImage ) const [override], [virtual]
```

Implements [Digikam::DNNFaceExtractorBase](#).

### 6.457.1.2 [alignFace\(\)](#) [2/2]

```
cv::UMat Digikam::DNNSFaceExtractor::alignFace (
    const cv::UMat & inputImage ) const [override], [virtual]
```

Implements [Digikam::DNNFaceExtractorBase](#).

### 6.457.1.3 [getFaceEmbedding\(\)](#) [1/2]

```
cv::Mat Digikam::DNNSFaceExtractor::getFaceEmbedding (
    const cv::Mat & faceImage ) [override], [virtual]
```

Implements [Digikam::DNNFaceExtractorBase](#).

### 6.457.1.4 [getFaceEmbedding\(\)](#) [2/2]

```
cv::Mat Digikam::DNNSFaceExtractor::getFaceEmbedding (
    const cv::UMat & faceImage ) [override], [virtual]
```

Implements [Digikam::DNNFaceExtractorBase](#).

### 6.457.1.5 [getThreshold\(\)](#)

```
float Digikam::DNNSFaceExtractor::getThreshold (
    int uiThreshold = DNN_MODEL_THRESHOLD_NOT_SET ) const [override], [virtual]
```

cover the UI threshold to a float using the conversion factor built into the model

Implements [Digikam::DNNFaceExtractorBase](#).

## 6.457.1.6 loadModels()

```
bool Digikam::DNNFaceExtractor::loadModels ( ) [override], [virtual]
```

Read pretrained neural network for face recognition.

Implements [Digikam::DNNFaceExtractorBase](#).

## 6.458 Digikam::DNNYoloDetector Class Reference

Inheritance diagram for Digikam::DNNYoloDetector:

- void [paintEvent](#) (QPaintEvent \*pe) override
- virtual void [positionSelf](#) ()

## Properties

- bool [autoDelete](#)
- int [timeout](#)

### 6.459.1 Detailed Description

The simplest uses of [DNotificationPopup](#) are by using the various [message\(\)](#) static methods. The position the popup appears at depends on the type of the parent window:

### 6.459.2 Member Enumeration Documentation

#### 6.459.2.1 PopupStyle

```
enum Digikam::DNotificationPopup::PopupStyle
```

Styles that a [DNotificationPopup](#) can have.

Enumerator

Boxed	Information will appear in a framed box (default)
Balloon	Information will appear in a comic-alike balloon.

### 6.459.3 Constructor & Destructor Documentation

#### 6.459.3.1 DNotificationPopup() [1/2]

```
Digikam::DNotificationPopup::DNotificationPopup (
    QWidget *const parent = nullptr,
    Qt::WindowFlags f = Qt::WindowFlags() ) [explicit]
```

Creates a popup for the specified widget.

#### 6.459.3.2 DNotificationPopup() [2/2]

```
Digikam::DNotificationPopup::DNotificationPopup (
    WId parent ) [explicit]
```

Creates a popup for the specified window.

### 6.459.3.3 ~DNotificationPopup()

```
Digikam::DNotificationPopup::~DNotificationPopup ( ) [override]
```

Cleans up.

## 6.459.4 Member Function Documentation

### 6.459.4.1 anchor()

```
QPoint Digikam::DNotificationPopup::anchor ( ) const
```

Returns the position to which this popup is anchored.

### 6.459.4.2 autoDelete()

```
bool Digikam::DNotificationPopup::autoDelete ( ) const
```

Returns whether the popup will be deleted when it is hidden.

See also

[setAutoDelete](#)

### 6.459.4.3 clicked [1/2]

```
void Digikam::DNotificationPopup::clicked ( ) [signal]
```

Emitted when the popup is clicked.

### 6.459.4.4 clicked [2/2]

```
void Digikam::DNotificationPopup::clicked (
    const QPoint & pos ) [signal]
```

Emitted when the popup is clicked.

### 6.459.4.5 defaultLocation()

```
QPoint Digikam::DNotificationPopup::defaultLocation ( ) const [protected], [virtual]
```

Returns a default location for popups when a better placement cannot be found.

The default implementation returns the top-left corner of the available work area of the desktop (ie: minus panels, etc).

#### 6.459.4.6 message() [1/14]

```
DNotificationPopup * Digikam::DNotificationPopup::message (
    const QString & caption,
    const QString & text,
    const QPixmap & icon,
    QSystemTrayIcon * parent,
    int timeout = -1 ) [static]
```

Convenience method that displays popup with the specified icon, caption and message beside the icon of the specified QSystemTrayIcon. Note that the returned object is destroyed when it is hidden.

See also

[setAutoDelete](#)

#### 6.459.4.7 message() [2/14]

```
DNotificationPopup * Digikam::DNotificationPopup::message (
    const QString & caption,
    const QString & text,
    const QPixmap & icon,
    QWidget * parent,
    int timeout = -1,
    const QPoint & p = QPoint() ) [static]
```

Convenience method that displays popup with the specified icon, caption and message beside the icon of the specified widget. Note that the returned object is destroyed when it is hidden.

See also

[setAutoDelete](#)

#### 6.459.4.8 message() [3/14]

```
DNotificationPopup * Digikam::DNotificationPopup::message (
    const QString & caption,
    const QString & text,
    const QPixmap & icon,
    WId parent,
    int timeout = -1,
    const QPoint & p = QPoint() ) [static]
```

Convenience method that displays popup with the specified icon, caption and message beside the icon of the specified window. Note that the returned object is destroyed when it is hidden.

See also

[setAutoDelete](#)

#### 6.459.4.9 message() [4/14]

```
DNotificationPopup * Digikam::DNotificationPopup::message (
    const QString & caption,
    const QString & text,
    QSystemTrayIcon * parent ) [static]
```

Convenience method that displays popup with the specified caption and message beside the icon of the specified QSystemTrayIcon. Note that the returned object is destroyed when it is hidden.

See also

[setAutoDelete](#)

#### 6.459.4.10 message() [5/14]

```
DNotificationPopup * Digikam::DNotificationPopup::message (
    const QString & caption,
    const QString & text,
    QWidget * parent,
    const QPoint & p = QPoint() ) [static]
```

Convenience method that displays popup with the specified caption and message beside the icon of the specified widget. Note that the returned object is destroyed when it is hidden.

See also

[setAutoDelete](#)

#### 6.459.4.11 message() [6/14]

```
DNotificationPopup * Digikam::DNotificationPopup::message (
    const QString & text,
    QSystemTrayIcon * parent ) [static]
```

Convenience method that displays popup with the specified message beside the icon of the specified QSystemTrayIcon. Note that the returned object is destroyed when it is hidden.

See also

[setAutoDelete](#)

#### 6.459.4.12 message() [7/14]

```
DNotificationPopup * Digikam::DNotificationPopup::message (
    const QString & text,
    QWidget * parent,
    const QPoint & p = QPoint() ) [static]
```

Convenience method that displays popup with the specified message beside the icon of the specified widget. Note that the returned object is destroyed when it is hidden.

See also

[setAutoDelete](#)

**6.459.4.13 message()** [8/14]

```
DNotificationPopup * Digikam::DNotificationPopup::message (
    int popupStyle,
    const QString & caption,
    const QString & text,
    const QPixmap & icon,
    QSystemTrayIcon * parent,
    int timeout = -1 ) [static]
```

Convenience method that displays popup with the specified popup-style, icon, caption and message beside the icon of the specified QSystemTrayIcon. Note that the returned object is destroyed when it is hidden.

See also

[setAutoDelete](#)

**6.459.4.14 message()** [9/14]

```
DNotificationPopup * Digikam::DNotificationPopup::message (
    int popupStyle,
    const QString & caption,
    const QString & text,
    const QPixmap & icon,
    QWidget * parent,
    int timeout = -1,
    const QPoint & p = QPoint() ) [static]
```

Convenience method that displays popup with the specified popup-style, icon, caption and message beside the icon of the specified widget. Note that the returned object is destroyed when it is hidden.

See also

[setAutoDelete](#)

**6.459.4.15 message()** [10/14]

```
DNotificationPopup * Digikam::DNotificationPopup::message (
    int popupStyle,
    const QString & caption,
    const QString & text,
    const QPixmap & icon,
    WId parent,
    int timeout = -1,
    const QPoint & p = QPoint() ) [static]
```

Convenience method that displays popup with the specified popup-style, icon, caption and message beside the icon of the specified window. Note that the returned object is destroyed when it is hidden.

See also

[setAutoDelete](#)

**6.459.4.16 message()** [11/14]

```
DNotificationPopup * Digikam::DNotificationPopup::message (
    int popupStyle,
    const QString & caption,
    const QString & text,
    QSystemTrayIcon * parent ) [static]
```

Convenience method that displays popup with the specified popup-style, caption and message beside the icon of the specified QSystemTrayIcon. Note that the returned object is destroyed when it is hidden.

See also

[setAutoDelete](#)

**6.459.4.17 message()** [12/14]

```
DNotificationPopup * Digikam::DNotificationPopup::message (
    int popupStyle,
    const QString & caption,
    const QString & text,
    QWidget * parent,
    const QPoint & p = QPoint() ) [static]
```

Convenience method that displays popup with the specified popup-style, caption and message beside the icon of the specified widget. Note that the returned object is destroyed when it is hidden.

See also

[setAutoDelete](#)

**6.459.4.18 message()** [13/14]

```
DNotificationPopup * Digikam::DNotificationPopup::message (
    int popupStyle,
    const QString & text,
    QSystemTrayIcon * parent ) [static]
```

Convenience method that displays popup with the specified popup-style and message beside the icon of the specified QSystemTrayIcon. Note that the returned object is destroyed when it is hidden.

See also

[setAutoDelete](#)

#### 6.459.4.19 message() [14/14]

```
DNotificationPopup * Digikam::DNotificationPopup::message (
    int popupStyle,
    const QString & text,
    QWidget * parent,
    const QPoint & p = QPoint() ) [static]
```

Convenience method that displays popup with the specified popup-style and message beside the icon of the specified widget. Note that the returned object is destroyed when it is hidden.

See also

[setAutoDelete](#)

#### 6.459.4.20 moveNear()

```
void Digikam::DNotificationPopup::moveNear (
    const QRect & target ) [protected]
```

Moves the popup to be adjacent to `target`.

The popup will be placed adjacent to, but outside of, `target`, without going off the current desktop.

Reimplementations of [positionSelf\(\)](#) can use this to actually position the popup.

#### 6.459.4.21 positionSelf()

```
void Digikam::DNotificationPopup::positionSelf ( ) [protected], [virtual]
```

Positions the popup.

The default implementation attempts to place it by the taskbar entry; failing that it places it by the window of the associated widget; failing that it places it at the location given by [defaultLocation\(\)](#).

See also

[moveNear\(\)](#)

#### 6.459.4.22 setAnchor()

```
void Digikam::DNotificationPopup::setAnchor (
    const QPoint & anchor )
```

Sets the anchor of this popup.

The popup is placed near to the anchor.

#### 6.459.4.23 `setAutoDelete()`

```
void Digikam::DNotificationPopup::setAutoDelete (
    bool autoDelete ) [virtual]
```

Sets whether the popup will be deleted when it is hidden.

The default is false (unless created by one of the static [message\(\)](#) overloads).

#### 6.459.4.24 `setPopupStyle`

```
void Digikam::DNotificationPopup::setPopupStyle (
    int popupstyle ) [slot]
```

Sets the visual appearance of the popup.

See also

[PopupStyle](#)

#### 6.459.4.25 `setTimeout`

```
void Digikam::DNotificationPopup::setTimeout (
    int delay ) [slot]
```

Sets the delay for the popup is removed automatically. Setting the delay to 0 disables the timeout, if you're doing this, you may want to connect the [clicked\(\)](#) signal to the `hide()` slot. Setting the delay to -1 makes it use the default value.

See also

`timeout`

#### 6.459.4.26 `setView()` [1/3]

```
void Digikam::DNotificationPopup::setView (
    const QString & caption,
    const QString & text,
    const QPixmap & icon ) [virtual]
```

Creates a standard view then calls [setView\(QWidget\\*\)](#) .

#### 6.459.4.27 `setView()` [2/3]

```
void Digikam::DNotificationPopup::setView (
    const QString & caption,
    const QString & text = QString() )
```

Creates a standard view then calls [setView\(QWidget\\*\)](#) .

**6.459.4.28 setView()** [3/3]

```
void Digikam::DNotificationPopup::setView (
    QWidget * child )
```

Sets the main view to be the specified widget (which must be a child of the popup).

**6.459.4.29 show**

```
void Digikam::DNotificationPopup::show (
    const QPoint & p ) [slot]
```

Shows the popup in the given point

**6.459.4.30 standardView()**

```
QWidget * Digikam::DNotificationPopup::standardView (
    const QString & caption,
    const QString & text,
    const QPixmap & icon,
    QWidget * parent = nullptr )
```

Returns a widget that is used as standard view if one of the [setView\(\)](#) methods taking the QString arguments is used. You can use the returned widget to customize the passivepopup while keeping the look similar to the "standard" passivepopups.

After customizing the widget, pass it to [setView\( QWidget\\* \)](#)

**Parameters**

<i>caption</i>	The window caption (title) on the popup
<i>text</i>	The text for the popup
<i>icon</i>	The icon to use for the popup
<i>parent</i>	The parent widget used for the returned widget. If left 0, then "this", i.e. the passive popup object will be used.

**Returns**

a QWidget containing the given arguments, looking like the standard passivepopups. The returned widget contains a QVBoxLayout, which is accessible through layout().

**See also**

[setView\( QWidget \\* \)](#)  
[setView\( const QString&, const QString& \)](#)  
[setView\( const QString&, const QString&, const QPixmap& \)](#)

**6.459.4.31 timeout()**

```
int Digikam::DNotificationPopup::timeout ( ) const
```

Returns the delay before the popup is removed automatically.

**6.459.4.32 view()**

```
QWidget * Digikam::DNotificationPopup::view ( ) const
```

Returns the main view.

### 6.460.1 Detailed Description

This widget can be used to provide inline positive or negative feedback, or to implement opportunistic interactions.

### 6.460.2 Member Enumeration Documentation

#### 6.460.2.1 MessageType

```
enum Digikam::DNotificationWidget::MessageType
```

Available message types. The background colors are chosen depending on the message type.

### 6.460.3 Constructor & Destructor Documentation

#### 6.460.3.1 DNotificationWidget() [1/2]

```
Digikam::DNotificationWidget::DNotificationWidget (  
    QWidget *const parent = nullptr ) [explicit]
```

Constructs a [DNotificationWidget](#) with the specified `parent`.

#### 6.460.3.2 DNotificationWidget() [2/2]

```
Digikam::DNotificationWidget::DNotificationWidget (  
    const QString & text,  
    QWidget *const parent = nullptr ) [explicit]
```

Constructs a [DNotificationWidget](#) with the specified `parent` and contents `text`.

#### 6.460.3.3 ~DNotificationWidget()

```
Digikam::DNotificationWidget::~~DNotificationWidget ( ) [override]
```

Destructor.

### 6.460.4 Member Function Documentation

#### 6.460.4.1 addAction()

```
void Digikam::DNotificationWidget::addAction (  
    QAction * action )
```

Add `action` to the message widget. For each action a button is added to the message widget in the order the actions were added.

## Parameters

<i>action</i>	the action to add
---------------	-------------------

## See also

[removeAction\(\)](#), [QWidget::actions\(\)](#)

**6.460.4.2 animatedHide**

```
void Digikam::DNotificationWidget::animatedHide ( ) [slot]
```

Hide the widget using an animation.

**6.460.4.3 animatedShow**

```
void Digikam::DNotificationWidget::animatedShow ( ) [slot]
```

Show the widget using an animation.

**6.460.4.4 animatedShowTemporized()**

```
void Digikam::DNotificationWidget::animatedShowTemporized (
    int delay )
```

Show the widget using an animation. The widget is automatically hidden after the delay (in ms).

**6.460.4.5 clearAllActions()**

```
void Digikam::DNotificationWidget::clearAllActions ( )
```

clear all actions from the message widget.

## See also

[DNotificationWidget::MessageType](#), [addAction\(\)](#), [setMessageType\(\)](#)

**6.460.4.6 heightForWidth()**

```
int Digikam::DNotificationWidget::heightForWidth (
    int width ) const [override]
```

Returns the required height for width.

## Parameters

<i>width</i>	the width in pixels
--------------	---------------------

**6.460.4.7 hideAnimationFinished**

```
void Digikam::DNotificationWidget::hideAnimationFinished ( ) [signal]
```

This signal is emitted when the hide animation is finished, started by calling [animatedHide\(\)](#). If animations are disabled, this signal is emitted immediately after the message widget got hidden.

## Note

This signal is *not* emitted if the widget was hidden by calling `hide()`, so this signal is only useful in conjunction with [animatedHide\(\)](#).

## See also

[animatedHide\(\)](#)

**6.460.4.8 icon()**

```
QIcon Digikam::DNotificationWidget::icon ( ) const
```

The icon shown on the left of the text. By default, no icon is shown.

**6.460.4.9 isCloseButtonVisible()**

```
bool Digikam::DNotificationWidget::isCloseButtonVisible ( ) const
```

Check whether the close button is visible.

## See also

[setCloseButtonVisible\(\)](#)

**6.460.4.10 isHideAnimationRunning()**

```
bool Digikam::DNotificationWidget::isHideAnimationRunning ( ) const
```

Check whether the hide animation started by calling [animatedHide\(\)](#) is still running. If animations are disabled, this function always returns *false*.

## See also

[animatedHide\(\)](#), [hideAnimationFinished\(\)](#)

#### 6.460.4.11 isShowAnimationRunning()

```
bool Digikam::DNotificationWidget::isShowAnimationRunning ( ) const
```

Check whether the show animation started by calling [animatedShow\(\)](#) is still running. If animations are disabled, this function always returns *false*.

See also

[animatedShow\(\)](#), [showAnimationFinished\(\)](#)

#### 6.460.4.12 linkActivated

```
void Digikam::DNotificationWidget::linkActivated (
    const QString & contents ) [signal]
```

This signal is emitted when the user clicks a link in the text label. The URL referred to by the href anchor is passed in contents.

Parameters

<i>contents</i>	text of the href anchor
-----------------	-------------------------

See also

[QLabel::linkActivated\(\)](#)

#### 6.460.4.13 linkHovered

```
void Digikam::DNotificationWidget::linkHovered (
    const QString & contents ) [signal]
```

This signal is emitted when the user hovers over a link in the text label. The URL referred to by the href anchor is passed in contents.

Parameters

<i>contents</i>	text of the href anchor
-----------------	-------------------------

See also

[QLabel::linkHovered\(\)](#)

#### 6.460.4.14 messageType()

```
DNotificationWidget::MessageType Digikam::DNotificationWidget::messageType ( ) const
```

Get the type of this message. By default, the type is set to `DNotificationWidget::Information`.

See also

[DNotificationWidget::MessageType](#), [setMessageType\(\)](#)

#### 6.460.4.15 `minimumSizeHint()`

```
QSize Digikam::DNotificationWidget::minimumSizeHint ( ) const [override]
```

Returns the minimum size of the message widget.

#### 6.460.4.16 `removeAction()`

```
void Digikam::DNotificationWidget::removeAction (
    QAction * action )
```

Remove `action` from the message widget.

Parameters

<code>action</code>	the action to remove
---------------------	----------------------

See also

[DNotificationWidget::MessageType](#), [addAction\(\)](#), [setMessageType\(\)](#)

#### 6.460.4.17 `setCloseButtonVisible`

```
void Digikam::DNotificationWidget::setCloseButtonVisible (
    bool visible ) [slot]
```

Set the visibility of the close button. If `visible` is `true`, a close button is shown that calls [animatedHide\(\)](#) if clicked.

See also

[closeButtonVisible\(\)](#), [animatedHide\(\)](#)

#### 6.460.4.18 `setIcon`

```
void Digikam::DNotificationWidget::setIcon (
    const QIcon & icon ) [slot]
```

Define an icon to be shown on the left of the text

#### 6.460.4.19 setMessageType

```
void Digikam::DNotificationWidget::setMessageType (
    DNotificationWidget::MessageType type ) [slot]
```

Set the message type to `type`. By default, the message type is set to `DNotificationWidget::Information`.

See also

`messageType()`, [DNotificationWidget::MessageType](#)

#### 6.460.4.20 setText

```
void Digikam::DNotificationWidget::setText (
    const QString & text ) [slot]
```

Set the text of the message widget to `text`. If the message widget is already visible, the text changes on the fly.

Parameters

<code>text</code>	the text to display, rich text is allowed
-------------------	---

See also

`text()`

#### 6.460.4.21 setWordWrap

```
void Digikam::DNotificationWidget::setWordWrap (
    bool wordWrap ) [slot]
```

Set word wrap to `wordWrap`. If word wrap is enabled, the `text()` of the message widget is wrapped to fit the available width. If word wrap is disabled, the message widget's minimum size is such that the entire text fits.

Parameters

<code>wordWrap</code>	disable/enable word wrap
-----------------------	--------------------------

See also

`wordWrap()`

#### 6.460.4.22 showAnimationFinished

```
void Digikam::DNotificationWidget::showAnimationFinished ( ) [signal]
```

This signal is emitted when the show animation is finished, started by calling [animatedShow\(\)](#). If animations are disabled, this signal is emitted immediately after the message widget got shown.

**Note**

This signal is *not* emitted if the widget was shown by calling `show()`, so this signal is only useful in conjunction with `animatedShow()`.

**See also**

[animatedShow\(\)](#)

**6.460.4.23 sizeHint()**

```
QSize Digikam::DNotificationWidget::sizeHint ( ) const [override]
```

Returns the preferred size of the message widget.

**6.460.4.24 text()**

```
QString Digikam::DNotificationWidget::text ( ) const
```

Get the text of this message widget.

**See also**

[setText\(\)](#)

**6.460.4.25 wordWrap()**

```
bool Digikam::DNotificationWidget::wordWrap ( ) const
```

Check whether word wrap is enabled.

If word wrap is enabled, the message widget wraps the displayed text as required to the available width of the widget. This is useful to avoid breaking widget layouts.

**See also**

[setWordWrap\(\)](#)

## 6.462.1 Member Enumeration Documentation

### 6.462.1.1 TranslationError

```
enum Digikam::DOnlineTranslator::TranslationError
```

#### Enumerator

NoError	No error condition
ParametersError	Unsupported combination of parameters
NetworkError	Network error
ServiceError	Service unavailable or maximum number of requests
ParsingError	The request could not be parsed (report a bug if you see this)

## 6.462.2 Constructor & Destructor Documentation

### 6.462.2.1 DOnlineTranslator()

```
Digikam::DOnlineTranslator::DOnlineTranslator (
    QObject *const parent = nullptr ) [explicit]
```

Constructs an object with empty data and with parent. You can use [translate\(\)](#) to send text to object.

#### Parameters

<i>parent</i>	the parent object
---------------	-------------------

## 6.462.3 Member Function Documentation

### 6.462.3.1 detectLanguage()

```
void Digikam::DOnlineTranslator::detectLanguage (
    const QString & text,
    Engine engine = Google )
```

#### Parameters

<i>text</i>	the text for language detection
<i>engine</i>	the engine to use

### 6.462.3.2 engineName()

```
QString Digikam::DOnlineTranslator::engineName (
    Engine engine ) [static]
```

Return the engine literal name.

### 6.462.3.3 error()

```
DOnlineTranslator::TranslationError Digikam::DOnlineTranslator::error ( ) const
```

Error that was found during the processing of the last translation. If no error was found, returns [DOnlineTranslator::NoError](#). The text of the error can be obtained by [errorString\(\)](#).

#### Returns

last error

### 6.462.3.4 errorString()

```
QString Digikam::DOnlineTranslator::errorString ( ) const
```

A human-readable description of the last translation error that occurred.

#### Returns

last error string

### 6.462.3.5 fromRFC3066()

```
QString Digikam::DOnlineTranslator::fromRFC3066 (
    Engine engine,
    const QString & langCodeRFC3066 ) [static]
```

Convert language RFC3066 to supported language code

### 6.462.3.6 isRunning()

```
bool Digikam::DOnlineTranslator::isRunning ( ) const
```

#### Returns

`true` when the translation is still processing and has not finished or was aborted yet.

### 6.462.3.7 isSourceTranscriptionEnabled()

```
bool Digikam::DOnlineTranslator::isSourceTranscriptionEnabled ( ) const
```

#### Returns

`true` if source transcription is enabled

### 6.462.3.8 isSourceTranslitEnabled()

```
bool Digikam::DOnlineTranslator::isSourceTranslitEnabled ( ) const
```

#### Returns

`true` if source transliteration is enabled

### 6.462.3.9 isSupportTranslation()

```
bool Digikam::DOnlineTranslator::isSupportTranslation (
    Engine engine,
    Language lang ) [static]
```

#### Parameters

<i>engine</i>	the engine to use
<i>lang</i>	language

#### Returns

`true` if the specified engine supports transliteration for specified language

### 6.462.3.10 isTranslationOptionsEnabled()

```
bool Digikam::DOnlineTranslator::isTranslationOptionsEnabled ( ) const
```

**Returns**

`true` if translation options are enabled

**See also**

[DOnlineTranslatorOption](#)

**6.462.3.11 isTranslationTranslitEnabled()**

```
bool Digikam::DOnlineTranslator::isTranslationTranslitEnabled ( ) const
```

**Returns**

`true` if translation transliteration is enabled

**6.462.3.12 language() [1/2]**

```
DOnlineTranslator::Language Digikam::DOnlineTranslator::language (
    const QLocale & locale ) [static]
```

**Parameters**

<i>locale</i>	the locale to use
---------------	-------------------

**Returns**

language

**6.462.3.13 language() [2/2]**

```
DOnlineTranslator::Language Digikam::DOnlineTranslator::language (
    const QString & langCode ) [static]
```

**Parameters**

<i>langCode</i>	code
-----------------	------

**Returns**

language

**6.462.3.14 languageCode()**

```
QString Digikam::DOnlineTranslator::languageCode (
    Language lang ) [static]
```

## Parameters

<i>lang</i>	language
-------------	----------

## Returns

language code

**6.462.3.15 languageName()**

```
QString Digikam::DOnlineTranslator::languageName (
    Language lang ) [static]
```

## Parameters

<i>lang</i>	language
-------------	----------

## Returns

language name

**6.462.3.16 setEngineApiKey()**

```
void Digikam::DOnlineTranslator::setEngineApiKey (
    Engine engine,
    const QByteArray & apiKey )
```

Affects only LibreTranslate.

## Parameters

<i>engine</i>	the engine to use
<i>apiKey</i>	your key for this particular instance

**6.462.3.17 setEngineUrl()**

```
void Digikam::DOnlineTranslator::setEngineUrl (
    Engine engine,
    const QString & url )
```

Only affects LibreTranslate and Lingva because these engines have multiple instances. You need to call this function to specify the URL of an instance for them.

## Parameters

<i>engine</i>	the engine to use
<i>url</i>	engine url

### 6.462.3.18 setSourceTranscriptionEnabled()

```
void Digikam::DOnlineTranslator::setSourceTranscriptionEnabled (
    bool enable )
```

#### Parameters

<i>enable</i>	whether to enable source transcription
---------------	--

### 6.462.3.19 setSourceTranslitEnabled()

```
void Digikam::DOnlineTranslator::setSourceTranslitEnabled (
    bool enable )
```

#### Parameters

<i>enable</i>	whether to enable source transliteration
---------------	--

### 6.462.3.20 setTranslationOptionsEnabled()

```
void Digikam::DOnlineTranslator::setTranslationOptionsEnabled (
    bool enable )
```

#### Parameters

<i>enable</i>	whether to enable translation options
---------------	---------------------------------------

#### See also

[DOnlineTranslatorOption](#)

### 6.462.3.21 setTranslationTranslitEnabled()

```
void Digikam::DOnlineTranslator::setTranslationTranslitEnabled (
    bool enable )
```

#### Parameters

<i>enable</i>	whether to enable translation transliteration
---------------	---

### 6.462.3.22 signalFinished

```
void Digikam::DOnlineTranslator::signalFinished ( ) [signal]
```

This signal is emitted when the translation is complete.

**6.462.3.23 source()**

```
QString Digikam::DOnlineTranslator::source ( ) const
```

**Returns**

source text

**6.462.3.24 sourceLanguage()**

```
DOnlineTranslator::Language Digikam::DOnlineTranslator::sourceLanguage ( ) const
```

**Returns**

language of the source text

**6.462.3.25 sourceLanguageName()**

```
QString Digikam::DOnlineTranslator::sourceLanguageName ( ) const
```

**Returns**

language name of the source text

**6.462.3.26 sourceTranscription()**

```
QString Digikam::DOnlineTranslator::sourceTranscription ( ) const
```

**Returns**

transcription of the source text

**6.462.3.27 sourceTranslit()**

```
QString Digikam::DOnlineTranslator::sourceTranslit ( ) const
```

**Returns**

transliteration of the source text

**6.462.3.28 supportedRFC3066()**

```
QStringList Digikam::DOnlineTranslator::supportedRFC3066 (
    Engine engine ) [static]
```

Return a list of all supported language in RFC3066.

### 6.462.3.29 toJson()

```
QJsonDocument Digikam::DOnlineTranslator::toJson ( ) const
```

#### Returns

JSON representation

### 6.462.3.30 translate()

```
void Digikam::DOnlineTranslator::translate (
    const QString & text,
    Engine engine = Google,
    Language translationLang = Auto,
    Language sourceLang = Auto,
    Language uiLang = Auto )
```

#### Parameters

<i>text</i>	the text to translate
<i>engine</i>	online engine to use
<i>translationLang</i>	language to translation
<i>sourceLang</i>	language of the passed text
<i>uiLang</i>	ui language to use for display

### 6.462.3.31 translation()

```
QString Digikam::DOnlineTranslator::translation ( ) const
```

#### Returns

translated text.

### 6.462.3.32 translationLanguage()

```
DOnlineTranslator::Language Digikam::DOnlineTranslator::translationLanguage ( ) const
```

#### Returns

language of the translated text

### 6.462.3.33 translationLanguageName()

```
QString Digikam::DOnlineTranslator::translationLanguageName ( ) const
```

#### Returns

language name of the translated text

### 6.462.3.34 translationOptions()

```
QMap< QString, QVector< DOnlineTranslatorOption > > Digikam::DOnlineTranslator::translationOptions ( ) const
```

#### Returns

QMap whose key represents the type of speech, and the value is a QVector of translation options

#### See also

[DOnlineTranslatorOption](#)

### 6.462.3.35 translationTranslit()

```
QString Digikam::DOnlineTranslator::translationTranslit ( ) const
```

#### Returns

transliteration of the translated text

### 6.463.1.6 s\_rfc3066LanguageCodesLingva

```
const QMap< QString, QString > Digikam::DOnlineTranslator::Private::s_rfc3066LanguageCodes←
Lingva [static]
```

#### Initial value:

```
=
{
    { QLatin1String("zh-TW"), QLatin1String("zh_HANT") },
    { QLatin1String("zh-MO"), QLatin1String("zh") },
    { QLatin1String("zh-HK"), QLatin1String("zh") },
    { QLatin1String("zh-SG"), QLatin1String("zh") }
}
```

### 6.463.1.7 s\_rfc3066LanguageCodesYandex

```
const QMap< QString, QString > Digikam::DOnlineTranslator::Private::s_rfc3066LanguageCodes←
Yandex [static]
```

#### Initial value:

```
=
{
    { QLatin1String("jv-ID"), QLatin1String("jv") },
    { QLatin1String("zn-CN"), QLatin1String("zn") }
}
```

### 6.463.1.8 s\_yandexLanguageCodes

```
const QMap< DOnlineTranslator::Language, QString > Digikam::DOnlineTranslator::Private::s_yandexLanguageCodes [static]
```

#### Initial value:

```
=
{
    { DOnlineTranslator::SimplifiedChinese,   QStringLiteral("zn")           },
    { DOnlineTranslator::Javanese,           QStringLiteral("jv")          }
}
```

## 6.464 Digikam::DOnlineTranslatorOption Struct Reference

Contains translation options for a single word.

### Public Member Functions

- QJsonObject [toJson](#) () const  
*Converts the object to JSON.*

### Public Attributes

- QString **gender**  
*Gender of the word.*
- QStringList **translations**  
*Associated translations for the word.*
- QString **word**  
*Word that specified for translation options.*

### 6.464.1 Detailed Description

Can be obtained from the QOnlineTranslator object.

#### Example:

```
QOnlineTranslator translator;
// Obtain translation

QTextStream out(stdout);

for (auto it = translator.translationOptions().cbegin() ; it != translator.translationOptions().cend() ;
     ++it)
{
    out << it.key() << ":" << endl; // Output the type of speech with a colon

    for (const auto &[word, gender, translations] : it.value())
    {
        out << " " << word << ": "; // Print the word
        out << translations;       // Print translations
        out << endl;
    }

    out << endl;
}
}
```

#### Possible output:

```
// verb:
// sagen: say, tell, speak, mean, utter
// sprechen: speak, talk, say, pronounce, militate, discourse
// meinen: think, mean, believe, say, opine, fancy
// heißen: mean, be called, be named, bid, tell, be titled
// äußern: express, comment, speak, voice, say, utter
// aussprechen: express, pronounce, say, speak, voice, enunciate
// vorbringen: make, put forward, raise, say, put, bring forward
// aufsagen: recite, say, speak

// noun:
// Sagen: say
// Mitspracherecht: say
```

## 6.464.2 Member Function Documentation

### 6.464.2.1 toJson()

```
QJsonObject Digikam::DOnlineTranslatorOption::toJson ( ) const [inline]
```

#### Returns

JSON representation

## 6.465 Digikam::DOnlineTts Class Reference

Provides TTS URL generation.

Inheritance diagram for Digikam::DOnlineTts:

#### Classes

- class [Private](#)

## Public Types

- enum [Emotion](#) { **NoEmotion** = -1 , **Neutral** , **Good** , **Evil** }  
*Defines emotion to use.*
- enum [TtsError](#) {  
[NoError](#) , [UnsupportedEngine](#) , [UnsupportedLanguage](#) , [UnsupportedVoice](#) ,  
[UnsupportedEmotion](#) }  
*Indicates all possible error conditions found during the processing of the URLs generation.*
- enum [Voice](#) {  
**NoVoice** = -1 , **Zahar** , **Ermil** , **Jane** ,  
**Oksana** , **Alyss** , **Omazh** }  
*Defines voice to use.*

## Public Member Functions

- [DOnlineTts](#) (QObject \*const parent=nullptr)  
*Create object.*
- [TtsError](#) [error](#) () const  
*Last error.*
- QString [errorString](#) () const  
*Last error string.*
- void [generateUrls](#) (const QString &text, [DOnlineTranslator::Engine](#) engine, [DOnlineTranslator::Language](#) lang, [Voice](#) voice=NoVoice, [Emotion](#) emotion=NoEmotion)  
*Create TTS urls.*
- QList< QUrl > [media](#) () const  
*Generated media.*

## Static Public Member Functions

- static [Emotion](#) [emotion](#) (const QString &emotionCode)  
*Emotion from code.*
- static QString [emotionCode](#) ([Emotion](#) emotion)  
*Code of the emotion.*
- static [Voice](#) [voice](#) (const QString &voiceCode)  
*Voice from code.*
- static QString [voiceCode](#) ([Voice](#) voice)  
*Code of the voice.*

## 6.465.1 Detailed Description

Example:

```
DOnlineTts tts;
tts.generateUrls(QLatin1String("Hello World!"), DOnlineTranslator::Google, DOnlineTranslator::English);

// Get list of Urls to play with media player.
QList<QUrl> urls = tts.media();
```

## 6.465.2 Member Enumeration Documentation

### 6.465.2.1 Emotion

```
enum Digikam::DOnlineTts::Emotion
```

Used only by Yandex.

## 6.465.2.2 TtsError

enum `Digikam::DOnlineTts::TtsError`

## Enumerator

NoError	No error condition
UnsupportedEngine	Specified engine does not support TTS
UnsupportedLanguage	Unsupported language by specified engine
UnsupportedVoice	Unsupported voice by specified engine
UnsupportedEmotion	Unsupported emotion by specified engine

## 6.465.2.3 Voice

```
enum Digikam::DOnlineTts::Voice
```

Used only by Yandex.

## 6.465.3 Constructor &amp; Destructor Documentation

## 6.465.3.1 DOnlineTts()

```
Digikam::DOnlineTts::DOnlineTts (
    QObject *const parent = nullptr ) [explicit]
```

Constructs an object with empty data and with parent. You can use [generateUrls\(\)](#) to create URLs for use in QMediaPlayer.

## Parameters

<i>parent</i>	the parent object
---------------	-------------------

## 6.465.4 Member Function Documentation

## 6.465.4.1 emotion()

```
DOnlineTts::Emotion Digikam::DOnlineTts::emotion (
    const QString & emotionCode ) [static]
```

Used only by Yandex.

## Parameters

<i>emotionCode</i>	emotion code
--------------------	--------------

## Returns

corresponding emotion

#### 6.465.4.2 emotionCode()

```
QString Digikam::DOnlineTts::emotionCode (
    Emotion emotion ) [static]
```

Used only by Yandex.

##### Parameters

<i>emotion</i>	the emotion to use
----------------	--------------------

##### Returns

code for emotion

#### 6.465.4.3 error()

```
DOnlineTts::TtsError Digikam::DOnlineTts::error ( ) const
```

Error that was found during the generating tts. If no error was found, returns `TtsError::NoError`. The text of the error can be obtained by `errorString()`.

##### Returns

last error

#### 6.465.4.4 errorString()

```
QString Digikam::DOnlineTts::errorString ( ) const
```

A human-readable description of the last tts URL generation error that occurred.

##### Returns

last error string

#### 6.465.4.5 generateUrls()

```
void Digikam::DOnlineTts::generateUrls (
    const QString & text,
    DOnlineTranslator::Engine engine,
    DOnlineTranslator::Language lang,
    Voice voice = NoVoice,
    Emotion emotion = NoEmotion )
```

Splits text into parts (engines have a limited number of characters per request) and returns list with the generated API URLs to play.

**Parameters**

<i>text</i>	the text to speak
<i>engine</i>	online translation engine
<i>lang</i>	text language
<i>voice</i>	the voice to use (used only by Yandex)
<i>emotion</i>	the emotion to use (used only by Yandex)

**6.465.4.6 media()**

```
QList< QUrl > Digikam::DOnlineTts::media ( ) const
```

**Returns**

List of generated URLs

**6.465.4.7 voice()**

```
DOnlineTts::Voice Digikam::DOnlineTts::voice (
    const QString & voiceCode ) [static]
```

Used only by Yandex.

**Parameters**

<i>voiceCode</i>	voice code
------------------	------------

**Returns**

corresponding voice

**6.465.4.8 voiceCode()**

```
QString Digikam::DOnlineTts::voiceCode (
    Voice voice ) [static]
```

**Parameters**

<i>voice</i>	the voice to use
--------------	------------------

## Returns

code for voice

## 6.466 Digikam::DOnlineTts::Private Class Reference

### Public Attributes

- [TtsError](#) **error** = [NoError](#)
- [QString](#) **errorString**
- [QList< QUrl >](#) **media**

### Static Public Attributes

- static const [QMap< Emotion, QString >](#) **s\_emotionCodes**
- static constexpr int **s\_googleTtsLimit** = 200
- static const [QMap< Voice, QString >](#) **s\_voiceCodes**
- static constexpr int **s\_yandexTtsLimit** = 1400

### 6.466.1 Member Data Documentation

#### 6.466.1.1 s\_emotionCodes

```
const QMap< DOnlineTts::Emotion, QString > Digikam::DOnlineTts::Private::s_emotionCodes [static]
```

##### Initial value:

```
=
{
    { Neutral, QStringLiteral("neutral") },
    { Good,   QStringLiteral("good")   },
    { Evil,   QStringLiteral("evil")   }
}
```

#### 6.466.1.2 s\_voiceCodes

```
const QMap< DOnlineTts::Voice, QString > Digikam::DOnlineTts::Private::s_voiceCodes [static]
```

##### Initial value:

```
=
{
    { Zahar,   QStringLiteral("zahar")   },
    { Ermil,   QStringLiteral("ermil")   },
    { Jane,    QStringLiteral("jane")    },
    { Oksana,  QStringLiteral("oksana")  },
    { Alyss,   QStringLiteral("alyss")   },
    { Omazh,   QStringLiteral("omazh")   }
}
```

## 6.467 Digikam::DownloadInfo Class Reference

### Public Member Functions

- [DownloadInfo](#) (const [DownloadInfo](#) &other)
- [DownloadInfo](#) (const [QString](#) &\_path, const [QString](#) &\_name, const [QString](#) &\_hash, const [qint64](#) &\_size)
- [DownloadInfo](#) & **operator=** (const [DownloadInfo](#) &other)

## Public Attributes

- QString [hash](#)
- QString [name](#)
- QString [path](#)
- qint64 [size](#) = 0

## 6.467.1 Member Data Documentation

### 6.467.1.1 hash

```
QString Digikam::DownloadInfo::hash
```

The file hash as SHA256.

### 6.467.1.2 name

```
QString Digikam::DownloadInfo::name
```

The file name on the server.

### 6.467.1.3 path

```
QString Digikam::DownloadInfo::path
```

The file path on the server.

### 6.467.1.4 size

```
qint64 Digikam::DownloadInfo::size = 0
```

The file size.

## 6.468 Digikam::DownloadSettings Class Reference

## Public Attributes

- bool **autoRotate** = true  
*Settings from [AdvancedSettings](#) widget.*
- int **colorLabel** = NoColorLabel  
*Pre-colorLabel of each camera file.*
- bool **convertJpeg** = false
- QString **dest**
- bool **documentName** = false
- QString **file**
- bool **fixDateTime** = false
- QString **folder**

- File path to download.*
- QString **losslessFormat**
  - New format to convert Jpeg files.*
- QString **mime**
  - Mime type from file to download.*
- QDateTime **newDateTime**
- int **pickLabel** = NoPickLabel
  - Pre-pickLabel of each camera file.*
- int **rating** = NoRating
  - Pre-rating of each camera file.*
- QString **script**
  - Settings from [ScriptingSettings](#) widget.*
- QList< int > **tagIds**
  - Pre-tags of each camera file.*
- QString **templateTitle**
  - Metadata template title.*

## 6.469 Digikam::DPixelsAliasFilter Class Reference

### Public Member Functions

- void [pixelAntiAliasing](#) (uchar \*const data, int Width, int Height, double X, double Y, uchar \*const A, uchar \*const R, uchar \*const G, uchar \*const B)
- void [pixelAntiAliasing16](#) (unsigned short \*const data, int Width, int Height, double X, double Y, unsigned short \*const A, unsigned short \*const R, unsigned short \*const G, unsigned short \*const B)

### 6.469.1 Member Function Documentation

#### 6.469.1.1 pixelAntiAliasing()

```
void Digikam::DPixelsAliasFilter::pixelAntiAliasing (
    uchar *const data,
    int Width,
    int Height,
    double X,
    double Y,
    uchar *const A,
    uchar *const R,
    uchar *const G,
    uchar *const B )
```

Function to perform pixel antialiasing with 8 bits/color/pixel images. This method is used to smooth target image in transformation method like free rotation or shear tool.

## 6.469.1.2 pixelAntiAliasing16()

```
void Digikam::DPixelsAliasFilter::pixelAntiAliasing16 (
    unsigned short *const data,
    int Width,
    int Height,
    double X,
    double Y,
    unsigned short *const A,
    unsigned short *const R,
    unsigned short *const G,
    unsigned short *const B )
```

Function to perform pixel antialiasing with 16 bits/color/pixel images. This method is used to smooth target image in transformation method like free rotation or shear tool.

## 6.470 Digikam::DPlainTextEdit Class Reference

Inheritance diagram for Digikam::DPlainTextEdit:

## Classes

- class [Private](#)

## Signals

- void [returnPressed](#) ()
- void **textEdited** (const QString &)

## Public Member Functions

- QString [acceptedCharacters](#) () const
- QString **currentLanguage** () const
- [DPlainTextEdit](#) (const QString &contents, QWidget \*const parent=nullptr)
- [DPlainTextEdit](#) (QWidget \*const parent=nullptr)
- [DPlainTextEdit](#) (unsigned int lines, QWidget \*const parent=nullptr)

- void **setAcceptedCharacters** (const QString &mask)
- void **setClearButtonEnabled** (bool enable)
- void [setCurrentLanguage](#) (const QString &lang)
- void **setIgnoredCharacters** (const QString &mask)
- void [setLinesVisible](#) (unsigned int lines)
- void **setLocalizeSettings** (const [LocalizeContainer](#) &settings)
- void [setMaxLength](#) (int length)
- void **setText** (const QString &text)
- [LocalizeContainer](#) [spellCheckSettings](#) () const
- QString [text](#) () const
- [~DPlainTextEdit](#) () override

## Protected Member Functions

- void **insertFromMimeData** (const QMimeData \*source) override
- void **keyPressEvent** (QKeyEvent \*e) override

### 6.470.1 Detailed Description

A text edit widget based on [QPlainTextEdit](#) with spell checker capabilities based on [Sonnet](#) (optional). Widget size can be constrained with the number of visible lines. A single line constraint will emulate [QLineEdit](#). See [setLinesVisible\(\)](#) for details. The maximum number of characters can be limited with [setMaxLength\(\)](#). The characters can be limited in editor by [setIgnoredCharacters\(\)](#) and [setAcceptedCharacters\(\)](#). Implementation↵  
: [dplaintextedit.cpp](#)

## 6.470.2 Constructor & Destructor Documentation

### 6.470.2.1 DPlainTextEdit() [1/3]

```
Digikam::DPlainTextEdit::DPlainTextEdit (  
    QWidget *const parent = nullptr ) [explicit]
```

Default constructor.

### 6.470.2.2 DPlainTextEdit() [2/3]

```
Digikam::DPlainTextEdit::DPlainTextEdit (  
    unsigned int lines,  
    QWidget *const parent = nullptr ) [explicit]
```

Constructor with a number of lines. Zero lines do not apply a size constraint.

### 6.470.2.3 DPlainTextEdit() [3/3]

```
Digikam::DPlainTextEdit::DPlainTextEdit (  
    const QString & contents,  
    QWidget *const parent = nullptr ) [explicit]
```

Constructor with text contents to use.

### 6.470.2.4 ~DPlainTextEdit()

```
Digikam::DPlainTextEdit::~DPlainTextEdit ( ) [override]
```

Standard destructor.

## 6.470.3 Member Function Documentation

### 6.470.3.1 acceptedCharacters()

```
QString Digikam::DPlainTextEdit::acceptedCharacters ( ) const
```

This property holds whether the edit widget handle the mask of accepted characters in text editor. The mask of characters is passed as string (ex: "abcABC"). By default the mask is empty.

### 6.470.3.2 ignoredCharacters()

```
QString Digikam::DPlainTextEdit::ignoredCharacters ( ) const
```

This property holds whether the edit widget handle the mask of ignored characters in text editor. The mask of characters is passed as string (ex: "+/!()"). By default the mask is empty.

### 6.470.3.3 isClearButtonEnabled()

```
bool Digikam::DPlainTextEdit::isClearButtonEnabled ( ) const
```

This property holds whether the edit widget displays a clear button when it is not empty. If enabled, the edit widget displays a trailing clear button when it contains some text, otherwise the edit widget does not show a clear button. This option only take effect in QLineEdit emulation mode when lines visible is set to 1. See [setLinesVisible\(\)](#) for details.

### 6.470.3.4 leftCharacters()

```
int Digikam::DPlainTextEdit::leftCharacters ( ) const
```

Return the left characters that user can enter if a limit have been previously set with `setMaxLeght()`.

### 6.470.3.5 returnPressed

```
void Digikam::DPlainTextEdit::returnPressed ( ) [signal]
```

Emmited only when mimic QLineEdit mode is enabled. See [setLinesVisible\(\)](#) for details.

### 6.470.3.6 setCurrentLanguage()

```
void Digikam::DPlainTextEdit::setCurrentLanguage (
    const QString & lang )
```

This property holds whether the edit widget handle a specific spell-checker language (2 letters code based as "en", "fr", "es", etc.). If this property is not set, spell-checker will try to auto-detect language by parsing the text. To reset this setting, pass a empty string as language. If Sonnet dependencies is not resolved, these method do nothing.

### 6.470.3.7 setLinesVisible()

```
void Digikam::DPlainTextEdit::setLinesVisible (
    unsigned int lines )
```

This property holds whether the edit widget handle visible lines used by the widget to show text. Lines must be superior or egal to 1 to apply a size constraint. Notes: if a single visible line is used, the widget emulate QLineEdit. a null value do not apply a size constraint.

### 6.470.3.8 setMaxLength()

```
void Digikam::DPlainTextEdit::setMaxLength (
    int length )
```

This property holds whether the edit widget handle the maximum of characters that user can enter in editor. By default no limit is set. A zero length reset a limit.

### 6.470.3.9 spellCheckSettings()

```
LocalizeContainer Digikam::DPlainTextEdit::spellCheckSettings ( ) const
```

This property holds whether the edit widget handle the Spellcheck settings. See [LocalizeContainer](#) class for details.

### 6.470.3.10 text()

```
QString Digikam::DPlainTextEdit::text ( ) const
```

This property holds whether the edit widget handle text contents as plain text. If ignored or accepted characters masks are set, text is filtered accordingly.

## 6.471 Digikam::DPlainTextEdit::Private Class Reference

### Public Member Functions

- void [init](#) ([DPlainTextEdit](#) \*const parent)

### Public Attributes

- QString **acceptedMask**  
*Mask of accepted characters in text editor.*
- bool **clearBtnEnable** = true
- [DTextEditClearButton](#) \* **clrBtn** = nullptr
- [LocalizeContainer](#) **container**  
*Spell checking settings container.*
- QString **ignoredMask**  
*Mask of ignored characters in text editor.*
- unsigned int **lines** = 3
- int **maxLength** = 0

### 6.471.1 Member Function Documentation

#### 6.471.1.1 init()

```
void Digikam::DPlainTextEdit::Private::init (
    DPlainTextEdit *const parent )
```

Init the text widget with the spell-checker engine (optional).

## 6.472 Digikam::DPlugin Class Reference

Inheritance diagram for Digikam::DPlugin:

### Public Member Functions

- virtual `QList< DPluginAuthor > authors ()` const =0  
*Returns authors list for the plugin.*
- virtual `QStringList categories ()` const =0
- virtual `void cleanUp ()`
- virtual `int count ()` const =0
- virtual `QString description ()` const =0  
*Returns a short description about the plugin.*
- virtual `QString details ()` const =0  
*Returns a long description about the plugin.*
- `DPlugin (QObject *const parent=nullptr)`
- virtual `QMap< QString, QStringList > extraAboutData ()` const  
*Returns a map of extra data to show in plugin about dialog.*
- virtual `QStringList extraAboutDataRowTitles ()` const  
*Returns a list of extra data row titles to show in tab of plugin about dialog.*
- virtual `QString extraAboutDataTitle ()` const  
*Returns the tab title of data returned by [extraAboutData\(\)](#).*
- virtual `QString handbookChapter ()` const
- virtual `QString handbookReference ()` const
- virtual `QString handbookSection ()` const
- virtual `bool hasVisibilityProperty ()` const
- virtual `QIcon icon ()` const  
*Returns an icon for the plugin. Default implementation return the system plugin icon.*
- virtual `QString ifaceId ()` const =0

Returns the unique top level internal identification property of the plugin interface. Must be formatted as "org.kde.digikam.digikam.\_NAME\_OF\_INTERFACE\_/\_VERSION\_". Examples: "org.kde.digikam.DPluginGeneric/1.1.0" "org.kde.digikam.DPluginEditor/1.1.0" "org.kde.digikam.DPluginBqm/1.1.0".

- virtual QString **iid** () const =0

Returns the unique internal identification property of the plugin. Must be formatted as "org.kde.digikam.plugin.\_PLUGIN\_TYPE\_.\_NAME\_OF\_PLUGIN\_". Examples: "org.kde.digikam.plugin.generic.Calendar" "org.kde.digikam.plugin.editor.AdjustCurvesTool" "org.kde.digikam.plugin.bqm.NoiseReduction".

- QString **libraryFileName** () const

Returns the file name of the library for this plugin. This string is filled at run-time by plugin loader.

- virtual QString **name** () const =0

Returns the user-visible name of the plugin.

- QStringList **pluginAuthors** () const
- void **setLibraryFileName** (const QString &)

Sets the file name of the library for this plugin. This string is filled at run-time by plugin loader.

- void **setShouldLoaded** (bool b)
- virtual void **setup** (QObject \*const parent)=0
- virtual void **setVisible** (bool b)=0
- bool **shouldLoaded** () const
- QString **version** () const
- ~DPlugin () override

## 6.472.1 Detailed Description

A digiKam external plugin abstract class.

## 6.472.2 Constructor & Destructor Documentation

### 6.472.2.1 DPlugin()

```
Digikam::DPlugin::DPlugin (
    QObject *const parent = nullptr ) [explicit]
```

Constructor with optional parent object

### 6.472.2.2 ~DPlugin()

```
Digikam::DPlugin::~~DPlugin ( ) [override]
```

Destructor

## 6.472.3 Member Function Documentation

### 6.472.3.1 categories()

```
virtual QStringList Digikam::DPlugin::categories ( ) const [pure virtual]
```

Return a list of categories as strings registered in this plugin.

Implemented in [Digikam::DPluginDImg](#), [Digikam::DPluginEditor](#), [Digikam::DPluginGeneric](#), [Digikam::DPluginRawImport](#), and [Digikam::DPluginBqm](#).

### 6.472.3.2 cleanUp()

```
virtual void Digikam::DPlugin::cleanUp ( ) [inline], [virtual]
```

Plugin method to clean up internal created objects. This method is called by plugin loader.

### 6.472.3.3 count()

```
virtual int Digikam::DPlugin::count ( ) const [pure virtual]
```

Return the amount of tools registered to all parents.

Implemented in [Digikam::DPluginDImg](#), [Digikam::DPluginEditor](#), [Digikam::DPluginGeneric](#), [Digikam::DPluginRawImport](#), and [Digikam::DPluginBqm](#).

### 6.472.3.4 extraAboutData()

```
virtual QMap< QString, QStringList > Digikam::DPlugin::extraAboutData ( ) const [inline], [virtual]
```

Reimplemented in [Digikam::DPluginDImg](#).

### 6.472.3.5 extraAboutDataRowTitles()

```
virtual QStringList Digikam::DPlugin::extraAboutDataRowTitles ( ) const [inline], [virtual]
```

Reimplemented in [Digikam::DPluginDImg](#).

### 6.472.3.6 extraAboutDataTitle()

```
virtual QString Digikam::DPlugin::extraAboutDataTitle ( ) const [inline], [virtual]
```

Reimplemented in [Digikam::DPluginDImg](#).

### 6.472.3.7 handbookChapter()

```
QString Digikam::DPlugin::handbookChapter ( ) const [virtual]
```

Return the online handbook chapter from an handbook section corresponding to this plugin. It's used in plugin dialog Help button. By default, no chapter is defined, and root page of the section is loaded by Help Button in this case. Note: a chapter is always included in a section. See [handbookSection\(\)](#) for details.

### 6.472.3.8 handbookReference()

```
QString Digikam::DPlugin::handbookReference ( ) const [virtual]
```

Return the online handbook reference from an handbook chapter corresponding to this plugin. It's used in plugin dialog Help button. By default, no reference is defined, and root page of the chapter is loaded by Help Button in this case. Note: a reference is always included in a chapter. See [handbookChapter\(\)](#) for details.

### 6.472.3.9 handbookSection()

```
QString Digikam::DPlugin::handbookSection ( ) const [virtual]
```

Return the online handbook section corresponding to this plugin. It's used in plugin dialog Help button. By default, no section is defined, and root page of the documentation is loaded by Help Button in this case.

### 6.472.3.10 hasVisibilityProperty()

```
bool Digikam::DPlugin::hasVisibilityProperty ( ) const [virtual]
```

Return true if plugin can be configured in setup dialog about the visibility property. Default implementation return true.

Reimplemented in [Digikam::DPluginDImg](#), and [Digikam::DPluginBqm](#).

### 6.472.3.11 ifaceId()

```
virtual QString Digikam::DPlugin::ifaceId ( ) const [pure virtual]
```

Implemented in [Digikam::DPluginDImg](#), [Digikam::DPluginEditor](#), [Digikam::DPluginGeneric](#), [Digikam::DPluginRawImport](#), and [Digikam::DPluginBqm](#).

### 6.472.3.12 name()

```
virtual QString Digikam::DPlugin::name ( ) const [pure virtual]
```

The user-visible name should be context free, i.e. the name should provide enough information as to what the plugin is about in the context of digiKam.

### 6.472.3.13 pluginAuthors()

```
QStringList Digikam::DPlugin::pluginAuthors ( ) const
```

Return a list of authors as strings registered in this plugin.

### 6.472.3.14 setShouldLoaded()

```
void Digikam::DPlugin::setShouldLoaded (
    bool b )
```

Accessor to adjust the should loaded plugin property. This property is adjusted by plugin loader at start-up.

### 6.472.3.15 setup()

```
virtual void Digikam::DPlugin::setup (
    QObject *const parent ) [pure virtual]
```

Plugin factory method to create all internal object instances for a given parent.

**6.472.3.16 setVisible()**

```
virtual void Digikam::DPlugin::setVisible (
    bool b ) [pure virtual]
```

Holds whether the plugin can be seen in parent view.

Implemented in [Digikam::DPluginEditor](#), [Digikam::DPluginGeneric](#), [Digikam::DPluginBqm](#), [Digikam::DPluginDImg](#), and [Digikam::DPluginRawImport](#).

**6.472.3.17 shouldLoaded()**

```
bool Digikam::DPlugin::shouldLoaded ( ) const
```

Return the should loaded property. If it's true, the plugin must be loaded in application GUI at startup by plugin loader.

**6.472.3.18 version()**

```
QString Digikam::DPlugin::version ( ) const
```

Return the internal version used to check the binary compatibility at run-time. This is typically the same version of digiKam core used at compilation time.

**6.473 Digikam::DPluginAboutDlg Class Reference**

Inheritance diagram for Digikam::DPluginAboutDlg:

**Public Member Functions**

- **DPluginAboutDlg** ([DPlugin](#) \*const tool, [QWidget](#) \*const parent=nullptr)

## 6.474 Digikam::DPluginAction Class Reference

Inheritance diagram for Digikam::DPluginAction:

### Public Types

- enum [ActionCategory](#) { **InvalidCat** = -1 , [GenericExport](#) = 0 , [GenericImport](#) , [GenericTool](#) , [GenericMetadata](#) , [GenericView](#) , [EditorFile](#) , [EditorColors](#) , [EditorEnhance](#) , [EditorTransform](#) , [EditorDecorate](#) , [EditorFilters](#) }  
*Plugin action categories.*
- enum [ActionType](#) { **InvalidType** = -1 , **Generic** = 0 , **Editor** }  
*Plugin action types to resume where they can be used.*
- enum [PluginActionData](#) { **NoData** = 0 , **AlbumData** }  
*Plugin action types via QAction data container.*

### Public Member Functions

- [ActionCategory](#) **actionCategory** () const
- QString **actionCategoryToString** () const
- [ActionType](#) **actionType** () const
- **DPluginAction** (QObject \*const parent=nullptr)
- QString **pluginId** () const
- void **setActionCategory** ([ActionCategory](#) cat)
- QString **toString** () const
- QString **xmlSection** () const

## Static Public Member Functions

- static bool **pluginActionLessThan** ([DPluginAction](#) \*const a, [DPluginAction](#) \*const b)

## 6.474.1 Member Enumeration Documentation

### 6.474.1.1 ActionCategory

```
enum Digikam::DPluginAction::ActionCategory
```

#### Enumerator

GenericExport	Generic export action.
GenericImport	Generic import action.
GenericTool	Generic processing action.
GenericMetadata	Generic Metadata adjustment action.
GenericView	Generic View action (as Slideshow).
EditorFile	Image Editor file action.
EditorColors	Image Editor color correction action.
EditorEnhance	Image Editor enhance action.
EditorTransform	Image Editor transform action.
EditorDecorate	Image Editor decorate action.
EditorFilters	Image Editor special effects action.

### 6.474.1.2 ActionType

```
enum Digikam::DPluginAction::ActionType
```

#### Enumerator

InvalidType	An invalid action category.
Generic	Generic action available everywhere (AlbumView, Editor, and LightTable).
Editor	Specific action for Image Editor and Showfoto.

## 6.474.2 Member Function Documentation

### 6.474.2.1 actionType()

```
DPluginAction::ActionType Digikam::DPluginAction::actionType ( ) const
```

Return the action type depending of category.

### 6.474.2.2 pluginId()

```
QString Digikam::DPluginAction::pluginId ( ) const
```

Return the plugin id string hosting this action.

### 6.474.2.3 setActionCategory()

```
void Digikam::DPluginAction::setActionCategory (
    ActionCategory cat )
```

Manage the internal action category.

### 6.474.2.4 toString()

```
QString Digikam::DPluginAction::toString ( ) const
```

Return details as string about action properties. For debug purpose only.

### 6.474.2.5 xmlSection()

```
QString Digikam::DPluginAction::xmlSection ( ) const
```

Return the XML section to merge in KXMLGUIClient host XML definition.

## 6.475 Digikam::DPluginAuthor Class Reference

### Public Member Functions

- **DPluginAuthor** (const QString &\_name, const QString &\_email, const QString &\_year, const QString &\_role)
- **DPluginAuthor** (const QString &\_name, const QString &\_email, const QString &\_year)
- QString [toString](#) () const

### Public Attributes

- QString **email**  
*Email anti-spammed.*
- QString **name**  
*Author name and surname.*
- QString **roles**  
*Author roles, as "Developer", "Designer", "Translator", etc.*
- QString **years**  
*Copyrights years.*

## 6.475.1 Member Function Documentation

### 6.475.1.1 toString()

```
QString Digikam::DPluginAuthor::toString ( ) const
```

Return author details as string. For debug purpose only.

## 6.476 Digikam::DPluginBqm Class Reference

Inheritance diagram for Digikam::DPluginBqm:

### Signals

- void **signalVisible** (bool)

## Public Member Functions

- QStringList [categories](#) () const override
- int [count](#) () const override
- [DPluginBqm](#) (QObject \*const parent=nullptr)
- [BatchTool](#) \* [findToolByName](#) (const QString &name, QObject \*const parent) const
- bool [hasVisibilityProperty](#) () const override
- QString [ifacelid](#) () const override
- [BqmInfoface](#) \* [infoface](#) () const
- void [setVisible](#) (bool b) override
- QList< [BatchTool](#) \* > [tools](#) (QObject \*const parent) const
- ~[DPluginBqm](#) () override

## Public Member Functions inherited from [Digikam::DPlugin](#)

- virtual QList< [DPluginAuthor](#) > [authors](#) () const =0  
*Returns authors list for the plugin.*
- virtual void [cleanUp](#) ()
- virtual QString [description](#) () const =0  
*Returns a short description about the plugin.*
- virtual QString [details](#) () const =0  
*Returns a long description about the plugin.*
- [DPlugin](#) (QObject \*const parent=nullptr)
- virtual QMap< QString, QStringList > [extraAboutData](#) () const  
*Returns a map of extra data to show in plugin about dialog.*
- virtual QStringList [extraAboutDataRowTitles](#) () const  
*Returns a list of extra data row titles to show in tab of plugin about dialog.*
- virtual QString [extraAboutDataTitle](#) () const  
*Returns the tab title of data returned by [extraAboutData\(\)](#).*
- virtual QString [handbookChapter](#) () const
- virtual QString [handbookReference](#) () const
- virtual QString [handbookSection](#) () const
- virtual QIcon [icon](#) () const  
*Returns an icon for the plugin. Default implementation return the system plugin icon.*
- virtual QString [iid](#) () const =0  
*Returns the unique internal identification property of the plugin. Must be formatted as "org.kde.digikam.plugin.\_PLUGIN\_TYPE\_.NAME\_OF\_PLUGIN\_". Examples: "org.kde.digikam.plugin.generic.Calendar" "org.kde.digikam.plugin.editor.AdjustCurvesTool" "org.kde.digikam.plugin.bqm.NoiseReduction".*
- QString [libraryFileName](#) () const  
*Returns the file name of the library for this plugin. This string is filled at run-time by plugin loader.*
- virtual QString [name](#) () const =0  
*Returns the user-visible name of the plugin.*
- QStringList [pluginAuthors](#) () const
- void [setLibraryFileName](#) (const QString &)  
*Sets the file name of the library for this plugin. This string is filled at run-time by plugin loader.*
- void [setShouldLoaded](#) (bool b)
- virtual void [setup](#) (QObject \*const parent)=0
- bool [shouldLoaded](#) () const
- QString [version](#) () const
- ~[DPlugin](#) () override

## Protected Member Functions

- void **addTool** ([BatchTool](#) \*const t)

## 6.476.1 Constructor & Destructor Documentation

### 6.476.1.1 DPluginBqm()

```
Digikam::DPluginBqm::DPluginBqm (
    QObject *const parent = nullptr ) [explicit]
```

Constructor with optional parent object

### 6.476.1.2 ~DPluginBqm()

```
Digikam::DPluginBqm::~DPluginBqm ( ) [override]
```

Destructor

## 6.476.2 Member Function Documentation

### 6.476.2.1 categories()

```
QStringList Digikam::DPluginBqm::categories ( ) const [override], [virtual]
```

Return a list of batch tool group categories as strings registered in this plugin.

Implements [Digikam::DPlugin](#).

### 6.476.2.2 count()

```
int Digikam::DPluginBqm::count ( ) const [override], [virtual]
```

Return the amount of tools registered.

Implements [Digikam::DPlugin](#).

### 6.476.2.3 findToolByName()

```
BatchTool * Digikam::DPluginBqm::findToolByName (
    const QString & name,
    QObject *const parent ) const
```

Return a plugin tool instance found by name in plugin tools list for a given parent.

#### 6.476.2.4 hasVisibilityProperty()

```
bool Digikam::DPluginBqm::hasVisibilityProperty ( ) const [override], [virtual]
```

Return true if plugin can be configured in setup dialog about the visibility property. Default implementation return true.

Reimplemented from [Digikam::DPlugin](#).

#### 6.476.2.5 ifaceId()

```
QString Digikam::DPluginBqm::ifaceId ( ) const [override], [virtual]
```

Return the plugin interface identifier.

Implements [Digikam::DPlugin](#).

#### 6.476.2.6 infoIface()

```
BqmInfoIface * Digikam::DPluginBqm::infoIface ( ) const
```

Return the info interface instance.

#### 6.476.2.7 setVisible()

```
void Digikam::DPluginBqm::setVisible (
    bool b ) [override], [virtual]
```

Holds whether the plugin can be seen in parent view.

Implements [Digikam::DPlugin](#).

#### 6.476.2.8 tools()

```
QList< BatchTool * > Digikam::DPluginBqm::tools (
    QObject *const parent ) const
```

Return all plugin tools registered in [setup\(\)](#) method with [addTool\(\)](#) for a given parent.

## 6.477 Digikam::DPluginConfView Class Reference

Inheritance diagram for Digikam::DPluginConfView:

### Signals

- void [signalSearchResult](#) (int)

### Public Member Functions

- int [activated](#) () const
- void [apply](#) ()
- void [clearAll](#) ()
- int [count](#) () const
- [DPluginConfView](#) (QWidget \*const parent=nullptr)
- QString [filter](#) () const
- int [itemsVisible](#) () const
- int [itemsWithVisiblyProperty](#) () const
- [DPlugin](#) \* [plugin](#) (QTreeWidgetItem \*const item) const
- void [selectAll](#) () override
- void [setFilter](#) (const QString &filter, Qt::CaseSensitivity cs)

### Protected Member Functions

- QTreeWidgetItem \* [appendPlugin](#) ([DPlugin](#) \*const)
- virtual void [loadPlugins](#) ()=0

## 6.477.1 Constructor & Destructor Documentation

### 6.477.1.1 DPluginConfView()

```
Digikam::DPluginConfView::DPluginConfView (
    QWidget *const parent = nullptr ) [explicit]
```

Default constructor.

## 6.477.2 Member Function Documentation

### 6.477.2.1 actived()

```
int Digikam::DPluginConfView::actived ( ) const
```

Return the number of plugins active in the list.

### 6.477.2.2 apply()

```
void Digikam::DPluginConfView::apply ( )
```

Apply all changes about plugins selected to be hosted in host application.

### 6.477.2.3 clearAll()

```
void Digikam::DPluginConfView::clearAll ( )
```

Clear all selected plugins in the list.

### 6.477.2.4 count()

```
int Digikam::DPluginConfView::count ( ) const
```

Return the total number of plugins in the list.

### 6.477.2.5 filter()

```
QString Digikam::DPluginConfView::filter ( ) const
```

Return the current string used to filter the plugins list.

### 6.477.2.6 itemsVisible()

```
int Digikam::DPluginConfView::itemsVisible ( ) const
```

Return the number of visible plugins in the list.

### 6.477.2.7 itemsWithVisiblyProperty()

```
int Digikam::DPluginConfView::itemsWithVisiblyProperty ( ) const
```

Return the number of plugins in the list with visibly properties available.

### 6.477.2.8 selectAll()

```
void Digikam::DPluginConfView::selectAll ( ) [override]
```

Select all plugins in the list.

### 6.477.2.9 setFilter()

```
void Digikam::DPluginConfView::setFilter (
    const QString & filter,
    Qt::CaseSensitivity cs )
```

Set the string used to filter the plugins list. [signalSearchResult\(\)](#) is emitted when all is done.

### 6.477.2.10 signalSearchResult

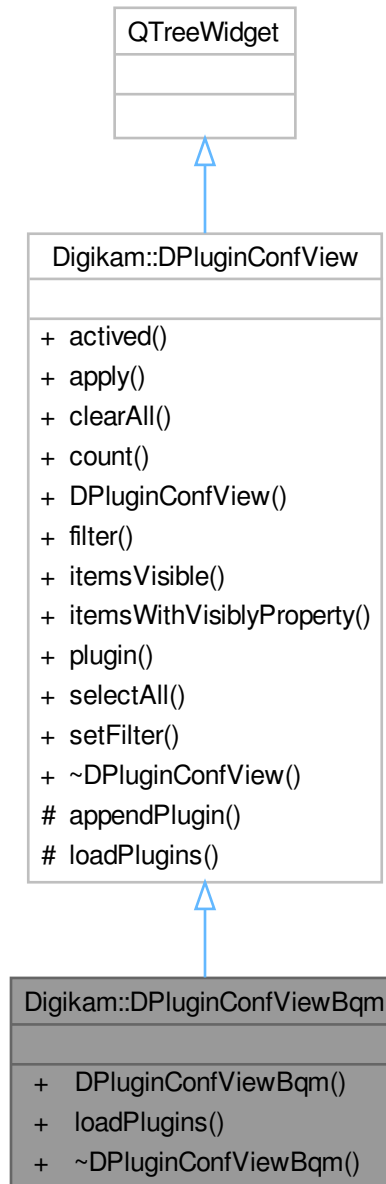

```
void Digikam::DPluginConfView::signalSearchResult (
    int ) [signal]
```

Signal emitted when filtering is done through `slotSetFilter()`. Number of plugins found is sent when item relevant of filtering match the query.

## 6.483.1 Constructor & Destructor Documentation

### 6.483.1.1 DPluginDImg()

```
Digikam::DPluginDImg::DPluginDImg (
    QObject *const parent = nullptr ) [explicit]
```

Constructor with optional parent object

### 6.483.1.2 ~DPluginDImg()

```
Digikam::DPluginDImg::~~DPluginDImg ( ) [override], [default]
```

Destructor

## 6.483.2 Member Function Documentation

### 6.483.2.1 canRead()

```
virtual int Digikam::DPluginDImg::canRead (
    const QFileInfo & fileInfo,
    bool magic ) const [pure virtual]
```

Return  $> 0$  if source file path is supported by the loader and contents can be loaded. The return value (1 - 100) is a priority. digiKam default loaders have a priority of 10, the QImage loader has a priority of 80 and the ImageMagick loader has a priority of 90. If the loader is to be used before the default loader, the value must be less than 10.

### 6.483.2.2 canWrite()

```
virtual int Digikam::DPluginDImg::canWrite (
    const QString & format ) const [pure virtual]
```

Return  $> 0$  if target file format is supported by the loader and contents can be written. The return value (1 - 100) is a priority.

### 6.483.2.3 categories()

```
QStringList Digikam::DPluginDImg::categories ( ) const [inline], [override], [virtual]
```

This kind of plugin do not use a category.

Implements [Digikam::DPlugin](#).

### 6.483.2.4 count()

```
int Digikam::DPluginDImg::count ( ) const [inline], [override], [virtual]
```

This kind of plugin only provide one tool.

Implements [Digikam::DPlugin](#).

### 6.483.2.5 exportWidget()

```
virtual DImgLoaderSettings * Digikam::DPluginDImg::exportWidget (
    const QString & format ) const [pure virtual]
```

Return a new widget instance to show settings while exporting image to specified format. Return nullptr if format is not supported or if no settings widget is available for this format.

### 6.483.2.6 extraAboutData()

```
QMap< QString, QStringList > Digikam::DPluginDImg::extraAboutData ( ) const [override], [virtual]
```

With this kind of plugin, we will display the type-mimes list on about dialog.

Reimplemented from [Digikam::DPlugin](#).

### 6.483.2.7 extraAboutDataRowTitles()

```
QStringList Digikam::DPluginDImg::extraAboutDataRowTitles ( ) const [override], [virtual]
```

Reimplemented from [Digikam::DPlugin](#).

### 6.483.2.8 extraAboutDataTitle()

```
QString Digikam::DPluginDImg::extraAboutDataTitle ( ) const [override], [virtual]
```

Reimplemented from [Digikam::DPlugin](#).

### 6.483.2.9 hasVisibilityProperty()

```
bool Digikam::DPluginDImg::hasVisibilityProperty ( ) const [inline], [override], [virtual]
```

This kind of plugin do not need to be configurable

Reimplemented from [Digikam::DPlugin](#).

### 6.483.2.10 ifacelid()

```
QString Digikam::DPluginDImg::ifaceId ( ) const [inline], [override], [virtual]
```

Return the plugin interface identifier.

Implements [Digikam::DPlugin](#).

### 6.483.2.11 loader()

```
virtual DImgLoader * Digikam::DPluginDImg::loader (
    DImg *const image,
    const DRawDecoding & rawSettings = DRawDecoding\(\) ) const [pure virtual]
```

Return the image loader instance for the [DImg](#) instance.

### 6.483.2.12 loaderName()

```
virtual QString Digikam::DPluginDImg::loaderName ( ) const [pure virtual]
```

Return a single capitalized word to identify the format supported by the loader. Ex: jpeg => "JPG" ; tiff => "TIF", etc.

### 6.483.2.13 previewSupported()

```
virtual bool Digikam::DPluginDImg::previewSupported ( ) const [inline], [virtual]
```

Return true if the loader can read a preview image.

### 6.483.2.14 setVisible()

```
void Digikam::DPluginDImg::setVisible (
    bool ) [inline], [override], [virtual]
```

This kind of plugin do not have GUI visibility attribute.

Implements [Digikam::DPlugin](#).

### 6.483.2.15 typeMimes()

```
virtual QString Digikam::DPluginDImg::typeMimes ( ) const [pure virtual]
```

Return the list of white-listed type-mimes supported by the loader, as a string of file-name suffix separated by spaces. Ex: "jpeg jpg thm"

## 6.484 Digikam::DPluginEditor Class Reference

Inheritance diagram for Digikam::DPluginEditor:

### Public Member Functions

- `QList< DPluginAction * > actions` (`QObject *const parent`) const
- `QStringList categories` () const override

- int `count` () const override
- `DPluginEditor` (QObject \*const parent=nullptr)
- `DPluginAction` \* `findActionByName` (const QString &name, QObject \*const parent) const
- QString `ifacelid` () const override
- void `setVisible` (bool b) override
- ~`DPluginEditor` () override

## Public Member Functions inherited from `Digikam::DPlugin`

- virtual QList< `DPluginAuthor` > `authors` () const =0  
*Returns authors list for the plugin.*
- virtual void `cleanUp` ()
- virtual QString `description` () const =0  
*Returns a short description about the plugin.*
- virtual QString `details` () const =0  
*Returns a long description about the plugin.*
- `DPlugin` (QObject \*const parent=nullptr)
- virtual QMap< QString, QStringList > `extraAboutData` () const  
*Returns a map of extra data to show in plugin about dialog.*
- virtual QStringList `extraAboutDataRowTitles` () const  
*Returns a list of extra data row titles to show in tab of plugin about dialog.*
- virtual QString `extraAboutDataTitle` () const  
*Returns the tab title of data returned by `extraAboutData()`.*
- virtual QString `handbookChapter` () const
- virtual QString `handbookReference` () const
- virtual QString `handbookSection` () const
- virtual bool `hasVisibilityProperty` () const
- virtual QIcon `icon` () const  
*Returns an icon for the plugin. Default implementation return the system plugin icon.*
- virtual QString `iid` () const =0  
*Returns the unique internal identification property of the plugin. Must be formatted as "org.kde.digikam.<->plugin.\_PLUGIN\_TYPE\_.\_NAME\_OF\_PLUGIN\_". Examples: "org.kde.digikam.plugin.generic.Calendar" "org.kde.<->digikam.plugin.editor.AdjustCurvesTool" "org.kde.digikam.plugin.bqm.NoiseReduction".*
- QString `libraryFileName` () const  
*Returns the file name of the library for this plugin. This string is filled at run-time by plugin loader.*
- virtual QString `name` () const =0  
*Returns the user-visible name of the plugin.*
- QStringList `pluginAuthors` () const
- void `setLibraryFileName` (const QString &)  
*Sets the file name of the library for this plugin. This string is filled at run-time by plugin loader.*
- void `setShouldLoaded` (bool b)
- virtual void `setup` (QObject \*const parent)=0
- bool `shouldLoaded` () const
- QString `version` () const
- ~`DPlugin` () override

## Protected Member Functions

- void `addAction` (`DPluginAction` \*const ac)
- `DInfoInterface` \* `infoiface` (QObject \*const ac) const

## 6.484.1 Constructor & Destructor Documentation

### 6.484.1.1 DPluginEditor()

```
Digikam::DPluginEditor::DPluginEditor (
    QObject *const parent = nullptr ) [explicit]
```

Constructor with optional parent object

### 6.484.1.2 ~DPluginEditor()

```
Digikam::DPluginEditor::~~DPluginEditor ( ) [override]
```

Destructor

## 6.484.2 Member Function Documentation

### 6.484.2.1 actions()

```
QList< DPluginAction * > Digikam::DPluginEditor::actions (
    QObject *const parent ) const
```

Return all plugin actions registered in [setup\(\)](#) method with [addAction\(\)](#) for a given parent.

### 6.484.2.2 categories()

```
QStringList Digikam::DPluginEditor::categories ( ) const [override], [virtual]
```

Return a list of categories as strings registered in this plugin.

Implements [Digikam::DPlugin](#).

### 6.484.2.3 count()

```
int Digikam::DPluginEditor::count ( ) const [override], [virtual]
```

Return the amount of tools registered to all parents.

Implements [Digikam::DPlugin](#).

### 6.484.2.4 findActionByName()

```
DPluginAction * Digikam::DPluginEditor::findActionByName (
    const QString & name,
    QObject *const parent ) const
```

Return a plugin action instance found by name in plugin action list for a given parent.

### 6.484.2.5 ifaceId()

```
QString Digikam::DPluginEditor::ifaceId ( ) const [inline], [override], [virtual]
```

Return the plugin interface identifier.

Implements [Digikam::DPlugin](#).

### 6.484.2.6 infoIface()

```
DInfoInterface * Digikam::DPluginEditor::infoIface (
    QObject *const ac ) const [protected]
```

Return the info interface instance for the given action.

### 6.484.2.7 setVisible()

```
void Digikam::DPluginEditor::setVisible (
    bool b ) [override], [virtual]
```

Holds whether the plugin can be seen in parent view.

Implements [Digikam::DPlugin](#).

## 6.485 Digikam::DPluginGeneric Class Reference

Inheritance diagram for Digikam::DPluginGeneric:

### Public Member Functions

- `DInfoInterface` \* `infoface` (QObject \*const ac) const
- bool `reactivateToolDialog` (QWidget \*const dlg) const

## 6.485.1 Constructor & Destructor Documentation

### 6.485.1.1 DPluginGeneric()

```
Digikam::DPluginGeneric::DPluginGeneric (
    QObject *const parent = nullptr ) [explicit]
```

Constructor with optional parent object

### 6.485.1.2 ~DPluginGeneric()

```
Digikam::DPluginGeneric::~~DPluginGeneric ( ) [override]
```

Destructor

## 6.485.2 Member Function Documentation

### 6.485.2.1 actions()

```
QList< DPluginAction * > Digikam::DPluginGeneric::actions (
    QObject *const parent ) const
```

Return all plugin actions registered in [setup\(\)](#) method with [addAction\(\)](#) for a given parent.

### 6.485.2.2 categories()

```
QStringList Digikam::DPluginGeneric::categories ( ) const [override], [virtual]
```

Return a list of categories as strings registered in this plugin.

Implements [Digikam::DPlugin](#).

### 6.485.2.3 count()

```
int Digikam::DPluginGeneric::count ( ) const [override], [virtual]
```

Return the amount of tools registered to all parents.

Implements [Digikam::DPlugin](#).

### 6.485.2.4 findActionByName()

```
DPluginAction * Digikam::DPluginGeneric::findActionByName (
    const QString & name,
    QObject *const parent ) const
```

Return a plugin action instance found by name in plugin action list for a given parent.

### 6.485.2.5 ifaceId()

```
QString Digikam::DPluginGeneric::ifaceId ( ) const [inline], [override], [virtual]
```

Return the plugin interface identifier.

Implements [Digikam::DPlugin](#).

### 6.485.2.6 infoIface()

```
DInfoInterface * Digikam::DPluginGeneric::infoIface (
    QObject *const ac ) const [protected]
```

Return the info interface instance for the given action object.

### 6.485.2.7 reactivateToolDialog()

```
bool Digikam::DPluginGeneric::reactivateToolDialog (
    QWidget *const dlg ) const [protected]
```

Helper function to reactivate the desktop visibility of tool widget.

### 6.485.2.8 setVisible()

```
void Digikam::DPluginGeneric::setVisible (
    bool b ) [override], [virtual]
```

Holds whether the plugin can be seen in parent view.

Implements [Digikam::DPlugin](#).

## 6.486 Digikam::DPluginLoader Class Reference

The class that handles digiKam's external plugins.

Inheritance diagram for Digikam::DPluginLoader:

## Classes

- class [Private](#)

## Public Member Functions

- `QList< DPlugin * > allPlugins ()` const  
*Returns all available plugins.*
- void `appendPluginToBlackList (const QString &filename)`  
*appendPluginToBlackList Prevent that a plugin is loaded from the given filename*
- void `appendPluginToWhiteList (const QString &filename)`  
*appendPluginToWhiteList Add a plugin to the whitelist of tools. If the whitelist is not empty, only whitelisted tools are loaded. If a tool is both whitelisted and blacklisted, it will not be loaded.*
- bool `canExport (const QString &format)` const
- bool `canImport (const QString &format)` const
- void `cleanUp ()`
- `QString configGroupName ()` const
- `DImgLoaderSettings * exportWidget (const QString &format)` const
- void `init ()`

- [DPluginAction](#) \* **pluginAction** (const QString &actionName, QObject \*const parent) const  
*Returns the plugin action corresponding to a action name for a given parent. If not found, this returns a null pointer.*
- QList< [DPluginAction](#) \* > **pluginActions** (const QString &pluginIID, QObject \*const parent) const  
*Returns the plugin actions corresponding to a plugin internal ID string for a given parent. If not found, this returns an empty list.*
- QList< [DPluginAction](#) \* > **pluginsActions** ([DPluginAction::ActionCategory](#) cat, QObject \*const parent) const  
*Returns a list of plugin actions set as category for a given parent. If no plugin have found in this category, this returns an empty list.*
- QList< [DPluginAction](#) \* > **pluginsActions** ([DPluginAction::ActionType](#) type, QObject \*const parent) const  
*Returns a list of plugin actions set as type for a given parent. If no plugin have found in this category, this returns an empty list.*
- QString **pluginXmlSections** ([DPluginAction::ActionCategory](#) cat, QObject \*const parent) const  
*Returns all xml sections as string of plugin actions set with a kind of category for a given parent.*
- void [registerEditorPlugins](#) (QObject \*const parent)
- void [registerGenericPlugins](#) (QObject \*const parent)
- void [registerRawImportPlugins](#) (QObject \*const parent)

### Static Public Member Functions

- static [DPluginLoader](#) \* [instance](#) ()  
*instance: returns the singleton of plugin loader*

### Friends

- class [DPluginLoaderCreator](#)

## 6.486.1 Detailed Description

Ownership policy for plugins:

The [DPluginLoader](#) creates new objects and transfer ownership. In order to create the objects, the [DPluginLoader](#) internally has a list of the tools which are owned by the [DPluginLoader](#) and destroyed by it.

## 6.486.2 Member Function Documentation

### 6.486.2.1 appendPluginToBlackList()

```
void Digikam::DPluginLoader::appendPluginToBlackList (
    const QString & filename )
```

#### Parameters

<i>filename</i>	The name of the file excluding file extension to blacklist. E.g. to ignore "HtmlGalleryPlugin.so" on Linux and "HtmlGalleryPlugin.dll" on Windows, pass "HtmlGalleryPlugin"
-----------------	---

### 6.486.2.2 appendPluginToWhiteList()

```
void Digikam::DPluginLoader::appendPluginToWhiteList (
    const QString & filename )
```

#### Parameters

<i>filename</i>	The name of the file excluding file extension to whitelist. E.g. to not ignore "HtmlGalleryPlugin.so" on Linux and "HtmlGalleryPlugin.dll" on Windows, pass "HtmlGalleryPlugin"
-----------------	---

### 6.486.2.3 canExport()

```
bool Digikam::DPluginLoader::canExport (
    const QString & format ) const
```

Return true if format is supported by a [DPluginDImg](#) to export image.

### 6.486.2.4 canImport()

```
bool Digikam::DPluginLoader::canImport (
    const QString & format ) const
```

Return true if format is supported by a [DPluginDImg](#) to import image.

### 6.486.2.5 cleanUp()

```
void Digikam::DPluginLoader::cleanUp ( )
```

Unload all loaded plugins. Call this method before the main instance is closed.

### 6.486.2.6 configGroupName()

```
QString Digikam::DPluginLoader::configGroupName ( ) const
```

Return the config group name used to store the list of plugins to load at startup.

### 6.486.2.7 exportWidget()

```
DImgLoaderSettings * Digikam::DPluginLoader::exportWidget (
    const QString & format ) const
```

Return a new widget instance from a [DPluginDImg](#) to show settings while exporting image to specified format. Return nullptr if format is not supported or if no settings widget is available for this format.

### 6.486.2.8 init()

```
void Digikam::DPluginLoader::init ( )
```

Init plugin loader. Call this method to parse and load relevant plugins installed on your system.

### 6.486.2.9 instance()

```
DPluginLoader * Digikam::DPluginLoader::instance ( ) [static]
```

#### Returns

[DPluginLoader](#) global instance

### 6.486.2.10 registerEditorPlugins()

```
void Digikam::DPluginLoader::registerEditorPlugins (
    QObject *const parent )
```

Register all Editor plugin actions to parent object.

### 6.486.2.11 registerGenericPlugins()

```
void Digikam::DPluginLoader::registerGenericPlugins (
    QObject *const parent )
```

Register all Generic plugin actions to parent object.

### 6.486.2.12 registerRawImportPlugins()

```
void Digikam::DPluginLoader::registerRawImportPlugins (
    QObject *const parent )
```

Register all Raw Import plugin to parent object.

## 6.487 Digikam::DPluginLoader::Private Class Reference

### Public Member Functions

- bool [appendPlugin](#) (QObject \*const obj, QPluginLoader \*const loader)
- void [loadPlugins](#) ()
- QFileInfoList [pluginEntriesList](#) () const

## Public Attributes

- QList< [DPlugin](#) \* > **allPlugins**
- QStringList **blacklist**
- QStringList **DKBlacklist**  
*Showfoto specific plugins to ignore in digiKam.*
- bool **pluginsLoaded** = false
- QStringList **whitelist**

## 6.487.1 Member Function Documentation

### 6.487.1.1 `appendPlugin()`

```
bool Digikam::DPluginLoader::Private::appendPlugin (
    QObject *const obj,
    QPluginLoader *const loader )
```

Append object to the given plugins list.

### 6.487.1.2 `loadPlugins()`

```
void Digikam::DPluginLoader::Private::loadPlugins ( )
```

Stage to load plugins in memory

### 6.487.1.3 `pluginEntriesList()`

```
QFileInfoList Digikam::DPluginLoader::Private::pluginEntriesList ( ) const
```

Try to find plugin files from Qt5 plugins install dir:

## 6.488 Digikam::DPluginRawImport Class Reference

## 6.488.1 Constructor & Destructor Documentation

### 6.488.1.1 DPluginRawImport()

```
Digikam::DPluginRawImport::DPluginRawImport (
    QObject *const parent = nullptr ) [explicit]
```

Constructor with optional parent object

### 6.488.1.2 ~DPluginRawImport()

```
Digikam::DPluginRawImport::~~DPluginRawImport ( ) [override], [default]
```

Destructor

## 6.488.2 Member Function Documentation

### 6.488.2.1 categories()

```
QStringList Digikam::DPluginRawImport::categories ( ) const [inline], [override], [virtual]
```

This kind of plugin do not use a category.

Implements [Digikam::DPlugin](#).

### 6.488.2.2 count()

```
int Digikam::DPluginRawImport::count ( ) const [inline], [override], [virtual]
```

This kind of plugin only provide one tool.

Implements [Digikam::DPlugin](#).

### 6.488.2.3 getRawProgram()

```
QString Digikam::DPluginRawImport::getRawProgram ( ) const [virtual]
```

Return the path to the raw program, or empty if not found.

### 6.488.2.4 ifaceId()

```
QString Digikam::DPluginRawImport::ifaceId ( ) const [inline], [override], [virtual]
```

Return the plugin interface identifier.

Implements [Digikam::DPlugin](#).

**6.488.2.5 run()**

```
virtual bool Digikam::DPluginRawImport::run (
    const QString & path,
    const DRawDecoding & def ) [pure virtual]
```

Function to re-implement used to invoke Raw processor for a Raw file path and a Default Raw decoding settings.

**6.488.2.6 setVisible()**

```
void Digikam::DPluginRawImport::setVisible (
    bool ) [inline], [override], [virtual]
```

This kind of plugin do not have GUI visibility attribute.

Implements [Digikam::DPlugin](#).

**6.488.2.7 signalDecodedImage**

```
void Digikam::DPluginRawImport::signalDecodedImage (
    const Digikam::LoadingDescription & ,
    const Digikam::DImg & ) [signal]
```

Signal emitted to notify host application to load pre-decoded Raw preprocessed with these decoding settings.

**6.488.2.8 signalLoadRaw**

```
void Digikam::DPluginRawImport::signalLoadRaw (
    const Digikam::LoadingDescription & ) [signal]
```

Signal emitted to notify host application to load Raw with these decoding settings.

**6.489 Digikam::DPluginSetup Class Reference**

Inheritance diagram for Digikam::DPluginSetup:

### Public Member Functions

- void **applySettings** ()
- **DPluginSetup** (QWidget \*const parent=nullptr)
- void **setPluginConfView** (DPluginConfView \*const view)

## 6.490 Digikam::DPointSelect Class Reference

Inheritance diagram for Digikam::DPointSelect:

## Signals

- void `valueChanged` (int x, int y)

## Public Member Functions

- class `Private`

## 6.490.1 Constructor & Destructor Documentation

### 6.490.1.1 DPointSelect()

```
Digikam::DPointSelect::DPointSelect (
    QWidget *const parent ) [explicit]
```

Constructs a two-dimensional selector widget which has a value range of [0..100] in both directions.

## 6.490.2 Member Function Documentation

### 6.490.2.1 contentsRect()

```
QRect Digikam::DPointSelect::contentsRect ( ) const
```

#### Returns

the rectangle on which subclasses should draw.

### 6.490.2.2 drawContents()

```
virtual void Digikam::DPointSelect::drawContents (
    QPainter * ) [inline], [protected], [virtual]
```

Override this function to draw the contents of the widget. The default implementation does nothing.

Draw within [contentsRect\(\)](#) only.

Reimplemented in [Digikam::DHueSaturationSelector](#).

### 6.490.2.3 drawMarker()

```
void Digikam::DPointSelect::drawMarker (
    QPainter * p,
    int xp,
    int yp ) [protected], [virtual]
```

Override this function to draw the marker which indicates the currently selected value pair.

### 6.490.2.4 minimumSizeHint()

```
QSize Digikam::DPointSelect::minimumSizeHint ( ) const [override]
```

Reimplemented to give the widget a minimum size

### 6.490.2.5 setMarkerColor()

```
void Digikam::DPointSelect::setMarkerColor (
    const QColor & col )
```

Sets the color used to draw the marker

#### Parameters

<i>col</i>	the color
------------	-----------

### 6.490.2.6 setRange()

```
void Digikam::DPointSelect::setRange (
    int minX,
    int minY,
    int maxX,
    int maxY )
```

Sets the range of possible values.

### 6.490.2.7 setValues()

```
void Digikam::DPointSelect::setValues (
    int xPos,
    int yPos )
```

Sets the current values in horizontal and vertical direction.

#### Parameters

<i>xPos</i>	the horizontal value
<i>yPos</i>	the vertical value

### 6.490.2.8 setXValue()

```
void Digikam::DPointSelect::setXValue (
    int xPos )
```

Sets the current horizontal value

#### Parameters

<i>xPos</i>	the horizontal value
-------------	----------------------

### 6.490.2.9 setYValue()

```
void Digikam::DPointSelect::setYValue (
    int yPos )
```

Sets the current vertical value

#### Parameters

<i>yPos</i>	the vertical value
-------------	--------------------

#### 6.490.2.10 valueChanged

```
void Digikam::DPointSelect::valueChanged (
    int x,
    int y ) [signal]
```

This signal is emitted whenever the user chooses a value, e.g. by clicking with the mouse on the widget.

#### 6.490.2.11 valuesFromPosition()

```
void Digikam::DPointSelect::valuesFromPosition (
    int x,
    int y,
    int & xVal,
    int & yVal ) const [protected]
```

Converts a pixel position to its corresponding values.

#### 6.490.2.12 xValue()

```
int Digikam::DPointSelect::xValue ( ) const
```

##### Returns

the current value in horizontal direction.

#### 6.490.2.13 yValue()

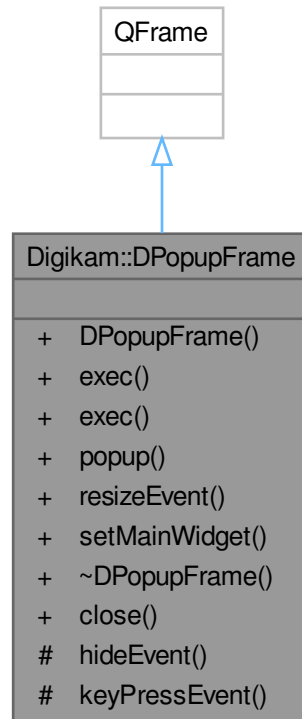

```
int Digikam::DPointSelect::yValue ( ) const
```

##### Returns

the current value in vertical direction.

## 6.491 Digikam::DPopupFrame Class Reference

Inheritance diagram for Digikam::DPopupFrame:

### Public Slots

- void `close` (int r)

### Signals

- void `leaveModality` ()

### Public Member Functions

- `DPopupFrame` (QWidget \*const parent=nullptr)
- int `exec` (const QPoint &p)
- int `exec` (int x, int y)
- void `popup` (const QPoint &p)

## 6.491.1 Constructor & Destructor Documentation

### 6.491.1.1 DPopupFrame()

```
Digikam::DPopupFrame::DPopupFrame (
    QWidget *const parent = nullptr ) [explicit]
```

The constructor. Creates a dialog without buttons.

### 6.491.1.2 ~DPopupFrame()

```
Digikam::DPopupFrame::~~DPopupFrame ( ) [override]
```

The destructor

## 6.491.2 Member Function Documentation

### 6.491.2.1 close

```
void Digikam::DPopupFrame::close (
    int r ) [slot]
```

Close the popup window. This is called from the main widget, usually. *r* is the result returned from [exec\(\)](#).

### 6.491.2.2 exec() [1/2]

```
int Digikam::DPopupFrame::exec (
    const QPoint & p )
```

Execute the popup window.

### 6.491.2.3 exec() [2/2]

```
int Digikam::DPopupFrame::exec (
    int x,
    int y )
```

Execute the popup window.

#### 6.491.2.4 hideEvent()

```
void Digikam::DPopupFrame::hideEvent (
    QHideEvent * e ) [override], [protected]
```

Catch hide events.

#### 6.491.2.5 keyPressEvent()

```
void Digikam::DPopupFrame::keyPressEvent (
    QKeyEvent * e ) [override], [protected]
```

Catch key press events.

#### 6.491.2.6 popup()

```
void Digikam::DPopupFrame::popup (
    const QPoint & p )
```

Open the popup window at position pos.

#### 6.491.2.7 resizeEvent()

```
void Digikam::DPopupFrame::resizeEvent (
    QResizeEvent * e ) [override]
```

The resize event. Simply resizes the main widget to the whole widgets client size.

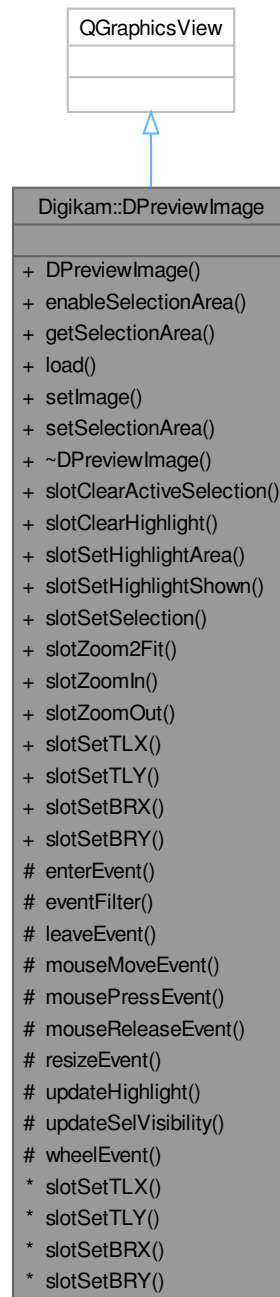

#### 6.491.2.8 setMainWidget()

```
void Digikam::DPopupFrame::setMainWidget (
    QWidget *const m )
```

Set the main widget. You cannot set the main widget from the constructor, since it must be a child of the frame itself. Be careful: the size is set to the main widgets size. It is up to you to set the main widgets correct size before setting it as the main widget.

## 6.492 Digikam::DPreviewImage Class Reference

Inheritance diagram for Digikam::DPreviewImage:

### Public Slots

- void `slotClearActiveSelection ()`
- void `slotClearHighlight ()`

- void [slotSetHighlightArea](#) (float tl\_x, float tl\_y, float br\_x, float br\_y)
  - void [slotSetHighlightShown](#) (int percentage, const QColor &highLightColor=Qt::white)
  - void [slotSetSelection](#) (float tl\_x, float tl\_y, float br\_x, float br\_y)
  - void **slotZoom2Fit** ()
  - void **slotZoomIn** ()
  - void **slotZoomOut** ()
- 
- void **slotSetTLX** (float ratio)
    - Selection area specific slots (TL = TopLeft, BR = BottomRight)*
  - void **slotSetTLY** (float ratio)
  - void **slotSetBRX** (float ratio)
  - void **slotSetBRY** (float ratio)

### Public Member Functions

- **DPreviewImage** (QWidget \*const parent)
- void **enableSelectionArea** (bool b)
- QRectF **getSelectionArea** () const
- bool **load** (const QUrl &file) const
- bool **setImage** (const QImage &img) const
- void [setSelectionArea](#) (const QRectF &rectangle)

### Protected Member Functions

- void **enterEvent** (QEnterEvent \*) override
- bool **eventFilter** (QObject \*, QEvent \*) override
- void **leaveEvent** (QEvent \*) override
- void **mouseMoveEvent** (QMouseEvent \*) override
- void **mousePressEvent** (QMouseEvent \*) override
- void **mouseReleaseEvent** (QMouseEvent \*) override
- void **resizeEvent** (QResizeEvent \*) override
- void **updateHighlight** ()
- void **updateSelVisibility** ()
- void **wheelEvent** (QWheelEvent \*) override

## 6.492.1 Member Function Documentation

### 6.492.1.1 setSelectionArea()

```
void Digikam::DPreviewImage::setSelectionArea (
    const QRectF & rectangle )
```

Sets a selection area and show it

#### Parameters

<i>rectangle</i>	This rectangle should have height and width of 1.0
------------------	--

### 6.492.1.2 slotClearHighlight

```
void Digikam::DPreviewImage::slotClearHighlight ( ) [slot]
```

This function removes the highlight area.

### 6.492.1.3 slotSetHighlightArea

```
void Digikam::DPreviewImage::slotSetHighlightArea (
    float tl_x,
    float tl_y,
    float br_x,
    float br_y ) [slot]
```

This function is used to darken everything except what is inside the given area.

#### Note

all parameters must be in the range 0.0 -> 1.0.

#### Parameters

<i>tl</i> <sub>↔</sub> <i>_x</i>	is the x coordinate of the top left corner 0=0 1=image with.
<i>tl</i> <sub>↔</sub> <i>_y</i>	is the y coordinate of the top left corner 0=0 1=image height.
<i>br</i> <sub>↔</sub> <i>_x</i>	is the x coordinate of the bottom right corner 0=0 1=image with.
<i>br</i> <sub>↔</sub> <i>_y</i>	is the y coordinate of the bottom right corner 0=0 1=image height.

### 6.492.1.4 slotSetHighlightShown

```
void Digikam::DPreviewImage::slotSetHighlightShown (
    int percentage,
    const QColor & highlightColor = Qt::white ) [slot]
```

This function sets the percentage of the highlighted area that is visible. The rest is hidden. This stacks with the previous highlight area.

#### Parameters

<i>percentage</i>	is the percentage of the highlighted area that is shown.
<i>highlightColor</i>	is the color to use to hide the highlighted area of the image.

### 6.492.1.5 slotSetSelection

```
void Digikam::DPreviewImage::slotSetSelection (
    float tl_x,
```

```
float tl_y,  
float br_x,  
float br_y ) [slot]
```

This function is used to set a selection without the user setting it.

#### Note

all parameters must be in the range 0.0 -> 1.0.

#### Parameters

<i>tl</i> <sub>↔</sub> <i>_x</i>	is the x coordinate of the top left corner 0=0 1=image width.
<i>tl</i> <sub>↔</sub> <i>_y</i>	is the y coordinate of the top left corner 0=0 1=image height.
<i>br</i> <sub>↔</sub> <i>_x</i>	is the x coordinate of the bottom right corner 0=0 1=image width.
<i>br</i> <sub>↔</sub> <i>_y</i>	is the y coordinate of the bottom right corner 0=0 1=image height.

## 6.493 Digikam::DPreviewManager Class Reference

Inheritance diagram for Digikam::DPreviewManager:

### Public Types

- enum `DisplayMode` { `MessageMode = 0` , `PreviewMode` }

### Public Slots

- void `slotLoad` (const `QUrl` &url)

### Signals

- void `signalButtonClicked` ()

## Public Member Functions

- **DPreviewManager** (QWidget \*const parent)
  - bool **load** (const QUrl &file, bool fit=true)
  - void **setBusy** (bool b, const QString &text=QString())
  - void **setButtonText** (const QString &text)
  - void **setButtonVisible** (bool b)
  - void **setImage** (const QImage &img, bool fit=true)
  - void **setSelectionAreaPossible** (bool b)
  - void **setText** (const QString &text, const QColor &color=Qt::white)
  - void **setThumbnail** (const QPixmap &preview=QPixmap())
- 
- void [setSelectionArea](#) (const QRectF &rectangle)
  - QRectF **getSelectionArea** () const

## 6.493.1 Member Function Documentation

### 6.493.1.1 setSelectionArea()

```
void Digikam::DPreviewManager::setSelectionArea (  
    const QRectF & rectangle )
```

Manage a selection area and show it

#### Parameters

<i>rectangle</i>	This rectangle should have height and width of 1.0
------------------	--

## 6.494 Digikam::DProgressDlg Class Reference

Inheritance diagram for Digikam::DProgressDlg:

### Public Slots

- void **addedAction** (const QPixmap &icon, const QString &text)
- void **advance** (int offset)

- void **incrementMaximum** (int added)
- void **reset** ()
- void **setButtonText** (const QString &text)
- void **setMaximum** (int max)
- void **setValue** (int value)

### Signals

- void **signalCancelPressed** ()

### Public Member Functions

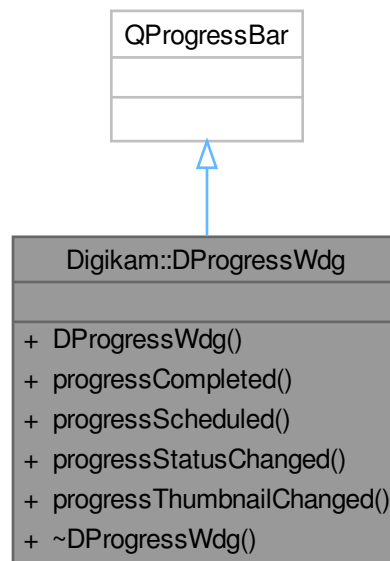

- **DProgressDlg** (QWidget \*const parent=nullptr, const QString &caption=QString())
- void **setLabel** (const QString &text)
- void **setTitle** (const QString &text)
- int **value** () const

### Protected Slots

- void **slotCancel** ()

## 6.495 Digikam::DProgressWdg Class Reference

Inheritance diagram for Digikam::DProgressWdg:

## Signals

- void [signalProgressCanceled](#) ()

## Public Member Functions

- **DProgressWdg** (QWidget \*const parent)
- void [progressCompleted](#) ()
- void [progressScheduled](#) (const QString &title, bool canBeCanceled, bool hasThumb)
- void [progressStatusChanged](#) (const QString &status)
- void [progressThumbnailChanged](#) (const QPixmap &thumb)

## 6.495.1 Member Function Documentation

### 6.495.1.1 progressCompleted()

```
void Digikam::DProgressWdg::progressCompleted ( )
```

Call this method to query progress manager that process is done.

### 6.495.1.2 progressScheduled()

```
void Digikam::DProgressWdg::progressScheduled (
    const QString & title,
    bool canBeCanceled,
    bool hasThumb )
```

Call this method to start a new instance of progress notification into progress manager You can pass title string to name progress item, and set it as cancelable. In this case, [signalProgressCanceled\(\)](#) is fired when user press cancel button from progress manager. This item can also accept a thumbnail that you can change through `progressThumbnailChanged()`.

### 6.495.1.3 progressStatusChanged()

```
void Digikam::DProgressWdg::progressStatusChanged (
    const QString & status )
```

Change status string in progress manager

### 6.495.1.4 progressThumbnailChanged()

```
void Digikam::DProgressWdg::progressThumbnailChanged (
    const QPixmap & thumb )
```

Change thumbnail in progress manager

6.495.1.5 signalProgressCanceled

```
void Digikam::DProgressWdg::signalProgressCanceled ( ) [signal]
```

Fired when user press cancel button from progress manager.

## 6.496 Digikam::DragDropModelImplementation Class Reference

Inheritance diagram for Digikam::DragDropModelImplementation:

## Public Member Functions

- virtual Qt::ItemFlags [dragDropFlags](#) (const QModelIndex &index) const
- Qt::ItemFlags [dragDropFlagsV2](#) (const QModelIndex &index) const
- [AbstractItemDragDropHandler](#) \* **dragDropHandler** () const
- [DragDropModelImplementation](#) ()=default
- bool **dropMimeData** (const QMimeData \*, Qt::DropAction, int, int, const QModelIndex &)
- virtual bool **isDragEnabled** (const QModelIndex &index) const
- virtual bool **isDropEnabled** (const QModelIndex &index) const
- QMimeData \* **mimeData** (const QModelIndexList &indexes) const
- QStringList **mimeTypes** () const
- void [setDragDropHandler](#) ([AbstractItemDragDropHandler](#) \*handler)
- Qt::DropActions [supportedDropActions](#) () const

## Protected Attributes

- [AbstractItemDragDropHandler](#) \* **m\_dragDropHandler** = nullptr

## 6.496.1 Constructor & Destructor Documentation

### 6.496.1.1 DragDropModelImplementation()

```
Digikam::DragDropModelImplementation::DragDropModelImplementation ( ) [default]
```

A class providing a sample implementation for a QAbstractItemModel redirecting drag-and-drop support to a handler. Include the macro `DECLARE_Model_DRAG_DROP_METHODS` in your derived QAbstractItemModel class.

## 6.496.2 Member Function Documentation

### 6.496.2.1 dragDropFlags()

```
Qt::ItemFlags Digikam::DragDropModelImplementation::dragDropFlags (
    const QModelIndex & index ) const [virtual]
```

Call from your flags() method, adding the relevant drag drop flags. Default implementation enables both drag and drop on the index if a drag drop handler is set. Reimplement to fine-tune. Note: There is an alternative below.

### 6.496.2.2 dragDropFlagsV2()

```
Qt::ItemFlags Digikam::DragDropModelImplementation::dragDropFlagsV2 (
    const QModelIndex & index ) const
```

This is an alternative approach to [dragDropFlags\(\)](#). [dragDropFlagsV2](#) calls the virtual methods [isDragEnabled\(\)](#) and [isDropEnabled\(\)](#) which you then reimplement. Use simple [dragDropFlags\(\)](#) if you need not customization, or reimplement [dragDropFlags\(\)](#) if you fine-tune it yourself.

### 6.496.2.3 setDragDropHandler()

```
void Digikam::DragDropModelImplementation::setDragDropHandler (
    AbstractItemDragDropHandler * handler )
```

Set a drag drop handler.

### 6.496.2.4 supportedDropActions()

```
Qt::DropActions Digikam::DragDropModelImplementation::supportedDropActions ( ) const
```

Implements the relevant QAbstractItemModel methods for drag and drop. All functionality is redirected to the handler. dropMimeData() always returns false, leaving implementation to the view.

## Protected Member Functions

- virtual `QAbstractItemView * asView ()=0`
- bool **decodelsCutSelection** (const `QMimeData *mimeData`)
- virtual `AbstractItemDragDropHandler * dragDropHandler () const =0`
- void **dragEnterEvent** (`QDragEnterEvent *event`)
- void **dragMoveEvent** (`QDragMoveEvent *e`)
- void **dropEvent** (`QDropEvent *e`)
- void **encodelsCutSelection** (`QMimeData *mime`, bool `isCutSelection`)
- virtual `QModelIndex mapIndexForDragDrop` (const `QModelIndex &index`) const =0
- virtual `QPixmap pixmapForDrag` (const `QList< QModelIndex > &indexes`) const =0
- void **startDrag** (`Qt::DropActions supportedActions`)

## 6.497.1 Member Function Documentation

### 6.497.1.1 asView()

```
virtual QAbstractItemView * Digikam::DragDropViewImplementation::asView ( ) [protected], [pure virtual]
```

This one is implemented by `DECLARE_VIEW_DRAG_DROP_METHODS`.

### 6.497.1.2 dragDropHandler()

```
virtual AbstractItemDragDropHandler * Digikam::DragDropViewImplementation::dragDropHandler ( ) const [protected], [pure virtual]
```

You need to implement these three methods Returns the drag drop handler.

Implemented in [Digikam::ItemCategorizedView](#), [Digikam::TableViewTreeView](#), [Digikam::VersionsTreeView](#), [ShowFoto::ShowfotoCategorizedView](#), and [Digikam::ImportCategorizedView](#).

### 6.497.1.3 dragEnterEvent()

```
void Digikam::DragDropViewImplementation::dragEnterEvent ( QDragEnterEvent * event ) [protected]
```

Implements the relevant `QAbstractItemView` methods for drag and drop.

### 6.497.1.4 mapIndexForDragDrop()

```
virtual QModelIndex Digikam::DragDropViewImplementation::mapIndexForDragDrop ( const QModelIndex & index ) const [protected], [pure virtual]
```

Maps the given index of the view's model to an index of the handler's model, which can be a source model of the view's model.

Implemented in [Digikam::TableViewTreeView](#), [Digikam::VersionsTreeView](#), and [Digikam::ItemViewCategorized](#).

### 6.497.1.5 pixmapForDrag()

```
virtual QPixmap Digikam::DragDropViewImplementation::pixmapForDrag (
    const QList< QModelIndex > & indexes ) const [protected], [pure virtual]
```

Creates a pixmap for dragging the given indexes.

Implemented in [Digikam::TableViewTreeView](#), [Digikam::VersionsTreeView](#), and [Digikam::ItemViewCategorized](#).

## 6.498 Digikam::DragHandle Class Reference

Inheritance diagram for Digikam::DragHandle:

### Public Member Functions

- **DragHandle** (QDockWidget \*const)
- QSize **minimumSizeHint** () const override
- QSize **sizeHint** () const override

### Protected Member Functions

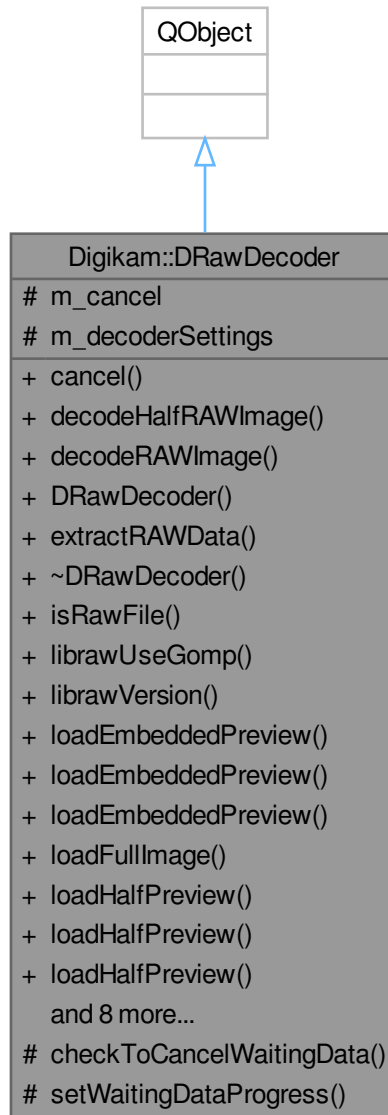

- void **paintEvent** (QPaintEvent \*) override

### 6.498.1 Detailed Description

An alternative handle for QDockWidget's that looks like a toolbar handle.

## 6.499 Digikam::DRawDecoder Class Reference

Inheritance diagram for Digikam::DRawDecoder:

### Classes

- class [Private](#)

### Public Member Functions

- void [cancel](#) ()

- bool [decodeHalfRAWImage](#) (const QString &filePath, const [DRawDecoderSettings](#) &[DRawDecoderSettings](#), QByteArray &imageData, int &width, int &height, int &rgbmax)
- bool [decodeRAWImage](#) (const QString &filePath, const [DRawDecoderSettings](#) &[DRawDecoderSettings](#), QByteArray &imageData, int &width, int &height, int &rgbmax)
- [DRawDecoder](#) ()
- bool [extractRAWData](#) (const QString &filePath, QByteArray &rawData, [DRawInfo](#) &identify, unsigned int shotSelect=0)
- [~DRawDecoder](#) () override

### Static Public Member Functions

- static QString [rawFiles](#) ()
- static QStringList [rawFilesList](#) ()
- static int [rawFilesVersion](#) ()
- static QStringList [supportedCamera](#) ()

### Protected Member Functions

- virtual bool [checkToCancelWaitingData](#) ()
- virtual void [setWaitingDataProgress](#) (double value)

### Protected Attributes

- bool [m\\_cancel](#) = false
- [DRawDecoderSettings](#) [m\\_decoderSettings](#)

### Friends

- class [Private](#)

## 6.499.1 Constructor & Destructor Documentation

### 6.499.1.1 DRawDecoder()

`Digikam::DRawDecoder::DRawDecoder ( )`

Standard constructor.

### 6.499.1.2 ~DRawDecoder()

```
Digikam::DRawDecoder::~~DRawDecoder ( ) [override]
```

Standard destructor.

## 6.499.2 Member Function Documentation

### 6.499.2.1 cancel()

```
void Digikam::DRawDecoder::cancel ( )
```

To cancel 'decodeHalfRAWImage' and 'decodeRAWImage' methods running in a separate thread.

### 6.499.2.2 checkToCancelWaitingData()

```
bool Digikam::DRawDecoder::checkToCancelWaitingData ( ) [protected], [virtual]
```

Re-implement this method to control the cancelisation of loop which wait data from RAW decoding process with your proper environment. By default, this method check if `m_cancel` is true.

### 6.499.2.3 decodeHalfRAWImage()

```
bool Digikam::DRawDecoder::decodeHalfRAWImage (
    const QString & filePath,
    const DRawDecoderSettings & DRawDecoderSettings,
    QByteArray & imageData,
    int & width,
    int & height,
    int & rgbmax )
```

Extract a small size of decode RAW data from 'filePath' picture file using 'DRawDecoderSettings' settings. This is a cancelable method which require a class instance to run because RAW pictures decoding can take a while.

This method return:

- A byte array container 'imageData' with picture data. Pixels order is RGB. Color depth can be 8 or 16. In 8 bits you can access to color component using (uchar\*), in 16 bits using (ushort\*).
- Size size of image in number of pixels ('width' and 'height').
- The max average of RGB components from decoded picture.
- 'false' is returned if decoding failed, else 'true'.

#### 6.499.2.4 decodeRAWImage()

```
bool Digikam::DRawDecoder::decodeRAWImage (
    const QString & filePath,
    const DRawDecoderSettings & DRawDecoderSettings,
    QByteArray & imageData,
    int & width,
    int & height,
    int & rgbmax )
```

Extract a full size of RAW data from 'filePath' picture file using 'DRawDecoderSettings' settings. This is a cancelable method which require a class instance to run because RAW pictures decoding can take a while.

This method return:

- A byte array container 'imageData' with picture data. Pixels order is RGB. Color depth can be 8 or 16. In 8 bits you can access to color component using (uchar\*), in 16 bits using (ushort\*).
- Size size of image in number of pixels ('width' and 'height').
- The max average of RGB components from decoded picture.
- 'false' is returned if decoding failed, else 'true'.

#### 6.499.2.5 extractRAWData()

```
bool Digikam::DRawDecoder::extractRAWData (
    const QString & filePath,
    QByteArray & rawData,
    DRawInfo & identify,
    unsigned int shotSelect = 0 )
```

Extract Raw image data undemosaiced and without post processing from 'filePath' picture file. This is a cancelable method which require a class instance to run because RAW pictures loading can take a while.

This method return:

- A byte array container 'rawData' with raw data.
- All info about Raw image into 'identify' container.
- 'false' is returned if loading failed, else 'true'.

#### 6.499.2.6 librawUseGomp()

```
int Digikam::DRawDecoder::librawUseGomp ( ) [static]
```

Return true or false if LibRaw use parallel demosaicing or not (libgomp support). Return -1 if undefined.

#### 6.499.2.7 librawVersion()

```
QString Digikam::DRawDecoder::librawVersion ( ) [static]
```

Return LibRaw version string.

**6.499.2.8 loadEmbeddedPreview()** [1/3]

```
bool Digikam::DRawDecoder::loadEmbeddedPreview (
    QByteArray & imgData,
    const QBuffer & inBuffer ) [static]
```

Get the embedded JPEG preview image from RAW image passed in QBuffer as a QByteArray which will include Exif Data. This is fast and non cancelable. This method does not require a class instance to run.

**6.499.2.9 loadEmbeddedPreview()** [2/3]

```
bool Digikam::DRawDecoder::loadEmbeddedPreview (
    QByteArray & imgData,
    const QString & path ) [static]
```

Get the embedded JPEG preview image from RAW picture as a QByteArray which will include Exif Data. This is fast and non cancelable. This method does not require a class instance to run.

**6.499.2.10 loadEmbeddedPreview()** [3/3]

```
bool Digikam::DRawDecoder::loadEmbeddedPreview (
    QImage & image,
    const QString & path ) [static]
```

Get the embedded JPEG preview image from RAW picture as a QImage. This is fast and non cancelable This method does not require a class instance to run.

**6.499.2.11 loadFullImage()**

```
bool Digikam::DRawDecoder::loadFullImage (
    QImage & image,
    const QString & path,
    const DRawDecoderSettings & settings = DRawDecoderSettings() ) [static]
```

Get the full decoded RAW picture. This is a more slower than [loadHalfPreview\(\)](#) method and non cancelable. This method does not require a class instance to run.

**6.499.2.12 loadHalfPreview()** [1/3]

```
bool Digikam::DRawDecoder::loadHalfPreview (
    QByteArray & imgData,
    const QBuffer & inBuffer ) [static]
```

Get the half decoded RAW picture passed in QBuffer as JPEG data in QByteArray. This is slower than [loadEmbeddedPreview\(\)](#) method and non cancelable. This method does not require a class instance to run.

**6.499.2.13 loadHalfPreview()** [2/3]

```
bool Digikam::DRawDecoder::loadHalfPreview (
    QByteArray & imgData,
    const QString & path ) [static]
```

Get the half decoded RAW picture as JPEG data in QByteArray. This is slower than [loadEmbeddedPreview\(\)](#) method and non cancelable. This method does not require a class instance to run.

**6.499.2.14 loadHalfPreview()** [3/3]

```
bool Digikam::DRawDecoder::loadHalfPreview (
    QImage & image,
    const QString & path,
    bool rotate = true ) [static]
```

Get the half decoded RAW picture. This is slower than [loadEmbeddedPreview\(\)](#) method and non cancelable. This method does not require a class instance to run.

**6.499.2.15 loadRawPreview()** [1/3]

```
static bool Digikam::DRawDecoder::loadRawPreview (
    QByteArray & imgData,
    const QBuffer & inBuffer ) [static]
```

Get the preview of RAW picture passed in QBuffer as a QByteArray holding JPEG data. It tries [loadEmbeddedPreview\(\)](#) first and if it fails, calls [loadHalfPreview\(\)](#).

**6.499.2.16 loadRawPreview()** [2/3]

```
static bool Digikam::DRawDecoder::loadRawPreview (
    QByteArray & imgData,
    const QString & path ) [static]
```

Get the preview of RAW picture as a QByteArray holding JPEG data. It tries [loadEmbeddedPreview\(\)](#) first and if it fails, calls [loadHalfPreview\(\)](#).

**6.499.2.17 loadRawPreview()** [3/3]

```
bool Digikam::DRawDecoder::loadRawPreview (
    QImage & image,
    const QString & path ) [static]
```

Get the preview of RAW picture as a QImage. It tries [loadEmbeddedPreview\(\)](#) first and if it fails, calls [loadHalfPreview\(\)](#).

#### 6.499.2.18 rawFileIdentify()

```
bool Digikam::DRawDecoder::rawFileIdentify (
    DRawInfo & identify,
    const QString & path ) [static]
```

Get the camera settings which have taken RAW file. Look into rawinfo.h for more details. This is a fast and non cancelable method which do not require a class instance to run.

#### 6.499.2.19 rawFiles()

```
QString Digikam::DRawDecoder::rawFiles ( ) [static]
```

Return the string of all RAW file type mime supported.

#### 6.499.2.20 rawFilesList()

```
QStringList Digikam::DRawDecoder::rawFilesList ( ) [static]
```

Return the list of all RAW file type mime supported, as a QStringList, without wildcard and suffix dot.

#### 6.499.2.21 rawFilesVersion()

```
int Digikam::DRawDecoder::rawFilesVersion ( ) [static]
```

Returns a version number for the list of supported RAW file types. This version is incremented if the list of supported formats has changed between library releases.

#### 6.499.2.22 setWaitingDataProgress()

```
void Digikam::DRawDecoder::setWaitingDataProgress (
    double value ) [protected], [virtual]
```

Re-implement this method to control the pseudo progress value during RAW decoding (when ddraw run with an internal loop without feedback) with your proper environment. By default, this method does nothing. Progress value average for this stage is 0%-n%, with 'n' == 40% max (see [setWaitingDataProgress\(\)](#) method).

#### 6.499.2.23 supportedCamera()

```
QStringList Digikam::DRawDecoder::supportedCamera ( ) [static]
```

Provide a list of supported RAW Camera name.

## 6.499.3 Member Data Documentation

### 6.499.3.1 m\_cancel

```
bool Digikam::DRawDecoder::m_cancel = false [protected]
```

Used internally to cancel RAW decoding operation. Normally, you don't need to use it directly, excepted if you derivated this class. Usual way is to use [cancel\(\)](#) method

### 6.499.3.2 m\_decoderSettings

```
DRawDecoderSettings Digikam::DRawDecoder::m_decoderSettings [protected]
```

The settings container used to perform RAW pictures decoding. See 'drawdecodingsetting.h' for details.

## 6.501.1 Member Enumeration Documentation

### 6.501.1.1 DecodingQuality

enum [Digikam::DRawDecoderSettings::DecodingQuality](#)

**Note**

from original ddraw demosaic

Bilinear: use high-speed but low-quality bilinear interpolation (default - for slow computer). In this method, the red value of a non-red pixel is computed as the average of the adjacent red pixels, and similar for blue and green. VNG: use Variable Number of Gradients interpolation. This method computes gradients near the pixel of interest and uses the lower gradients (representing smoother and more similar parts of the image) to make an estimate. PPG↔: use Patterned Pixel Grouping interpolation. Pixel Grouping uses assumptions about natural scenery in making estimates. It has fewer color artifacts on natural images than the Variable Number of Gradients method. AHD: use Adaptive Homogeneity-Directed interpolation. This method selects the direction of interpolation so as to maximize a homogeneity metric, thus typically minimizing color artifacts. DCB: DCB interpolation (see [www.linuxphoto.org/html/dcb.html](http://www.linuxphoto.org/html/dcb.html) for details) DHT: DHT interpolation. AAHD: Enhanced Adaptive AHD interpolation.

**6.501.1.2 InputColorSpace**

enum `Digikam::DRawDecoderSettings::InputColorSpace`

Input color profile used to decoded image NOINPUTCS: No input color profile. EMBEDDED: Use the camera profile embedded in RAW file if exist. CUSTOMINPUTCS: Use a custom input color space profile.

**6.501.1.3 NoiseReduction**

enum `Digikam::DRawDecoderSettings::NoiseReduction`

Noise Reduction method to apply before demosaicing NONR: No noise reduction. WAVELETSNR: wavelets correction to erase noise while preserving real detail. It's applied after interpolation. FBDDNR: Fake Before Demosaicing Denoising noise reduction. It's applied before interpolation.

**6.501.1.4 OutputColorSpace**

enum `Digikam::DRawDecoderSettings::OutputColorSpace`

Output RGB color space used to decoded image RAWCOLOR: No output color profile (Linear RAW). SRGB: Use standard sRGB color space. ADOBERGB: Use standard Adobe RGB color space. WIDEGAMMUT: Use standard RGB Wide Gamut color space. PROPHOTO: Use standard RGB Pro Photo color space. CUSTOMOUTPUTCS: Use a custom workspace color profile.

**6.501.1.5 WhiteBalance**

enum `Digikam::DRawDecoderSettings::WhiteBalance`

White balances alternatives NONE: no white balance used : reverts to standard daylight D65 WB. CAMERA: Use the camera embedded WB if available. Reverts to NONE if not. AUTO: Averages an auto WB on the entire image. CUSTOM: Let use set it's own temperature and green factor (later converted to RGBG factors). AERA: Let use an area from image to average white balance (see `whiteBalanceArea` for details).

## 6.501.2 Constructor & Destructor Documentation

### 6.501.2.1 DRawDecoderSettings() [1/2]

```
Digikam::DRawDecoderSettings::DRawDecoderSettings ( ) [default]
```

Standard constructor with default settings

### 6.501.2.2 DRawDecoderSettings() [2/2]

```
Digikam::DRawDecoderSettings::DRawDecoderSettings (
    const DRawDecoderSettings & o )
```

Equivalent to the copy constructor

### 6.501.2.3 ~DRawDecoderSettings()

```
Digikam::DRawDecoderSettings::~~DRawDecoderSettings ( ) [default]
```

Standard destructor

## 6.501.3 Member Function Documentation

### 6.501.3.1 operator==( )

```
bool Digikam::DRawDecoderSettings::operator==(
    const DRawDecoderSettings & o ) const
```

Compare for equality

### 6.501.3.2 optimizeTimeLoading()

```
void Digikam::DRawDecoderSettings::optimizeTimeLoading ( )
```

Method to use a settings to optimize time loading, for example to compute image histogram

## 6.501.4 Member Data Documentation

### 6.501.4.1 autoBrightness

```
bool Digikam::DRawDecoderSettings::autoBrightness = true
```

If false, use a fixed white level, ignoring the image histogram.

#### 6.501.4.2 blackPoint

```
int Digikam::DRawDecoderSettings::blackPoint = 0
```

Black Point value of output image.

#### 6.501.4.3 brightness

```
double Digikam::DRawDecoderSettings::brightness = 1.0
```

Brightness of output image.

#### 6.501.4.4 customWhiteBalance

```
int Digikam::DRawDecoderSettings::customWhiteBalance = 6500
```

The temperature and the green multiplier of the custom white balance

#### 6.501.4.5 dcbEnhanceFl

```
bool Digikam::DRawDecoderSettings::dcbEnhanceFl = false
```

Turn on the DCB interpolation with enhance interpolated colors.

#### 6.501.4.6 dcbIterations

```
int Digikam::DRawDecoderSettings::dcbIterations = -1
```

Number of DCB median filtering correction passes. -1 : disable (default) 1-10 : DCB correction passes

#### 6.501.4.7 deadPixelMap

```
QString Digikam::DRawDecoderSettings::deadPixelMap
```

Path to text file including dead pixel list.

#### 6.501.4.8 DontStretchPixels

```
bool Digikam::DRawDecoderSettings::DontStretchPixels = false
```

For cameras with non-square pixels, do not stretch the image to its correct aspect ratio. In any case, this option guarantees that each output pixel corresponds to one RAW pixel.

#### 6.501.4.9 enableBlackPoint

```
bool Digikam::DRawDecoderSettings::enableBlackPoint = false
```

Turn on the black point setting to decode RAW image.

#### 6.501.4.10 enableWhitePoint

```
bool Digikam::DRawDecoderSettings::enableWhitePoint = false
```

Turn on the white point setting to decode RAW image.

#### 6.501.4.11 expoCorrection

```
bool Digikam::DRawDecoderSettings::expoCorrection = false
```

Turn on the Exposure Correction before interpolation.

#### 6.501.4.12 expoCorrectionHighlight

```
double Digikam::DRawDecoderSettings::expoCorrectionHighlight = 0.0
```

Amount of highlight preservation for exposure correction before interpolation in E.V. Usable range is from 0.0 (linear exposure shift, highlights may blow) to 1.0 (maximum highlights preservation) This settings can only take effect if `expoCorrectionShift > 1.0`.

#### 6.501.4.13 expoCorrectionShift

```
double Digikam::DRawDecoderSettings::expoCorrectionShift = 1.0
```

Shift of Exposure Correction before interpolation in linear scale. Usable range is from 0.25 (darken image 1 stop : -2EV) to 8.0 (lighten ~1.5 photographic stops : +3EV).

#### 6.501.4.14 fixColorsHighlights

```
bool Digikam::DRawDecoderSettings::fixColorsHighlights = false
```

If true, images with overblown channels are processed much more accurate, without 'pink clouds' (and blue highlights under tungsten lamps).

#### 6.501.4.15 halfSizeColorImage

```
bool Digikam::DRawDecoderSettings::halfSizeColorImage = false
```

Half-size color image decoding (twice as fast as "enableRAWQuality"). Turn on this option to reduce time loading to render histogram for example, no to render an image to screen.

#### 6.501.4.16 inputColorSpace

```
InputColorSpace Digikam::DRawDecoderSettings::inputColorSpace = NOINPUTCS
```

The input color profile used to decoded RAW data. See OutputColorProfile values for details.

#### 6.501.4.17 inputProfile

```
QString Digikam::DRawDecoderSettings::inputProfile
```

Path to custom input ICC profile to define the camera's raw colorspace.

#### 6.501.4.18 medianFilterPasses

```
int Digikam::DRawDecoderSettings::medianFilterPasses = 0
```

After interpolation, clean up color artifacts by repeatedly applying a 3x3 median filter to the R-G and B-G channels.

#### 6.501.4.19 NRThreshold

```
int Digikam::DRawDecoderSettings::NRThreshold = 0
```

Noise reduction threshold value. Null value disable NR. Range is between 100 and 1000. For IMPULSENK : set the amount of Luminance impulse denoise.

#### 6.501.4.20 NRType

```
NoiseReduction Digikam::DRawDecoderSettings::NRType = NONR
```

Noise reduction method to apply before demosaicing.

#### 6.501.4.21 outputColorSpace

```
OutputColorSpace Digikam::DRawDecoderSettings::outputColorSpace = SRGB
```

The output color profile used to decoded RAW data. See OutputColorProfile values for details.

#### 6.501.4.22 outputProfile

```
QString Digikam::DRawDecoderSettings::outputProfile
```

Path to custom output ICC profile to define the color workspace.

#### 6.501.4.23 RAWQuality

`DecodingQuality` Digikam::DRawDecoderSettings::RAWQuality = BILINEAR

RAW quality decoding factor value. See DecodingQuality values for details.

#### 6.501.4.24 RGBInterpolate4Colors

`bool` Digikam::DRawDecoderSettings::RGBInterpolate4Colors = false

Turn on RAW file decoding using RGB interpolation as four colors.

#### 6.501.4.25 sixteenBitsImage

`bool` Digikam::DRawDecoderSettings::sixteenBitsImage = false

Turn on RAW file decoding in 16 bits per color per pixel instead 8 bits.

#### 6.501.4.26 unclipColors

`int` Digikam::DRawDecoderSettings::unclipColors = 0

Unclip Highlight color level: 0 = Clip all highlights to solid white. 1 = Leave highlights unclipped in various shades of pink. 2 = Blend clipped and unclipped values together for a gradual fade to white. 3-9 = Reconstruct highlights. Low numbers favor whites; high numbers favor colors.

#### 6.501.4.27 whiteBalance

`WhiteBalance` Digikam::DRawDecoderSettings::whiteBalance = CAMERA

White balance type to use. See WhiteBalance values for detail

#### 6.501.4.28 whiteBalanceArea

`QRect` Digikam::DRawDecoderSettings::whiteBalanceArea

Rectangle used to calculate the white balance by averaging the region of image.

#### 6.501.4.29 whitePoint

`int` Digikam::DRawDecoderSettings::whitePoint = 0

White Point value of output image.

## 6.502 Digikam::DRawDecoderWidget Class Reference

## 6.503.1 Constructor & Destructor Documentation

### 6.503.1.1 DRawDecoding() [1/2]

```
Digikam::DRawDecoding::DRawDecoding ( )
```

Standard constructor with default settings

### 6.503.1.2 DRawDecoding() [2/2]

```
Digikam::DRawDecoding::DRawDecoding (
    const DRawDecoderSettings & prm ) [explicit]
```

Copy constructor. Creates a copy of a [DRawDecoderSettings](#) object.

### 6.503.1.3 ~DRawDecoding()

```
Digikam::DRawDecoding::~~DRawDecoding ( ) [default]
```

Standard destructor

## 6.503.2 Member Function Documentation

### 6.503.2.1 decodingSettingsToXml()

```
void Digikam::DRawDecoding::decodingSettingsToXml (
    const DRawDecoderSettings & prm,
    QDomElement & elm ) [static]
```

Used by BQM to read/store Queue Raw decoding settings from/to configuration file

### 6.503.2.2 operator==( )

```
bool Digikam::DRawDecoding::operator==(
    const DRawDecoding & other ) const
```

Equality operator.

### 6.503.2.3 optimizeTimeLoading()

```
void Digikam::DRawDecoding::optimizeTimeLoading ( )
```

Method to use a settings to optimize time loading, for example to compute image histogram

### 6.503.2.4 postProcessingSettingsIsDirty()

```
bool Digikam::DRawDecoding::postProcessingSettingsIsDirty ( ) const
```

Method to check is a post-processing setting have been changed

### 6.503.2.5 resetPostProcessingSettings()

```
void Digikam::DRawDecoding::resetPostProcessingSettings ( )
```

Method to reset to default values all Raw processing settings.

## 6.503.3 Member Data Documentation

### 6.503.3.1 bcg

```
BCGContainer Digikam::DRawDecoding::bcg
```

BCG correction values.

### 6.503.3.2 curvesAdjust

[CurvesContainer](#) Digikam::DRawDecoding::curvesAdjust

Curve adjustments.

### 6.503.3.3 rawPrm

[DRawDecoderSettings](#) Digikam::DRawDecoding::rawPrm

All Raw decoding settings provided by RawEngine.

### 6.503.3.4 wb

[WBContainer](#) Digikam::DRawDecoding::wb

White Balance correction values.

## 6.504.1 Member Enumeration Documentation

### 6.504.1.1 ImageOrientation

enum `Digikam::DRawInfo::ImageOrientation`

The RAW image orientation values

## 6.504.2 Constructor & Destructor Documentation

### 6.504.2.1 DRawInfo()

```
Digikam::DRawInfo::DRawInfo ( ) [explicit]
```

Standard constructor < NOTE: see bug #253911 : [y][x] not [x][y]

### 6.504.2.2 ~DRawInfo()

```
Digikam::DRawInfo::~~DRawInfo ( ) [default]
```

Standard destructor

## 6.504.3 Member Data Documentation

### 6.504.3.1 ambientAcceleration

```
float Digikam::DRawInfo::ambientAcceleration = -1000.0F
```

Directionless camera acceleration in units of mGal, or 10<sup>-5</sup> m/s<sup>2</sup>. -1000 is an invalid acceleration.

### 6.504.3.2 ambientElevationAngle

```
float Digikam::DRawInfo::ambientElevationAngle = -1000.0F
```

Camera elevation angle in degrees. -1000 is an invalid angle.

### 6.504.3.3 ambientHumidity

```
float Digikam::DRawInfo::ambientHumidity = -1000.0F
```

Ambient relative humidity in percent. -1000 is an invalid humidity.

### 6.504.3.4 ambientPressure

```
float Digikam::DRawInfo::ambientPressure = -1000.0F
```

Ambient air pressure in hPa or mbar. -1000 is an invalid pressure.

### 6.504.3.5 ambientTemperature

```
float Digikam::DRawInfo::ambientTemperature = -1000.0F
```

Ambient temperature in Celsius degrees. -1000 is an invalid temperature.

### 6.504.3.6 ambientWaterDepth

```
float Digikam::DRawInfo::ambientWaterDepth = 1000.0F
```

Depth under water in metres, negative for above water. 1000 is an invalid water depth.

### 6.504.3.7 aperture

```
float Digikam::DRawInfo::aperture = -1.0F
```

Aperture value in APEX.

### 6.504.3.8 baselineExposure

```
float Digikam::DRawInfo::baselineExposure = -999.0F
```

Exposure compensation to be applied during raw conversion. -999 is an invalid exposure.

### 6.504.3.9 blackPoint

```
unsigned int Digikam::DRawInfo::blackPoint = 0
```

Black level from Raw histogram.

### 6.504.3.10 blackPointCh

```
unsigned int Digikam::DRawInfo::blackPointCh[4] = { 0 }
```

Channel black levels from Raw histogram.

### 6.504.3.11 cameraColorMatrix1

```
float Digikam::DRawInfo::cameraColorMatrix1[3][4]
```

Camera Color [Matrix](#)

### 6.504.3.12 cameraMult

```
double Digikam::DRawInfo::cameraMult[4] = { 0.0 }
```

Camera multipliers used for White Balance adjustments

### 6.504.3.13 colorKeys

```
QString Digikam::DRawInfo::colorKeys
```

The used Color Keys

### 6.504.3.14 dateTime

```
QDateTime Digikam::DRawInfo::dateTime
```

Date & time when the picture has been taken.

### 6.504.3.15 daylightMult

```
double Digikam::DRawInfo::daylightMult[3] = { 0.0 }
```

White color balance settings.

### 6.504.3.16 description

```
QString Digikam::DRawInfo::description
```

The image description of raw image.

### 6.504.3.17 DNGVersion

```
QString Digikam::DRawInfo::DNGVersion
```

The DNG version. NOTE: it is only shown with DNG RAW files.

### 6.504.3.18 exposureIndex

```
float Digikam::DRawInfo::exposureIndex = -1.0F
```

Exposure Index from the camera. Valid value is unsigned.

### 6.504.3.19 exposureProgram

```
int Digikam::DRawInfo::exposureProgram = -1
```

The exposure program used by camera. Valid value is unsigned.

### 6.504.3.20 exposureTime

```
float Digikam::DRawInfo::exposureTime = -1.0F
```

1/exposureTime = exposure time in seconds.

#### 6.504.3.21 filterPattern

```
QString Digikam::DRawInfo::filterPattern
```

The demosaicing filter pattern.

#### 6.504.3.22 firmware

```
QString Digikam::DRawInfo::firmware
```

The Firmware name or version which create raw image.

#### 6.504.3.23 flashUsed

```
int Digikam::DRawInfo::flashUsed = -1
```

Describe how flash has been used by camera. Valid value is unsigned.

#### 6.504.3.24 focalLength

```
float Digikam::DRawInfo::focalLength = -1.0F
```

Focal Length value in mm.

#### 6.504.3.25 fullSize

```
QSize Digikam::DRawInfo::fullSize
```

The full RAW image dimensions in pixels.

#### 6.504.3.26 hasIccProfile

```
bool Digikam::DRawInfo::hasIccProfile = false
```

True if RAW file include an ICC color profile.

#### 6.504.3.27 iccData

```
QByteArray Digikam::DRawInfo::iccData
```

ICC color profilr container extracted from RAW file, if present.

#### 6.504.3.28 imageID

```
QString Digikam::DRawInfo::imageID
```

An unique image ID generated by camera.

### 6.504.3.29 imageSize

```
QSize Digikam::DRawInfo::imageSize
```

The image dimensions in pixels.

### 6.504.3.30 isDecodable

```
bool Digikam::DRawInfo::isDecodable = false
```

True is RAW file is decodable by dcrw.

### 6.504.3.31 latitude

```
double Digikam::DRawInfo::latitude = 0.0F
```

GPS information

### 6.504.3.32 leftMargin

```
unsigned int Digikam::DRawInfo::leftMargin = 0
```

Left margin of raw image.

### 6.504.3.33 lensModel

```
QString Digikam::DRawInfo::lensModel
```

Description of lens properties.

### 6.504.3.34 localizedCameraModel

```
QString Digikam::DRawInfo::localizedCameraModel
```

Localized name for the camera model that created the raw file

### 6.504.3.35 make

```
QString Digikam::DRawInfo::make
```

The camera maker.

### 6.504.3.36 meteringMode

```
int Digikam::DRawInfo::meteringMode = -1
```

The metering mode used by camera. Valid value is unsigned.

### 6.504.3.37 model

```
QString Digikam::DRawInfo::model
```

The camera model.

### 6.504.3.38 orientation

```
ImageOrientation Digikam::DRawInfo::orientation = ORIENTATION_NONE
```

The raw image orientation

### 6.504.3.39 originalRawFileName

```
QString Digikam::DRawInfo::originalRawFileName
```

The original RAW file name.

### 6.504.3.40 outputSize

```
QSize Digikam::DRawInfo::outputSize
```

The output dimensions in pixels.

### 6.504.3.41 owner

```
QString Digikam::DRawInfo::owner
```

The artist name who have picture owner.

### 6.504.3.42 pixelAspectRatio

```
float Digikam::DRawInfo::pixelAspectRatio = 1.0F
```

The pixel Aspect Ratio if != 1.0. NOTE: if == 1.0, libraw CLI tool do not show this value. Default value = 1.0. This can be unavailable (depending of camera model).

### 6.504.3.43 rawColors

```
int Digikam::DRawInfo::rawColors = -1
```

The number of RAW colors.

#### 6.504.3.44 rawDataUniqueID

```
QString Digikam::DRawInfo::rawDataUniqueID
```

An unique RAW data ID.

#### 6.504.3.45 rawImages

```
int Digikam::DRawInfo::rawImages = -1
```

The number of RAW images.

#### 6.504.3.46 sensitivity

```
float Digikam::DRawInfo::sensitivity = -1.0F
```

The sensitivity in ISO used by camera to take the picture.

#### 6.504.3.47 serialNumber

```
unsigned int Digikam::DRawInfo::serialNumber = 0
```

Serial number of raw image.

#### 6.504.3.48 software

```
QString Digikam::DRawInfo::software
```

The software name which process raw image.

#### 6.504.3.49 thumbnail

```
QByteArray Digikam::DRawInfo::thumbnail
```

Thumbnail image data extracted from raw file.

#### 6.504.3.50 thumbSize

```
QSize Digikam::DRawInfo::thumbSize
```

The thumb dimensions in pixels.

#### 6.504.3.51 topMargin

```
unsigned int Digikam::DRawInfo::topMargin = 0
```

Top margin of raw image.

**6.504.3.52 uniqueCameraModel**

```
QString Digikam::DRawInfo::uniqueCameraModel
```

Non-localized name for the camera model that created the raw file

**6.504.3.53 whitePoint**

```
unsigned int Digikam::DRawInfo::whitePoint = 0
```

White level from Raw histogram.

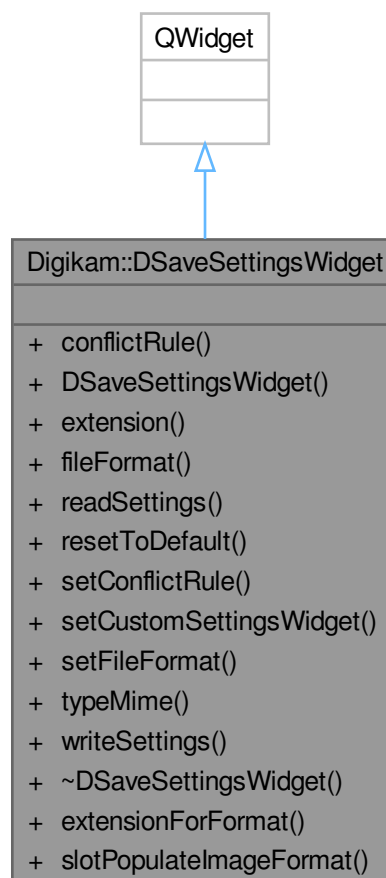

**6.504.3.54 xmpData**

```
QByteArray Digikam::DRawInfo::xmpData
```

Xmp metadata container extracted from RAW file, if present.

**6.505 Digikam::DSaveSettingsWidget Class Reference**

### Properties

- Qt::ArrowType **arrowDirection**
- bool **indent**
- int **maxValue**
- int **minValue**
- int **value**

### Friends

- class **Private**

## 6.507.1 Detailed Description

**DSelector** is the base class for other widgets which provides the ability to choose from a one-dimensional range of values. An example is the **KGradientSelector** which allows to choose from a range of colors.

A custom drawing routine for the widget surface has to be provided by the subclass.

## 6.507.2 Member Function Documentation

### 6.507.2.1 arrowDirection()

```
Qt::ArrowType Digikam::DSelector::arrowDirection ( ) const
```

#### Returns

the current arrow direction

### 6.507.2.2 contentsRect()

```
QRect Digikam::DSelector::contentsRect ( ) const
```

#### Returns

the rectangle on which subclasses should draw.

### 6.507.2.3 drawArrow()

```
void Digikam::DSelector::drawArrow (
    QPainter * painter,
    const QPoint & pos ) [protected], [virtual]
```

Override this function to draw the cursor which indicates the current value.

### 6.507.2.4 drawContents()

```
virtual void Digikam::DSelector::drawContents (
    QPainter * ) [inline], [protected], [virtual]
```

Override this function to draw the contents of the control. The default implementation does nothing.

Draw only within [contentsRect\(\)](#).

Reimplemented in [Digikam::DColorValueSelector](#).

### 6.507.2.5 indent()

```
bool Digikam::DSelector::indent ( ) const
```

#### Returns

whether the indent option is set.

### 6.507.2.6 setArrowDirection()

```
void Digikam::DSelector::setArrowDirection (
    Qt::ArrowType direction )
```

Sets the arrow direction.

### 6.507.2.7 setIndent()

```
void Digikam::DSelector::setIndent (
    bool i )
```

Sets the indent option of the widget to i. This determines whether a shaded frame is drawn.

## 6.508 Digikam::DServiceInfo Class Reference

### Public Member Functions

- **DServiceInfo** (const [DServiceInfo](#) &other)
- **DServiceInfo** (const QString &\_name, const QString &\_exec, const QString &\_icon, const QString &\_topt, bool \_term)
- bool **isEmpty** () const
- [DServiceInfo](#) & **operator=** (const [DServiceInfo](#) &other)

### Public Attributes

- QString **exec**
- QString **icon**
- QString **name**
- bool **term** = false
- QString **topt**

## 6.509 Digikam::DServiceMenu Class Reference

### Static Public Member Functions

- static QIcon [getIconFromService](#) (const [DServiceInfo](#) &sinfo)
- static bool **runFiles** (const [DServiceInfo](#) &serviceInfo, const QList< QUrl > &urls)
- static bool [runFiles](#) (const KService::Ptr &service, const QList< QUrl > &urls)
- static bool [runFiles](#) (const QString &appCmd, const QList< QUrl > &urls, const KService::Ptr &service=KService::Ptr(), const [DServiceInfo](#) &serviceInfo=[DServiceInfo](#)())
- static QList< [DServiceInfo](#) > **servicesForOpen** (const QList< QUrl > &urls)
- static KService::List [servicesForOpenWith](#) (const QList< QUrl > &urls)

### 6.509.1 Member Function Documentation

#### 6.509.1.1 [getIconFromService\(\)](#)

```
QIcon Digikam::DServiceMenu::getIconFromService (
    const DServiceInfo & sinfo ) [static]
```

Return the QIcon depending on the operating system.

#### 6.509.1.2 [runFiles\(\)](#) [1/2]

```
bool Digikam::DServiceMenu::runFiles (
    const KService::Ptr & service,
    const QList< QUrl > & urls ) [static]
```

Linux only: open file urls with the service.

### 6.509.1.3 runFiles() [2/2]

```
bool Digikam::DServiceMenu::runFiles (
    const QString & appCmd,
    const QList< QUrl > & urls,
    const KService::Ptr & service = KService::Ptr(),
    const DServiceInfo & serviceInfo = DServiceInfo() ) [static]
```

Linux only: open file urls with the application command.

### 6.509.1.4 servicesForOpenWith()

```
KService::List Digikam::DServiceMenu::servicesForOpenWith (
    const QList< QUrl > & urls ) [static]
```

Linux only: return list of service available on desktop to open files.

## 6.510 Digikam::DSliderSpinBox Class Reference

Inheritance diagram for Digikam::DSliderSpinBox:

### Public Slots

- void **setValue** (int [value](#))  
Set the value, don't use [setValue\(\)](#)

## Signals

- void **valueChanged** (int [value](#))

## Additional Inherited Members

### Protected Slots inherited from [Digikam::DAbstractSliderSpinBox](#)

- void **contextMenuEvent** (QContextMenuEvent \*event) override
- void **editLostFocus** ()

### Protected Attributes inherited from [Digikam::DAbstractSliderSpinBox](#)

- DAbstractSliderSpinBoxPrivate \*const **d\_ptr**

## 6.510.1 Member Function Documentation

### 6.510.1.1 setInternalValue()

```
void Digikam::DSliderSpinBox::setInternalValue (
    int value,
    bool blockUpdateSignal ) [override], [protected], [virtual]
```

Sets the slider internal value. Inheriting classes should respect blockUpdateSignal so that, in specific cases, we have a performance improvement. See setIgnoreMouseMoveEvents.

Implements [Digikam::DAbstractSliderSpinBox](#).

### 6.510.1.2 valueString()

```
QString Digikam::DSliderSpinBox::valueString ( ) const [override], [protected], [virtual]
```

Implements [Digikam::DAbstractSliderSpinBox](#).

## 6.511 Digikam::DSplashScreen Class Reference

- void [keyPressEvent](#) (QKeyEvent \*e) override

### 6.515.1 Detailed Description

A text edit widget based on QTextEdit with spell checker capabilities based on Sonnet (optional). Widget size can be constrained with the number of visible lines. A single line constraint will emulate QLineEdit. See [setLinesVisible\(\)](#) for details. The maximum number of characters can be limited with [setMaxLenght\(\)](#). The characters can be limited in editor by [setIgnoredCharacters\(\)](#) and [setAcceptedCharacters\(\)](#). Implementation: dtextedit.cpp

### 6.515.2 Constructor & Destructor Documentation

#### 6.515.2.1 DTextEdit() [1/3]

```
Digikam::DTextEdit::DTextEdit (
    QWidget *const parent = nullptr ) [explicit]
```

Default constructor.

#### 6.515.2.2 DTextEdit() [2/3]

```
Digikam::DTextEdit::DTextEdit (
    unsigned int lines,
    QWidget *const parent = nullptr ) [explicit]
```

Constructor with a number of lines. Zero lines do not apply a size constraint.

### 6.515.2.3 DTextEdit() [3/3]

```
Digikam::DTextEdit::DTextEdit (
    const QString & contents,
    QWidget *const parent = nullptr ) [explicit]
```

Constructor with text contents to use.

### 6.515.2.4 ~DTextEdit()

```
Digikam::DTextEdit::~DTextEdit ( ) [override]
```

Standard destructor.

## 6.515.3 Member Function Documentation

### 6.515.3.1 acceptedCharacters()

```
QString Digikam::DTextEdit::acceptedCharacters ( ) const
```

This property holds whether the edit widget handle the mask of accepted characters in text editor. The mask of characters is passed as string (ex: "abcABC"). By default the mask is empty.

### 6.515.3.2 ignoredCharacters()

```
QString Digikam::DTextEdit::ignoredCharacters ( ) const
```

This property holds whether the edit widget handle the mask of ignored characters in text editor. The mask of characters is passed as string (ex: "+!()"). By default the mask is empty.

### 6.515.3.3 isClearButtonEnabled()

```
bool Digikam::DTextEdit::isClearButtonEnabled ( ) const
```

This property holds whether the edit widget displays a clear button when it is not empty. If enabled, the edit widget displays a trailing clear button when it contains some text, otherwise the edit widget does not show a clear button. This option only take effect in QLineEdit emulation mode when lines visible is set to 1. See [setLinesVisible\(\)](#) for details.

### 6.515.3.4 leftCharacters()

```
int Digikam::DTextEdit::leftCharacters ( ) const
```

Return the left characters that user can enter if a limit have been previously set with [setMaxLeght\(\)](#).

### 6.515.3.5 returnPressed

```
void Digikam::DTextEdit::returnPressed ( ) [signal]
```

Emitted only when mimic QLineEdit mode is enabled. See [setLinesVisible\(\)](#) for details.

### 6.515.3.6 setCurrentLanguage()

```
void Digikam::DTextEdit::setCurrentLanguage (
    const QString & lang )
```

This property holds whether the edit widget handle a specific spell-checker language (2 letters code based as "en", "fr", "es", etc.). If this property is not set, spell-checker will try to auto-detect language by parsing the text. To reset this setting, pass a empty string as language. If Sonnet dependencies is not resolved, these method do nothing.

### 6.515.3.7 setLinesVisible()

```
void Digikam::DTextEdit::setLinesVisible (
    unsigned int lines )
```

This property holds whether the edit widget handle visible lines used by the widget to show text. Lines must be superior or equal to 1 to apply a size constraint. Notes: if a single visible line is used, the widget will emulate QLineEdit. a null value do not apply a size constraint.

### 6.515.3.8 setMaxLength()

```
void Digikam::DTextEdit::setMaxLength (
    int length )
```

This property holds whether the edit widget handle the maximum of characters that user can enter in editor. By default no limit is set. A zero length reset a limit.

### 6.515.3.9 spellCheckSettings()

```
LocalizeContainer Digikam::DTextEdit::spellCheckSettings ( ) const
```

This property holds whether the edit widget handle the Spellcheck settings. See [LocalizeContainer](#) class for details.

### 6.515.3.10 text()

```
QString Digikam::DTextEdit::text ( ) const
```

This property holds whether the edit widget handle text contents as plain text. If ignored or accepted characters masks are set, text is filtered accordingly.

## 6.516 Digikam::DTextEdit::Private Class Reference

### Public Member Functions

- void `init` (`DTextEdit` \*const parent)

### Public Attributes

- QString `acceptedMask`  
*Mask of accepted characters in text editor.*
- bool `clearBtnEnable` = true
- `DTextEditClearButton` \* `clrBtn` = nullptr
- `LocalizeContainer` `container`  
*Spell checking settings container.*
- QString `ignoredMask`  
*Mask of ignored characters in text editor.*
- unsigned int `lines` = 3
- int `maxLength` = 0

### 6.516.1 Member Function Documentation

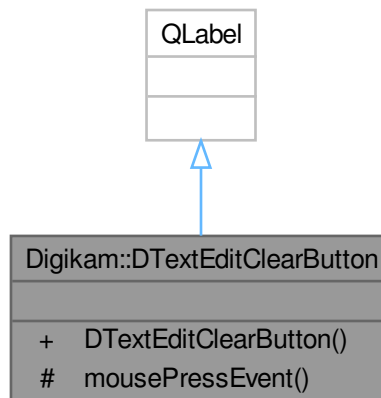

#### 6.516.1.1 `init()`

```
void Digikam::DTextEdit::Private::init (
    DTextEdit *const parent )
```

Init the text widget with the spell-checker engine (optional).

## 6.517 Digikam::DTextEditClearButton Class Reference

Inheritance diagram for Digikam::DTextEditClearButton:

**Signals**

- void **clicked** ()

**Public Member Functions**

- **DTextEditClearButton** (QWidget \*const parent)

**Protected Member Functions**

```
bool Digikam::DTrash::deleteDirRecursivley (
    const QString & dirToDelete,
    const QDateTime & deleteTime ) [static]
```

**Parameters**

<i>dirToDelete</i>	path to folder
<i>deleteTime</i>	delete time from the image

**Returns**

true if folder was deleted

**6.522.1.2 deleteImage()**

```
bool Digikam::DTrash::deleteImage (
    const QString & imagePath,
    const QDateTime & deleteTime ) [static]
```

**Parameters**

<i>imagePath</i>	path to image
<i>deleteTime</i>	delete time from the image

**Returns**

true if the image was deleted

**6.522.1.3 extractJsonForItem()**

```
void Digikam::DTrash::extractJsonForItem (
    const QString & collPath,
    const QString & baseName,
    DTrashItemInfo & itemInfo ) [static]
```

**Parameters**

<i>collPath</i>	path to collection
<i>baseName</i>	name of the file inside the trash
<i>itemInfo</i>	item to extract data to it

## 6.524.1 Member Function Documentation

### 6.524.1.1 append

```
void Digikam::DTrashItemModel::append (
    const DTrashItemInfo & itemInfo ) [slot]
```

#### Parameters

<i>itemInfo</i>	item to append
-----------------	----------------

### 6.524.1.2 changeThumbSize()

```
void Digikam::DTrashItemModel::changeThumbSize (
    int size )
```

#### Parameters

<i>size</i>	size to change to
-------------	-------------------

### 6.524.1.3 isEmpty()

```
bool Digikam::DTrashItemModel::isEmpty ( )
```

#### Returns

true if there is no data in the model

### 6.524.1.4 loadItemsForCollection()

```
void Digikam::DTrashItemModel::loadItemsForCollection (
    const QString & colPath )
```

#### Parameters

<i>colPath</i>	path to collection to load items for
----------------	--------------------------------------

### 6.524.1.5 pixmapForItem()

```
bool Digikam::DTrashItemModel::pixmapForItem (
    const QString & path,
    QPixmap & pix ) const
```

#### Parameters

<i>path</i>	path of image in trash
<i>pix</i>	Pixmap to fill

#### Returns

true if there is an available thumbnail

### 6.524.1.6 refreshThumbnails

```
void Digikam::DTrashItemModel::refreshThumbnails (
    const LoadingDescription & desc,
    const QPixmap & pix ) [slot]
```

## Parameters

<i>desc</i>	loading description from thumbnail load thread
<i>pix</i>	pixmap from thumbnail load thread

**6.524.1.7 removeItems**

```
void Digikam::DTrashItemModel::removeItems (  
    const QModelIndexList & indexes ) [slot]
```

## Parameters

<i>indexes</i>	indexes to remove
----------------	-------------------

## 6.525 Digikam::DTrashItemsListingJob Class Reference

## 6.526 Digikam::DuplicatesFinder Class Reference

Inheritance diagram for Digikam::DuplicatesFinder:

### Signals

- void **signalScanNotification** (const QString &msg, int type)

## Signals inherited from [Digikam::MaintenanceTool](#)

- void [signalCanceled](#) ()
- void [signalComplete](#) ()

## Signals inherited from [Digikam::ProgressItem](#)

- void [progressItemAdded](#) ([ProgressItem](#) \*item)  
*Emitted when a new [ProgressItem](#) is added.*
- void [progressItemCanceled](#) ([ProgressItem](#) \*item)  
*Emitted when an item was canceled. It will not go away immediately, only when the owner sets it complete, which will usually happen. Can be used to visually indicate the canceled status of an item. Should be used by the owner of the item to make sure it is set completed even if it is canceled. There is a [ProgressManager::slotStandardCancelHandler](#) which simply sets the item completed and can be used if no other work needs to be done on cancel.*
- void [progressItemCanceledById](#) (const QString &id)
- void [progressItemCompleted](#) ([ProgressItem](#) \*item)  
*Emitted when a progress item was completed. The item will be deleted afterwards, so slots connected to this are the last chance to work with this item.*
- void [progressItemLabel](#) ([ProgressItem](#) \*item, const QString &label)  
*Emitted when the label of an item changed. Should be used by progress dialogs to update the label of an item.*
- void [progressItemProgress](#) ([ProgressItem](#) \*item, unsigned int v)  
*Emitted when the progress value of an item changes.*
- void [progressItemStatus](#) ([ProgressItem](#) \*item, const QString &mess)  
*Emitted when the status message of an item changed. Should be used by progress dialogs to update the status message for an item.*
- void [progressItemThumbnail](#) ([ProgressItem](#) \*item, const QPixmap &thumb)  
*Emitted when the thumbnail data must be set in item.*
- void [progressItemUsesBusyIndicator](#) ([ProgressItem](#) \*item, bool value)  
*Emitted when the busy indicator state of an item changes. Should be used by progress dialogs so that they can adjust the display of the progress bar to the new mode.*

## Public Member Functions

- [DuplicatesFinder](#) (const AlbumList &albums, const AlbumList &tags, int albumTagRelation=0, int min←→ Similarity=90, int maxSimilarity=100, int searchResultRestriction=0, [Haarface::RefImageSelMethod](#) method=[Haarface::RefImageSelMethod::OlderOrLarger](#), const AlbumList &referenceImageAlbum={}, [ProgressItem](#) \*const parent=nullptr)

- virtual void [setUseMultiCoreCPU](#) (bool)

## Public Member Functions inherited from [Digikam::ProgressItem](#)

- void **addChild** ([ProgressItem](#) \*const kiddo)
- bool **advance** (unsigned int v)
 

*Advance total items processed by n values and update percentage in progressbar.*
- bool **canBeCanceled** () const
- void **cancel** ()
- bool **canceled** () const
- unsigned int **completedItems** () const
- bool **hasThumbnail** () const
- const QString & **id** () const
- bool **incCompletedItems** (unsigned int v=1)
- void **incTotalItems** (unsigned int v=1)
- const QString & **label** () const
- [ProgressItem](#) \* **parent** () const
- unsigned int **progress** () const
- [ProgressItem](#) ([ProgressItem](#) \*const parent, const QString &id, const QString &label, const QString &status, bool canBeCanceled, bool hasThumb)
- void **removeChild** ([ProgressItem](#) \*const kiddo)
- void **reset** ()
 

*Reset the progress value of this item to 0 and the status string to the empty string.*
- void **setComplete** ()
 

*Tell the item it has finished. This will emit [progressItemCompleted\(\)](#) result in the destruction of the item after all slots connected to this signal have executed. This is the only way to get rid of an item and needs to be called even if the item is canceled. Don't use the item after this has been called on it.*
- bool **setCompletedItems** (unsigned int v)
- void **setLabel** (const QString &v)
- void **setProgress** (unsigned int v)
 

*Set the progress (percentage of completion) value of this item.*
- void **setShowAtStart** (bool showAtStart)
 

*Set the property to pop-up item when it's added in progress manager. Use this method if you consider that item is important to be notified to end-user.*
- void **setStatus** (const QString &v)
 

*Set the string to be used for showing this item's current status.*
- void **setThumbnail** (const QIcon &icon)
 

*Sets whether this item has a thumbnail.*
- void **setTotalItems** (unsigned int v)
- void **setUsesBusyIndicator** (bool useBusyIndicator)
 

*Sets whether this item uses a busy indicator instead of real progress for its progress bar. If it uses a busy indicator, you are still responsible for calling [setProgress\(\)](#) from time to time to update the busy indicator.*
- bool **showAtStart** () const
- const QString & **status** () const
- bool **totalCompleted** () const
- unsigned int **totalItems** () const
- void **updateProgress** ()
 

*Recalculate progress according to total/completed items and update.*
- bool **usesBusyIndicator** () const

- virtual void **slotDone** ()
- virtual void **slotStart** ()

### 6.526.1 Constructor & Destructor Documentation

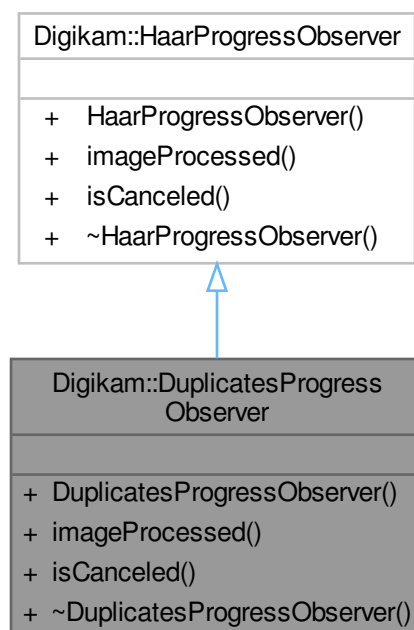

#### 6.526.1.1 DuplicatesFinder()

```
Digikam::DuplicatesFinder::DuplicatesFinder (
    const AlbumList & albums,
    const AlbumList & tags,
    int albumTagRelation = 0,
    int minSimilarity = 90,
    int maxSimilarity = 100,
    int searchResultRestriction = 0,
    HaarIface::RefImageSelMethod method = HaarIface::RefImageSelMethod::OlderOrLarger,
    const AlbumList & referenceImageAlbum = {},
    ProgressItem *const parent = nullptr )
```

Version to find all duplicates over a specific list to PAlbums and TAlbums

## 6.527 Digikam::DuplicatesProgressObserver Class Reference

Inheritance diagram for Digikam::DuplicatesProgressObserver:

## Public Member Functions

- **DuplicatesProgressObserver** ([SearchesJob](#) \*const thread)
- void **imageProcessed** (const [ItemInfo](#) &inf, const QImage &img, int dup) override
- bool **isCanceled** () override

## 6.527.1 Member Function Documentation

### 6.527.1.1 imageProcessed()

```
void Digikam::DuplicatesProgressObserver::imageProcessed (
    const ItemInfo & inf,
    const QImage & img,
    int dup ) [override], [virtual]
```

Implements [Digikam::HaarProgressObserver](#).

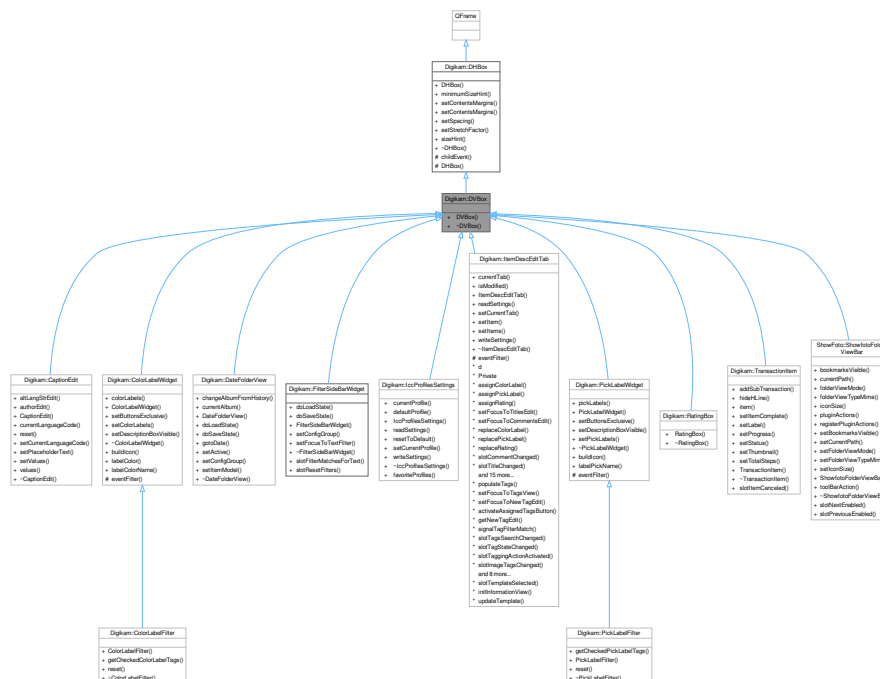

### 6.527.1.2 isCanceled()

```
bool Digikam::DuplicatesProgressObserver::isCanceled ( ) [override], [virtual]
```

Reimplemented from [Digikam::HaarProgressObserver](#).

## 6.528 Digikam::DVBox Class Reference

Inheritance diagram for [Digikam::DVBox](#):

### Public Member Functions

- **DVBox** (QWidget \*const parent=nullptr)

### Public Member Functions inherited from [Digikam::DHBox](#)

- **DHBox** (QWidget \*const parent=nullptr)
- QSize **minimumSizeHint** () const override
- void **setContentMargins** (const QMargins &margins)
- void **setContentMargins** (int left, int top, int right, int bottom)

- void **setStretchFactor** (QWidget \*const widget, int stretch)
- QSize **sizeHint** () const override

### Additional Inherited Members

### Protected Member Functions inherited from [Digikam::DHBox](#)

- void **childEvent** (QChildEvent \*e) override
- **DHBox** (bool vertical, QWidget \*const parent)

## 6.528.1 Detailed Description

A Vertical widget to host children widgets

## 6.529 Digikam::DWItemDelegate Class Reference

Inheritance diagram for Digikam::DWItemDelegate:

### Public Member Functions

- [DWItemDelegate](#) (`QAbstractItemView *const itemView`, `QObject *const parent=nullptr`)
- `QPersistentModelIndex` [focusedIndex](#) () const
- `QAbstractItemView *` [itemView](#) () const

## Protected Member Functions

- `QList< QEvent::Type > blockedEventTypes (QWidget *const widget) const`
- `virtual QList< QWidget * > createItemWidgets (const QModelIndex &index) const =0`
- `void setBlockedEventTypes (QWidget *const widget, const QList< QEvent::Type > &types) const`
- `virtual void updateItemWidgets (const QList< QWidget * > &widgets, const QStyleOptionViewItem &option, const QModelIndex &index) const =0`

## Friends

- class `DWItemDelegateEventListener`
- class `DWItemDelegatePool`

## 6.529.1 Detailed Description

This class allows to create item delegates embedding simple widgets to interact with items. For instance you can add push buttons, line edits, etc. to your delegate and use them to modify the state of your model.

## 6.529.2 Constructor & Destructor Documentation

### 6.529.2.1 DWItemDelegate()

```
Digikam::DWItemDelegate::DWItemDelegate (
    QAbstractItemView *const itemView,
    QObject *const parent = nullptr ) [explicit]
```

Creates a new [ItemDelegate](#) to be used with a given itemview.

#### Parameters

<i>itemView</i>	the item view the new delegate will monitor
<i>parent</i>	the parent of this delegate

## 6.529.3 Member Function Documentation

### 6.529.3.1 blockedEventTypes()

```
QList< QEvent::Type > Digikam::DWItemDelegate::blockedEventTypes (
    QWidget *const widget ) const [protected]
```

Retrieves the list of blocked event types for the given widget.

#### Parameters

<i>widget</i>	the specified widget.
---------------	-----------------------

**Returns**

the list of blocked event types, can be empty if no events are blocked.

**6.529.3.2 createItemWidgets()**

```
virtual QList< QWidget * > Digikam::DWItemDelegate::createItemWidgets (
    const QModelIndex & index ) const [protected], [pure virtual]
```

Creates the list of widgets needed for an item.

**Note**

No initialization of the widgets is supposed to happen here. The widgets will be initialized based on needs for a given item.

If you want to connect some widget signals to any slot, you should do it here.

- index the index to create widgets for.

**Note**

If you want to know the index for which you are creating widgets, it is available as a QModelIndex [Q\\_↔](#) PROPERTY called "goya:creatingWidgetsForIndex". Ensure to add `Q_DECLARE_METATYPE(QModelIndex)` before your method definition to tell QVariant about QModelIndex.

**Returns**

the list of newly created widgets which will be used to interact with an item.

**See also**

[updateItemWidgets\(\)](#)

Implemented in [Digikam::SetupCollectionDelegate](#).

**6.529.3.3 focusedIndex()**

```
QPersistentModelIndex Digikam::DWItemDelegate::focusedIndex ( ) const
```

Retrieves the currently focused index. An invalid index if none is focused.

**Returns**

the current focused index, or `QPersistentModelIndex()` if none is focused.

### 6.529.3.4 itemView()

```
QAbstractItemView * Digikam::DWItemDelegate::itemView ( ) const
```

Retrieves the item view this delegate is monitoring.

#### Returns

the item view this delegate is monitoring

### 6.529.3.5 setBlockedEventTypes()

```
void Digikam::DWItemDelegate::setBlockedEventTypes (
    QWidget *const widget,
    const QList< QEvent::Type > & types ) const [protected]
```

Sets the list of event `types` that a widget will block.

Blocked events are not passed to the view. This way you can prevent an item from being selected when a button is clicked for instance.

#### Parameters

<i>widget</i>	the widget which must block events
<i>types</i>	the list of event types the widget must block

### 6.529.3.6 updateItemWidgets()

```
virtual void Digikam::DWItemDelegate::updateItemWidgets (
    const QList< QWidget * > & widgets,
    const QStyleOptionViewItem & option,
    const QPersistentModelIndex & index ) const [protected], [pure virtual]
```

Updates a list of widgets for its use inside of the delegate (painting or event handling).

#### Note

All the positioning and sizing should be done in item coordinates.

#### Warning

Do not make widget connections in here, since this method will be called very regularly.

#### Parameters

<i>widgets</i>	the widgets to update
<i>option</i>	the current set of style options for the view.
<i>index</i>	the model index of the item currently manipulated.

Implemented in [Digikam::SetupCollectionDelegate](#).

## 6.530 Digikam::DWItemDelegatePool Class Reference

### Public Types

- enum **UpdateWidgetsEnum** { **UpdateWidgets** = 0 , **NotUpdateWidgets** }

### Public Member Functions

- [DWItemDelegatePool](#) ([DWItemDelegate](#) \*const delegate)
- `QList< QWidget * >` [findWidgets](#) (const `QPersistentModelIndex` &index, const `QStyleOptionViewItem` &option, `UpdateWidgetsEnum` updateWidgets=`UpdateWidgets`) const  
*Returns the widget associated to `index` and `widget`.*
- void **fullClear** ()
- `QList< QWidget * >` **invalidIndexesWidgets** () const

### Friends

- class **DWItemDelegate**
- class **DWItemDelegatePrivate**

## 6.530.1 Constructor & Destructor Documentation

### 6.530.1.1 DWItemDelegatePool()

```
Digikam::DWItemDelegatePool::DWItemDelegatePool (
    DWItemDelegate *const delegate ) [explicit]
```

Creates a new `ItemDelegatePool`.

#### Parameters

<i>delegate</i>	the <a href="#">ItemDelegate</a> for this pool.
-----------------	---

## 6.530.2 Member Function Documentation

### 6.530.2.1 findWidgets()

```
QList< QWidget * > Digikam::DWItemDelegatePool::findWidgets (
    const QPersistentModelIndex & index,
    const QStyleOptionViewItem & option,
    UpdateWidgetsEnum updateWidgets = UpdateWidgets ) const
```

## Parameters

<i>index</i>	The index to search into.
<i>option</i>	a QStyleOptionViewItem.
<i>updateWidgets</i>	a flag to force to update widgets.

## Returns

A QList of the pointers to the widgets found.

## 6.531 Digikam::DWItemDelegatePoolPrivate Class Reference

## 6.536.1 Detailed Description

Generic class to use with all main window.

## 6.536.2 Member Function Documentation

### 6.536.2.1 allActions()

```
QList< QAction * > Digikam::DXmlGuiWindow::allActions ( ) const
```

Return all actions from internal collection.

### 6.536.2.2 cleanupActions()

```
void Digikam::DXmlGuiWindow::cleanupActions ( )
```

Cleanup unwanted actions from action collection.

### 6.536.2.3 configFullScreenHideToolBarsEntry()

```
static QString Digikam::DXmlGuiWindow::configFullScreenHideToolBarsEntry ( ) [inline], [static]
```

Shared with [FullScreenSettings](#).

### 6.536.2.4 createFullScreenAction()

```
void Digikam::DXmlGuiWindow::createFullScreenAction (
    const QString & name )
```

Create Full-screen action to action collection instance from managed window set through `setManagedWindow()`. This action is connected to `slotToggleFullScreen()` slot. 'name' is action name used in KDE UI rc file.

### 6.536.2.5 createHelpActions()

```
void Digikam::DXmlGuiWindow::createHelpActions (
    const QString & handbookSection,
    bool coreOptions = true )
```

Create common actions from Help menu for all digiKam main windows.

### 6.536.2.6 createSettingsActions()

```
void Digikam::DXmlGuiWindow::createSettingsActions ( )
```

Create common actions to setup all digiKam main windows.

### 6.536.2.7 createSidebarActions()

```
void Digikam::DXmlGuiWindow::createSidebarActions ( )
```

Create common actions to handle side-bar through keyboard shortcuts.

### 6.536.2.8 customizedFullScreenMode()

```
void Digikam::DXmlGuiWindow::customizedFullScreenMode (
    bool set ) [protected], [virtual]
```

Re-implement this method if you want to manage customized view visibility in full-screen mode. This method is called by `switchWindowToFullScreen()`. By default this method do nothing.

### 6.536.2.9 editKeyboardShortcuts()

```
void Digikam::DXmlGuiWindow::editKeyboardShortcuts (
    KActionCollection *const extraac = nullptr,
    const QString & actitle = QString() ) [protected]
```

Call this method from your main window to show keyboard shortcut config dialog with an extra action collection to configure. This method is called by `slotEditKeys()` which can be re-implement in child class for customization.

### 6.536.2.10 fullScreenIsActive()

```
bool Digikam::DXmlGuiWindow::fullScreenIsActive ( ) const
```

Return true if managed window is currently in Full Screen Mode.

### 6.536.2.11 infoIface()

```
virtual DInfoInterface * Digikam::DXmlGuiWindow::infoIface (
    DPluginAction *const ac ) [pure virtual]
```

Return the interface instance to access to items information.

Implemented in [Digikam::DigikamApp](#), [ShowFoto::Showfoto](#), [Digikam::ImageWindow](#), [Digikam::LightTableWindow](#), [Digikam::ImportUI](#), and [Digikam::QueueMgrWindow](#).

### 6.536.2.12 readFullScreenSettings()

```
void Digikam::DXmlGuiWindow::readFullScreenSettings (
    const KConfigGroup & group )
```

Read full-screen settings from KDE config file.

### 6.536.2.13 registerPluginsActions()

```
void Digikam::DXmlGuiWindow::registerPluginsActions ( )
```

Register all generic plugins action to this instance. Call registerExtraPluginsActions() to plug other kind of plugins in GUI.

### 6.536.2.14 setConfigGroupName()

```
void Digikam::DXmlGuiWindow::setConfigGroupName (
    const QString & name )
```

Manage config group name used by window instance to get/set settings from config file

### 6.536.2.15 setFullScreenOptions()

```
void Digikam::DXmlGuiWindow::setFullScreenOptions (
    int options )
```

Set full-screen options to managed window

### 6.536.2.16 setupIconTheme()

```
void Digikam::DXmlGuiWindow::setupIconTheme ( ) [static]
```

If we have some local breeze icon resource, prefer it.

### 6.536.2.17 showSideBars()

```
void Digikam::DXmlGuiWindow::showSideBars (
    bool visible ) [protected], [virtual]
```

Re-implement this method if you want to manage sidebars visibility in full-screen mode. By default this method do nothing.

### 6.536.2.18 showThumbBar()

```
void Digikam::DXmlGuiWindow::showThumbBar (
    bool visible ) [protected], [virtual]
```

Re-implement this method if you want to manage thumbbar visibility in full-screen mode. By default this method do nothing.

### 6.536.2.19 thumbbarVisibility()

```
bool Digikam::DXmlGuiWindow::thumbbarVisibility ( ) const [protected], [virtual]
```

Re-implement this method if managed window has a thumbbar. This must return visibility state of it.

## 6.537 Digikam::DXmlGuiWindow::Private Class Reference

### Public Attributes

### 6.537.1 Member Data Documentation

#### 6.537.1.1 dirtyMainToolBar

```
bool Digikam::DXmlGuiWindow::Private::dirtyMainToolBar = false
```

Used by [slotToggleFullScreen\(\)](#) to manage state of full-screen button on managed window

#### 6.537.1.2 fsOptions

```
int Digikam::DXmlGuiWindow::Private::fsOptions = FS\_NONE
```

Full-Screen options. See [FullScreenOptions](#) enum and [setFullScreenOptions\(\)](#) for details.

#### 6.537.1.3 fullScreenAction

```
KToggleFullScreenAction* Digikam::DXmlGuiWindow::Private::fullScreenAction = nullptr
```

Action plug in managed window to switch fullscreen state

#### 6.537.1.4 fullScreenBtn

```
QToolButton* Digikam::DXmlGuiWindow::Private::fullScreenBtn = nullptr
```

Show only if toolbar is hidden

#### 6.537.1.5 fullScreenHideSideBars

```
bool Digikam::DXmlGuiWindow::Private::fullScreenHideSideBars = false
```

Settings taken from managed window configuration to handle toolbar visibility in full-screen mode

#### 6.537.1.6 fullScreenHideStatusBar

```
bool Digikam::DXmlGuiWindow::Private::fullScreenHideStatusBar = false
```

Settings taken from managed window configuration to handle statusbar visibility in full-screen mode

#### 6.537.1.7 fullScreenHideThumbBar

```
bool Digikam::DXmlGuiWindow::Private::fullScreenHideThumbBar = true
```

Settings taken from managed window configuration to handle thumbbar visibility in full-screen mode

#### 6.537.1.8 fullScreenHideToolBars

```
bool Digikam::DXmlGuiWindow::Private::fullScreenHideToolBars = false
```

Settings taken from managed window configuration to handle toolbar visibility in full-screen mode

#### 6.537.1.9 fullScreenParent

```
QWidget* Digikam::DXmlGuiWindow::Private::fullScreenParent = nullptr
```

Used under MacOS only. See bug #414117

#### 6.537.1.10 menubarVisibility

```
bool Digikam::DXmlGuiWindow::Private::menubarVisibility = true
```

Store previous visibility of menubar before full-screen mode.

#### 6.537.1.11 statusBarVisibility

```
bool Digikam::DXmlGuiWindow::Private::statusBarVisibility = true
```

Store previous visibility of statusbar before full-screen mode.

### 6.537.1.12 thumbbarVisibility

```
bool Digikam::DXmlGuiWindow::Private::thumbbarVisibility = true
```

Store previous visibility of thumbbar before full-screen mode.

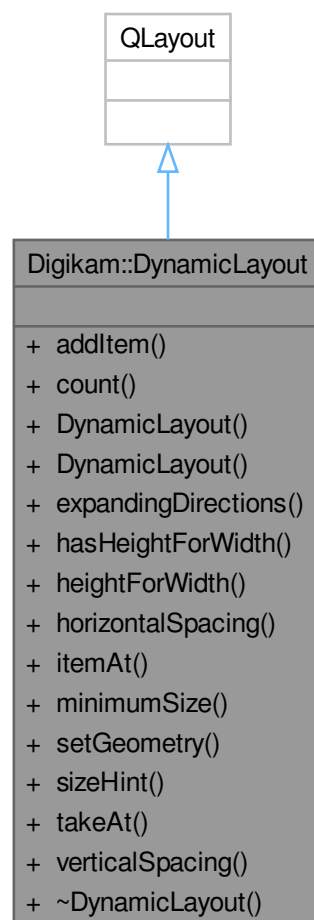

### 6.537.1.13 toolbarsVisibility

```
QMap<KToolBar*, bool> Digikam::DXmlGuiWindow::Private::toolbarsVisibility
```

Store previous visibility of toolbars before full-screen mode.

## 6.538 Digikam::DynamicLayout Class Reference

- void **stop** (const QMutexLocker< QMutex > &locker)
- QMutex \* **threadMutex** () const
- void **wait** (QMutexLocker< QMutex > &locker)

## Friends

- class **DynamicThreadPriv**

## 6.539.1 Constructor & Destructor Documentation

### 6.539.1.1 DynamicThread()

```
Digikam::DynamicThread::DynamicThread (
    QObject *const parent = nullptr ) [explicit]
```

This class extends QRunnable, so you have to reimplement virtual void [run\(\)](#). In all aspects the class will act similar to a QThread.

### 6.539.1.2 ~DynamicThread()

```
Digikam::DynamicThread::~DynamicThread ( ) [override]
```

The destructor calls [stop\(\)](#) and [wait\(\)](#), but if you, in your destructor, delete any data that is accessed by your [run\(\)](#) method, you must call [stop\(\)](#) and [wait\(\)](#) before yourself.

## 6.539.2 Member Function Documentation

### 6.539.2.1 run()

```
virtual void Digikam::DynamicThread::run ( ) [pure virtual]
```

Implement this pure virtual function in your subclass.

Implemented in [Digikam::DImgThreadedFilter](#), [Digikam::ImageHistogram](#), [Digikam::LoadSaveThread](#), and [Digikam::ScanStateFilter](#).

### 6.539.2.2 `runningFlag()`

```
bool Digikam::DynamicThread::runningFlag ( ) const volatile [protected]
```

In you `run()` method, you shall regularly check for `runningFlag()` and cleanup and return if false.

### 6.539.2.3 `setPriority()`

```
void Digikam::DynamicThread::setPriority (
    QThread::Priority priority )
```

Sets the priority for this dynamic thread. Can be set anytime. If the thread is currently not running, the priority will be set when it is run next time. When you set `QThread::InheritPriority` (default), the priority is not changed but inherited from the thread pool.

### 6.539.2.4 `shutDown()`

```
void Digikam::DynamicThread::shutDown ( ) [protected]
```

If you are deleting data in your destructor which is accessed from the thread, do one of the following from your destructor to guarantee a safe shutdown: 1) Call this method 2) Call `stop()` and `wait()`, knowing that nothing will call `start()` anymore after this 3) Be sure the thread will never be running at destruction. Note: This irrevocably stops this object. Note: It is not sufficient that your parent class does this. Calling this method, or providing one of the above mentioned equivalent guarantees, must be done by every single last class in the hierarchy with an implemented destructor deleting data. (the base class destructor is always called after the derived class)

### 6.539.2.5 `start()`

```
void Digikam::DynamicThread::start (
    QMutexLocker< QMutex > & locker ) [protected]
```

Doing the same as `start()`, `stop()` and `wait` above, provide it with a locked `QMutexLocker` on `mutex()`. Note the `start()` will unlock and relock for scheduling once, after state change.

### 6.539.2.6 `starting`

```
void Digikam::DynamicThread::starting ( ) [signal]
```

Emitted if `emitSignals` is enabled

### 6.539.2.7 `stop`

```
void Digikam::DynamicThread::stop ( ) [slot]
```

Stop computation, sets the running flag to false.

### 6.539.2.8 threadMutex()

```
QMutex * Digikam::DynamicThread::threadMutex ( ) const [protected]
```

This is the non-recursive mutex used to protect state variables and waiting in this class. You can use it if you want to protect your memory in the same scope as calling `start`, `stop` or `wait`, then using the `QMutexLocker` variants below. Note that when you have locked this mutex, you must use these variants, as the mutex is non-recursive.

### 6.539.2.9 wait

```
void Digikam::DynamicThread::wait ( ) [slot]
```

Waits until the thread finishes. Typically, call `stop()` before.

## 6.540 Digikam::DZoomBar Class Reference

Inheritance diagram for Digikam::DZoomBar:

### Public Types

- enum `BarMode` { `PreviewZoomCtrl` = 0 , `ThumbsSizeCtrl` , `NoPreviewZoomCtrl` }

## Public Slots

- void **slotUpdateTrackerPos** ()

### 6.541.1 Detailed Description

This tree view for searches adds basic editing functionality via the context menu. This is in detail deleting and renaming existing searches.

Author

jwienke

### 6.541.2 Constructor & Destructor Documentation

#### 6.541.2.1 EditableSearchTreeView()

```
Digikam::EditableSearchTreeView::EditableSearchTreeView (
    QWidget *const parent,
    SearchModel *const searchModel,
    SearchModificationHelper *const searchModificationHelper )
```

Constructor.

Parameters

<i>parent</i>	qt parent
<i>searchModel</i>	the model this view should act on
<i>searchModificationHelper</i>	the modification helper object used to perform operations on the displayed searches

#### 6.541.2.2 ~EditableSearchTreeView()

```
Digikam::EditableSearchTreeView::~EditableSearchTreeView ( ) [override]
```

Destructor.

### 6.541.3 Member Function Documentation

#### 6.541.3.1 addCustomContextMenuActions()

```
void Digikam::EditableSearchTreeView::addCustomContextMenuActions (
    ContextMenuHelper & cmh,
    Album * album ) [override], [protected], [virtual]
```

Adds actions to delete or rename existing searches.

Reimplemented from [Digikam::AbstractAlbumTreeView](#).

Reimplemented in [Digikam::NormalSearchTreeView](#).

### 6.541.3.2 contextMenuTitle()

```
QString Digikam::EditableSearchTreeView::contextMenuTitle ( ) const [override], [protected],  
[virtual]
```

implemented hook methods for context menus.

Reimplemented from [Digikam::AbstractAlbumTreeView](#).

### 6.541.3.3 handleCustomContextMenuAction()

```
void Digikam::EditableSearchTreeView::handleCustomContextMenuAction (   
    QAction * action,  
    const AlbumPointer< Album > & album ) [override], [protected], [virtual]
```

Handles deletion and renaming actions.

Reimplemented from [Digikam::AbstractAlbumTreeView](#).

Reimplemented in [Digikam::NormalSearchTreeView](#).

## 6.542 Digikam::EditorCore Class Reference

## 6.542.1 Member Function Documentation

### 6.542.1.1 convertToPixmap()

```
QPixmap Digikam::EditorCore::convertToPixmap (
    const DImg & img ) const
```

Convert a [DImg](#) image to a pixmap for screen using color managed view if necessary.

### 6.542.1.2 getImgSelection()

```
DImg Digikam::EditorCore::getImgSelection ( ) const
```

Image properties

### 6.542.1.3 rotate90()

```
void Digikam::EditorCore::rotate90 ( )
```

Image transforms

### 6.542.1.4 setUndoImg()

```
void Digikam::EditorCore::setUndoImg (
    const UndoMetadataContainer & c,
    const DImg & img )
```

For internal usage by [UndoManager](#)

## 6.543 Digikam::EditorCore::Private Class Reference

- virtual void **writeSettings** ()

## 6.546.1 Member Function Documentation

### 6.546.1.1 `init()`

```
void Digikam::EditorTool::init ( )
```

Called by editor tool interface to initialize tool when all is ready, through `slotInit()`.

### 6.546.1.2 `setInitPreview()`

```
void Digikam::EditorTool::setInitPreview (
    bool b )
```

Set this option to on if you want to call `slotPreview()` in `slotInit()` at tool startup.

## 6.547 Digikam::EditorToolface Class Reference

## Additional Inherited Members

## Signals inherited from [Digikam::EditorTool](#)

- void **cancelClicked** ()
- void **okClicked** ()

## 6.549.1 Member Function Documentation

### 6.549.1.1 analyser()

```
DImgThreadedAnalyser * Digikam::EditorToolThreaded::analyser ( ) const [protected]
```

Manage analyser instance plugged in tool interface

### 6.549.1.2 deleteFilterInstance()

```
void Digikam::EditorToolThreaded::deleteFilterInstance (
    bool b = true ) [protected]
```

If true, delete filter instance when preview or final rendering is processed. If false, filter instance will be managed outside for ex. with ContentAwareResizing tool.

### 6.549.1.3 filter()

```
DImgThreadedFilter * Digikam::EditorToolThreaded::filter ( ) const [protected]
```

Manage filter instance plugged in tool interface

### 6.549.1.4 renderingMode()

```
EditorToolThreaded::RenderingMode Digikam::EditorToolThreaded::renderingMode ( ) const
```

return the current tool rendering mode.

### 6.549.1.5 setProgressMessage()

```
void Digikam::EditorToolThreaded::setProgressMessage (
    const QString & mess )
```

Set the small text to show in editor status progress bar during tool computation. If it's not set, tool name is used instead.

### 6.549.1.6 slotAnalyserStarted

```
void Digikam::EditorToolThreaded::slotAnalyserStarted ( ) [protected], [slot]
```

Manage start and end events from analyser

### 6.549.1.7 slotFilterStarted

```
void Digikam::EditorToolThreaded::slotFilterStarted ( ) [protected], [slot]
```

Manage start and end events from filter

### 6.549.1.8 slotProgress

```
void Digikam::EditorToolThreaded::slotProgress (
    int progress ) [protected], [slot]
```

Dispatch progress event from filter and analyser

## 6.550.1 Member Function Documentation

### 6.550.1.1 registerExtraPluginsActions()

```
void Digikam::EditorWindow::registerExtraPluginsActions (
    QString & dom ) [override], [virtual]
```

Reimplemented from [Digikam::DXmlGuiWindow](#).

### 6.550.1.2 saveDestinationUrl()

```
virtual QUrl Digikam::EditorWindow::saveDestinationUrl ( ) [protected], [pure virtual]
```

Hook method that subclasses must implement to return the destination url of the image to save. This may also be a remote url.

This method will only be called while saving.

#### Returns

destination for the file that is currently being saved.

### 6.550.1.3 toggleZoomActions()

```
void Digikam::EditorWindow::toggleZoomActions (
    bool val ) [protected]
```

Method used by Editor Tools. Only tools based on imageregionwidget support zooming. TODO: Fix this behavior when editor tool preview widgets will be factored.

## 6.555.1 Detailed Description

Geometric figure that can be used to describe the approximate shape of the earth. In mathematical terms, it is a surface formed by the rotation of an ellipse about its minor axis. An ellipsoid requires two defining parameters:

- semi-major axis and inverse flattening, or
- semi-major axis and semi-minor axis.

## 6.555.2 Constructor & Destructor Documentation

### 6.555.2.1 Ellipsoid()

```
Digikam::Ellipsoid::Ellipsoid (
    const QString & name,
    double semiMajorAxis,
    double semiMinorAxis,
    double inverseFlattening,
    bool ivfDefinitive ) [protected]
```

Constructs a new ellipsoid using the specified axis length. The properties map is given unchanged to the Abstract← IdentifiedObjectAbstractIdentifiedObject(Map) super-class constructor.

## Parameters

<i>name</i>	The ellipsoid name.
<i>semiMajorAxis</i>	The equatorial radius.
<i>semiMinorAxis</i>	The polar radius.
<i>inverseFlattening</i>	The inverse of the flattening value.
<i>ivfDefinitive</i>	<code>true</code> if the inverse flattening is definitive.

## See also

[createEllipsoid](#)

[createFlattenedSphere](#)

## 6.555.3 Member Function Documentation

### 6.555.3.1 CLARKE\_1866()

`Ellipsoid` Digikam::Ellipsoid::CLARKE\_1866 ( ) [static]

Clarke 1866 ellipsoid with axis in metres.

### 6.555.3.2 createEllipsoid()

`Ellipsoid` Digikam::Ellipsoid::createEllipsoid (   
     const QString & *name*,   
     double *semiMajorAxis*,   
     double *semiMinorAxis* ) [static]

Constructs a new ellipsoid using the specified axis length.

## Parameters

<i>name</i>	The ellipsoid name.
<i>semiMajorAxis</i>	The equatorial radius.
<i>semiMinorAxis</i>	The polar radius.

### 6.555.3.3 createFlattenedSphere()

`Ellipsoid` Digikam::Ellipsoid::createFlattenedSphere (   
     const QString & *name*,   
     double *semiMajorAxis*,   
     double *inverseFlattening* ) [static]

Constructs a new ellipsoid using the specified axis length and inverse flattening value.

## Parameters

<i>name</i>	The ellipsoid name.
-------------	---------------------

## Parameters

<i>semiMajorAxis</i>	The equatorial radius.
<i>inverseFlattening</i>	The inverse flattening value. values.

**6.555.3.4 eccentricity()**

```
double Digikam::Ellipsoid::eccentricity ( ) const
```

The ratio of the distance between the center and a focus of the ellipse to the length of its semimajor axis. The eccentricity can alternately be computed from the equation:  $e = \sqrt{2f - f^2}$ .

**6.555.3.5 GRS80()**

```
Ellipsoid Digikam::Ellipsoid::GRS80 ( ) [static]
```

GRS 80 ellipsoid with axis in metres.

**6.555.3.6 INTERNATIONAL\_1924()**

```
Ellipsoid Digikam::Ellipsoid::INTERNATIONAL_1924 ( ) [static]
```

International 1924 ellipsoid with axis in metres.

**6.555.3.7 inverseFlattening()**

```
double Digikam::Ellipsoid::inverseFlattening ( ) const
```

Returns the value of the inverse of the flattening constant. Flattening is a value used to indicate how closely an ellipsoid approaches a spherical shape. The inverse flattening is related to the equatorial/polar radius by the formula

$ivf = r_e / (r_e - r_p)$ .

For perfect spheres (i.e. if `isSphere` returns `true`), the `DoublePOSITIVE_INFINITY` value is used.

## Returns

The inverse flattening value.

**6.555.3.8 isIvfDefinitive()**

```
bool Digikam::Ellipsoid::isIvfDefinitive ( ) const
```

Indicates if the inverse flattening is definitive for this ellipsoid. Some ellipsoids use the IVF as the defining value, and calculate the polar radius whenever asked. Other ellipsoids use the polar radius to calculate the IVF whenever asked. This distinction can be important to avoid floating-point rounding errors.

## Returns

`true` if the inverse flattening is definitive, or `false` if the polar radius is definitive.

### 6.555.3.9 isSphere()

```
bool Digikam::Ellipsoid::isSphere ( ) const
```

`true` if the ellipsoid is degenerate and is actually a sphere. The sphere is completely defined by the semi-major axis, which is the radius of the sphere.

#### Returns

`true` if the ellipsoid is degenerate and is actually a sphere.

### 6.555.3.10 orthodromicDistance()

```
double Digikam::Ellipsoid::orthodromicDistance (
    double x1,
    double y1,
    double x2,
    double y2 )
```

Returns the orthodromic distance between two geographic coordinates. The orthodromic distance is the shortest distance between two points on a sphere's surface. The orthodromic path is always on a great circle. This is different from the loxodromic distance, which is a longer distance on a path with a constant direction on the compass.

#### Parameters

<code>x1</code>	Longitude of first point (in decimal degrees).
<code>y1</code>	Latitude of first point (in decimal degrees).
<code>x2</code>	Longitude of second point (in decimal degrees).
<code>y2</code>	Latitude of second point (in decimal degrees).

#### Returns

The orthodromic distance (in the units of this ellipsoid's axis).

### 6.555.3.11 radiusOfCurvature()

```
double Digikam::Ellipsoid::radiusOfCurvature (
    double latitude )
```

Returns the Radius Of Curvature for the given latitude, using the geometric mean of two radii of curvature for all azimuths.

#### Parameters

<code>latitude</code>	in degrees
-----------------------	------------

### 6.555.3.12 semiMajorAxis()

```
double Digikam::Ellipsoid::semiMajorAxis ( ) const
```

Length of the semi-major axis of the ellipsoid. This is the equatorial radius in axis linear unit.

#### Returns

Length of semi-major axis.

### 6.555.3.13 semiMinorAxis()

```
double Digikam::Ellipsoid::semiMinorAxis ( ) const
```

Length of the semi-minor axis of the ellipsoid. This is the polar radius in axis linear unit.

#### Returns

Length of semi-minor axis.

### 6.555.3.14 SPHERE()

```
Ellipsoid Digikam::Ellipsoid::SPHERE ( ) [static]
```

A sphere with a radius of 6371000 metres. Spheres use a simpler algorithm for orthodromic distance computation, which may be faster and more robust.

### 6.555.3.15 WGS84()

```
Ellipsoid Digikam::Ellipsoid::WGS84 ( ) [static]
```

WGS 1984 ellipsoid with axis in metres. This ellipsoid is used in GPS systems and is the default for most `org.kde.geotools` packages.

## 6.555.4 Member Data Documentation

### 6.555.4.1 m\_inverseFlattening

```
double Digikam::Ellipsoid::m_inverseFlattening = 0.0 [protected]
```

The inverse of the flattening value, or `DBL_MAX` if the ellipsoid is a sphere.

#### See also

`getInverseFlattening`

#### 6.555.4.2 m\_ivfDefinitive

```
bool Digikam::Ellipsoid::m_ivfDefinitive = false [protected]
```

Tells if the Inverse Flattening definitive for this ellipsoid.

See also

[isIvfDefinitive](#)

#### 6.555.4.3 m\_semiMajorAxis

```
double Digikam::Ellipsoid::m_semiMajorAxis = 0.0 [protected]
```

The equatorial radius.

See also

[getSemiMajorAxis](#)

#### 6.555.4.4 m\_semiMinorAxis

```
double Digikam::Ellipsoid::m_semiMinorAxis = 0.0 [protected]
```

The polar radius.

## 6.559.1 Member Function Documentation

### 6.559.1.1 filterAction()

`FilterAction` Digikam::EqualizeFilter::filterAction ( ) [override], [virtual]

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.559.1.2 filterIdentifier()

`QString` Digikam::EqualizeFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.559.1.3 readParameters()

```
void Digikam::EqualizeFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.568.1 Member Typedef Documentation

### 6.568.1.1 ExifToolData

```
typedef QHash<QString, QVariantList> DigiKam::ExifToolParser::ExifToolData
```

A map used to store ExifTool data shared with [ExifToolProcess](#) class:

With [load\(\)](#) method, the container is used to get a map of ExifTool tag name as key and tags properties as values: key = ExifTool Tag name (QString - ExifTool Group 0.1.2.4.6) See -G Exiftool option ( [https://exiftool.org/exiftool\\_pod.html#Input-output-text-formatting](https://exiftool.org/exiftool_pod.html#Input-output-text-formatting)). values = ExifTool Tag value (QString). ExifTool Tag type (QString). ExifTool Tag description (QString). ExifTool Tag numerical value (QString) - available if any .

With [loadChunk\(\)](#) method, the container is used to get a EXV chunk as value: key = "EXV" (QString). value = the Exiv2 metadata container (QByteArray).

With [applyChanges\(\)](#) method, the container is used as argument to store tuple of ExifTool tag name as key and tag value: key = ExifTool tag name (QString). value = ExifTool Tag value (QString).

With [readableFormats\(\)](#) method, the container is used to get a list of upper-case file format extensions supported by ExifTool for reading. key = "READ\_FORMAT" (QString). value = list of pairs (ext,desc) (QStringList)

With [writableFormats\(\)](#) method, the container is used to get a list of upper-case file format extensions supported by ExifTool for writing. key = "WRITE\_FORMAT" (QString). value = list of pairs (ext,desc) (QStringList).

With [translationsList\(\)](#) method, the container is used to get a list of ExifTool languages available for translations. key = "TRANSLATIONS\_LIST" (QString). value = list of languages as strings (aka fr, en, de, es, etc.) (QStringList).

With [tagsDatabase\(\)](#) method, the container is used as argument to store tuple of ExifTool tag name as key and tag description: key = ExifTool tag name (QString). values = ExifTool Tag description (QString). ExifTool Tag type (QString). ExifTool Tag writable (QString).

## 6.568.2 Member Function Documentation

### 6.568.2.1 applyChanges() [1/2]

```
bool Digikam::ExifToolParser::applyChanges (
    const QString & path,
    const ExifToolData & newTags )
```

Apply tag changes to a target file using ExifTool with a list of tag properties. Tags can already exists in target file or new ones can be created. To remove a tag, pass an empty string as value.

#### Parameters

<i>path</i>	is the target files to change.
<i>newTags</i>	is the list of tag properties.

### 6.568.2.2 applyChanges() [2/2]

```
bool Digikam::ExifToolParser::applyChanges (
    const QString & path,
    const QString & exvTempFile,
    bool hasExif = true,
    bool hasXmp = true,
    bool hasCSet = false )
```

Apply tag changes to a target file using ExifTool with a EXV container. Tags can already exists in target file or new ones can be created.

#### Parameters

<i>path</i>	is the target files to change.
<i>exvTempFile</i>	is the list of changes embedded in EXV container.
<i>hasExif</i>	if the EXV container has Exif metadata restore MarkerNotes.
<i>hasXmp</i>	if the EXV container has Xmp metadata.
<i>hasCSet</i>	if the EXV container has characters set information.

### 6.568.2.3 applyMetadataFile()

```
bool Digikam::ExifToolParser::applyMetadataFile (
    const QString & path,
    const QString & meta )
```

Apply a file with metadata to the target file.

#### Parameters

<i>path</i>	is the target file to change.
<i>meta</i>	is the metadata file.

### 6.568.2.4 changeTimestamps()

```
bool Digikam::ExifToolParser::changeTimestamps (
    const QString & path,
    const QDateTime & dateTime )
```

Change all timestamps of the target file using ExifTool.

#### Parameters

<i>path</i>	is the target file to change.
<i>dateTime</i>	is the date/time.

### 6.568.2.5 copyTags()

```
bool Digikam::ExifToolParser::copyTags (
    const QString & src,
    const QString & dst,
    unsigned char copyOps,
    unsigned char writeModes = ExifToolProcess::ALL_MODES )
```

Copy group of tags from one source file to a destination file, following copy operations defined by 'copyOps'.

#### Parameters

<i>src</i>	must be a readable file format supported by ExifTool.
<i>dst</i>	must be a writable file format supported by ExifTool.
<i>copyOps</i>	is a OR combination of <a href="#">ExifToolProcess::CopyTagsSource</a> values.
<i>writeModes</i>	is a OR combination of <a href="#">ExifToolProcess::WritingTagsMode</a> values.

### 6.568.2.6 exifToolAvailable()

```
bool Digikam::ExifToolParser::exifToolAvailable ( ) const
```

Check the ExifTool program availability.

**6.568.2.7 load()**

```
bool Digikam::ExifToolParser::load (
    const QString & path )
```

Load all metadata with ExifTool from a file. Use `currentData()` to get the ExifTool map.

**6.568.2.8 loadChunk()**

```
bool Digikam::ExifToolParser::loadChunk (
    const QString & path,
    bool copyToAll = false )
```

Load Exif, Iptc, and Xmp chunk as Exiv2 EXV byte-array from a file. Use `currentData()` to get the container.

**6.568.2.9 readableFormats()**

```
bool Digikam::ExifToolParser::readableFormats ( )
```

Return a list of readable file format extensions. Use `currentData()` to get the container as `QStringList`.

**6.568.2.10 setOutputStream()**

```
void Digikam::ExifToolParser::setOutputStream (
    int cmdAction,
    const QByteArray & cmdOutputChannel,
    const QByteArray & cmdErrorChannel )
```

Unit-test method to check ExifTool stream parsing.

**6.568.2.11 tagsDatabase()**

```
bool Digikam::ExifToolParser::tagsDatabase ( )
```

Return a list of all tags from ExifTool database. Use `currentData()` to get the container.

**Warning**

: This method get whole ExifTool database in XML format and take age.

**6.568.2.12 tagsDbToOrderedMap()**

```
MetaEngine::TagsMap Digikam::ExifToolParser::tagsDbToOrderedMap (
    const ExifToolData & tagsDb ) [static]
```

Helper conversion method to translate unordered tags database hash-table to ordered map. Tag are formatted like this:

```
EXIF.IFD0.Image.XResolution EXIF.IFD0.Image.YCbCrCoefficients EXIF.IFD0.Image.YCbCrPositioning EXIF.IFD0.Image.YCbCrSubSampling EXIF.IFD0.Image.YClipPathUnits EXIF.IFD0.Image.YPosition EXIF.IFD0.Image.YResolution FITS.FITS.Image.Author FITS.FITS.Image.Background FITS.FITS.Image.CreateDate FITS.FITS.Image.Instrument FITS.FITS.Image.Object FITS.FITS.Image.ObservationDate
```

**6.568.2.13 translateTags()**

```
bool Digikam::ExifToolParser::translateTags (
    const QString & path,
    unsigned char transOps )
```

Translate group of tags in file.

## Parameters

<i>path</i>	must be a readable file format supported by ExifTool.
<i>transOps</i>	is a OR combination of <a href="#">ExifToolProcess::TranslateTagsOps</a> values.

**6.568.2.14 translationsList()**

```
bool Digikam::ExifToolParser::translationsList ( )
```

Return a list of available translations. Use `currentData()` to get the container as `QStringList`.

**6.568.2.15 version()**

```
bool Digikam::ExifToolParser::version ( )
```

Return the current version of ExifTool. Use `currentData()` to get the container as `QString`.

**6.568.2.16 writableFormats()**

```
bool Digikam::ExifToolParser::writableFormats ( )
```

Return a list of writable file format extensions. Use `currentData()` to get the container as `QStringList`.

## 6.570.1 Member Enumeration Documentation

### 6.570.1.1 Action

enum [Digikam::ExifToolProcess::Action](#)

ExifTool actions to process.

## Enumerator

LOAD_METADATA	Load all metadata from a file with ExifTool.
LOAD_CHUNKS	Load Exif, Iptc, and Xmp chunks from a file as byte-array for <a href="#">MetaEngine</a> .
APPLY_CHANGES	Apply tag changes in a file with ExifTool.
APPLY_CHANGES_EXV	Apply tag changes in a file with ExifTool using an EXV container.
APPLY_METADATA_FILE	Apply a metadata file to a file with ExifTool.
CHANGE_TIMESTAMPS	Change all timestamps in a file with ExifTool.
READ_FORMATS	Return the list of readable ExifTool file formats.
WRITE_FORMATS	Return the list of writable ExifTool file formats.
TRANSLATIONS_LIST	List of ExifTool languages available for translations.
TAGS_DATABASE	List of ExifTool tags from database.
VERSION_STRING	Return the ExifTool version as string.
COPY_TAGS	Copy tags from one file to another one. See CopyTagsSource enum for details.
TRANS_TAGS	Translate tags in file. See TranslateTagsOps enum for details.
NO_ACTION	Last value from this list. Do nothing.

## 6.570.1.2 CopyTagsSource

enum [Digikam::ExifToolProcess::CopyTagsSource](#)

Possible copying tags operations to OR combine with COPY\_TAGS action.

## Enumerator

COPY_EXIF	Copy all Exif Tags from source file.
COPY_MAKERNOTES	Copy all Makernotes tags from source file.
RESTORE_PREVIEW	Restore preview image from source file.
COPY_IPTC	Copy all Iptc tags from source file.
COPY_XMP	Copy all Xmp tags from source file.
COPY_ICC	Copy ICC profile from source file.
COPY_ALL	Copy all tags from source file.
COPY_NONE	No copy operation.

## 6.570.1.3 ResultStatus

enum [Digikam::ExifToolProcess::ResultStatus](#)

Command result state.

## 6.570.1.4 TranslateTagsOps

enum [Digikam::ExifToolProcess::TranslateTagsOps](#)

Possible translating tags operations to OR combine with COPY\_TAGS action.

## Enumerator

TRANS_ALL_XMP	Translate all existing Tags from source file to Xmp.
TRANS_ALL_IPTC	Translate all existing Tags from source file to Iptc.
TRANS_ALL_EXIF	Translate all existing Tags from source file to Exif.

**6.570.1.5 WritingTagsMode**

```
enum Digikam::ExifToolProcess::WritingTagsMode
```

Possible writing tags mode to OR combine with COPY\_TAGS action.

## Enumerator

WRITE_EXISTING_TAGS	Overwrite existing tags.
CREATE_NEW_TAGS	Create new tags.
CREATE_NEW_GROUPS	Create new groups if necessary.

**6.570.2 Constructor & Destructor Documentation****6.570.2.1 ExifToolProcess()**

```
Digikam::ExifToolProcess::ExifToolProcess ( )
```

Constructs a [ExifToolProcess](#).

**6.570.2.2 ~ExifToolProcess()**

```
Digikam::ExifToolProcess::~~ExifToolProcess ( )
```

Destructs the [ExifToolProcess](#) object, i.e., killing the process. Note that this function will not return until the process is terminated.

**6.570.3 Member Function Documentation****6.570.3.1 command()**

```
int Digikam::ExifToolProcess::command (
    const QByteArrayList & args,
    Action ac )
```

Send a command to exiftool process. This function can be called from another thread. Return 0: ExifTool not running, write channel is closed or args is empty.

### 6.570.3.2 `exifToolAvailable()`

```
bool Digikam::ExifToolProcess::exifToolAvailable ( ) const
```

Returns true if [ExifToolProcess](#) is available (process state == Running)

### 6.570.3.3 `exifToolError()`

```
QProcess::ProcessError Digikam::ExifToolProcess::exifToolError ( ) const
```

Returns the type of error that occurred last.

### 6.570.3.4 `exifToolErrorString()`

```
QString Digikam::ExifToolProcess::exifToolErrorString ( ) const
```

Returns an error message.

### 6.570.3.5 `exifToolsBusy()`

```
bool Digikam::ExifToolProcess::exifToolIsBusy ( ) const
```

Returns true if a command is running.

### 6.570.3.6 `getExifToolResult()`

```
ExifToolProcess::Result Digikam::ExifToolProcess::getExifToolResult (
    int cmdId ) const
```

Returns the [ExifToolProcess](#) result.

### 6.570.3.7 `initExifTool()`

```
void Digikam::ExifToolProcess::initExifTool ( )
```

[Setup](#) connections, apply Settings and start ExifTool process. This function cannot be called from another thread.

### 6.570.3.8 `setExifToolProgram()`

```
void Digikam::ExifToolProcess::setExifToolProgram (
    const QString & etExePath )
```

Change the ExifTool path configuration. This function can be called from another thread.

### 6.570.3.9 shutDownExifTool()

```
void Digikam::ExifToolProcess::shutDownExifTool ( )
```

Attempts to shut down the ExifTool process. This function cannot be called from another thread.

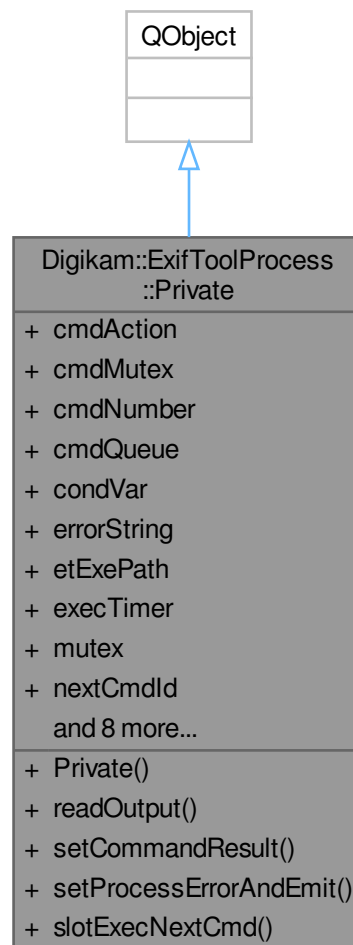

### 6.570.3.10 waitForExifToolResult()

```
ExifToolProcess::Result Digikam::ExifToolProcess::waitForExifToolResult (
    int cmdId ) const
```

WaitCondition for the [ExifToolParser](#) class. Returns the [ExifToolProcess](#) result.

## 6.571 Digikam::ExifToolProcess::Private Class Reference

Inheritance diagram for Digikam::ExifToolProcess::Private:

## Classes

- class [Command](#)

## Public Slots

- void **slotExecNextCmd** ()

## 6.576.1 Member Function Documentation

### 6.576.1.1 getMetadataTitle()

```
QString Digikam::ExifWidget::getMetadataTitle ( ) const [override], [virtual]
```

Implements [Digikam::MetadataWidget](#).

### 6.576.1.2 getTagDescription()

```
QString Digikam::ExifWidget::getTagDescription (
    const QString & key ) [override], [virtual]
```

Reimplemented from [Digikam::MetadataWidget](#).

### 6.576.1.3 getTagTitle()

```
QString Digikam::ExifWidget::getTagTitle (
    const QString & key ) [override], [virtual]
```

Reimplemented from [Digikam::MetadataWidget](#).

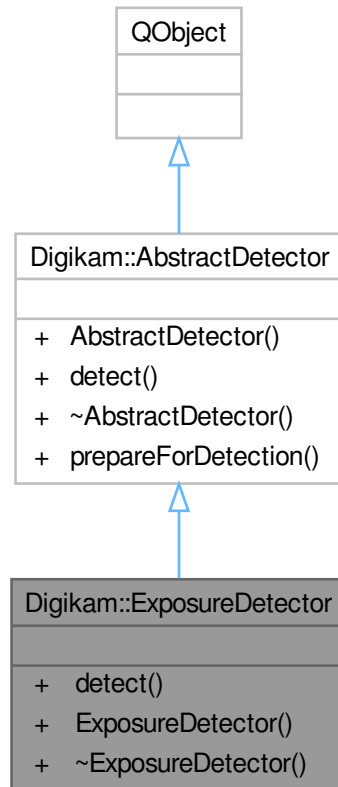

### 6.576.1.4 loadFromURL()

```
bool Digikam::ExifWidget::loadFromURL (
    const QUrl & url ) [override], [virtual]
```

Implements [Digikam::MetadataWidget](#).

## 6.577 Digikam::ExposureDetector Class Reference

Inheritance diagram for Digikam::ExposureDetector:

### Public Member Functions

- float [detect](#) (const cv::Mat &image) const override

### Public Member Functions inherited from [Digikam::AbstractDetector](#)

- **AbstractDetector** (QObject \*const parent=nullptr)

### Additional Inherited Members

### Static Public Member Functions inherited from [Digikam::AbstractDetector](#)

- static cv::Mat [prepareForDetection](#) (const [DImg](#) &inputImage)

## 6.577.1 Member Function Documentation

### 6.577.1.1 detect()

```
float Digikam::ExposureDetector::detect (
    const cv::Mat & image ) const [override], [virtual]
```

Implements [Digikam::AbstractDetector](#).

## 6.578 Digikam::ExposureSettingsContainer Class Reference

### Public Attributes

- bool [exposureIndicatorMode](#) = true
- QColor [overExposureColor](#) = Qt::black
- bool [overExposureIndicator](#) = false
- float [overExposurePercent](#) = 1.0
- QColor [underExposureColor](#) = Qt::white
- bool [underExposureIndicator](#) = false
- float [underExposurePercent](#) = 1.0

## 6.578.1 Member Data Documentation

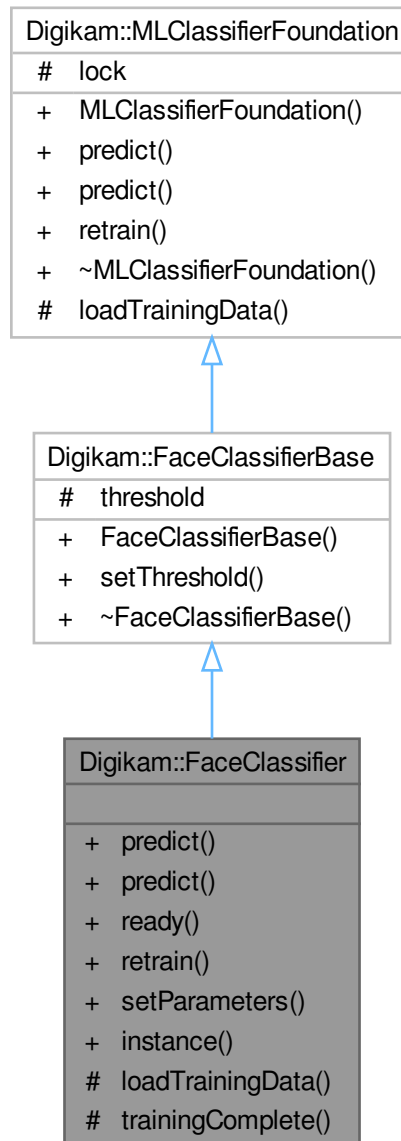

### 6.578.1.1 exposureIndicatorMode

```
bool Digikam::ExposureSettingsContainer::exposureIndicatorMode = true
```

If this option is true, over and under exposure indicators will be displayed only when pure white and pure black color matches, as all color components match the condition in the same time. Else indicators are turn on when one of color components match the condition.

## 6.579 Digikam::FaceClassifier Class Reference

Inheritance diagram for Digikam::FaceClassifier:

- cv::Ptr< cv::ml::TrainData > `trainData () const`  
*trainData: extract train data from database.*
- void `updateIdentity (const Identity &p)`
- void `vacuum ()`

## 6.581.1 Member Function Documentation

### 6.581.1.1 clearDNNTraining()

```
void Digikam::FaceDb::clearDNNTraining (
    const QList< int > & identities )
```

#### Parameters

<i>identities</i>	in the database.
-------------------	------------------

### 6.581.1.2 insertFaceVector()

```
int Digikam::FaceDb::insertFaceVector (
    const cv::Mat & faceEmbedding,
    const int label,
    const QString & hash ) const
```

#### Parameters

<i>faceEmbedding</i>	
<i>label</i>	
<i>hash</i>	

#### Returns

id of newly inserted entry.

### 6.581.1.3 integrityCheck()

```
bool Digikam::FaceDb::integrityCheck ( )
```

Returns true if the integrity of the database is preserved.

**6.581.1.4 removeFaceVector()** [1/2]

```
bool Digikam::FaceDb::removeFaceVector (
    const int id ) const
```

**Parameters**

<i>id</i>	the nodeId (row id) to remove.
-----------	--------------------------------

**Returns**

bool

**6.581.1.5 removeFaceVector() [2/2]**

```
bool Digikam::FaceDb::removeFaceVector (
    const QString & hash ) const
```

**Parameters**

<i>hash</i>	the removeHash (removeHash) to remove.
-------------	--

**Returns**

bool

**6.581.1.6 trainData()**

```
cv::Ptr< cv::ml::TrainData > Digikam::FaceDb::trainData ( ) const
```

**Returns**

the train data instance.

**6.581.1.7 vacuum()**

```
void Digikam::FaceDb::vacuum ( )
```

Shrinks the database.

## 6.582 Digikam::FaceDb::Private Class Reference

**Public Attributes**

- [FaceDbBackend](#) \* **db** = nullptr
- [FaceScanSettings::FaceRecognitionModel](#) **recognizeModel** = [FaceScanSettings::FaceRecognitionModel::OpenFace](#)

## 6.583 Digikam::FaceDbAccess Class Reference

### Public Member Functions

- [FaceDbBackend](#) \* **backend** () const
- [FaceDb](#) \* **db** () const
- [FaceDbAccess](#) ()
- const QString & **lastError** () const
- void **setLastError** (const QString &error)

### Static Public Member Functions

- static void **cleanUpDatabase** ()
- static void **initDbEngineErrorHandler** ([DbEngineErrorHandler](#) \*const errorhandler)
- static bool **isInitialized** ()
- static [DbEngineParameters](#) **parameters** ()
- static void **setParameters** (const [DbEngineParameters](#) &parameters, [FaceScanSettings::FaceRecognitionModel](#) recognizeModel)

### Friends

- class [FaceDbAccessUnlock](#)

## 6.583.1 Constructor & Destructor Documentation

### 6.583.1.1 FaceDbAccess()

```
Digikam::FaceDbAccess::FaceDbAccess ( )
```

This class is written in analogy to [CoreDbAccess](#) (some features stripped off). For documentation, see [coredbaccess.h](#)

## 6.583.2 Member Function Documentation

### 6.583.2.1 setLastError()

```
void Digikam::FaceDbAccess::setLastError (
    const QString & error )
```

Set the "last error" message. This method is not for public use.

## 6.584 Digikam::FaceDbAccessUnlock Class Reference

### Public Member Functions

- [FaceDbAccessUnlock](#) ()
- [FaceDbAccessUnlock](#) ([FaceDbAccess](#) \*const access)

## 6.584.1 Constructor & Destructor Documentation

### 6.584.1.1 FaceDbAccessUnlock()

```
Digikam::FaceDbAccessUnlock::FaceDbAccessUnlock ( )
```

Acquire an object of this class if you want to assure that the [FaceDbAccess](#) is *not* held during the lifetime of the object. At creation, the lock is obtained shortly, then all locks are released. At destruction, all locks are acquired again. If you need to access any locked structures during lifetime, acquire a new [FaceDbAccess](#).

## 6.585 Digikam::FaceDbBackend Class Reference

## Additional Inherited Members

### Public Types inherited from [Digikam::BdEngineBackend](#)

- enum [DbType](#) { [SQLite](#) , [MySQL](#) }
- enum [QueryOperationStatus](#) { [ExecuteNormal](#) , [Wait](#) , [AbortQueries](#) }
- enum [QueryStateEnum](#) { [NoErrors](#) , [SQLException](#) , [ConnectionError](#) }
- enum [Status](#) { [Unavailable](#) , [Open](#) , [OpenSchemaChecked](#) }

### Protected Attributes inherited from [Digikam::BdEngineBackend](#)

- [BdEngineBackendPrivate](#) \*const [d\\_ptr](#) = nullptr

## 6.585.1 Member Function Documentation

### 6.585.1.1 [initSchema\(\)](#)

```
bool Digikam::FaceDbBackend::initSchema (
    FaceDbSchemaUpdater *const updater )
```

Initialize the database schema to the current version, carry out upgrades if necessary. Shall only be called from the thread that called [open\(\)](#).

## 6.586 Digikam::FaceDbOperationGroup Class Reference

### Public Member Functions

- void [allowLift](#) ()
- [FaceDbOperationGroup](#) ()
- [FaceDbOperationGroup](#) ([FaceDbAccess](#) \*const dbAccess)
- void [lift](#) ()
- void [resetTime](#) ()
- void [setMaximumTime](#) (int msec)

### 6.586.1 Detailed Description

When you intend to execute a number of write operations to the database, group them while holding a [FaceDbOperationGroup](#). For some database systems (SQLite), keeping a transaction across write operations occurring in short time results in enormous speedup (800x). For system that do not need this optimization, this class is a no-op.

### 6.586.2 Constructor & Destructor Documentation

#### 6.586.2.1 [FaceDbOperationGroup\(\)](#) [1/2]

```
Digikam::FaceDbOperationGroup::FaceDbOperationGroup ( )
```

Retrieve a [FaceDbAccess](#) object each time when constructing and destructing.

### 6.586.2.2 FaceDbOperationGroup() [2/2]

```
Digikam::FaceDbOperationGroup::FaceDbOperationGroup (
    FaceDbAccess *const dbAccess ) [explicit]
```

Use an existing [FaceDbAccess](#) object, which must live as long as this object exists.

## 6.586.3 Member Function Documentation

### 6.586.3.1 allowLift()

```
void Digikam::FaceDbOperationGroup::allowLift ( )
```

Allows to [lift\(\)](#). The transaction will be lifted if the time set by [setMaximumTime\(\)](#) has expired.

### 6.586.3.2 lift()

```
void Digikam::FaceDbOperationGroup::lift ( )
```

This will - if a transaction is held - commit the transaction and acquire a new one. This may improve concurrent access.

### 6.586.3.3 resetTime()

```
void Digikam::FaceDbOperationGroup::resetTime ( )
```

Resets to 0 the time used by [allowLift\(\)](#).

## 6.588.1 Constructor & Destructor Documentation

### 6.588.1.1 FaceDetector()

```
Digikam::FaceDetector::FaceDetector ( )
```

Provides face detection, that means the process of selecting those regions of a full image which contain face.

This class provides shallow copying The class is fully reentrant (a single object and its copies are not thread-safe). Deferred creation is guaranteed, that means creation of a [FaceDetector](#) object is cheap, the expensive creation of the detection backend is performed when `detectFaces` is called for the first time.

## 6.588.2 Member Function Documentation

### 6.588.2.1 detectFaces() [1/2]

```
QList< QRectF > Digikam::FaceDetector::detectFaces (
    const DImg & image,
    const QSize & originalSize = QSize() )
```

Scan an image for faces. Return a list with regions possibly containing faces. If the image has been downscaled anywhere in the process, provide the original size of the image as this may be of importance in the detection process.

Found faces are returned in relative coordinates.

### 6.588.2.2 detectFaces() [2/2]

```
QList< QRectF > Digikam::FaceDetector::detectFaces (
    const QImage & image,
    const QSize & originalSize = QSize() )
```

Scan an image for faces. Return a list with regions possibly containing faces. If the image has been downscaled anywhere in the process, provide the original size of the image as this may be of importance in the detection process.

Found faces are returned in relative coordinates.

### 6.588.2.3 recommendedImageSize()

```
int Digikam::FaceDetector::recommendedImageSize (
    const QSize & availableSize = QSize() ) const
```

Returns the recommended size if you want to scale images for detection. Larger images can be passed, but may be downscaled.

### 6.588.2.4 setParameter()

```
void Digikam::FaceDetector::setParameter (
    const QString & parameter,
    const QVariant & value )
```

Tunes backend parameters. Available parameters:

"speed" vs. "accuracy", 0..1, float "sensitivity" vs. "specificity", 0..1, float.

For both pairs: a = 1-b, you can set either. The first pair changes the ROC curve in a trade for computing time. The second pair moves on a given ROC curve towards more false positives, or more missed faces.

## 6.589.1 Constructor & Destructor Documentation

### 6.589.1.1 FaceGroup()

```
Digikam::FaceGroup::FaceGroup (  
    GraphicsDImgView *const view ) [explicit]
```

Constructs a new face group, managing RegionFrameItems for faces of a particular image, displayed on a [GraphicsDImgView](#).

## 6.589.2 Member Function Documentation

### 6.589.2.1 aboutToSetInfo

```
void Digikam::FaceGroup::aboutToSetInfo (  
    const ItemInfo & info ) [slot]
```

Prepares to load a new info. Closes the face group for editing. Pass a null info if about to close.

### 6.589.2.2 addFace

```
void Digikam::FaceGroup::addFace ( ) [slot]
```

Enters a special state where by click + drag a new face can be created.

### 6.589.2.3 closestItem()

```
RegionFrameItem * Digikam::FaceGroup::closestItem (  
    const QPointF & p,  
    qreal *const manhattanLength = nullptr ) const
```

Returns the item in this group closest to scene position p. If given, manhattanLength is set to the manhattan length between p and the closest point of the returned item's bounding rectangle. In particular, if p is inside the item's rectangle, manhattanLength is 0.

### 6.589.2.4 hasUnconfirmed()

```
bool Digikam::FaceGroup::hasUnconfirmed ( )
```

Returns a boolean whether there is at least one unconfirmed face in the group or not.

### 6.589.2.5 markAllAsIgnored

```
void Digikam::FaceGroup::markAllAsIgnored ( ) [slot]
```

Mark all unconfirmed faces as ignored on the current image.

### 6.589.2.6 rejectAll

```
void Digikam::FaceGroup::rejectAll ( ) [slot]
```

Rejects (clears) all faces on the current image.

### 6.589.2.7 setAutoSuggest()

```
void Digikam::FaceGroup::setAutoSuggest (
    bool doAutoSuggest )
```

Auto suggest applies if an image has not been scanned, or an unknown face is registered. In this case, a new scan will be triggered.

### 6.589.2.8 setInfo

```
void Digikam::FaceGroup::setInfo (
    const ItemInfo & info ) [slot]
```

Sets the current [ItemInfo](#).

### 6.589.2.9 setShowOnHover()

```
void Digikam::FaceGroup::setShowOnHover (
    bool show )
```

Even if `visible()` is false, show the item under the mouse cursor.

### 6.589.2.10 setVisible

```
void Digikam::FaceGroup::setVisible (
    bool visible ) [slot]
```

Shows or hides the frames.

### 6.590.1 Member Data Documentation

#### 6.590.1.1 MaxFaceListSize

```
const int Digikam::FaceGroup::Private::MaxFaceListSize = 5
```

Maximum size of faces in [FaceTagsIface](#) container while processing before to clean up and create again.

#### 6.590.1.2 MaxMouseDistance

```
const qreal Digikam::FaceGroup::Private::MaxMouseDistance = 25.0
```

The maximum distance of the mouse coordinate, when a face overlay widget is shown or hidden in the image, or whether the input widget moves up or down.

## 6.593.1 Member Enumeration Documentation

### 6.593.1.1 FilterMode

enum [Digikam::FacePipeline::FilterMode](#)

#### Enumerator

ScanAll	Will read any given image.
SkipAlreadyScanned	Will skip any image that is already marked as scanned.
ReadUnconfirmedFaces	Will read unconfirmed faces for recognition.
ReadFacesForTraining	Will read faces marked for training.
ReadConfirmedFaces	Will read faces which are confirmed.

### 6.593.1.2 WriteMode

enum [Digikam::FacePipeline::WriteMode](#)

#### Enumerator

NormalWrite	Write results. Merge with existing entries.
OverwriteAllFaces	Add new results. Previous all results will be cleared.
OverwriteUnconfirmed	Add new results. Previous unconfirmed results will be cleared.

## 6.593.2 Member Function Documentation

### 6.593.2.1 addManually

```
FaceTagsIface Digikam::FacePipeline::addManually (
    const ItemInfo & info,
    const DImg & image,
    const TagRegion & assignedRegion ) [slot]
```

Add an entry manually.

### 6.593.2.2 cancel()

```
void Digikam::FacePipeline::cancel ( )
```

Cancels all processing.

### 6.593.2.3 confirm

```
FaceTagsIface Digikam::FacePipeline::confirm (
    const ItemInfo & info,
    const FaceTagsIface & face,
    int assignedTagId = 0,
    const TagRegion & assignedRegion = TagRegion() ) [slot]
```

Confirm the face. Pass the original face, and additionally tag id or region if they changed. Returns the confirmed face entry immediately purely for convenience, it is not yet in the database (connect to signal [processed\(\)](#) to react when the processing finished). If a trainer is plugged, the face will be trained.

### 6.593.2.4 editRegion

```
FaceTagsIface Digikam::FacePipeline::editRegion (
    const ItemInfo & info,
    const DImg & image,
    const FaceTagsIface & databaseFace,
    const TagRegion & newRegion ) [slot]
```

Change the given face's region to newRegion. Does not care for training atm.

### 6.593.2.5 editTag

```
FaceTagsIface Digikam::FacePipeline::editTag (
    const ItemInfo & info,
    const FaceTagsIface & databaseFace,
    int newTagId ) [slot]
```

Changes the given face's tagId to newTagId. Used to Reject Facial Recognition suggestions, since the tag needs to be converted from Unconfirmed to Unknown.

### 6.593.2.6 plugDatabaseFilter()

```
void Digikam::FacePipeline::plugDatabaseFilter (
    FilterMode mode )
```

You can plug these four different steps in the working pipeline. 1) Call any of the four plug...() methods. See below for supported combinations. 2) Call construct() to set up the pipeline.

- Database filter: Prepares database records and/or filters out items. See FilterMode for specification.
- Preview loader: If no preview loader is plugged, you must provide a [DImg](#) for face detection and recognition
- Face Detector: If no recognizer is plugged, all detected face are marked as the unknown person
- Face Recognizer: If no detector is plugged, only already scanned faces marked as unknown will be processed. They are implicitly read from the database.
- [DatabaseWriter](#): Writes the detection and recognition results to the database. The trainer works on a completely different storage and is not affected by the database writer.
- DatabaseEditor: Can confirm or reject faces

PlugParallel: You can call this instead of the simple plugging method. Depending on the number of processor cores of the machine and the memory cost, more than one element may be plugged and process parallelly for this part of the pipeline.

Supported combinations: (Database [Filter](#) ->) (Preview Loader ->) Detector -> Recognizer (-> [DatabaseWriter](#)) (Database [Filter](#) ->) (Preview Loader ->) Detector (-> [DatabaseWriter](#)) (Database [Filter](#) ->) (Preview Loader ->) Recognizer (-> [DatabaseWriter](#)) DatabaseEditor Trainer DatabaseEditor -> Trainer

### 6.593.2.7 process [1/2]

```
bool Digikam::FacePipeline::process (
    const ItemInfo & info ) [slot]
```

Processes the given image info. If a filter is installed, returns false if the info is skipped, or true if it is processed. If no preview loader is plugged, you must provide a [DImg](#) for detection or recognition. Any of the signals below will only be emitted if true is returned.

### 6.593.2.8 process [2/2]

```
void Digikam::FacePipeline::process (
    const QList< ItemInfo > & infos ) [slot]
```

Batch processing. If a filter is installed, the [skipped\(\)](#) signal will inform about skipped infos. Filtering is done in a thread, returns immediately. Some of the signals below will be emitted in any case.

### 6.593.2.9 remove

```
void Digikam::FacePipeline::remove (
    const ItemInfo & info,
    const FaceTagsIface & face ) [slot]
```

Remove the given face.

### 6.593.2.10 setPriority()

```
void Digikam::FacePipeline::setPriority (
    QThread::Priority priority )
```

Set the priority of the threads used by this pipeline. The default setting is QThread::LowPriority.

### 6.593.2.11 shutDown()

```
void Digikam::FacePipeline::shutDown ( )
```

Cancels and waits for the pipeline to finish.

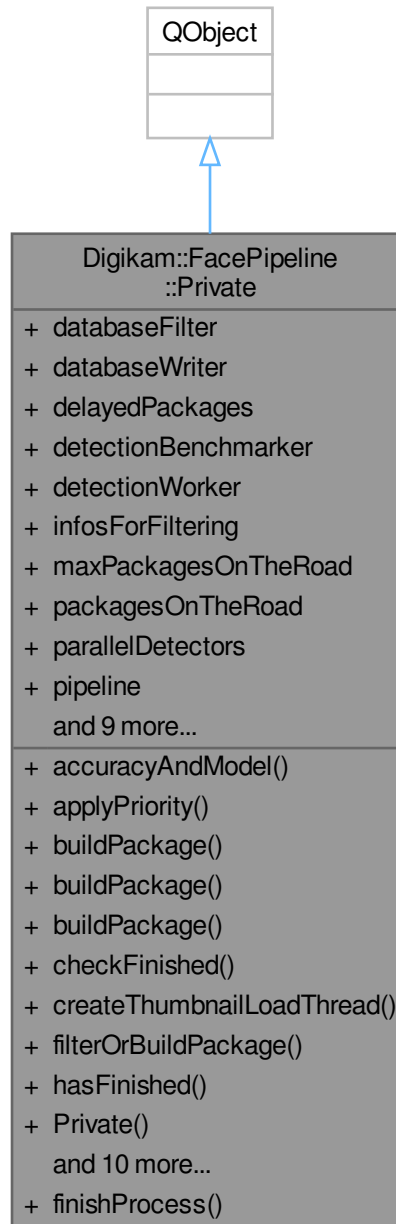

### 6.593.2.12 train

```
void Digikam::FacePipeline::train (
    const ItemInfo & info,
    const QList< FaceTagsIface > & faces ) [slot]
```

Train the given faces.

## 6.595.1 Member Enumeration Documentation

### 6.595.1.1 FilterMode

enum [Digikam::FacePipelineBase::FilterMode](#)

#### Enumerator

ScanAll	Will read any given image.
ScanNew	Scan new images, will skip any image that is already marked as scanned.
TrainNew	Adds new face(s) to training.
TrainAll	Retrains the face DB.
TrainRemove	Removes the face(s) from training.
TrainReset	Removes all face training, sets all images to not scanned.

### 6.595.1.2 WriteMode

```
enum Digikam::FacePipelineBase::WriteMode
```

#### Enumerator

NormalWrite	Write results. Merge with existing entries.
OverwriteAllFaces	Add new results. Previous all results will be cleared.
OverwriteUnconfirmed	Add new results. Previous unconfirmed results will be cleared.

## 6.595.2 Member Function Documentation

### 6.595.2.1 enqueue()

```
bool Digikam::FacePipelineBase::enqueue (  
    MLPipelineQueue * thisQueue,  
    MLPipelinePackageFoundation * package ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::MLPipelineFoundation](#).

- QWidget \* [m\\_widget](#) = nullptr

## Protected Attributes inherited from [Digikam::ItemDelegateOverlay](#)

- QAbstractItemDelegate \* [m\\_delegate](#) = nullptr
- QAbstractItemView \* [m\\_view](#) = nullptr

## 6.609.1 Member Function Documentation

### 6.609.1.1 checkIndex()

```
bool Digikam::FaceRejectionOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Return true here if you want to show the overlay for the given index. The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.609.1.2 createButton()

```
ItemViewHoverButton * Digikam::FaceRejectionOverlay::createButton ( ) [override], [protected],
[virtual]
```

Create your widget here. Pass view() as parent.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 6.609.1.3 setActive()

```
void Digikam::FaceRejectionOverlay::setActive (
    bool active ) [override], [virtual]
```

If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots. If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.609.1.4 updateButton()

```
void Digikam::FaceRejectionOverlay::updateButton (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Called when a new index is entered. Reposition your button here, adjust and store state.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 6.609.1.5 widgetEnterEvent()

```
void Digikam::FaceRejectionOverlay::widgetEnterEvent ( ) [override], [protected], [virtual]
```

Called when a QEvent::Enter resp. QEvent::Leave event for the widget is received. The default implementation does nothing.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.609.1.6 widgetLeaveEvent()

```
void Digikam::FaceRejectionOverlay::widgetLeaveEvent ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 6.610 Digikam::FaceRejectionOverlayButton Class Reference

Inheritance diagram for Digikam::FaceRejectionOverlayButton:

## Public Member Functions

- **FaceRejectionOverlayButton** (QAbstractItemView \*const parentView)
- QSize **sizeHint** () const override

## Public Member Functions inherited from [Digikam::ItemViewHoverButton](#)

- QModelIndex **index** () const
- void **initIcon** ()
- **ItemViewHoverButton** (QAbstractItemView \*const parentView)
- void **reset** ()
- void **setIndex** (const QModelIndex &index)

- void **setup** ()

## Additional Inherited Members

## Protected Slots inherited from [Digikam::ItemViewHoverButton](#)

- void **refreshIcon** ()
- void **setFadingValue** (int value)
- void **startFading** ()
- void **stopFading** ()

## Protected Attributes inherited from [Digikam::ItemViewHoverButton](#)

- QTimerLine \* **m\_fadingTimeLine** = nullptr
- int **m\_fadingValue** = 0
- QIcon **m\_icon**
- QPersistentModelIndex **m\_index**
- bool **m\_isHovered** = false

## 6.610.1 Member Function Documentation

### 6.610.1.1 icon()

```
QIcon Digikam::FaceRejectionOverlayButton::icon ( ) [override], [protected], [virtual]
```

Return your icon here. Will be queried again on toggle.

Implements [Digikam::ItemViewHoverButton](#).

### 6.610.1.2 sizeHint()

```
QSize Digikam::FaceRejectionOverlayButton::sizeHint ( ) const [override], [virtual]
```

Reimplement to match the size of your icon

Implements [Digikam::ItemViewHoverButton](#).

### 6.610.1.3 updateToolTip()

```
void Digikam::FaceRejectionOverlayButton::updateToolTip ( ) [override], [protected], [virtual]
```

Optionally update tooltip here. Will be called again on state change.

Reimplemented from [Digikam::ItemViewHoverButton](#).

## 6.611 Digikam::FaceScanSettings Class Reference

### Public Types

## 6.611.1 Member Enumeration Documentation

### 6.611.1.1 AlreadyScannedHandling

enum `Digikam::FaceScanSettings::AlreadyScannedHandling`

To detect and recognize.

## Enumerator

Skip	Skip faces from images already scanned.
Rescan	Rescan faces from images already scanned.
ClearAll	Clear all faces data from images already scanned. Clear identities and training data from FacesDb.
RecognizeOnly	Recognize faces from images already scanned.

**6.611.1.2 FaceDetectionModel**

enum `Digikam::FaceScanSettings::FaceDetectionModel`

Face detection AI models.

## Enumerator

SSDMOBILENET	SSD MobileNet neural network inference [ <a href="https://github.com/arunponnusamy/cvlib">https://github.com/arunponnusamy/cvlib</a> ].
YOLOv3	YOLO neural network inference [ <a href="https://github.com/sthanhng/yoloface">https://github.com/sthanhng/yoloface</a> ].
YuNet	YuNet neural network inference [ <a href="https://github.com/opencv/opencv_zoo/tree/main">https://github.com/opencv/opencv_zoo/tree/main</a> ].

**6.611.1.3 FaceDetectionSize**

enum `Digikam::FaceScanSettings::FaceDetectionSize`

Face detection size.

**6.611.1.4 FaceRecognitionModel**

enum `Digikam::FaceScanSettings::FaceRecognitionModel`

Face recognition AI models.

## Enumerator

OpenFace	OpenFace pre-trained neural network model [ <a href="https://github.com/sahilshah/openface/tree/master">https://github.com/sahilshah/openface/tree/master</a> ].
SFace	SFace pre-trained neural network model [ <a href="https://github.com/opencv/opencv_zoo/blob/main/models/face_recognition_sface/">https://github.com/opencv/opencv_zoo/blob/main/models/face_recognition_sface/</a> ].

**6.611.1.5 ScanTask**

enum `Digikam::FaceScanSettings::ScanTask`

Different possible tasks processed while scanning operation.

## Enumerator

DetectAndRecognize	Detect and recognize faces only.
RecognizeMarkedFaces	Recognize already marked faces only.
RetrainAll	Retrain faces only.

## 6.611.2 Member Data Documentation

### 6.611.2.1 detectAccuracy

```
int Digikam::FaceScanSettings::detectAccuracy = DNN_MODEL_THRESHOLD_NOT_SET
```

use default value from dnnmodels.conf

### 6.611.2.2 recognizeAccuracy

```
int Digikam::FaceScanSettings::recognizeAccuracy = DNN_MODEL_THRESHOLD_NOT_SET
```

use default value from dnnmodels.conf

## 6.612 Digikam::FaceScanWidget Class Reference

### 6.612.1 Member Function Documentation

#### 6.612.1.1 doLoadState()

```
void Digikam::FaceScanWidget::doLoadState ( ) [override], [protected], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation. ClearAll isn't a valid value anymore so set it Rescan. ClearAll is only used by ResetFacesDb in maintenance.

Implements [Digikam::StateSavingObject](#).

#### 6.612.1.2 doSaveState()

```
void Digikam::FaceScanWidget::doSaveState ( ) [override], [protected], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.616.1 Member Function Documentation

#### 6.616.1.1 allPersonNames()

```
QList< QString > Digikam::FaceTags::allPersonNames ( ) [static]
```

A method to return a list of all person tag names in the DB.

#### 6.616.1.2 allPersonPaths()

```
QList< QString > Digikam::FaceTags::allPersonPaths ( ) [static]
```

A method to return a list of all person tag paths in the DB.

### 6.616.1.3 allPersonTags()

```
QList< int > Digikam::FaceTags::allPersonTags ( ) [static]
```

A method to return a list of all person tags in the DB.

### 6.616.1.4 applyTagIdentityMapping()

```
void Digikam::FaceTags::applyTagIdentityMapping (
    int tagId,
    const QMap< QString, QString > & attributes ) [static]
```

Map an existing tag to a [FacesEngine Identity](#). Subsequently, the [Identity](#) can be retrieved via the `identityAttributes()`.

### 6.616.1.5 ensureIsPerson()

```
void Digikam::FaceTags::ensureIsPerson (
    int tagId,
    const QString & fullName = QString() ) [static]
```

Ensure that the given tag is a person tag. If not, it will be converted. Optionally, pass the full name. (tag name is not changed).

### 6.616.1.6 faceNameForTag()

```
QString Digikam::FaceTags::faceNameForTag (
    int tagId ) [static]
```

Return a person's name for a tag.

### 6.616.1.7 getOrCreateTagForIdentity()

```
int Digikam::FaceTags::getOrCreateTagForIdentity (
    const QMap< QString, QString > & attributes ) [static]
```

Use attributes as used by [FacesEngine](#) to identify or create a person tag; From the database, produce the identity attributes identifying the corresponding identity.

### 6.616.1.8 getOrCreateTagForPerson()

```
int Digikam::FaceTags::getOrCreateTagForPerson (
    const QString & name,
    int parentId = -1,
    const QString & fullName = QString() ) [static]
```

First, looks for the given person name in person tags, and returns an ID. If not, creates a new tag. Per default, `fullName` is the same as `name`.

### 6.616.1.9 isPerson()

```
bool Digikam::FaceTags::isPerson (
    int tagId ) [static]
```

Returns a boolean value indicating whether the given tagId represents a person.

### 6.616.1.10 personParentTag()

```
int Digikam::FaceTags::personParentTag ( ) [static]
```

The suggested parent tag for persons.

### 6.616.1.11 tagForPerson()

```
int Digikam::FaceTags::tagForPerson (
    const QString & name,
    int parentId = -1,
    const QString & fullName = QString() ) [static]
```

Looks for the given person name under the People tags tree, and returns an ID. Returns 0 if no name found. Per default, fullName is the same as name. As parentId of -1 signals to look for any tag, a valid parentId will limit the search to direct children of this tag. parentId of 0 means top-level tag.

## 6.617 Digikam::FaceTagsEditor Class Reference

- virtual void **removeNormalTags** (qulonglong imageid, const [QList](#)< int > &tagIds)

## 6.617.1 Member Function Documentation

### 6.617.1.1 add()

```
void Digikam::FaceTagsEditor::add (
    const FaceTagsIface & face,
    bool trainFace = true )
```

Adds a new entry to the database. The convenience wrapper will return the newly created entry. If trainFace is true, the face will also be listed in the db as needing training. The tag of the face will, if necessary, be converted to a person tag.

### 6.617.1.2 addNormalTag()

```
void Digikam::FaceTagsEditor::addNormalTag (
    qlonglong imageId,
    int tagId ) [protected], [virtual]
```

Reimplemented in [Digikam::FaceUtils](#).

### 6.617.1.3 changeRegion()

```
FaceTagsIface Digikam::FaceTagsEditor::changeRegion (
    const FaceTagsIface & face,
    const TagRegion & newRegion )
```

Changes the region of the given entry. Returns the face with the new region set.

### 6.617.1.4 changeSuggestedName()

```
FaceTagsIface Digikam::FaceTagsEditor::changeSuggestedName (
    const FaceTagsIface & previousEntry,
    int unconfirmedNameTagId )
```

Switches an unknownPersonEntry or unconfirmedEntry to an unconfirmedEntry (with a different suggested name).

### 6.617.1.5 changeTag()

```
FaceTagsIface Digikam::FaceTagsEditor::changeTag (
    const FaceTagsIface & face,
    int newTagId )
```

Changes the tag of the given entry. Returns the face with the new Tag. Since a new Tag is going to be assigned to the Face, it's important to remove the association between the face and the old tagId.

If the face is being ignored and it was an unconfirmed or unknown face don't remove a possible tag. See bug 449142.

We store metadata of [FaceTags](#), if it's a confirmed person.

### 6.617.1.6 confirmedEntry()

```
FaceTagsIface Digikam::FaceTagsEditor::confirmedEntry (
    const FaceTagsIface & face,
    int tagId = -1,
    const TagRegion & confirmedRegion = TagRegion() ) [static]
```

Returns the entry that would be added if the given face is confirmed.

### 6.617.1.7 confirmName()

```
FaceTagsIface Digikam::FaceTagsEditor::confirmName (
    const FaceTagsIface & face,
    int tagId = -1,
    const TagRegion & confirmedRegion = TagRegion() )
```

Assign the name tag for given face entry. Pass the tagId if it changed or was newly assigned (UnknownName). Pass the new, corrected region if it changed. If the default values are passed, tag id or region are taken from the given face. The given face should be an unchanged entry read from the database. The confirmed tag will, if necessary, be converted to a person tag. Returns the newly inserted entry.

### 6.617.1.8 databaseFaces()

```
QList< FaceTagsIface > Digikam::FaceTagsEditor::databaseFaces (
    qlonglong imageid ) const
```

Reads the FaceTagsIfaces for the given image id from the database.

### 6.617.1.9 faceCountForPersonInImage()

```
int Digikam::FaceTagsEditor::faceCountForPersonInImage (
    qlonglong imageid,
    int tagId ) const
```

Returns the number of faces a particular person has in the specified image.

### 6.617.1.10 getSuggestedNames()

```
QMap< QString, QString > Digikam::FaceTagsEditor::getSuggestedNames (
    qlonglong id ) const
```

Returns a Map of Tag Regions (in XML format) to Suggested Name (from Face Recognition) for the given image. This function makes read operations to the database, and hence can be inefficient when called repeatedly. A cached version is provided in [ItemInfo](#), and should be preferred for intensive operations such as sorting, categorizing etc. For Unconfirmed Results, the value is stored as a tuple of (SuggestedId, Property, Region). Look at the digikam.db file for more details.

### 6.617.1.11 getTagRects()

```
QList< QRect > Digikam::FaceTagsEditor::getTagRects (
    qlonglong imageid ) const
```

Returns a list of all tag rectangles for the image. Unlike findAndTagFaces, this does not take a [DImg](#), because it returns only a QRect, not a Face, so no need of cropping a face rectangle.

### 6.617.1.12 numberOfFaces()

```
int Digikam::FaceTagsEditor::numberOfFaces (
    qlonglong imageid ) const
```

Returns the number of faces present in an image.

### 6.617.1.13 removeAllFaces()

```
void Digikam::FaceTagsEditor::removeAllFaces (
    qlonglong imageid )
```

Unassigns all face tags from the image and sets it's scanned property to false.

### 6.617.1.14 removeFace() [1/2]

```
void Digikam::FaceTagsEditor::removeFace (
    const FaceTagsIface & face,
    bool touchTags = true )
```

Remove the given face. If appropriate, the tag is also removed.

### 6.617.1.15 removeFace() [2/2]

```
void Digikam::FaceTagsEditor::removeFace (
    qlonglong imageid,
    const QRect & rect )
```

Remove a face or the face for a certain rect from an image.

### 6.617.1.16 removeNormalTag()

```
void Digikam::FaceTagsEditor::removeNormalTag (
    qlonglong imageId,
    int tagId ) [protected], [virtual]
```

Reimplemented in [Digikam::FaceUtils](#).

### 6.617.1.17 rotateFaces()

```
bool Digikam::FaceTagsEditor::rotateFaces (
    qlonglong imageId,
    const QSize & size,
    int oldOrientation,
    int newOrientation )
```

Rotate face tags.

### 6.617.1.18 unconfirmedEntry()

```
FaceTagsIface Digikam::FaceTagsEditor::unconfirmedEntry (
    qlonglong imageId,
    int tagId,
    const TagRegion & region ) [static]
```

Returns the entry that would be added if the given face is autodetected. If tagId is -1, the unknown person will be taken.

### 6.617.1.19 unconfirmedFaceTagsIfaces()

```
QList< FaceTagsIface > Digikam::FaceTagsEditor::unconfirmedFaceTagsIfaces (
    qlonglong imageid ) const
```

Returns list of Unconfirmed and Unknown faces in the Image. If you want just Unconfirmed Faces,

## 6.618.1 Member Function Documentation

### 6.618.1.1 attributeForType()

```
QString Digikam::FaceTagsIface::attributeForType (
    Type type ) [static]
```

Return the corresponding image tag property for the given type.

### 6.618.1.2 attributesForFlags()

```
QStringList Digikam::FaceTagsIface::attributesForFlags (
    TypeFlags flags ) [static]
```

Returns a list of all image tag properties for which flags are set.

### 6.618.1.3 fromListing()

```
FaceTagsIface Digikam::FaceTagsIface::fromListing (
    qlonglong imageid,
    const QList< QVariant > & values ) [static]
```

Create a [FaceTagsIface](#) from the extraValues returned from [ItemLister](#).

### 6.618.1.4 fromVariant()

```
FaceTagsIface Digikam::FaceTagsIface::fromVariant (
    const QVariant & var ) [static]
```

Writes the contents of this face - in a compact way - in the QVariant. Only native QVariant types are used, that is, the QVariant will not have a custom type, thus it can be compared by value by operator==.

### 6.618.1.5 getAutodetectedPersonString()

```
QString Digikam::FaceTagsIface::getAutodetectedPersonString ( ) const
```

Returns the string tagId + ',' + unconfirmedFace + ',' + regionXml.

### 6.618.1.6 hash()

```
const QString Digikam::FaceTagsIface::hash ( ) const
```

Generate a hash based on the imageId, tagId, and rect to uniquely identify this entry in the face training DB.

### 6.618.1.7 removeFaceTraining()

```
void Digikam::FaceTagsIface::removeFaceTraining ( ) const
```

Remove the face from face training based on the current imageId, tagId, and rect hash.

### 6.618.1.8 typeForAttribute()

```
FaceTagsIface::Type Digikam::FaceTagsIface::typeForAttribute (
    const QString & attribute,
    int tagId = 0 ) [static]
```

Return the Type for the given attribute. To distinguish between UnknownName and UnconfirmedName, the tagId must be given.

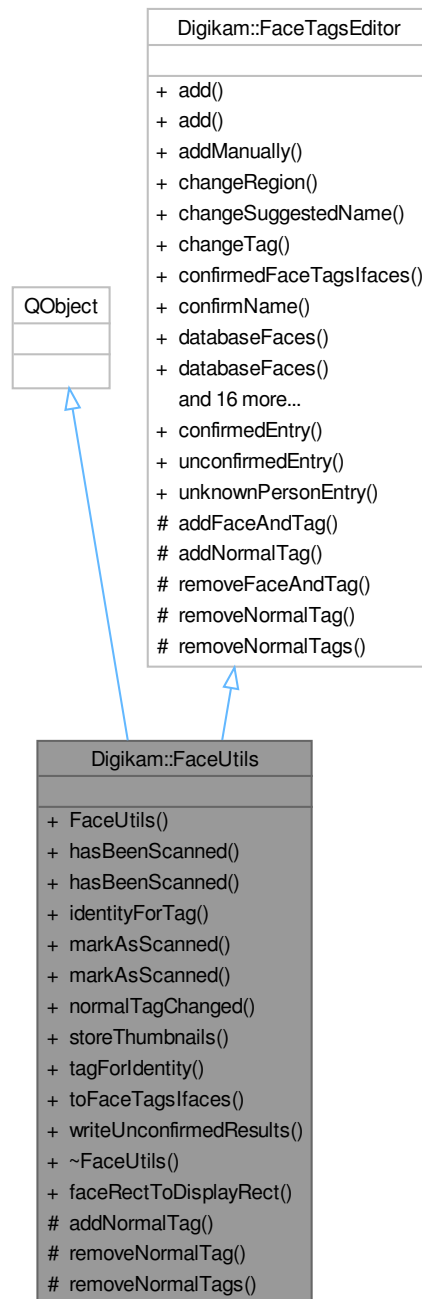

### 6.618.1.9 typeForId()

```
FaceTagsIface::Type Digikam::FaceTagsIface::typeForId (
    int tagId ) [static]
```

Returns the Face Type corresponding to the given TagId.

## 6.619 Digikam::FaceUtils Class Reference

- void [removeNormalTags](#) (qulonglong imageId, const QList< int > &tagIds) override

## Protected Member Functions inherited from [Digikam::FaceTagsEditor](#)

- void [addFaceAndTag](#) ([ItemTagPair](#) &pair, const [FaceTagsIface](#) &face, const QStringList &properties, bool addTag)
- void [removeFaceAndTag](#) ([ItemTagPair](#) &pair, const [FaceTagsIface](#) &face, bool touchTags)

## 6.619.1 Member Function Documentation

### 6.619.1.1 addNormalTag()

```
void Digikam::FaceUtils::addNormalTag (
    qulonglong imageId,
    int tagId ) [override], [protected], [virtual]
```

Reimplemented from parent class.

Reimplemented from [Digikam::FaceTagsEditor](#).

### 6.619.1.2 faceRectToDisplayRect()

```
QRect Digikam::FaceUtils::faceRectToDisplayRect (
    const QRect & rect ) [static]
```

For display, it may be desirable to display a slightly larger region than the strict face rectangle. This returns a pixel margin commonly used to increase the rectangle size in all four directions.

### 6.619.1.3 hasBeenScanned()

```
bool Digikam::FaceUtils::hasBeenScanned (
    const ItemInfo & info ) const
```

Tells if the image has been scanned for faces or not

### 6.619.1.4 markAsScanned()

```
void Digikam::FaceUtils::markAsScanned (
    qulonglong imageid,
    bool hasBeenScanned = true ) const
```

Marks the image as scanned for faces.

### 6.619.1.5 removeNormalTag()

```
void Digikam::FaceUtils::removeNormalTag (
    qlonglong imageId,
    int tagId ) [override], [protected], [virtual]
```

If the face just removed was the final face associated with that Tag, reset Tag Icon.

Reimplemented from [Digikam::FaceTagsEditor](#).

### 6.619.1.6 removeNormalTags()

```
void Digikam::FaceUtils::removeNormalTags (
    qlonglong imageId,
    const QList< int > & tagIds ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::FaceTagsEditor](#).

### 6.619.1.7 storeThumbnails()

```
void Digikam::FaceUtils::storeThumbnails (
    ThumbnailLoadThread *const thread,
    const QString & filePath,
    const QList< FaceTagsIface > & databaseFaces,
    const DImg & image )
```

This uses a thumbnail load thread to load the image detail. If requested, the faces will be scaled to the given (fixed) size. Store the needed thumbnails for the given faces. This can be a huge optimization when the has already been loaded anyway.

Images in faces and thumbnails.

### 6.619.1.8 toFaceTagsifaces()

```
QList< FaceTagsIface > Digikam::FaceUtils::toFaceTagsIfaces (
    qlonglong imageid,
    const QList< QRectF > & detectedFaces,
    const QList< Identity > & recognitionResults,
    const QSize & fullSize ) const
```

Conversion.

Convert between [FacesEngine](#) results and [FaceTagsIface](#).

### 6.619.1.9 writeUnconfirmedResults()

```
QList< FaceTagsIface > Digikam::FaceUtils::writeUnconfirmedResults (
    qlonglong imageid,
    const QList< QRectF > & detectedFaces,
    const QList< Identity > & recognitionResults,
    const QSize & fullSize )
```

The given face list is a result of automatic detection and possibly recognition. The results are written to the database and merged with existing entries. The returned list contains the faces written to the database and has the same size as the given list. If a face was skipped (because of an existing entry), a null [FaceTagsIface](#) will be at this place.

### 6.620.1 Member Function Documentation

#### 6.620.1.1 addIdentity()

```
Identity Digikam::FacialRecognitionWrapper::addIdentity (
    const QMap< QString, QString > & attributes )
```

Adds a new identity with the specified attributes. Please note that a UUID is automatically generated.

### 6.620.1.2 addIdentityAttributes()

```
void Digikam::FacialRecognitionWrapper::addIdentityAttributes (
    int id,
    const QMap< QString, QString > & attributes )
```

Adds or sets, resp., the attributes of an identity.

### 6.620.1.3 addIdentityDebug()

```
Identity Digikam::FacialRecognitionWrapper::addIdentityDebug (
    const QMap< QString, QString > & attributes )
```

This is the debug version of addIdentity, so the identity is only added to identityCache, but not into the recognition database.

### 6.620.1.4 allIdentities()

```
QList< Identity > Digikam::FacialRecognitionWrapper::allIdentities ( ) const
```

Returns all identities known to the database

### 6.620.1.5 clearAllTraining()

```
void Digikam::FacialRecognitionWrapper::clearAllTraining ( )
```

Deletes the training data for all identities, leaving the identities as such in the database.

### 6.620.1.6 clearTraining() [1/2]

```
void Digikam::FacialRecognitionWrapper::clearTraining (
    const QList< Identity > & identitiesToClean )
```

Deletes the training data for the given identity, leaving the identity as such in the database.

### 6.620.1.7 clearTraining() [2/2]

```
void Digikam::FacialRecognitionWrapper::clearTraining (
    const QString & hash )
```

Deletes the training image for the given identity, leaving the identity as such in the database.

### 6.620.1.8 deleteIdentities()

```
void Digikam::FacialRecognitionWrapper::deleteIdentities (
    QList< Identity > identitiesToBeDeleted )
```

Deletes a list of identities from the database.

**6.620.1.9 deleteIdentity()**

```
void Digikam::FacialRecognitionWrapper::deleteIdentity (
    const Identity & identityToBeDeleted )
```

Deletes an identity from the database.

**6.620.1.10 findIdentity() [1/2]**

```
Identity Digikam::FacialRecognitionWrapper::findIdentity (
    const QMap< QString, QString > & attributes ) const
```

Finds the identity matching the given attributes. Attributes are first checked with knowledge of their meaning. Secondly, all unknown attributes are used. Returns a null [Identity](#) if no match is possible or the map is empty.

**6.620.1.11 findIdentity() [2/2]**

```
Identity Digikam::FacialRecognitionWrapper::findIdentity (
    const QString & attribute,
    const QString & value ) const
```

Finds the first identity with matching attribute - value. Returns a null identity if no match is found or attribute is empty.

**6.620.1.12 integrityCheck()**

```
bool Digikam::FacialRecognitionWrapper::integrityCheck ( )
```

Checks the integrity and returns true if everything is fine.

**6.620.1.13 recognizeFaces()**

```
QList< Identity > Digikam::FacialRecognitionWrapper::recognizeFaces (
    ImageListProvider *const images )
```

Returns the recommended size if you want to scale face images for recognition. Larger images can be passed, but may be downscaled. Performs recognition. The face details to be recognized are passed by the provider. For each entry in the provider, in 1-to-1 mapping, a recognized identity or the null identity is returned.

**6.620.1.14 setParameter()**

```
void Digikam::FacialRecognitionWrapper::setParameter (
    const QString & parameter,
    const QVariant & value )
```

Tunes backend parameters. Available parameters: "accuracy", synonymous: "threshold", range: 0-1, type: float Determines recognition threshold, 0->accept very insecure recognitions, 1-> be very sure about a recognition.

"k-nearest" : limit the number of nearest neighbors for KNN "recognizeModel" : sets the recognizer model used to instantiate the correct recognizer

### 6.620.1.15 train() [1/2]

```
void Digikam::FacialRecognitionWrapper::train (
    const Identity & identityToBeTrained,
    const QPair< QImage *, QString > & image )
```

Performs training by using image data directly.

These are convenience functions for simple setups. If you want good performance and/or a more versatile implementation, be sure to implement your own [TrainingDataProvider](#) and use one of the above functions.

### 6.620.1.16 train() [2/2]

```
void Digikam::FacialRecognitionWrapper::train (
    const QList< Identity > & identitiesToBeTrained,
    TrainingDataProvider *const data )
```

Performs training. The identities which have new images to be trained are given. An empty list means that all identities are checked.

All needed data will be queried from the provider.

An identifier for the current training context is given, which can identify the application or group of collections. (It is assumed that training from different contexts is based on non-overlapping collections of images. Keep it always constant for your app.)

### 6.620.1.17 vacuum()

```
void Digikam::FacialRecognitionWrapper::vacuum ( )
```

Shrinks the database.

## 6.621 Digikam::FacialRecognitionWrapper::Private Class Reference

### 6.621.1.1 `findByAttributes()`

```
Identity Digikam::FacialRecognitionWrapper::Private::findByAttributes (
    const QString & attribute,
    const QMap< QString, QString > & valueMap ) const
```

NOTE: Takes care that there may be multiple values of attribute in valueMap.

### 6.621.1.2 `identityContains()`

```
bool Digikam::FacialRecognitionWrapper::Private::identityContains (
    const Identity & identity,
    const QString & attribute,
    const QString & value ) [static]
```

NOTE: Takes care that there may be multiple values of attribute in identity's attributes.

### Static Public Member Functions

- static FFMpegProperties [getAudioCodecsProperties](#) ()
- static FFMpegProperties [getExtensionsProperties](#) ()
- static FFMpegProperties [getVideoCodecsProperties](#) ()

### 6.623.1 Member Function Documentation

#### 6.623.1.1 getAudioCodecsProperties()

FFMpegProperties Digikam::FFmpegConfigHelper::getAudioCodecsProperties ( ) [static]

Return a map of Audio Codec Name with a list of properties:

- Codecs description.
- Read support.
- Write support.

### 6.623.1.2 getExtensionsProperties()

```
FFMpegProperties Digikam::FFMpegConfigHelper::getExtensionsProperties ( ) [static]
```

Return a map,of File extensions supported with a list of properties:

- Format description.

### 6.623.1.3 getVideoCodecsProperties()

```
FFMpegProperties Digikam::FFMpegConfigHelper::getVideoCodecsProperties ( ) [static]
```

Return a map of Video Codec Name with a list of properties:

- Codecs description.
- Read support.
- Write support.

## Additional Inherited Members

## Signals inherited from [Digikam::ProcessLauncher](#)

- void **signalComplete** (bool [success](#), int [exitCode](#))

## 6.624.1 Member Function Documentation

### 6.624.1.1 [encodeFrames\(\)](#)

```
void Digikam::FFmpegLauncher::encodeFrames ( )
```

Encode frames in a separated thread.

### 6.624.1.2 [setSettings\(\)](#)

```
void Digikam::FFmpegLauncher::setSettings (
    VidSlideSettings *const settings )
```

Set encoding frames settings.

### 6.624.1.3 [soundTrackLength\(\)](#)

```
QTime Digikam::FFmpegLauncher::soundTrackLength (
    const QString & audioPath )
```

Return the length of an audio file. If duration cannot be decoded, it returns a null QTime.

#### 6.624.1.4 supportedCodecs()

```
QMap< QString, QString > Digikam::FFmpegLauncher::supportedCodecs ( )
```

Get the map of supported codecs with features.

#### 6.624.1.5 supportedFormats()

```
QMap< QString, QString > Digikam::FFmpegLauncher::supportedFormats ( )
```

Get the map of supported formats with features.

### 6.629.1 Member Function Documentation

#### 6.629.1.1 [applyMetadata\(\)](#)

```
void Digikam::FileActionMngrDatabaseWorker::applyMetadata (
    const FileActionItemInfoList & infos,
    DisjointMetadata * hub ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

#### 6.629.1.2 [assignColorLabel\(\)](#)

```
void Digikam::FileActionMngrDatabaseWorker::assignColorLabel (
    const FileActionItemInfoList & infos,
    int colorId ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

#### 6.629.1.3 [assignPickLabel\(\)](#)

```
void Digikam::FileActionMngrDatabaseWorker::assignPickLabel (
    const FileActionItemInfoList & infos,
    int pickId ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

#### 6.629.1.4 [assignRating\(\)](#)

```
void Digikam::FileActionMngrDatabaseWorker::assignRating (
    const FileActionItemInfoList & infos,
    int rating ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

### 6.629.1.5 assignTags()

```
void Digikam::FileActionMngrDatabaseWorker::assignTags (
    const FileActionItemInfoList & infos,
    const QList< int > & tagIDs ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

### 6.629.1.6 copyAttributes()

```
void Digikam::FileActionMngrDatabaseWorker::copyAttributes (
    const FileActionItemInfoList & infos,
    const QStringList & derivedPaths ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

### 6.629.1.7 editGroup()

```
void Digikam::FileActionMngrDatabaseWorker::editGroup (
    int groupAction,
    const ItemInfo & pick,
    const FileActionItemInfoList & infos ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

### 6.629.1.8 removeTags()

```
void Digikam::FileActionMngrDatabaseWorker::removeTags (
    const FileActionItemInfoList & infos,
    const QList< int > & tagIDs ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

### 6.629.1.9 setExifOrientation()

```
void Digikam::FileActionMngrDatabaseWorker::setExifOrientation (
    const FileActionItemInfoList & infos,
    int orientation ) [override], [virtual]
```

Reimplemented from [Digikam::DatabaseWorkerInterface](#).

```
void Digikam::FileActionMngrFileWorker::writeOrientationToFiles (
    const FileActionItemInfoList & infos,
    int orientation ) [override], [virtual]
```

Reimplemented from [Digikam::FileWorkerInterface](#).

## 6.631 Digikam::FileActionProgress Class Reference

Inheritance diagram for Digikam::FileActionProgress:

### Signals

- void `signalComplete ()`

### Signals inherited from [Digikam::ProgressItem](#)

- void `progressItemAdded (ProgressItem *item)`  
*Emitted when a new ProgressItem is added.*
- void `progressItemCanceled (ProgressItem *item)`

Emitted when an item was canceled. It will not go away immediately, only when the owner sets it complete, which will usually happen. Can be used to visually indicate the canceled status of an item. Should be used by the owner of the item to make sure it is set completed even if it is canceled. There is a [ProgressManager::slotStandardCancelHandler](#) which simply sets the item completed and can be used if no other work needs to be done on cancel.

- void **progressItemCanceledById** (const QString &id)
- void **progressItemCompleted** (ProgressItem \*item)
 

Emitted when a progress item was completed. The item will be deleted afterwards, so slots connected to this are the last chance to work with this item.
- void **progressItemLabel** (ProgressItem \*item, const QString &label)
 

Emitted when the label of an item changed. Should be used by progress dialogs to update the label of an item.
- void **progressItemProgress** (ProgressItem \*item, unsigned int v)
 

Emitted when the progress value of an item changes.
- void **progressItemStatus** (ProgressItem \*item, const QString &mess)
 

Emitted when the status message of an item changed. Should be used by progress dialogs to update the status message for an item.
- void **progressItemThumbnail** (ProgressItem \*item, const QPixmap &thumb)
 

Emitted when the thumbnail data must be set in item.
- void **progressItemUsesBusyIndicator** (ProgressItem \*item, bool value)
 

Emitted when the busy indicator state of an item changes. Should be used by progress dialogs so that they can adjust the display of the progress bar to the new mode.

## Public Member Functions

- **FileActionProgress** (const QString &name)

## Public Member Functions inherited from [Digikam::ProgressItem](#)

- void **addChild** (ProgressItem \*const kiddo)
- bool **advance** (unsigned int v)
 

Advance total items processed by n values and update percentage in progressbar.
- bool **canBeCanceled** () const
- void **cancel** ()
- bool **canceled** () const
- unsigned int **completedItems** () const
- bool **hasThumbnail** () const
- const QString & **id** () const
- bool **incCompletedItems** (unsigned int v=1)
- void **incTotalItems** (unsigned int v=1)
- const QString & **label** () const
- ProgressItem \* **parent** () const
- unsigned int **progress** () const
- **ProgressItem** (ProgressItem \*const parent, const QString &id, const QString &label, const QString &status, bool canBeCanceled, bool hasThumb)
- void **removeChild** (ProgressItem \*const kiddo)
- void **reset** ()
 

Reset the progress value of this item to 0 and the status string to the empty string.
- void **setComplete** ()
 

Tell the item it has finished. This will emit [progressItemCompleted\(\)](#) result in the destruction of the item after all slots connected to this signal have executed. This is the only way to get rid of an item and needs to be called even if the item is canceled. Don't use the item after this has been called on it.
- bool **setCompletedItems** (unsigned int v)
- void **setLabel** (const QString &v)

- void [setProgress](#) (unsigned int v)  
*Set the progress (percentage of completion) value of this item.*
- void [setShowAtStart](#) (bool [showAtStart](#))  
*Set the property to pop-up item when it's added in progress manager. Use this method if you consider that item is important to be notified to end-user.*
- void [setStatus](#) (const QString &v)  
*Set the string to be used for showing this item's current status.*
- void [setThumbnail](#) (const QIcon &icon)  
*Sets whether this item has a thumbnail.*
- void **setTotalItems** (unsigned int v)
- void [setUsesBusyIndicator](#) (bool useBusyIndicator)  
*Sets whether this item uses a busy indicator instead of real progress for its progress bar. If it uses a busy indicator, you are still responsible for calling [setProgress\(\)](#) from time to time to update the busy indicator.*
- bool [showAtStart](#) () const
- const QString & [status](#) () const
- bool **totalCompleted** () const
- unsigned int **totalItems** () const
- void **updateProgress** ()  
*Recalculate progress according to total/completed items and update.*
- bool [usesBusyIndicator](#) () const

TODO: describe me

## Parameters

<i>settings</i>	contains settings
<i>match</i>	result of the regular expression match done in <code>Option::parse()</code>

## Returns

Implements [Digikam::Option](#).

## 6.635 Digikam::FileReadLocker Class Reference

## 6.637 Digikam::FileSaveConflictBox Class Reference

Inheritance diagram for Digikam::FileSaveConflictBox:

### Public Types

- enum `ConflictRule` { `OVERWRITE = 0` , `DIFFNAME` , `SKIPFILE` }

### Signals

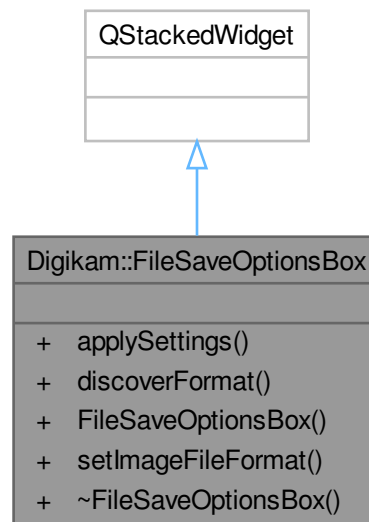

- void `signalConflictButtonChanged` (int)

### Public Member Functions

- ConflictRule `conflictRule` () const
- `FileSaveConflictBox` (QWidget \*const parent, bool addSkip=false)
- void `readSettings` (const KConfigGroup &group)
- void `resetToDefault` ()
- void `setConflictRule` (ConflictRule r)
- void `writeSettings` (KConfigGroup &group)

## 6.638 Digikam::FileSaveOptionsBox Class Reference

Inheritance diagram for Digikam::FileSaveOptionsBox:

### Public Types

- enum `FORMAT` {  
`NONE = 0`, `JPEG`, `PNG`, `TIFF`,  
`PGF`, `JXL`, `WEBP`, `AVIF` }

### Public Member Functions

- void `applySettings` ()
- `FORMAT` `discoverFormat` (const QString &filename, `FORMAT` fallback=`NONE`)
- `FileSaveOptionsBox` (QWidget \*const parent=nullptr)  
*Constructor. Don't forget to call `setDialog` after creation of the dialog.*
- void `setImageFileFormat` (const QString &)
- `~FileSaveOptionsBox` () override

### 6.638.1 Member Enumeration Documentation

#### 6.638.1.1 FORMAT

enum `Digikam::FileSaveOptionsBox::FORMAT`

## Enumerator

NONE	<p>Warning</p> <p>Order is important here. See filesaveoptionbox.cpp which use these values to fill a stack of widgets.</p>
------	---

## 6.638.2 Constructor & Destructor Documentation

### 6.638.2.1 FileSaveOptionsBox()

```
Digikam::FileSaveOptionsBox::FileSaveOptionsBox (
    QWidget *const parent = nullptr ) [explicit]
```

## Parameters

<i>parent</i>	the parent for Qt's parent child mechanism
---------------	--

### 6.638.2.2 ~FileSaveOptionsBox()

```
Digikam::FileSaveOptionsBox::~FileSaveOptionsBox ( ) [override]
```

Destructor.

## 6.638.3 Member Function Documentation

### 6.638.3.1 discoverFormat()

```
FileSaveOptionsBox::FORMAT Digikam::FileSaveOptionsBox::discoverFormat (
    const QString & filename,
    FileSaveOptionsBox::FORMAT fallback = NONE )
```

Tries to discover a file format that has options to change based on a filename.

## Parameters

<i>filename</i>	file name to discover the desired format from
<i>fallback</i>	the fallback format to return if no format could be discovered based on the filename

## Returns

file format guessed from the file name or the given fallback format if no format could be guessed based on the file name

## 6.639 Digikam::FileSaveOptionsDlg Class Reference

## 6.649.1 Constructor & Destructor Documentation

### 6.649.1.1 FilmGrainFilter()

```
Digikam::FilmGrainFilter::FilmGrainFilter (
    DImgThreadedFilter *const parentFilter,
    const DImg & orgImage,
    const DImg & destImage,
    int progressBegin = 0,
    int progressEnd = 100,
    const FilmGrainContainer & settings = FilmGrainContainer() ) [explicit]
```

Constructor for slave mode: execute immediately in current thread with specified master filter.

## 6.649.2 Member Function Documentation

### 6.649.2.1 filterAction()

```
FilterAction Digikam::FilmGrainFilter::filterAction ( ) [override], [virtual]
```

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.649.2.2 filterIdentifier()

```
QString Digikam::FilmGrainFilter::filterIdentifier ( ) const [inline], [override], [virtual]
```

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

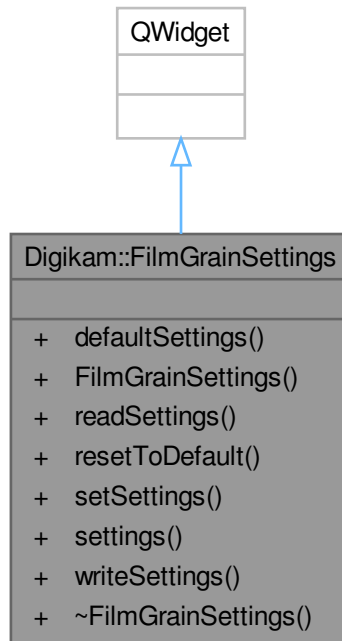

### 6.649.2.3 readParameters()

```
void Digikam::FilmGrainFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

- QString **m\_identifier**
- QHash< QString, QVariant > **m\_params**
- int **m\_version** = 0

## 6.653.1 Member Enumeration Documentation

### 6.653.1.1 Category

```
enum Digikam::FilterAction::Category
```

## Enumerator

ReproducibleFilter	<p><b>Note</b></p> <p>Do not change existing values, they are written to XML in files! When given the set of stored parameters and the original data, an identical result will be produced.</p>
ComplexFilter	The operation is documented and a number of parameters may be known, but the identical result cannot be reproduced. It may be possible to produce a sufficiently similar result.
DocumentedHistory	The source images are known, a textual description may be added, but there is no way to automatically replay

**6.653.1.2 Flag**

```
enum Digikam::FilterAction::Flag
```

## Enumerator

ExplicitBranch	The editing step of this filter action explicitly branches from the parent. This is an optional hint that the result is meant as a new version.
----------------	---

**6.653.2 Member Function Documentation****6.653.2.1 description()**

```
QString Digikam::FilterAction::description ( ) const
```

Returns a description / comment for this action. In the case of DocumentedHistory, this may be the most useful value.

**6.653.2.2 hasParameters()**

```
bool Digikam::FilterAction::hasParameters ( ) const
```

Access parameters. A parameters is a key -> value pair. Keys need to be unique.

**6.653.2.3 identifier()**

```
QString Digikam::FilterAction::identifier ( ) const
```

Returns a technical identifier for the filter used to produce this action. Can include a namespace. Example↔  
: digikam:charcoal

**6.653.2.4 parameter()** [1/2]

```
template<typename T >
T Digikam::FilterAction::parameter (
    const QString & key ) const [inline]
```

Returns parameter converted from QVariant to given type

**6.653.2.5 parameter()** [2/2]

```
template<typename T >
T Digikam::FilterAction::parameter (
    const QString & key,
    const T & defaultValue ) const [inline]
```

Read parameter with a default value: If there is a parameter for the given key, return it converted from QVariant to the template type. If there is no parameter, return the given default value.

**6.653.2.6 version()**

```
int Digikam::FilterAction::version ( ) const
```

Returns the version ( $\geq 1$ ) of the filter used to produce this action. When a filter / tool is found by the identifier, it can decide by the version if it supports this action and which parameters it expects.

## 6.654 Digikam::FilterActionFilter Class Reference

Inheritance diagram for Digikam::FilterActionFilter:

### Public Member Functions

- void **addFilterAction** (const [FilterAction](#) &action)
- void **addFilterActions** (const QList< [FilterAction](#) > &actions)

- `QList< FilterAction > appliedFilterActions ()` const
- `bool completelyApplied ()` const
- `FilterAction failedAction ()` const
- `int failedActionIndex ()` const
- `QString failedActionMessage ()` const
- `FilterAction filterAction ()` override
- `FilterActionFilter (QObject *const parent=nullptr)`
- `QList< FilterAction > filterActions ()` const
- `QString filterIdentifier ()` const override

- [DImgThreadedFilter \\* m\\_slave](#) = nullptr
- [int m\\_version](#) = 1
- [bool m\\_wasCancelled](#) = false

### 6.654.1 Constructor & Destructor Documentation

#### 6.654.1.1 FilterActionFilter()

```
Digikam::FilterActionFilter::FilterActionFilter (
    QObject *const parent = nullptr ) [explicit]
```

A meta-filter applying other filter according to a list of FilterActions

### 6.654.2 Member Function Documentation

#### 6.654.2.1 appliedFilterActions()

```
QList< FilterAction > Digikam::FilterActionFilter::appliedFilterActions ( ) const
```

Returns the list of applied filter actions. This is probably identical to filterActions, but it can differ in some situations:

- if [completelyApplied\(\)](#) is false, it will contain only the successful actions
- the list is regenerated by the filters. If filterActions contains actions with an older version, still supported by the filter, the filter will now possibly return the newer, current version

#### 6.654.2.2 completelyApplied()

```
bool Digikam::FilterActionFilter::completelyApplied ( ) const
```

After the thread was run, you can find out if application was successful. A precondition is that at least [isComplexAction\(\)](#) and [isSupported\(\)](#) returns true. If all filters applied cleanly, [completelyApplied\(\)](#) returns true. [appliedActions\(\)](#) returns all applied actions, if [completelyApplied\(\)](#), the same as [filterActions\(\)](#). If not completely Applied, [failedAction\(\)](#) returns the action that failed, [failedActionIndex](#) its index in [filterActions\(\)](#), and [failedActionMessage](#) an optional error message. Note that [finished\(true\)](#) does not mean that [completelyApplied\(\)](#) is also true.

### 6.654.2.3 filterAction()

```
FilterAction Digikam::FilterActionFilter::filterAction ( ) [inline], [override], [virtual]
```

These methods do not make sense here. Use filterActions.

Implements [Digikam::DImgThreadedFilter](#).

### 6.654.2.4 filterIdentifier()

```
QString Digikam::FilterActionFilter::filterIdentifier ( ) const [inline], [override], [virtual]
```

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.654.2.5 filterImage()

```
void Digikam::FilterActionFilter::filterImage ( ) [override], [protected], [virtual]
```

Main image filter method. Override in subclass.

Implements [Digikam::DImgThreadedFilter](#).

### 6.654.2.6 isComplexAction()

```
bool Digikam::FilterActionFilter::isComplexAction ( ) const
```

Returns true if all FilterActions are reproducible or are ComplexFilters. That means the identical result may not be reproducible, but a sufficiently similar result may be available and apply will probably complete.

### 6.654.2.7 isReproducible()

```
bool Digikam::FilterActionFilter::isReproducible ( ) const
```

Returns true if all FilterActions are reproducible

### 6.654.2.8 isSupported()

```
bool Digikam::FilterActionFilter::isSupported ( ) const
```

Returns true if all actions are supported.

### 6.654.2.9 readParameters()

```
void Digikam::FilterActionFilter::readParameters (
    const FilterAction & ) [inline], [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

**6.654.2.10 setContinueOnError()**

```
void Digikam::FilterActionFilter::setContinueOnError (
    bool cont )
```

Per default, the filter will stop when it encounters an unsupported action. If you want it to continue, set this to true. Only the last occurred error will then be reported.

**6.654.2.11 setFilterActions()**

```
void Digikam::FilterActionFilter::setFilterActions (
    const QList< FilterAction > & actions )
```

Set - or add to existing list - the given filter actions

**6.655 Digikam::FiltersHistoryWidget Class Reference**

Inheritance diagram for Digikam::FiltersHistoryWidget:

**Public Slots**

- void **clearData** ()
- void **disableEntries** (int count)

## 6.656.1 Detailed Description

[Sidebar](#) widget containing the all filter widgets.

### Author

jwienke

## 6.656.2 Constructor & Destructor Documentation

### 6.656.2.1 [FilterSideBarWidget\(\)](#)

```
Digikam::FilterSideBarWidget::FilterSideBarWidget (
    QWidget *const parent,
    TagModel *const tagFilterModel ) [explicit]
```

Constructor.

#### Parameters

<i>parent</i>	the parent for qt parent child mechanism
<i>tagFilterModel</i>	tag model to work on

### 6.656.2.2 [~FilterSideBarWidget\(\)](#)

```
Digikam::FilterSideBarWidget::~~FilterSideBarWidget ( ) [override]
```

Destructor.

## 6.656.3 Member Function Documentation

### 6.656.3.1 doLoadState()

```
void Digikam::FilterSideBarWidget::doLoadState ( ) [override], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.656.3.2 doSaveState()

```
void Digikam::FilterSideBarWidget::doSaveState ( ) [override], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.656.3.3 setConfigGroup()

```
void Digikam::FilterSideBarWidget::setConfigGroup (
    const KConfigGroup & group ) [override], [virtual]
```

Sets a dedicated config group that will be used to store and reload the state from. If this method is not called, a group based on the object name is used.

You can re-implement this method to pass the group set here to child objects. Don't forget to call this method in your implementation.

#### Parameters

<i>group</i>	config group to use for state saving and restoring
--------------	--

Reimplemented from [Digikam::StateSavingObject](#).

### 6.656.3.4 signalTagFilterChanged

```
void Digikam::FilterSideBarWidget::signalTagFilterChanged (
    const QList< int > & includedTags,
    const QList< int > & excludedTags,
    ItemFilterSettings::MatchingCondition matchingCond,
    bool showUnTagged,
    const QList< int > & c1TagIds,
    const QList< int > & p1TagIds ) [signal]
```

Emitted if the selected filter has changed.

#### Parameters

<i>includedTags</i>	a list of included tag ids
---------------------	----------------------------

## Parameters

<i>excludedTags</i>	a list of excluded tag ids
<i>matchingCond</i>	condition to join the selected tags
<i>showUnTagged</i>	if this is true, only photos without a tag shall be shown
<i>clTagIds</i>	a list of color label tag ids
<i>plTagIds</i>	a list of pick label tag ids

**6.656.3.5 slotResetFilters**

```
void Digikam::FilterSideBarWidget::slotResetFilters ( ) [slot]
```

Resets all selected filters.

**6.657 Digikam::FilterStatusBar Class Reference**

Inheritance diagram for Digikam::FilterStatusBar:

**Public Slots**

- void **slotFilterMatches** (bool)
- void **slotFilterSettingsChanged** (const [ItemFilterSettings](#) &settings)

**Signals**

- void **signalPopupFiltersView** ()
- void **signalResetFilters** ()

**Public Member Functions**

- void **calculateInfos** (const QList< qlonglong > &deletedImages=QList< qlonglong >())
- QList< [ItemInfo](#) > **duplicatedItems** ()
- **FindDuplicatesAlbumItem** (QTreeWidgetItem \*const parent, [SAlbum](#) \*const album)
- bool **isValidThumbnail** () const
- int **itemCount** () const
- bool **operator<** (const QTreeWidgetItem &other) const override
- QUrl **refUrl** () const
- void **setThumb** (const QPixmap &pix, bool hasThumb=true)

## 6.659.1 Member Function Documentation

### 6.659.1.1 calculateInfos()

```
void Digikam::FindDuplicatesAlbumItem::calculateInfos (
    const QList< qlonglong > & deletedImages = QList<qlonglong>() )
```

Calculates the duplicates count and average similarity.

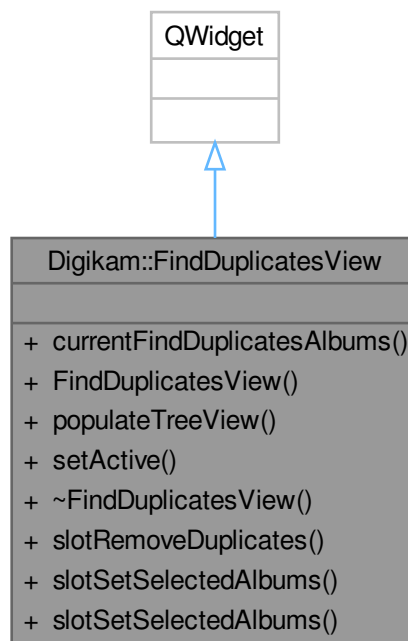

### 6.659.1.2 itemCount()

```
int Digikam::FindDuplicatesAlbumItem::itemCount ( ) const
```

Returns the item count.

## 6.660 Digikam::FindDuplicatesView Class Reference

Inheritance diagram for Digikam::FindDuplicatesView:

### Public Slots

- void **slotRemoveDuplicates** ()
- void **slotSetSelectedAlbums** (const QList< [PAlbum](#) \* > &albums)
- void **slotSetSelectedAlbums** (const QList< [TAlbum](#) \* > &albums)

## Signals

## 6.661 Digikam::FingerPrintsGenerator Class Reference

Inheritance diagram for Digikam::FingerPrintsGenerator:

### Signals

- void **signalScanNotification** (const QString &msg, int type)

## Signals inherited from [Digikam::MaintenanceTool](#)

- void [signalCanceled](#) ()
- void [signalComplete](#) ()

## Signals inherited from [Digikam::ProgressItem](#)

- void [progressItemAdded](#) ([ProgressItem](#) \*item)  
*Emitted when a new [ProgressItem](#) is added.*
- void [progressItemCanceled](#) ([ProgressItem](#) \*item)  
*Emitted when an item was canceled. It will not go away immediately, only when the owner sets it complete, which will usually happen. Can be used to visually indicate the canceled status of an item. Should be used by the owner of the item to make sure it is set completed even if it is canceled. There is a [ProgressManager::slotStandardCancelHandler](#) which simply sets the item completed and can be used if no other work needs to be done on cancel.*
- void [progressItemCanceledById](#) (const QString &id)
- void [progressItemCompleted](#) ([ProgressItem](#) \*item)  
*Emitted when a progress item was completed. The item will be deleted afterwards, so slots connected to this are the last chance to work with this item.*
- void [progressItemLabel](#) ([ProgressItem](#) \*item, const QString &label)  
*Emitted when the label of an item changed. Should be used by progress dialogs to update the label of an item.*
- void [progressItemProgress](#) ([ProgressItem](#) \*item, unsigned int v)  
*Emitted when the progress value of an item changes.*
- void [progressItemStatus](#) ([ProgressItem](#) \*item, const QString &mess)  
*Emitted when the status message of an item changed. Should be used by progress dialogs to update the status message for an item.*
- void [progressItemThumbnail](#) ([ProgressItem](#) \*item, const QPixmap &thumb)  
*Emitted when the thumbnail data must be set in item.*
- void [progressItemUsesBusyIndicator](#) ([ProgressItem](#) \*item, bool value)  
*Emitted when the busy indicator state of an item changes. Should be used by progress dialogs so that they can adjust the display of the progress bar to the new mode.*

## Public Member Functions

- [FingerPrintsGenerator](#) (const bool rebuildAll, const AlbumList &list=AlbumList(), [ProgressItem](#) \*const parent=nullptr)
- void [setUseMultiCoreCPU](#) (bool b) override

## Public Member Functions inherited from [Digikam::MaintenanceTool](#)

- [MaintenanceTool](#) (const QString &id, [ProgressItem](#) \*const parent=nullptr)
- void [setNotificationEnabled](#) (bool b)

## Public Member Functions inherited from Digikam::ProgressItem

- void **addChild** ([ProgressItem](#) \*const kiddo)
- bool **advance** (unsigned int v)
 

*Advance total items processed by n values and update percentage in progressbar.*
- bool **canBeCanceled** () const
- void **cancel** ()
- bool **canceled** () const
- unsigned int **completedItems** () const
- bool **hasThumbnail** () const
- const QString & **id** () const
- bool **incCompletedItems** (unsigned int v=1)
- void **incTotalItems** (unsigned int v=1)
- const QString & **label** () const
- [ProgressItem](#) \* **parent** () const
- unsigned int **progress** () const
- [ProgressItem](#) ([ProgressItem](#) \*const parent, const QString &id, const QString &label, const QString &status, bool canBeCanceled, bool hasThumb)
- void **removeChild** ([ProgressItem](#) \*const kiddo)
- void **reset** ()
 

*Reset the progress value of this item to 0 and the status string to the empty string.*
- void **setComplete** ()
 

*Tell the item it has finished. This will emit [progressItemCompleted\(\)](#) result in the destruction of the item after all slots connected to this signal have executed. This is the only way to get rid of an item and needs to be called even if the item is canceled. Don't use the item after this has been called on it.*
- bool **setCompletedItems** (unsigned int v)
- void **setLabel** (const QString &v)
- void **setProgress** (unsigned int v)
 

*Set the progress (percentage of completion) value of this item.*
- void **setShowAtStart** (bool showAtStart)
 

*Set the property to pop-up item when it's added in progress manager. Use this method if you consider that item is important to be notified to end-user.*
- void **setStatus** (const QString &v)
 

*Set the string to be used for showing this item's current status.*
- void **setThumbnail** (const QIcon &icon)
 

*Sets whether this item has a thumbnail.*
- void **setTotalItems** (unsigned int v)
- void **setUsesBusyIndicator** (bool useBusyIndicator)
 

*Sets whether this item uses a busy indicator instead of real progress for its progress bar. If it uses a busy indicator, you are still responsible for calling [setProgress\(\)](#) from time to time to update the busy indicator.*
- bool **showAtStart** () const
- const QString & **status** () const
- bool **totalCompleted** () const
- unsigned int **totalItems** () const
- void **updateProgress** ()
 

*Recalculate progress according to total/completed items and update.*
- bool **usesBusyIndicator** () const

### Additional Inherited Members

### 6.661.1 Constructor & Destructor Documentation

#### 6.661.1.1 FingerPrintsGenerator()

```
Digikam::FingerPrintsGenerator::FingerPrintsGenerator (
    const bool rebuildAll,
    const AlbumList & list = AlbumList(),
    ProgressItem *const parent = nullptr ) [explicit]
```

Constructor using AlbumList as argument. If list is empty, whole Albums collection is processed.

### 6.661.2 Member Function Documentation

#### 6.661.2.1 setUseMultiCoreCPU()

```
void Digikam::FingerPrintsGenerator::setUseMultiCoreCPU (
    bool ) [override], [virtual]
```

Re-implement this method if your tool is able to use multi-core CPU to process item in parallel

Reimplemented from [Digikam::MaintenanceTool](#).

## 6.662 Digikam::FingerprintsTask Class Reference

- QRect **getRectBySize** (const QSize &size) const
- QSizeF **getSize** () const
- [TypePoint](#) **getType** () const
- QString **getTypeDescription** () const
- [FocusPoint](#) & **operator=** (const [FocusPoint](#) &other)
- void **setCenterPosition** (float x\_position, float y\_position)
- void **setRect** (const QRectF &rectF)
- void **setSize** (float width, float height)
- void **setType** ([TypePoint](#) type)

**6.664.1 Member Enumeration Documentation****6.664.1.1 TypePoint**

```
enum Digikam::FocusPoint::TypePoint
```

**Enumerator**

Inactive	The AF-point is not active.
InFocus	The AF-point is in focus.
Selected	The AF-point is selected but not in focus.
SelectedInFocus	The AF-point is selected and in focus.

## 6.664.2 Constructor & Destructor Documentation

### 6.664.2.1 FocusPoint()

```
Digikam::FocusPoint::FocusPoint (
    float x_position,
    float y_position,
    float width,
    float height,
    TypePoint type )
```

Focus point container constructors. Position and size are in float and a relative to the original image size. Typically, the area is define as percents of values depending of image size used to extract information from metadata. Like this, focus area can be drawn easily over a resized version of image.

## 6.664.3 Member Function Documentation

### 6.664.3.1 getRectBySize()

```
QRect Digikam::FocusPoint::getRectBySize (
    const QSize & size ) const
```

Return the real aera properties in image coordinates depending of the size.

### 6.664.3.2 operator=()

```
FocusPoint & Digikam::FocusPoint::operator= (
    const FocusPoint & other )
```

Equivalent to the copy constructor

### 6.664.3.3 setCenterPosition()

```
void Digikam::FocusPoint::setCenterPosition (
    float x_position,
    float y_position )
```

Accessors to relative properties of focus point area.

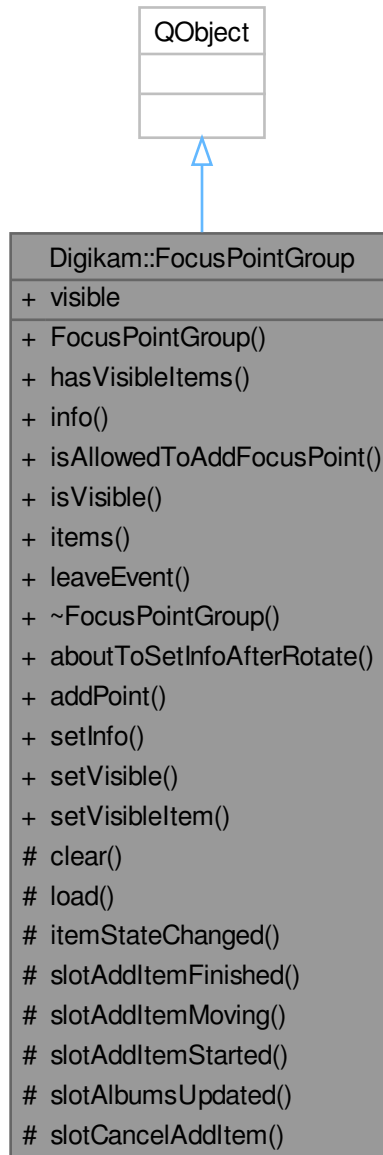

### 6.664.3.4 setType()

```
void Digikam::FocusPoint::setType (
    TypePoint type )
```

Focus point type properties accessor. See TypePoint enum definition for details.

## 6.665 Digikam::FocusPointGroup Class Reference

Inheritance diagram for Digikam::FocusPointGroup:

### Classes

- class [Private](#)

### Public Slots

## 6.665.1 Member Function Documentation

### 6.665.1.1 setInfo

```
void Digikam::FocusPointGroup::setInfo (
    const ItemInfo & info ) [slot]
```

Sets the current [ItemInfo](#)

### 6.665.1.2 setVisible

```
void Digikam::FocusPointGroup::setVisible (
    bool visible ) [slot]
```

Shows or hides the frames

### Public Member Functions

- `FocusPointsExtractor` (`QObject *const parent`, `const QString &path`)
- `ListAFPoints get_af_points ()`
- `ListAFPoints get_af_points (FocusPoint::TypePoint type)`
- `bool isAFPointsReadOnly () const`
- `QString make () const`
- `QString model () const`
- `MetaEngine::ImageOrientation orientation () const`
- `QSize originalSize () const`

## 6.668.1 Member Typedef Documentation

### 6.668.1.1 ListAFPoints

```
using Digikam::FocusPointsExtractor::ListAFPoints = QList<FocusPoint>
```

A list used to store focus points of a image extracted from meta data

With extract() function, an exiftool parser is used to read data from metadata and lists all focus points. Each focus point is defined by their relative centers coordinate and relative size. Each point has own type (Inactive, Infocus, Selected, SelectedInFocus)

## 6.669 Digikam::FocusPointsWriter Class Reference

Inheritance diagram for Digikam::FocusPointsWriter:

### Public Member Functions

- `FocusPointsWriter` (`QObject *const parent`, `const QString &path`)
- void `writeFocusPoint` (`const FocusPoint &point`)
- void `writeFocusPoint` (`const QRectF &rectF`)

## 6.670 Digikam::FrameOsd Class Reference

### Public Member Functions

- void `insertMessageOsdToFrame` (`QImage &frame`, `const QSize &JPEGsize`, `const QString &mess`)
- void `insertOsdToFrame` (`QImage &frame`, `const QUrl &url`, `const FrameOsdSettings &settings`, `const DInfoInterface *const info`)
- void `populateOSD` (`const QUrl &url`, `const FrameOsdSettings &settings`, `const DInfoInterface *const info`)
- void `printComments` (`const QString &comments`)
- void `printTags` (`QStringList &tags`)

## Public Attributes

- QString **m\_desc** = QLatin1String("")
- Qt::Alignment **m\_descAlign** = Qt::AlignLeft
- QColor **m\_descBg** = Qt::darkGray
- QFont **m\_descFnt** = QFont(QLatin1String("Monospace"))
- QPoint **m\_descPos** = QPoint(10, 10)

## 6.670.1 Member Function Documentation

### 6.670.1.1 insertMessageOsdToFrame()

```
void Digikam::FrameOsd::insertMessageOsdToFrame (
    QImage & frame,
    const QSize & JPEGsize,
    const QString & mess )
```

Insert message OSD on broken frame or end frame

### 6.670.1.2 insertOsdToFrame()

```
void Digikam::FrameOsd::insertOsdToFrame (
    QImage & frame,
    const QUrl & url,
    const FrameOsdSettings & settings,
    const DInfoInterface *const info )
```

Insert OSD on frame.

### 6.670.1.3 populateOSD()

```
void Digikam::FrameOsd::populateOSD (
    const QUrl & url,
    const FrameOsdSettings & settings,
    const DInfoInterface *const info )
```

Populate OSD items properties base on Url

### 6.670.1.4 printComments()

```
void Digikam::FrameOsd::printComments (
    const QString & comments )
```

print comments

### 6.670.1.5 printTags()

```
void Digikam::FrameOsd::printTags (
    QStringList & tags )
```

print tags

## 6.671 Digikam::FrameOsdSettings Class Reference

### Public Member Functions

- void [readSettings](#) (const KConfigGroup &group)
- void [writeSettings](#) (KConfigGroup &group)

### Public Attributes

- QFont [osdFont](#) = QFontDatabase::systemFont(QFontDatabase::GeneralFont)
- bool [printApertureFocal](#) = false  
*Print camera Aperture and Focal while streaming.*
- bool [printCapIfNoTitle](#) = false  
*Print image captions if no title available while streaming.*
- bool [printComment](#) = false  
*Print picture comment while streaming.*
- bool [printDate](#) = true  
*Print picture creation date while streaming.*
- bool [printExpoSensitivity](#) = false

*Print rating while streaming.*
- bool [printTags](#) = false  
*Print tags title while streaming.*
- bool [printTitle](#) = false  
*Print image title while streaming.*

### 6.671.1 Member Function Documentation

#### 6.671.1.1 readSettings()

```
void Digikam::FrameOsdSettings::readSettings (
    const KConfigGroup & group )
```

Read and write settings in config file between sessions.

### 6.671.2 Member Data Documentation

#### 6.671.2.1 osdFont

```
QFont Digikam::FrameOsdSettings::osdFont = QFontDatabase::systemFont (QFontDatabase::General↔
Font)
```

Font for the display of osd text.

## 6.672 Digikam::FrameOsdWidget Class Reference

## 6.675.1 Member Function Documentation

### 6.675.1.1 filterAction()

`FilterAction Digikam::FreeRotationFilter::filterAction ( ) [override], [virtual]`

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.675.1.2 filterIdentifier()

`QString Digikam::FreeRotationFilter::filterIdentifier ( ) const [inline], [override], [virtual]`

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

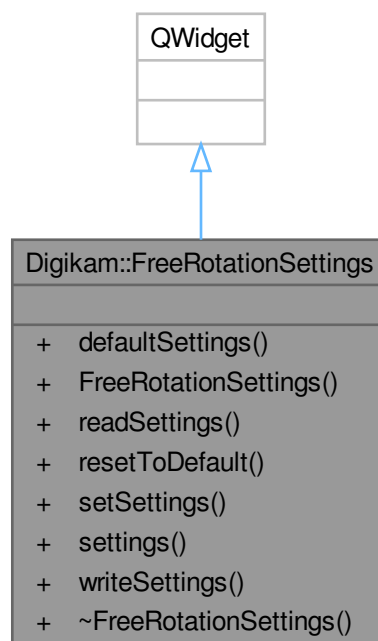

### 6.675.1.3 readParameters()

`void Digikam::FreeRotationFilter::readParameters ( const FilterAction & action ) [override], [virtual]`

Implements [Digikam::DImgThreadedFilter](#).

## 6.681.1 Member Function Documentation

### 6.681.1.1 applySettings()

```
void Digikam::FuzzySearchSideBarWidget::applySettings ( ) [override], [virtual]
```

This method is invoked when the application settings should be (re-) applied to this widget.

Implements [Digikam::SidebarWidget](#).

### 6.681.1.2 changeAlbumFromHistory()

```
void Digikam::FuzzySearchSideBarWidget::changeAlbumFromHistory (
    const QList< Album * > & album ) [override], [virtual]
```

This is called on this widget when the history requires to move back to the specified album

Implements [Digikam::SidebarWidget](#).

### 6.681.1.3 doLoadState()

```
void Digikam::FuzzySearchSideBarWidget::doLoadState ( ) [override], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.681.1.4 doSaveState()

```
void Digikam::FuzzySearchSideBarWidget::doSaveState ( ) [override], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.681.1.5 getCaption()

```
const QString Digikam::FuzzySearchSideBarWidget::getCaption ( ) [override], [virtual]
```

Must be implemented to return the title of this sidebar's tab.

#### Returns

localized title string

Implements [Digikam::SidebarWidget](#).

### 6.681.1.6 `getIcon()`

```
const QIcon Digikam::FuzzySearchSideBarWidget::getIcon ( ) [override], [virtual]
```

Must be implemented and return the icon that shall be visible for this sidebar widget.

#### Returns

pixmap icon

Implements [Digikam::SidebarWidget](#).

### 6.681.1.7 `setActive()`

```
void Digikam::FuzzySearchSideBarWidget::setActive (
    bool active ) [override], [virtual]
```

This method is called if the visible sidebar widget is changed.

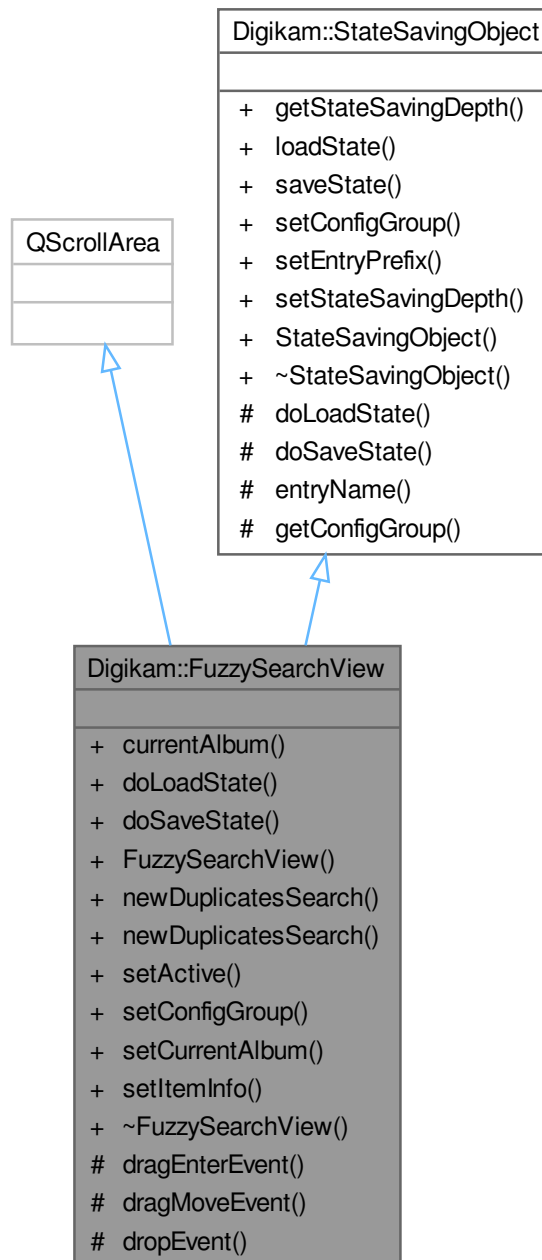

## Parameters

<i>active</i>	if true, this widget is the new active widget, if false another widget is active
---------------	--

Implements [Digikam::SidebarWidget](#).

## 6.682 Digikam::FuzzySearchView Class Reference

Inheritance diagram for Digikam::FuzzySearchView:

## Public Types inherited from [Digikam::StateSavingObject](#)

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }

## 6.682.1 Member Function Documentation

### 6.682.1.1 doLoadState()

```
void Digikam::FuzzySearchView::doLoadState ( ) [override], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.682.1.2 doSaveState()

```
void Digikam::FuzzySearchView::doSaveState ( ) [override], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.682.1.3 setConfigGroup()

```
void Digikam::FuzzySearchView::setConfigGroup (
    const KConfigGroup & group ) [override], [virtual]
```

Sets a dedicated config group that will be used to store and reload the state from. If this method is not called, a group based on the object name is used.

You can re-implement this method to pass the group set here to child objects. Don't forget to call this method in your implementation.

#### Parameters

<i>group</i>	config group to use for state saving and restoring
--------------	--

Reimplemented from [Digikam::StateSavingObject](#).

## 6.683 Digikam::FuzzySearchView::Private Class Reference

### Public Types

- enum **FuzzySearchTab** { **DUPLICATES** = 0 , **SIMILARS** , **SKETCH** }

## 6.685.1 Constructor & Destructor Documentation

### 6.685.1.1 GeodeticCalculator()

```
Digikam::GeodeticCalculator::GeodeticCalculator (
    const Ellipsoid & e = Ellipsoid::WGS84() ) [explicit]
```

Performs geodetic calculations on an ellipsoid. This class encapsulates a generic ellipsoid and calculates the following properties:

Distance and azimuth between two points. Point located at a given distance and azimuth from an other point.

The calculation use the following information:

The starting position (`setStartingPosition`), which is always considered valid. It is initially set at (0,0) and can only be changed to another legitimate value. Only one of the following:

```
The destination position (setDestinationPosition), or  
An azimuth and distance (setDirection).
```

The latest one set overrides the other and determines what will be calculated.

## 6.685.2 Member Function Documentation

### 6.685.2.1 azimuth()

```
double Digikam::GeodeticCalculator::azimuth ( )
```

Returns the azimuth. This method returns the value set by the last call to `setDirection(double, double)` `setDirection(azimuth, distance)`, except if `setDestinationGeographicPoint(double, double)` `setDestinationGeographicPoint(...)` has been invoked after. In this later case, the azimuth will be computed from the startingGeographicPoint starting point to the destination point.

#### Returns

The azimuth, in decimal degrees from -180° to +180°.

### 6.685.2.2 checkAzimuth()

```
bool Digikam::GeodeticCalculator::checkAzimuth (
    double * azimuth ) [protected]
```

Checks the azimuth validity. The argument `azimuth` should be greater or equal than -180 degrees and lower or equals than +180 degrees. As a convenience, this method converts the azimuth to radians.

#### Parameters

<code>azimuth</code>	The azimuth value in decimal degrees.
----------------------	---------------------------------------

### 6.685.2.3 checkLatitude()

```
bool Digikam::GeodeticCalculator::checkLatitude (
    double * latitude ) [protected]
```

Checks the latitude validity. The argument `latitude` should be greater or equal than -90 degrees and lower or equals than +90 degrees. As a convenience, this method converts the latitude to radians.

## Parameters

<i>latitude</i>	The latitude value in decimal degrees.
-----------------	--

**6.685.2.4 checkLongitude()**

```
bool Digikam::GeodeticCalculator::checkLongitude (
    double * longitude ) [protected]
```

Checks the longitude validity. The argument `longitude` should be greater or equal than -180 degrees and lower or equals than +180 degrees. As a convenience, this method converts the longitude to radians.

## Parameters

<i>longitude</i>	The longitude value in decimal degrees.
------------------	---

**6.685.2.5 checkOrthodromicDistance() [1/2]**

```
bool Digikam::GeodeticCalculator::checkOrthodromicDistance ( )
```

Computes the orthodromic distance using the algorithm implemented in the Geotools's ellipsoid class (if available), and check if the error is smaller than some tolerance error.

**6.685.2.6 checkOrthodromicDistance() [2/2]**

```
bool Digikam::GeodeticCalculator::checkOrthodromicDistance (
    const double distance ) [protected]
```

Checks the orthodromic distance validity. Arguments `orthodromicDistance` should be greater or equal than 0 and lower or equals than the maximum orthodromic distance.

## Parameters

<i>distance</i>	The orthodromic distance value.
-----------------	---------------------------------

**6.685.2.7 computeDestinationPoint()**

```
bool Digikam::GeodeticCalculator::computeDestinationPoint ( )
```

Computes the destination point from the starting point, the azimuth and the orthodromic distance.

**6.685.2.8 computeDirection()**

```
bool Digikam::GeodeticCalculator::computeDirection ( )
```

Computes the azimuth and orthodromic distance from the startingGeographicPoint starting point and the destinationGeographicPoint destination point.

Computes the azimuth and orthodromic distance from the startingGeographicPoint() and the destinationGeographicPoint().

### 6.685.2.9 destinationGeographicPoint()

```
bool Digikam::GeodeticCalculator::destinationGeographicPoint (
    double * longitude,
    double * latitude )
```

Returns the destination point. This method returns the point set by the last call to a setDestinationGeographicPoint(...) method, except if setDirection(...) has been invoked after. In this later case, the destination point will be computed from the starting point to the azimuth and distance specified. Coordinates positive North and East.

#### Returns

The destination point. The x and y coordinates are the longitude and latitude in decimal degrees, respectively.

### 6.685.2.10 ellipsoid()

```
Ellipsoid Digikam::GeodeticCalculator::ellipsoid ( ) const
```

Returns the referenced ellipsoid.

### 6.685.2.11 meridianArcLength()

```
double Digikam::GeodeticCalculator::meridianArcLength (
    double latitude1,
    double latitude2 )
```

Calculates the meridian arc length between two points in the same meridian in the referenced ellipsoid.

#### Parameters

<i>latitude1</i>	The latitude of the first point (in decimal degrees).
<i>latitude2</i>	The latitude of the second point (in decimal degrees).

#### Returns

Returned the meridian arc length between latitude1 and latitude2

### 6.685.2.12 meridianArcLengthRadians()

```
double Digikam::GeodeticCalculator::meridianArcLengthRadians (
    double P1,
    double P2 )
```

Calculates the meridian arc length between two points in the same meridian in the referenced ellipsoid.

**Parameters**

<i>P1</i>	The latitude of the first point (in radians).
<i>P2</i>	The latitude of the second point (in radians).

**Returns**

Returned the meridian arc length between P1 and P2

**6.685.2.13 orthodromicDistance()**

```
double Digikam::GeodeticCalculator::orthodromicDistance ( )
```

Returns the orthodromic distance. This method returns the value set by the last call to `setDirection(double, double)` `setDirection(azimuth, distance)`, except if `setDestinationGeographicPoint(double, double)` `setDestinationGeographicPoint(...)` has been invoked after. In this later case, the distance will be computed from the startingGeographicPoint starting point to the destination point.

**Returns**

The orthodromic distance, in the same units as the getEllipsoid ellipsoid axis.

**6.685.2.14 setDestinationGeographicPoint()**

```
void Digikam::GeodeticCalculator::setDestinationGeographicPoint (
    double longitude,
    double latitude )
```

Set the destination point in geographic coordinates. The azimuth and distance values will be updated as a side effect of this call. They will be recomputed the next time `getAzimuth()` or `getOrthodromicDistance()` are invoked. Coordinates positive North and East.

**Parameters**

<i>longitude</i>	The longitude in decimal degrees between -180 and +180°
<i>latitude</i>	The latitude in decimal degrees between -90 and +90°

**6.685.2.15 setDirection()**

```
void Digikam::GeodeticCalculator::setDirection (
    double azimuth,
    double distance )
```

Set the azimuth and the distance from the startingGeographicPoint starting point. The destination point will be updated as a side effect of this call. It will be recomputed the next time `destinationGeographicPoint()` is invoked. Azimuth 0° North.

## Parameters

<i>azimuth</i>	The azimuth in decimal degrees from -180° to 180°.
<i>distance</i>	The orthodromic distance in the same units as the ellipsoid axis.

**6.685.2.16 setStartingGeographicPoint()**

```
void Digikam::GeodeticCalculator::setStartingGeographicPoint (
    double longitude,
    double latitude )
```

Set the starting point in geographic coordinates. The azimuth, the orthodromic distance and the destination point are discarded. They will need to be specified again. Coordinates positive North and East.

## Parameters

<i>longitude</i>	The longitude in decimal degrees between -180 and +180°
<i>latitude</i>	The latitude in decimal degrees between -90 and +90°

**6.685.3 Member Data Documentation****6.685.3.1 a01**

```
double Digikam::GeodeticCalculator::a01 = 0.0 [protected]
```

Parameters computed from the ellipsoid.

**6.685.3.2 fo**

```
double Digikam::GeodeticCalculator::fo = 0.0 [protected]
```

GPNHRI parameters computed from the ellipsoid.

$f$  if the flattening of the referenced ellipsoid.  $f_2$ ,  $f_3$  and  $f_4$  are  $f^2$ ,  $f^3$  and  $f^4$  respectively.

**6.685.3.3 m\_A**

```
double Digikam::GeodeticCalculator::m_A = 0.0 [protected]
```

GPNARC parameters computed from the ellipsoid.

**6.685.3.4 m\_destinationValid**

```
bool Digikam::GeodeticCalculator::m_destinationValid = false [protected]
```

Tell if the destination point is valid. `false` if long2 and lat2 need to be computed.

### 6.685.3.5 m\_directionValid

```
bool Digikam::GeodeticCalculator::m_directionValid = false [protected]
```

Tell if the azimuth and the distance are valids. `false` if distance and azimuth need to be computed.

### 6.685.3.6 m\_distance

```
double Digikam::GeodeticCalculator::m_distance = 0.0 [protected]
```

The distance and azimuth (in radians) from the starting point (long1, lat1) to the destination point (long2, lat2).

### 6.685.3.7 m\_eccentricitySquared

```
double Digikam::GeodeticCalculator::m_eccentricitySquared = 0.0 [protected]
```

The eccentricity squared of the referenced ellipsoid.

### 6.685.3.8 m\_ellipsoid

```
Ellipsoid Digikam::GeodeticCalculator::m_ellipsoid [protected]
```

The encapsulated ellipsoid.

### 6.685.3.9 m\_lat1

```
double Digikam::GeodeticCalculator::m_lat1 = 0.0 [protected]
```

The (*latitude*, *longitude*) coordinate of the first point in radians. This point is set by `setStartingGeographicPoint`.

### 6.685.3.10 m\_lat2

```
double Digikam::GeodeticCalculator::m_lat2 = 0.0 [protected]
```

The (*latitude*, *longitude*) coordinate of the destination point in radians. This point is set by `setDestinationGeographicPoint`.

### 6.685.3.11 m\_maxOrthodromicDistance

```
double Digikam::GeodeticCalculator::m_maxOrthodromicDistance = 0.0 [protected]
```

The maximum orthodromic distance that could be calculated onto the referenced ellipsoid.

**6.685.3.12 m\_semiMajorAxis**

```
double Digikam::GeodeticCalculator::m_semiMajorAxis = 0.0 [protected]
```

The semi major axis of the referenced ellipsoid.

**6.685.3.13 m\_semiMinorAxis**

```
double Digikam::GeodeticCalculator::m_semiMinorAxis = 0.0 [protected]
```

The semi minor axis of the referenced ellipsoid.

**6.685.3.14 m\_TOLERANCE\_0**

```
double Digikam::GeodeticCalculator::m_TOLERANCE_0 = 5.0e-15 [protected]
```

Tolerance factors from the strictest (TOLERANCE\_0) to the most relax one (TOLERANCE\_3).

**6.685.3.15 m\_TOLERANCE\_CHECK**

```
double Digikam::GeodeticCalculator::m_TOLERANCE_CHECK = 1E-8 [protected]
```

Tolerance factor for assertions. It has no impact on computed values.

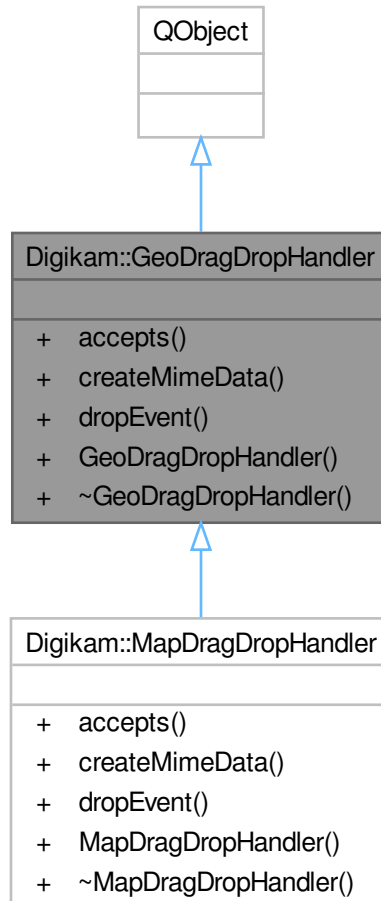

**6.685.3.16 T1**

```
double Digikam::GeodeticCalculator::T1 = 1.0 [protected]
```

Parameters computed from the ellipsoid.

## 6.686 Digikam::GeoDragDropHandler Class Reference

Inheritance diagram for Digikam::GeoDragDropHandler:

### Public Member Functions

## 6.692.1 Member Function Documentation

### 6.692.1.1 applySettingsToWidget()

```
void Digikam::GeolocationSettings::applySettingsToWidget (
    MapWidget *const widget )
```

Apply the current settings to a previously registered [MapWidget](#).

### 6.692.1.2 instance()

```
GeolocationSettings * Digikam::GeolocationSettings::instance ( ) [static]
```

Global container for Metadata settings. All accessor methods are thread-safe.

### 6.692.1.3 mainMarbleWidget()

```
MarbleWidget * Digikam::GeolocationSettings::mainMarbleWidget ( ) const
```

Return the first registered MarbleWidget instance stored in the collection. If no valid instance is found, nullptr is returned.

### 6.692.1.4 registerWidget()

```
void Digikam::GeolocationSettings::registerWidget (
    MapWidget *const widget )
```

Store one [MapWidget](#) instance in the collection.

### 6.692.1.5 setSettings()

```
void Digikam::GeolocationSettings::setSettings (
    const GeolocationSettingsContainer & settings )
```

Sets the current Metadata settings and writes them to config.

### 6.692.1.6 settings()

```
GeolocationSettingsContainer Digikam::GeolocationSettings::settings ( ) const
```

Returns the current Metadata settings.

### 6.692.1.7 unregisterWidget()

```
void Digikam::GeolocationSettings::unregisterWidget (
    MapWidget *const widget )
```

Remove one [MapWidget](#) instance in the collection.

- bool **showSunShading** = false
- Marble::MapQuality **stillQuality** = Marble::HighQuality
- int **volatileTileCacheLimit** = 100

### 6.693.1 Detailed Description

The class [GeolocationSettingsContainer](#) encapsulates all Marble related settings.

## 6.694 Digikam::GeoModelHelper Class Reference

Helper class to access data in models.

Inheritance diagram for Digikam::GeoModelHelper:

### Public Types

- enum **PropertyFlag** { **FlagNull** = 0 , **FlagVisible** = 1 , **FlagMovable** = 2 , **FlagSnaps** = 4 }

### Signals

- void **signalModelChangedDrastically** ()
- void **signalThumbnailAvailableForIndex** (const QPersistentModelIndex &index, const QPixmap &pixmap)
- void **signalVisibilityChanged** ()

### Public Member Functions

- virtual QPersistentModelIndex **bestRepresentativeIndexFromList** (const QList< QPersistentModelIndex > &list, const int sortKey)
- **GeoModelHelper** (QObject \*const parent=nullptr)
- virtual bool **itemCoordinates** (const QModelIndex &index, GeoCoordinates \*const coordinates) const =0
- virtual PropertyFlags **itemFlags** (const QModelIndex &index) const

- virtual bool [itemIcon](#) (const QModelIndex &index, QPoint \*const offset, QSize \*const size, QPixmap \*const pixmap, QUrl \*const url) const  
*these are necessary for ungrouped models*
- virtual QAbstractItemModel \* [model](#) () const =0  
*these are necessary for grouped and ungrouped models*
- virtual PropertyFlags [modelFlags](#) () const
- virtual void [onIndicesClicked](#) (const QList< QPersistentModelIndex > &clickedIndices)
- virtual void [onIndicesMoved](#) (const QList< QPersistentModelIndex > &movedIndices, const [GeoCoordinates](#) &targetCoordinates, const QPersistentModelIndex &targetSnapIndex)
- virtual QPixmap [pixmapFromRepresentativeIndex](#) (const QPersistentModelIndex &index, const QSize &size)  
*these are used by MarkerModel for grouped models*
- virtual QItemSelectionModel \* [selectionModel](#) () const =0
- virtual void [snapItemsTo](#) (const QModelIndex &targetIndex, const QList< QModelIndex > &snappedIndices)
- void [snapItemsTo](#) (const QModelIndex &targetIndex, const QList< QPersistentModelIndex > &snappedIndices)

## 6.694.1 Detailed Description

[GeoModelHelper](#) is used to access data held in models, which is not suitable for transfer using the the Qt-style API, like coordinates or custom sized thumbnails.

The basic functions which have to be implemented are:

- [model\(\)](#): Returns a pointer to the model
- [selectionModel\(\)](#): Returns a pointer to the selection model. It may return a null-pointer if no selection model is used.
- [itemCoordinates\(\)](#): Returns the coordinates for a given item index, if it has any.
- [modelFlags\(\)](#): Returns flags for the model.

For ungrouped models, the following functions should also be implemented:

- [itemIcon\(\)](#): Returns an icon for an index, and an offset to the 'center' of the item.
- [itemFlags\(\)](#): Returns flags for individual items.
- [snapItemsTo\(\)](#): Grouped items have been moved and should snap to an index.

For grouped models which are accessed by [MarkerModel](#), the following functions should be implemented:

- [bestRepresentativeIndexFromList\(\)](#): Find the item that should represent a group of items.
- [pixmapFromRepresentativeIndex\(\)](#): Find a thumbnail for an item.

## 6.694.2 Member Function Documentation

### 6.694.2.1 [bestRepresentativeIndexFromList\(\)](#)

```
QPersistentModelIndex Digikam::GeoModelHelper::bestRepresentativeIndexFromList (
    const QList< QPersistentModelIndex > & list,
    const int sortKey ) [virtual]
```

Reimplemented in [Digikam::MapViewModelHelper](#).

### 6.694.2.2 itemCoordinates()

```
virtual bool Digikam::GeoModelHelper::itemCoordinates (
    const QModelIndex & index,
    GeoCoordinates *const coordinates ) const [pure virtual]
```

Implemented in [Digikam::MapViewModelHelper](#).

### 6.694.2.3 itemIcon()

```
bool Digikam::GeoModelHelper::itemIcon (
    const QModelIndex & index,
    QPoint *const offset,
    QSize *const size,
    QPixmap *const pixmap,
    QUrl *const url ) const [virtual]
```

Returns the icon for an ungrouped marker.

The icon can either be returned as a URL to an image, or as a QPixmap. If the caller can handle URLs (for example, to display them in HTML), he can provide the URL parameter. However, the [GeoModelHelper](#) may still choose to return a QPixmap instead, if no URL is available.

#### Parameters

<i>index</i>	Modelindex of the marker.
<i>offset</i>	Offset of the zero point in the icon, given from the top-left.
<i>size</i>	the size of the icon, only populated if a URL is returned.
<i>pixmap</i>	Holder for the pixmap of the icon.
<i>url</i>	URL of the icon if available.

Reimplemented in [Digikam::GPSBookmarkModelHelper](#).

### 6.694.2.4 model()

```
virtual QAbstractItemModel * Digikam::GeoModelHelper::model ( ) const [pure virtual]
```

Implemented in [Digikam::MapViewModelHelper](#), [Digikam::ItemGPSModelHelper](#), [Digikam::GPSBookmarkModelHelper](#), and [Digikam::GPSGeofaceModelHelper](#).

### 6.694.2.5 onIndicesClicked()

```
void Digikam::GeoModelHelper::onIndicesClicked (
    const QList< QPersistentModelIndex > & clickedIndices ) [virtual]
```

Reimplemented in [Digikam::MapViewModelHelper](#).

### 6.694.2.6 pixmapFromRepresentativeIndex()

```
QPixmap Digikam::GeoModelHelper::pixmapFromRepresentativeIndex (
    const QPersistentModelIndex & index,
    const QSize & size ) [virtual]
```

Reimplemented in [Digikam::MapViewModelHelper](#), [Digikam::ItemGPSModelHelper](#), and [Digikam::GPSGeofaceModelHelper](#).

### 6.694.2.7 selectionModel()

```
virtual QItemSelectionModel * Digikam::GeoModelHelper::selectionModel ( ) const [pure virtual]
```

Implemented in [Digikam::MapViewModelHelper](#).

## 6.696.1 Detailed Description

Gphoto2 camera Implementation of abstract type [DKCamera](#)

## 6.696.2 Member Function Documentation

### 6.696.2.1 cameraAbout()

```
bool Digikam::GPCamera::cameraAbout (
    QString & about ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.2 cameraDriverType()

```
DKCamera::CameraDriverType Digikam::GPCamera::cameraDriverType ( ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.3 cameraManual()

```
bool Digikam::GPCamera::cameraManual (
    QString & manual ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.4 cameraMD5ID()

```
QByteArray Digikam::GPCamera::cameraMD5ID ( ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.5 cameraSummary()

```
bool Digikam::GPCamera::cameraSummary (
    QString & summary ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.6 cancel()

```
void Digikam::GPCamera::cancel ( ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.7 capture()

```
bool Digikam::GPCamera::capture (
    CamItemInfo & itemInfo ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.8 deleteItem()

```
bool Digikam::GPCamera::deleteItem (
    const QString & folder,
    const QString & itemName ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.9 doConnect()

```
bool Digikam::GPCamera::doConnect ( ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.10 downloadItem()

```
bool Digikam::GPCamera::downloadItem (
    const QString & folder,
    const QString & itemName,
    const QString & saveFile ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.11 getFolders()

```
bool Digikam::GPCamera::getFolders (
    const QString & folder ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.12 getFreeSpace()

```
bool Digikam::GPCamera::getFreeSpace (
    quint64 & bytesSize,
    quint64 & bytesAvail ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.13 getItemInfo()

```
void Digikam::GPCamera::getItemInfo (
    const QString & folder,
    const QString & itemName,
    CamItemInfo & info,
    bool useMetadata ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.14 getItemsInfoList()

```
bool Digikam::GPCamera::getItemsInfoList (
    const QString & folder,
    bool useMetadata,
    CamItemInfoList & infoList ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.15 getMetadata()

```
bool Digikam::GPCamera::getMetadata (
    const QString & folder,
    const QString & itemName,
    DMetadata & meta ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.16 getPreview()

```
bool Digikam::GPCamera::getPreview (
    QImage & preview ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.17 getThumbnail()

```
bool Digikam::GPCamera::getThumbnail (
    const QString & folder,
    const QString & itemName,
    QImage & thumbnail ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.18 setLockItem()

```
bool Digikam::GPCamera::setLockItem (
    const QString & folder,
    const QString & itemName,
    bool lock ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

### 6.696.2.19 uploadItem()

```
bool Digikam::GPCamera::uploadItem (
    const QString & folder,
    const QString & itemName,
    const QString & localFile,
    CamItemInfo & itemInfo ) [override], [virtual]
```

Implements [Digikam::DKCamera](#).

## 6.697.1 Member Function Documentation

### 6.697.1.1 itemCoordinates()

```
bool Digikam::GPSBookmarkModelHelper::itemCoordinates (
    const QModelIndex & index,
    GeoCoordinates *const coordinates ) const [override], [virtual]
```

Implements [Digikam::GeoModelHelper](#).

### 6.697.1.2 itemFlags()

```
GeoModelHelper::PropertyFlags Digikam::GPSBookmarkModelHelper::itemFlags (
    const QModelIndex & index ) const [override], [virtual]
```

Reimplemented from [Digikam::GeoModelHelper](#).

### 6.697.1.3 itemIcon()

```
bool Digikam::GPSBookmarkModelHelper::itemIcon (
    const QModelIndex & index,
    QPoint *const offset,
    QSize *const size,
    QPixmap *const pixmap,
    QUrl *const url ) const [override], [virtual]
```

Returns the icon for an ungrouped marker.

The icon can either be returned as a URL to an image, or as a QPixmap. If the caller can handle URLs (for example, to display them in HTML), he can provide the URL parameter. However, the [GeoModelHelper](#) may still choose to return a QPixmap instead, if no URL is available.

#### Parameters

<i>index</i>	Modelindex of the marker.
<i>offset</i>	Offset of the zero point in the icon, given from the top-left.
<i>size</i>	the size of the icon, only populated if a URL is returned.
<i>pixmap</i>	Holder for the pixmap of the icon.
<i>url</i>	URL of the icon if available.

Reimplemented from [Digikam::GeoModelHelper](#).

### 6.697.1.4 model()

```
QAbstractItemModel * Digikam::GPSBookmarkModelHelper::model ( ) const [override], [virtual]
```

Implements [Digikam::GeoModelHelper](#).

### 6.697.1.5 modelFlags()

```
GeoModelHelper::PropertyFlags Digikam::GPSBookmarkModelHelper::modelFlags ( ) const [override],
[virtual]
```

Reimplemented from [Digikam::GeoModelHelper](#).

### 6.697.1.6 selectionModel()

```
QItemSelectionModel * Digikam::GPSBookmarkModelHelper::selectionModel ( ) const [override],
[virtual]
```

Implements [Digikam::GeoModelHelper](#).

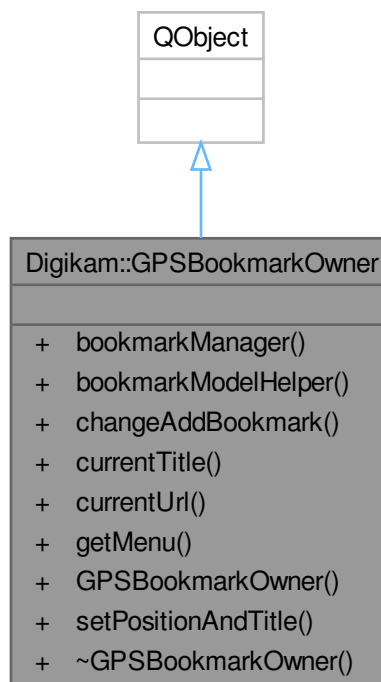

### 6.697.1.7 snapItemsTo()

```
void Digikam::GPSBookmarkModelHelper::snapItemsTo (
    const QModelIndex & targetIndex,
    const QList< QModelIndex > & snappedIndices ) [override], [virtual]
```

Reimplemented from [Digikam::GeoModelHelper](#).

## 6.703.1 Member Function Documentation

### 6.703.1.1 bestRepresentativeIndexFromList()

```
QPersistentModelIndex Digikam::GPSGeoIfaceModelHelper::bestRepresentativeIndexFromList (
    const QList< QPersistentModelIndex > & list,
    const int sortKey ) [override], [virtual]
```

Reimplemented from [Digikam::GeoModelHelper](#).

### 6.703.1.2 itemCoordinates()

```
bool Digikam::GPSGeoIfaceModelHelper::itemCoordinates (
    const QModelIndex & index,
    GeoCoordinates *const coordinates ) const [override], [virtual]
```

Implements [Digikam::GeoModelHelper](#).

### 6.703.1.3 model()

```
QAbstractItemModel * Digikam::GPSGeoIfaceModelHelper::model ( ) const [override], [virtual]
```

Implements [Digikam::GeoModelHelper](#).

### 6.703.1.4 modelFlags()

```
GeoModelHelper::PropertyFlags Digikam::GPSGeoIfaceModelHelper::modelFlags ( ) const [override],
[virtual]
```

Reimplemented from [Digikam::GeoModelHelper](#).

### 6.703.1.5 onIndicesMoved()

```
void Digikam::GPSGeoIfaceModelHelper::onIndicesMoved (
    const QList< QPersistentModelIndex > & movedMarkers,
    const GeoCoordinates & targetCoordinates,
    const QPersistentModelIndex & targetSnapIndex ) [override], [virtual]
```

Reimplemented from [Digikam::GeoModelHelper](#).

### 6.703.1.6 pixmapFromRepresentativeIndex()

```
QPixmap Digikam::GPSGeoIfaceModelHelper::pixmapFromRepresentativeIndex (
    const QPersistentModelIndex & index,
    const QSize & size ) [override], [virtual]
```

Reimplemented from [Digikam::GeoModelHelper](#).

## 6.703.1.7 selectionModel()

```
QItemSelectionModel * Digikam::GPSGeoIfaceModelHelper::selectionModel ( ) const [override],
[virtual]
```

Implements [Digikam::GeoModelHelper](#).

## 6.704 Digikam::GPSItemContainer Class Reference

- static void `setHeaderData` (GPSItemModel \*const model)

## 6.704.1 Member Function Documentation

### 6.704.1.1 getTagList()

```
QList< QList< TagData > > Digikam::GPSItemContainer::getTagList ( ) const
```

Returns the tag list of the current image.

### 6.704.1.2 isTagListDirty()

```
bool Digikam::GPSItemContainer::isTagListDirty ( ) const
```

Returns

Returns true if the current image has been modified and not saved.

### 6.704.1.3 loadImageData()

```
bool Digikam::GPSItemContainer::loadImageData ( ) [virtual]
```

### 6.704.1.4 restoreRGTagList()

```
void Digikam::GPSItemContainer::restoreRGTagList (
    const QList< QList< TagData > > & tagList )
```

Replaces the current tag list with the one contained in tagList.

### 6.704.1.5 saveChanges()

```
QString Digikam::GPSItemContainer::saveChanges ( ) [virtual]
```

### 6.704.1.6 setTagList()

```
void Digikam::GPSItemContainer::setTagList (
    const QList< QList< TagData > > & externalTagList )
```

The tags added in reverse geocoding process are stored in each image, before they end up in external tag model. This function adds them.

## Parameters

<i>externalTagList</i>	A list containing tags.
------------------------	-------------------------

**6.704.1.7 writeLocations()**

```
void Digikam::GPSItemContainer::writeLocations (
    const bool writeMetaLoc ) [inline]
```

Writes the current tags to the metadata location fields.

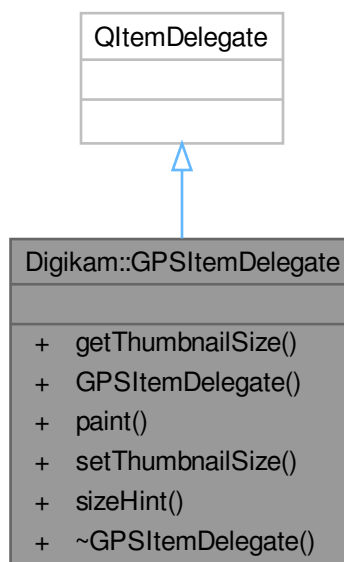

**6.704.1.8 writeTagsToXmp()**

```
void Digikam::GPSItemContainer::writeTagsToXmp (
    const bool writeXmpTags ) [inline]
```

Writes the current tags to XMP metadata.

## Properties

- QItemSelectionModel \* **linkedItemSelectionModel**

### 6.714.1 Detailed Description

Makes it possible to share a selection in multiple views which do not have the same source model

Although Qt documentation, multiple views can share the same QItemSelectionModel, the views then need to have the same source model.

If there is a proxy model between the model and one of the views, or different proxy models in each, this class makes it possible to share the selection between the views.

## 6.715 Digikam::GPSTiler Class Reference

Marker model for storing data needed to display markers on the map. The data is retrieved from [Digikam's](#) database.

Inheritance diagram for Digikam::GPSTiler:

### Public Slots

- void `slotNewModelData` (const `QList< ItemInfo >` &infoList)  
*Receives notifications from the album model about new items.*

### Signals

- void `signalModelFilteredImages` (const `QList< qlonglong >` &imagesId)

## 6.715.1 Constructor & Destructor Documentation

### 6.715.1.1 GPSMarkerTiler()

```
Digikam::GPSMarkerTiler::GPSMarkerTiler (
    QObject *const parent,
    ItemFilterModel *const imageFilterModel,
    QItemSelectionModel *const selectionModel ) [explicit]
```

#### Parameters

<i>parent</i>	The parent object
<i>imageFilterModel</i>	The image filter instance
<i>selectionModel</i>	The selection model instance

## 6.715.2 Member Function Documentation

### 6.715.2.1 bestRepresentativeIndexFromList()

```
QVariant Digikam::GPSMarkerTiler::bestRepresentativeIndexFromList (
    const QList< QVariant > & indices,
    const int sortKey ) [override], [virtual]
```

#### Parameters

<i>indices</i>	A list containing markers, obtained by <code>getTileRepresentativeMarker</code> .
<i>sortKey</i>	Sets the criteria for selecting the representative thumbnail, a combination of the <code>SortOptions</code> bits.

#### Returns

Returns the internally used index of the marker.

Implements [Digikam::AbstractMarkerTiler](#).

### 6.715.2.2 getGlobalGroupState()

```
GeoGroupState Digikam::GPSMarkerTiler::getGlobalGroupState ( ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 6.715.2.3 `getTile()`

```
AbstractMarkerTiler::Tile * Digikam::GPSTiler::getTile (
    const TileIndex & tileIndex,
    const bool stopIfEmpty ) [override], [virtual]
```

#### Parameters

<i>tileIndex</i>	The index of a tile.
<i>stopIfEmpty</i>	Determines whether child tiles are also created for empty tiles.

Implements [Digikam::AbstractMarkerTiler](#).

### 6.715.2.4 `getTileGroupState()`

```
GeoGroupState Digikam::GPSTiler::getTileGroupState (
    const TileIndex & tileIndex ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 6.715.2.5 `getTileMarkerCount()`

```
int Digikam::GPSTiler::getTileMarkerCount (
    const TileIndex & tileIndex ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 6.715.2.6 `getTileRepresentativeMarker()`

```
QVariant Digikam::GPSTiler::getTileRepresentativeMarker (
    const TileIndex & tileIndex,
    const int sortKey ) [override], [virtual]
```

#### Parameters

<i>tileIndex</i>	Index of the tile from which the best marker should be found.
<i>sortKey</i>	Sets the criteria for selecting the representative thumbnail, a combination of the SortOptions bits.

#### Returns

Returns the internally used index of the marker.

Implements [Digikam::AbstractMarkerTiler](#).

### 6.715.2.7 `getTileSelectedCount()`

```
int Digikam::GPSTiler::getTileSelectedCount (
    const TileIndex & tileIndex ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 6.715.2.8 indicesEqual()

```
bool Digikam::GPSTiler::indicesEqual (
    const QVariant & a,
    const QVariant & b ) const [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

### 6.715.2.9 onIndicesClicked()

```
void Digikam::GPSTiler::onIndicesClicked (
    const ClickInfo & clickInfo ) [override], [virtual]
```

Reimplemented from [Digikam::AbstractMarkerTiler](#).

### 6.715.2.10 pixmapFromRepresentativeIndex()

```
QPixmap Digikam::GPSTiler::pixmapFromRepresentativeIndex (
    const QVariant & index,
    const QSize & size ) [override], [virtual]
```

#### Parameters

<i>index</i>	The marker's index.
<i>size</i>	The size of the thumbnail.

#### Returns

If the thumbnail has been loaded in the [ThumbnailLoadThread](#) instance, it is returned. If not, a QPixmap is returned and [ThumbnailLoadThread](#)'s signal named `signalThumbnailLoaded` is emitted when the thumbnail becomes available.

Implements [Digikam::AbstractMarkerTiler](#).

### 6.715.2.11 prepareTiles()

```
void Digikam::GPSTiler::prepareTiles (
    const GeoCoordinates & upperLeft,
    const GeoCoordinates & lowerRight,
    int level ) [override], [virtual]
```

This function calls the database for the images found inside a rectangle defined by `upperLeft` and `lowerRight` points. The images are returned from the database in batches.

#### Parameters

<i>upperLeft</i>	The North-West point.
<i>lowerRight</i>	The South-East point.
<i>level</i>	The requested tiling level.

Implements [Digikam::AbstractMarkerTiler](#).

#### 6.715.2.12 regenerateTiles()

```
void Digikam::GPSTiler::regenerateTiles ( ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

#### 6.715.2.13 setActive()

```
void Digikam::GPSTiler::setActive (
    const bool state ) [override], [virtual]
```

##### Parameters

<i>state</i>	New state of the map, true means active.
--------------	--

Implements [Digikam::AbstractMarkerTiler](#).

#### 6.715.2.14 setPositiveFilterIsActive()

```
void Digikam::GPSTiler::setPositiveFilterIsActive (
    const bool state )
```

#### 6.715.2.15 slotNewModelData

```
void Digikam::GPSTiler::slotNewModelData (
    const QList< ItemInfo > & infoList ) [slot]
```

#### 6.715.2.16 tileNew()

```
AbstractMarkerTiler::Tile * Digikam::GPSTiler::tileNew ( ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

## 6.716 Digikam::GPSModelIndexProxyMapper Class Reference

Inheritance diagram for Digikam::GPSModelIndexProxyMapper:

### Signals

- void **isConnectedChanged** ()

### Public Member Functions

- **GPSModelIndexProxyMapper** (const QAbstractItemModel \*const leftModel, const QAbstractItemModel \*const rightModel, QObject \*const parent=nullptr)

- QItemSelection [mapSelectionRightToLeft](#) (const QItemSelection &selection) const

### Properties

- bool [isConnected](#)

### 6.716.1 Detailed Description

This class facilitates easy mapping of indexes and selections through proxy models.

In a complex system of proxy models there can be a need to map indexes and selections between them, and sometimes to do so without knowledge of the path from one model to another.

If there is a need to map indexes between proxy 2 and proxy 4, a [GPSModelIndexProxyMapper](#) can be created to facilitate mapping of indexes between them.

Note that the aim is to achieve black box connections so that there is no need for application code to know the structure of proxy models in the path between left and right and attempt to manually map them.

The `isConnected` property indicates whether there is a path from the left side to the right side.

### 6.716.2 Member Function Documentation

#### 6.716.2.1 `mapLeftToRight()`

```
QModelIndex Digikam::GPSModelIndexProxyMapper::mapLeftToRight (
    const QModelIndex & index ) const
```

Maps the `index` from the left model to the right model.

#### 6.716.2.2 `mapRightToLeft()`

```
QModelIndex Digikam::GPSModelIndexProxyMapper::mapRightToLeft (
    const QModelIndex & index ) const
```

Maps the `index` from the right model to the left model.

#### 6.716.2.3 `mapSelectionLeftToRight()`

```
QItemSelection Digikam::GPSModelIndexProxyMapper::mapSelectionLeftToRight (
    const QItemSelection & selection ) const
```

Maps the `selection` from the left model to the right model.

#### 6.716.2.4 `mapSelectionRightToLeft()`

```
QItemSelection Digikam::GPSModelIndexProxyMapper::mapSelectionRightToLeft (
    const QItemSelection & selection ) const
```

Maps the `selection` from the right model to the left model.

## 6.716.3 Property Documentation

### 6.716.3.1 isConnected

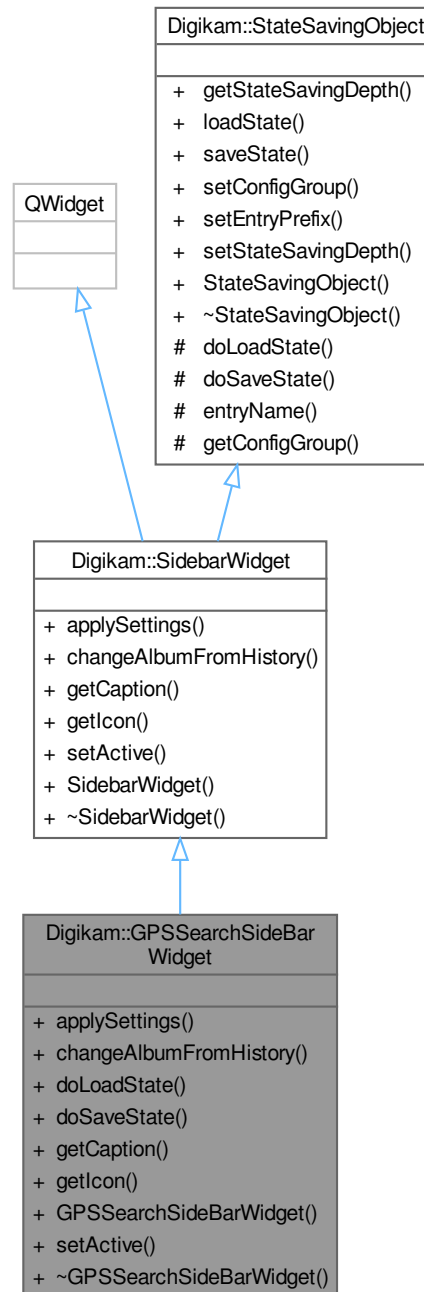

```
bool Digikam::GPSModelIndexProxyMapper::isConnected [read]
```

Indicates whether there is a chain that can be followed from leftModel to rightModel.

This value can change if the sourceModel of an intermediate proxy is changed.

## 6.717.1 Member Function Documentation

### 6.717.1.1 applySettings()

```
void Digikam::GPSSearchSideBarWidget::applySettings ( ) [override], [virtual]
```

This method is invoked when the application settings should be (re-) applied to this widget.

Implements [Digikam::SidebarWidget](#).

### 6.717.1.2 changeAlbumFromHistory()

```
void Digikam::GPSSearchSideBarWidget::changeAlbumFromHistory (
    const QList< Album * > & album ) [override], [virtual]
```

This is called on this widget when the history requires to move back to the specified album

Implements [Digikam::SidebarWidget](#).

### 6.717.1.3 doLoadState()

```
void Digikam::GPSSearchSideBarWidget::doLoadState ( ) [override], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.717.1.4 doSaveState()

```
void Digikam::GPSSearchSideBarWidget::doSaveState ( ) [override], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.717.1.5 getCaption()

```
const QString Digikam::GPSSearchSideBarWidget::getCaption ( ) [override], [virtual]
```

Must be implemented to return the title of this sidebar's tab.

#### Returns

localized title string

Implements [Digikam::SidebarWidget](#).

### 6.717.1.6 `getIcon()`

```
const QIcon Digikam::GPSSearchSideBarWidget::getIcon ( ) [override], [virtual]
```

Must be implemented and return the icon that shall be visible for this sidebar widget.

#### Returns

QPixmap icon

Implements [Digikam::SidebarWidget](#).

### 6.717.1.7 `setActive()`

```
void Digikam::GPSSearchSideBarWidget::setActive (
    bool active ) [override], [virtual]
```

This method is called if the visible sidebar widget is changed.

## Parameters

<i>active</i>	if true, this widget is the new active widget, if false another widget is active
---------------	--

Implements [Digikam::SidebarWidget](#).

## 6.718 Digikam::GPSSearchView Class Reference

**Additional Inherited Members****Public Types inherited from Digikam::StateSavingObject**

- enum StateSavingDepth { INSTANCE , DIRECT\_CHILDREN , RECURSIVE }

**Protected Member Functions inherited from Digikam::StateSavingObject**

- QString **entryName** (const QString &base) const
- KConfigGroup **getConfigGroup** () const

**6.718.1 Constructor & Destructor Documentation****6.718.1.1 GPSSearchView()**

```
Digikam::GPSSearchView::GPSSearchView (
    QWidget *const parent,
    SearchModel *const searchModel,
    SearchModificationHelper *const searchModificationHelper,
    ItemFilterModel *const imageFilterModel,
    QItemSelectionModel *const itemSelectionModel ) [explicit]
```

## Parameters

<i>parent</i>	The parent object.
<i>searchModel</i>	The model that stores the searches.
<i>searchModificationHelper</i>	The helper instance to perform the searches.
<i>imageFilterModel</i>	The image model used by displaying the selected images on map.
<i>itemSelectionModel</i>	The selection model corresponding to the imageFilterModel.

## 6.718.2 Member Function Documentation

### 6.718.2.1 doLoadState()

```
void Digikam::GPSSearchView::doLoadState ( ) [override], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.718.2.2 doSaveState()

```
void Digikam::GPSSearchView::doSaveState ( ) [override], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.718.2.3 setActive()

```
void Digikam::GPSSearchView::setActive (
    bool state )
```

Called when the GPSSearch tab becomes the current/not current tab.

## Parameters

<i>state</i>	When true, the widget is enabled.
--------------	-----------------------------------

### 6.718.2.4 setConfigGroup()

```
void Digikam::GPSSearchView::setConfigGroup (
    const KConfigGroup & group ) [override], [virtual]
```

Sets a dedicated config group that will be used to store and reload the state from. If this method is not called, a group based on the object name is used.

You can re-implement this method to pass the group set here to child objects. Don't forget to call this method in your implementation.

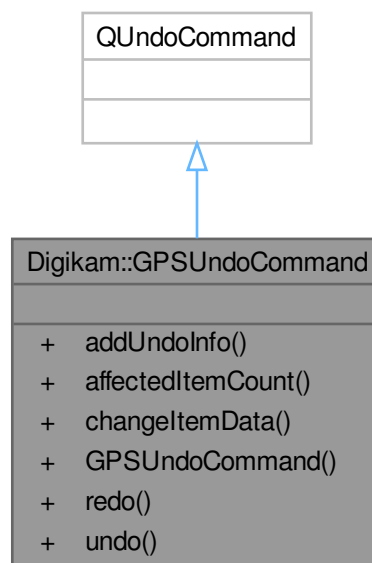

## Parameters

<i>group</i>	config group to use for state saving and restoring
--------------	--

Reimplemented from [Digikam::StateSavingObject](#).

## 6.719 Digikam::GPSUndoCommand Class Reference

## 6.721.1 Detailed Description

```
template<class VertexProperties, class EdgeProperties>
class Digikam::Graph< VertexProperties, EdgeProperties >
```

The graph base class template.

## 6.721.2 Member Typedef Documentation

### 6.721.2.1 graph\_traits

```
template<class VertexProperties , class EdgeProperties >
typedef boost::graph_traits<GraphContainer> Digikam::Graph< VertexProperties, EdgeProperties
>::graph_traits
```

a bunch of graph-specific typedefs that make the long boost types manageable.

## 6.721.3 Member Enumeration Documentation

### 6.721.3.1 AdjacencyFlags

```
template<class VertexProperties , class EdgeProperties >
enum Digikam::Graph::AdjacencyFlags
```

Enumerator

EdgesToLeaf	These resolve to one of the flags above, depending on MeaningOfDirection.
-------------	---

## 6.721.4 Member Function Documentation

### 6.721.4.1 copyProperties()

```
template<class VertexProperties , class EdgeProperties >
void Digikam::Graph< VertexProperties, EdgeProperties >::copyProperties (
    Graph< VertexProperties, EdgeProperties > & other,
    GraphCopyFlags flags,
    const std::vector< vertex_t > & copiedVertices ) const [inline], [protected]
```

According to the given flags and based on the map, copies vertex and edge properties from this to the other graph.

### 6.721.4.2 edgeDifference()

```
template<class VertexProperties , class EdgeProperties >
QList< Edge > Digikam::Graph< VertexProperties, EdgeProperties >::edgeDifference (
    const Graph< VertexProperties, EdgeProperties > & other,
    const std::vector< vertex_t > & copiedVertices ) const [inline], [protected]
```

Returns a list of edges of this graph that have been removed in other. copiedVertices maps the vertices of this graph to other.

### 6.721.4.3 findZeroDegree()

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::findZeroDegree (
    bool inOrOut ) const [inline], [protected]
```

Finds vertex ids of all vertices with zero in- our out-degree.

#### 6.721.4.4 `getGraph()`

```
template<class VertexProperties , class EdgeProperties >
const GraphContainer & Digikam::Graph< VertexProperties, EdgeProperties >::getGraph ( ) const
[inline]
```

Accessing vertices and edges.

#### 6.721.4.5 `leaves()`

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::leaves ( ) const [inline]
```

Returns all leaves, i.e. vertices with no children Takes the graph direction into account.

#### 6.721.4.6 `listPath()`

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::listPath (
    const Vertex & root,
    const Vertex & target,
    const VertexVertexMap & predecessors,
    MeaningOfDirection dir = ParentToChild ) const [inline], [protected]
```

Get a list of vertex ids for the path from root to target, using the given predecessors. Depending on MeaningOfDirection, the ids are listed inverted, from target to root.

#### 6.721.4.7 `longestPathTouching()`

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::longestPathTouching (
    const Vertex & v ) const [inline]
```

Returns the longest path through the graph, starting from a vertex in `roots()`, ending on a vertex in `leaves()`, and passing vertex v. The returned list is given in that order, root - v - leave. If there is more than one candidate for root or leave, `lessThan` is used to determine the first candidate.

#### 6.721.4.8 `mostRemoteNodes()`

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::mostRemoteNodes (
    const VertexIntMap & distances ) const [inline], [protected]
```

Get the list of vertices with the largest value in the given distance map.

#### 6.721.4.9 `roots()`

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::roots ( ) const [inline]
```

Returns all roots, i.e. vertices with no parents. Takes the graph direction into account.

#### 6.721.4.10 rootsOf()

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::rootsOf (
    const Vertex & v ) const [inline]
```

Returns all roots of vertex v. Subset of [roots\(\)](#). I case any leaves have roots that are not roots of v, they will not be contained in this list.

#### 6.721.4.11 shortestDistancesFrom()

```
template<class VertexProperties , class EdgeProperties >
QMap< Vertex, int > Digikam::Graph< VertexProperties, EdgeProperties >::shortestDistancesFrom
(
    const Vertex & v ) const [inline]
```

Returns the shortest distances from [Vertex](#) to all vertices in the graph. If the value is -1, a vertex is not reachable from v.

#### 6.721.4.12 shortestPath()

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::shortestPath (
    const Vertex & v1,
    const Vertex & v2 ) const [inline]
```

Returns the [shortestPath](#) between id1 and id2. If s2 is not reachable from s1, the path is searched from s2 to s1. The returned list always starts with s1, contains the intermediate vertices, and ends with s2. If no path is available, an empty list is returned.

#### 6.721.4.13 toList()

```
template<class VertexProperties , class EdgeProperties >
template<typename Value , typename range_t >
static QList< Value > Digikam::Graph< VertexProperties, EdgeProperties >::toList (
    const range_t & range ) [inline], [static], [protected]
```

Returns a list of vertex ids of vertices in the given range.

#### 6.721.4.14 topologicalSort()

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::topologicalSort ( ) const
[inline]
```

Returns the vertex ids of this graph, in topological order.

**6.721.4.15 transitiveClosure()**

```
template<class VertexProperties , class EdgeProperties >
Graph Digikam::Graph< VertexProperties, EdgeProperties >::transitiveClosure (
    GraphCopyFlags flags = CopyAllProperties ) const [inline]
```

Returns a copy of this graph with all edges added to form the transitive closure.

**6.721.4.16 transitiveReduction()**

```
template<class VertexProperties , class EdgeProperties >
Graph Digikam::Graph< VertexProperties, EdgeProperties >::transitiveReduction (
    QList< Edge > * removedEdges = 0,
    GraphCopyFlags flags = CopyAllProperties ) const [inline]
```

Returns a copy of this graph, with edges removed so that the transitive reduction is formed. Optionally, a list of edges of this graph that have been removed in the returned graph is given.

**6.721.4.17 verticesBreadthFirst()**

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::verticesBreadthFirst (
    const Vertex & givenRef = Vertex() ) const [inline]
```

Orders all vertices of the graph in a breadth-first manner. A single vertex is taken as reference to distinguish main root and side paths. Otherwise the first root is taken as reference.

**6.721.4.18 verticesDepthFirstSorted()**

```
template<class VertexProperties , class EdgeProperties >
template<typename LessThan >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::verticesDepthFirstSorted
(
    const Vertex & givenRef,
    LessThan lessThan ) const [inline]
```

Orders all vertices of the graph in a depth-first manner. When discovering a vertex, the adjacent vertices are sorted with the given lessThan. A single vertex is taken as starting point. If null, the first root is taken as reference.

**6.721.4.19 verticesDominatedBy() [1/2]**

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::verticesDominatedBy (
    const Vertex & v,
    const Vertex & root,
    const QList< Vertex > & presortedVertices ) const [inline]
```

For a vertex *v* reachable from a vertex *root* returns all vertices dominated by *v* starting from *root*. The order is the same as in the given, sorted list of all vertices in this graph (or all vertices expected to be returned. The returned list is the intersection of the dominated vertices and *presortedVertices*, in order of *presortedVertices*). Remove all vertices from the DFS of *v* that are not in the dominated tree.

**6.721.4.20 verticesDominatedBy()** [2/2]

```
template<class VertexProperties , class EdgeProperties >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::verticesDominatedBy (
    const Vertex & v,
    const Vertex & root,
    ReturnOrder order = BreadthFirstOrder ) const [inline]
```

For a vertex v reachable from a vertex root, returns, in depth-first or breadth-first order, all vertices dominated by v starting from root.

**6.721.4.21 verticesDominatedByDepthFirstSorted()**

```
template<class VertexProperties , class EdgeProperties >
template<typename LessThan >
QList< Vertex > Digikam::Graph< VertexProperties, EdgeProperties >::verticesDominatedBy↔
DepthFirstSorted (
    const Vertex & v,
    const Vertex & root,
    LessThan lessThan ) const [inline]
```

For a vertex v reachable from a vertex root all vertices dominated by v starting from root. The returned list is in depth-first order, using root as starting point, and when discovering a vertex, sorting the adjacent vertices with the given lessThan.

**6.722 Digikam::Graph< VertexProperties, EdgeProperties >::DominatorTree Class Reference****Public Member Functions**

- template<class GraphType > void **enter** (const GraphType &graph, const Vertex &v, MeaningOfDirection direction=ParentToChild)

**Public Attributes**

- VertexVertexMap predecessors

## 6.724 Digikam::Graph< VertexProperties, EdgeProperties >::GraphSearch Class Reference

**Classes**

- class [BreadthFirstSearchVisitor](#)
- class [CommonVisitor](#)
- class [DepthFirstSearchVisitor](#)
- class [lessThanMapEdgeToTarget](#)

**Public Member Functions**

- template<class GraphType >  
void **breadthFirstSearch** (const GraphType &graph, const [Vertex](#) &v, bool invertGraph)
- template<class GraphType >  
void **depthFirstSearch** (const GraphType &graph, const [Vertex](#) &v, bool invertGraph)
- template<class GraphType , typename LessThan >  
void **depthFirstSearchSorted** (const GraphType &graph, const [Vertex](#) &v, bool invertGraph, LessThan lessThan)

**Public Attributes**

- QList< [Vertex](#) > vertices

**Protected Member Functions**

- template<class IncidenceGraph , class DFSVisitor , class ColorMap , typename LessThan >  
void **depth\_first\_search\_sorted** (const IncidenceGraph &g, [Vertex](#) u, DFSVisitor &vis, ColorMap color, LessThan lessThan)

**6.724.1 Member Function Documentation****6.724.1.1 depth\_first\_search\_sorted()**

```
template<class VertexProperties , class EdgeProperties >
template<class IncidenceGraph , class DFSVisitor , class ColorMap , typename LessThan >
void Digikam::Graph< VertexProperties, EdgeProperties >::GraphSearch::depth_first_search_
sorted (
    const IncidenceGraph & g,
    Vertex u,
    DFSVisitor & vis,
    ColorMap color,
    LessThan lessThan ) [inline], [protected]
```

This is boost's simple, old, recursive DFS algorithm adapted with lessThan. Sort edges. The lessThan we have takes vertices, so we use a lessThan which maps the given edges to their targets, and calls our vertex lessThan.

## 6.725 Digikam::Graph< VertexProperties, EdgeProperties >::GraphSearch::BreadthFirstSearchVisitor Class Reference

Inheritance diagram for Digikam::Graph< VertexProperties, EdgeProperties >::GraphSearch::BreadthFirstSearchVisitor:

## 6.728 Digikam::Graph< VertexProperties, EdgeProperties >::GraphSearch::lessThanMapEdgeToTarget< GraphType, VertexLessThan > Class Template Reference

### Public Member Functions

- **lessThanMapEdgeToTarget** (const GraphType &gg, VertexLessThan vertexLessThan)
- bool **operator()** (const edge\_descriptor &a, const edge\_descriptor &b)

### Public Attributes

- const GraphType & **g**
- VertexLessThan **vertexLessThan**

## 6.729 Digikam::Graph< VertexProperties, EdgeProperties >::Path Class Reference

### Public Member Functions

- bool **isReachable** (const [Vertex](#) &v) const
- template<class GraphType >  
void **longestPath** (const GraphType &graph, const [Vertex](#) &v)
- template<class GraphType >  
void **shortestPath** (const GraphType &graph, const [Vertex](#) &v)

### Public Attributes

- [VertexIntMap](#) **distances**
- [VertexVertexMap](#) **predecessors**

### 6.729.1 Detailed Description

```
template<class VertexProperties, class EdgeProperties>
class Digikam::Graph< VertexProperties, EdgeProperties >::Path
```

Helper class to find paths through the graph. Call one of the methods and then read the maps.

### 6.729.2 Member Function Documentation

#### 6.729.2.1 longestPath()

```
template<class VertexProperties , class EdgeProperties >
template<class GraphType >
void Digikam::Graph< VertexProperties, EdgeProperties >::Path::longestPath (
    const GraphType & graph,
    const Vertex & v ) [inline]
```

We provide a constant weight of 1.

Invert the default compare method: With greater, we get the longest path.

Will be returned if a node is unreachable.

Store distance and predecessors in QMap, wrapped to serve as property maps.

### 6.729.2.2 shortestPath()

```
template<class VertexProperties , class EdgeProperties >
template<class GraphType >
void Digikam::Graph< VertexProperties, EdgeProperties >::Path::shortestPath (
    const GraphType & graph,
    const Vertex & v ) [inline]
```

we provide a constant weight of 1.

Store distance and predecessors in QMap, wrapped to serve as property maps.

## 6.730 Digikam::Graph< VertexProperties, EdgeProperties >::Vertex Class Reference

### Public Member Functions

- bool **isNull** () const
- **operator const vertex\_t &** () const
- **operator vertex\_t &** ()
- bool **operator!=** (const vertex\_t &other) const
- **Vertex & operator=** (const vertex\_t &other)
- bool **operator==** (const vertex\_t &other) const
- **Vertex** (const vertex\_t &vv)

### Protected Attributes

- vertex\_t v

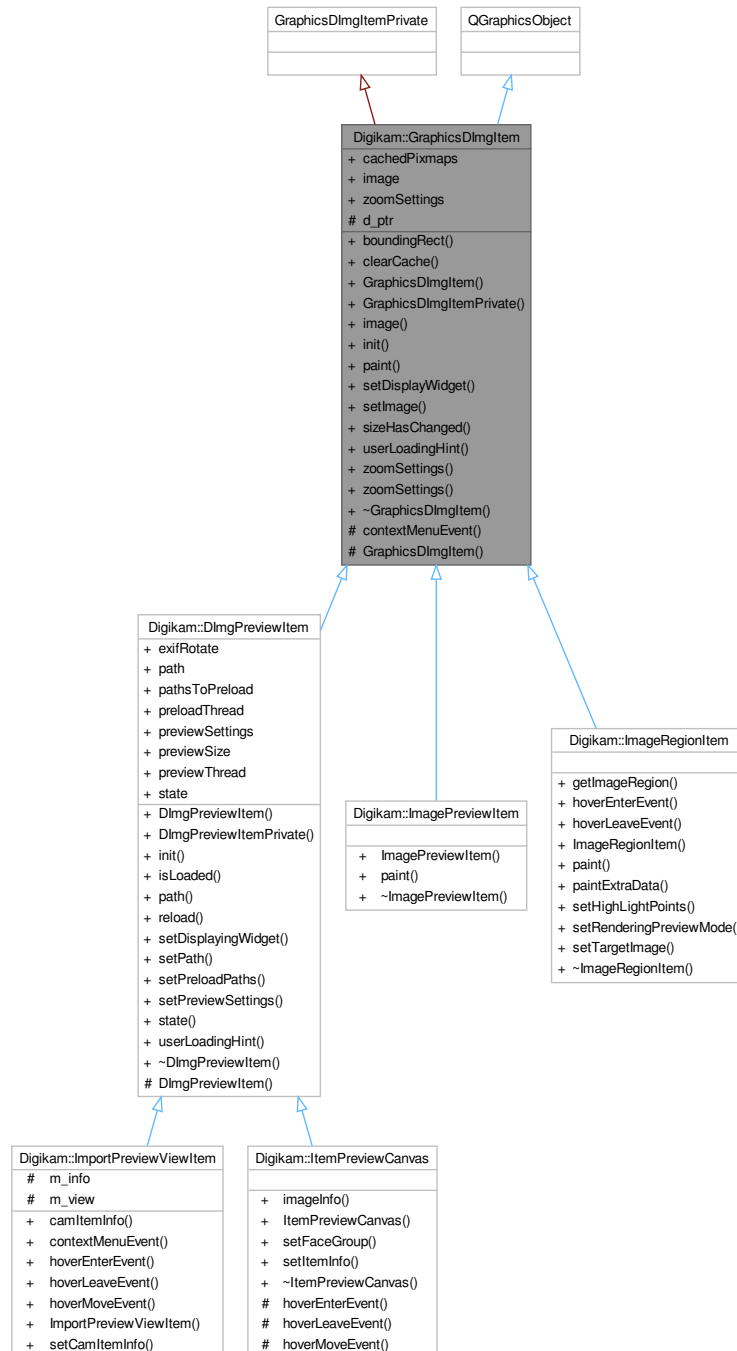

### 6.730.1 Detailed Description

```
template<class VertexProperties, class EdgeProperties>
class Digikam::Graph< VertexProperties, EdgeProperties >::Vertex
```

These two classes provide source-compatible wrappers for the vertex and edge descriptors, providing default construction to null and the isNull() method.

## 6.731 Digikam::GraphicsDImgItem Class Reference

Inheritance diagram for Digikam::GraphicsDImgItem:

### Signals

- void **wheelEvent** (QWheelEvent \*) override

## 6.732.1 Member Function Documentation

### 6.732.1.1 item()

```
GraphicsDImgItem * Digikam::GraphicsDImgView::item ( ) const
```

Return the instance of item set by [setItem\(\)](#).

### 6.732.1.2 previewItem()

```
DImgPreviewItem * Digikam::GraphicsDImgView::previewItem ( ) const
```

Return a cast of item instance of item set by [setItem\(\)](#) as [DImgPreviewItem](#) Note: if you store a [GraphicsDImgItem](#) object using [setItem\(\)](#), this method will return 0.

### 6.732.1.3 scrollPointOnPoint()

```
void Digikam::GraphicsDImgView::scrollPointOnPoint (
    const QPointF & scenePos,
    const QPoint & viewportPos )
```

Scrolls the view such that scenePos (in scene coordinates) is displayed on the viewport at viewportPos (in viewport coordinates). E.g., calling `scrollPointOnPoint(scenePos, viewport()->rect().center())` is equivalent to calling `centerOn(scenePos)`.

### 6.732.1.4 setItem()

```
void Digikam::GraphicsDImgView::setItem (
    GraphicsDImgItem *const item )
```

Store internal instance of item as [GraphicsDImgItem](#). You can store [DImgPreviewItem](#) object also by this method. Use [item\(\)](#) or [previewItem\(\)](#) to get right version. Note: if you store a [GraphicsDImgItem](#) object, [previewItem\(\)](#) will return 0.

## 6.733 Digikam::GreycstorageContainer Class Reference

### 6.734.1 Member Enumeration Documentation

#### 6.734.1.1 MODE

```
enum Digikam::GreycstorationFilter::MODE
```

Enumerator

SimpleResize	Mode to resize image without to use Greycstoration algorithm.
--------------	---

### 6.734.2 Constructor & Destructor Documentation

#### 6.734.2.1 GreycstorationFilter() [1/2]

```
Digikam::GreycstorationFilter::GreycstorationFilter (
    QObject *const parent = nullptr ) [explicit]
```

Constructor without argument. Before to use it, you need to call in order: [setSettings\(\)](#), [setMode\(\)](#), optionally [setInPaintingMask\(\)](#), [setOriginalImage\(\)](#), and necessary [setup\(\)](#) at end.

#### 6.734.2.2 GreycstorationFilter() [2/2]

```
Digikam::GreycstorationFilter::GreycstorationFilter (
    DImg *const orgImage,
    const GreycstorationContainer & settings,
    int mode = Restore,
    int newWidth = 0,
    int newHeight = 0,
    const QImage & inPaintingMask = QImage(),
    QObject *const parent = nullptr )
```

Constructor with all arguments. Ready to use.

## 6.734.3 Member Function Documentation

### 6.734.3.1 `cancelFilter()`

```
void Digikam::GreycstorationFilter::cancelFilter ( ) [override], [virtual]
```

Cancel the threaded computation.

Reimplemented from [Digikam::DImgThreadedFilter](#).

### 6.734.3.2 `filterAction()`

```
FilterAction Digikam::GreycstorationFilter::filterAction ( ) [override], [virtual]
```

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.734.3.3 `filterIdentifier()`

```
QString Digikam::GreycstorationFilter::filterIdentifier ( ) const [inline], [override], [virtual]
```

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.734.3.4 `readParameters()`

```
void Digikam::GreycstorationFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.735 Digikam::GreycstorationSettings Class Reference

Inheritance diagram for Digikam::GreycstorationSettings:

### Public Member Functions

## 6.737.1 Member Function Documentation

### 6.737.1.1 [checkIndex\(\)](#)

```
bool Digikam::GroupIndicatorOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Return true here if you want to show the overlay for the given index. The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.737.1.2 createWidget()

```
QWidget * Digikam::GroupIndicatorOverlay::createWidget ( ) [override], [protected], [virtual]
```

Create your widget here. When creating the object, pass [parentWidget\(\)](#) as parent widget. Ownership of the object is passed. It will be deleted in [setActive\(false\)](#).

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.737.1.3 setActive()

```
void Digikam::GroupIndicatorOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots. If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.737.1.4 slotEntered()

```
void Digikam::GroupIndicatorOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Default implementation shows the widget iff the index is valid and [checkIndex](#) returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.737.1.5 visualChange()

```
void Digikam::GroupIndicatorOverlay::visualChange ( ) [override], [protected], [virtual]
```

Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change

Reimplemented from [Digikam::ItemDelegateOverlay](#).

## 6.738 Digikam::GroupIndicatorOverlayWidget Class Reference

Inheritance diagram for Digikam::GroupIndicatorOverlayWidget:

### Signals

- void **contextMenu** (QContextMenuEvent \*event)

### Public Member Functions

- void **contextMenuEvent** (QContextMenuEvent \*event) override
- **GroupIndicatorOverlayWidget** (QWidget \*const parent=nullptr)

### Protected Member Functions

- void **paintEvent** (QPaintEvent \*) override

## 6.739 Digikam::GroupingViewImplementation Class Reference

Inheritance diagram for Digikam::GroupingViewImplementation:

### Public Member Functions

- [ItemInfoList](#) **getHiddenGroupedInfos** (const [ItemInfoList](#) &infos) const
- virtual bool **hasHiddenGroupedImages** (const [ItemInfo](#) &) const

*must be implemented by parent view*

- bool **needGroupResolving** ([OperationType](#) type, const [ItemInfoList](#) &infos) const
- [ItemInfoList](#) **resolveGrouping** (const [ItemInfoList](#) &infos) const

## 6.739.1 Member Function Documentation

### 6.739.1.1 hasHiddenGroupedImages()

```
virtual bool Digikam::GroupingViewImplementation::hasHiddenGroupedImages (
    const ItemInfo & ) const [inline], [virtual]
```

Reimplemented in [Digikam::ItemThumbnailBar](#), [Digikam::DigikamItemView](#), and [Digikam::TableViewTreeView](#).

## 6.740 Digikam::GroupItemFilterSettings Class Reference

### Public Member Functions

- bool **isAllOpen** () const
- bool **isFiltering** () const
- *Returns if images will be filtered by these criteria at all.*
- bool **isOpen** (qulonglong group) const
- bool **matches** (const [ItemInfo](#) &info) const
- bool **operator==** (const [GroupItemFilterSettings](#) &other) const
- void **setAllOpen** (bool open)
- void **setOpen** (qulonglong group, bool open)
- [DatabaseFields::Set](#) **watchFlags** () const

### Protected Attributes

- bool **m\_allOpen** = false
- [QSet](#)< qulonglong > **m\_openGroups**

## 6.740.1 Member Function Documentation

### 6.740.1.1 matches()

```
bool Digikam::GroupItemFilterSettings::matches (
    const ItemInfo & info ) const
```

Returns true if the given [ItemInfo](#) matches the filter criteria.

### 6.740.1.2 setAllOpen()

```
void Digikam::GroupItemFilterSettings::setAllOpen (
    bool open )
```

Open all groups

### 6.740.1.3 setOpen()

```
void Digikam::GroupItemFilterSettings::setOpen (
    qlonglong group,
    bool open )
```

Open or close a group.

## 6.741 Digikam::GroupStateComputer Class Reference

### Public Member Functions

- void **addFilteredPositiveState** (const GeoGroupState state)
- void **addRegionSelectedState** (const GeoGroupState state)
- void **addSelectedState** (const GeoGroupState state)
- void **addState** (const GeoGroupState state)
- void **clear** ()
- GeoGroupState **getState** () const

## 6.742 Digikam::Haar::Calculator Class Reference

### Public Member Functions

- int **calcHaar** (ImageData \*const imageData, SignatureData \*const sigData)
- void **transform** (ImageData \*const data)

### 6.742.1 Member Function Documentation

#### 6.742.1.1 calcHaar()

```
int Digikam::Haar::Calculator::calcHaar (
    ImageData *const data,
    SignatureData *const sigData )
```

Determines a total of NUM\_COEFS positions in the image that have the largest magnitude (absolute value) in color value. Returns linearized coordinates in sig1, sig2, and sig3. avgl are the [0,0] values. The order of occurrence of the coordinates in sig doesn't matter. Complexity is  $3 \times \text{NUM\_PIXELS}^2 \times 2\log(\text{NUM\_COEFS})$ .

#### 6.742.1.2 transform()

```
void Digikam::Haar::Calculator::transform (
    ImageData *const data )
```

Do the Haar tensorial 2d transform itself. Here input is RGB data [0..255] in Unit arrays. Results are available in a, b, and c. Fully inplace calculation; order of result is interleaved though, but we don't care about that.

## 6.743 Digikam::Haar::ImageData Class Reference

### Public Member Functions

- void `fillImageData` (const `DImg` &image)
- void `fillImageData` (const `QImage` &image)

### Public Attributes

- Unit `data1` [NumberOfPixelsSquared] = { 0.0 }
- Unit `data2` [NumberOfPixelsSquared] = { 0.0 }
- Unit `data3` [NumberOfPixelsSquared] = { 0.0 }

### 6.743.1 Member Function Documentation

#### 6.743.1.1 `fillImageData()` [1/2]

```
void Digikam::Haar::ImageData::fillImageData (
    const DImg & im )
```

Write pixels of a `DImg` in three arrays (one per color channel, pixels linearly)

#### 6.743.1.2 `fillImageData()` [2/2]

```
void Digikam::Haar::ImageData::fillImageData (
    const QImage & im )
```

Write pixels of a `QImage` in three arrays (one per color channel, pixels linearly)

## 6.744 Digikam::Haar::SignatureData Class Reference

### Public Attributes

- double `avg` [3] = { 0.0 }
- Haar::Idx `sig` [3][Haar::NumberOfCoefficients] = { { 0 } }

### 6.744.1 Member Data Documentation

#### 6.744.1.1 `avg`

```
double Digikam::Haar::SignatureData::avg[3] = { 0.0 }
```

YIQ for position [0,0]

### 6.744.1.2 sig

```
Haar::Idx Digikam::Haar::SignatureData::sig[3][Haar::NumberOfCoefficients] = { { 0 } }
```

Y/I/Q positions with largest magnitude

## 6.745 Digikam::Haar::SignatureMap Class Reference

### Public Types

- typedef bool **MapIndexType**

### Public Member Functions

- void **fill** (const Haar::Idx \*const coefs)  
*Load a set of coefficients.*
- bool **operator[]** (Haar::Idx index) const  
*Query if the given index is set. Index must be in the range -16383..16383.*

### Public Attributes

- MapIndexType \* **m\_indexList** = nullptr

### 6.745.1 Detailed Description

This class provides very fast lookup if a certain pixel is set (positive or negative) in the loaded coefficient set.

## 6.746 Digikam::Haar::WeightBin Class Reference

### Public Member Functions

- unsigned char **bin** (int index) const
- unsigned char **binAbs** (int index) const
- [WeightBin](#) ()

### Public Attributes

- unsigned char **m\_bin** [16384] = { 0 }

### 6.746.1 Constructor & Destructor Documentation

#### 6.746.1.1 WeightBin()

```
Digikam::Haar::WeightBin::WeightBin ( )
```

[Setup](#) initial fixed Haar weights that each coefficient represents

## 6.746.2 Member Data Documentation

### 6.746.2.1 m\_bin

```
unsigned char Digikam::Haar::WeightBin::m_bin[16384] = { 0 }
```

Fixed weight mask for pixel positions (i,j). Each entry  $x = i * \text{NUM\_PIXELS} + j$ , gets value  $\max(i,j)$  saturated at 5. To be treated as a constant.

## 6.747 Digikam::Haar::Weights Class Reference

### Public Types

- enum **SketchType** { **ScannedSketch** = 0 , **PaintedSketch** = 1 }

### Public Member Functions

- float **weight** (int weight, int channel) const
- float **weightForAverage** (int channel) const
- **Weights** (SketchType type=ScannedSketch)

## 6.748 Digikam::HaarIface Class Reference

### Classes

- class [Private](#)

### Public Types

- enum **AlbumTagRelation** { **NoMix** = 0 , **Union** = 1 , **Intersection** = 2 , **AlbumExclusive** = 3 , **TagExclusive** = 4 }
- using **DuplicatesResultsMap** = QMap< qlonglong, QPair< double, QList< qlonglong > > >

- static void [rebuildDuplicatesAlbums](#) (const DuplicatesResultsMap &results, bool isAlbumUpdate)

## 6.748.1 Member Enumeration Documentation

### 6.748.1.1 RefImageSelMethod

```
enum class Digikam::HaarIface::RefImageSelMethod : unsigned int [strong]
```

When adding method here, update also [HaarIface::findDuplicates\(\)](#)

#### Enumerator

OlderOrLarger	Original.
PreferFolder	Prefer select folder to be the reference.
ExcludeFolder	Prefer image not in the selected folder.
NewerCreationDate	Prefer newer creation date image.
NewerModificationDate	Prefer newer modification date image.

## 6.748.2 Member Function Documentation

### 6.748.2.1 bestMatchesForImageWithThreshold() [1/2]

```
QPair< double, QMap< qlonglong, double > > Digikam::HaarIface::bestMatchesForImageWithThreshold (
    const QString & imagePath,
    double requiredPercentage,
    double maximumPercentage,
    const QList< int > & targetAlbums,
    DuplicatesSearchRestrictions searchResultRestriction = DuplicatesSearchRestrictions::None,
    SketchType type = ScannedSketch )
```

Searches the database for the best matches for the specified query image. All matches with a similarity in a given threshold interval are returned. The threshold is in the range requiredPercentage..maximumPercentage.

### 6.748.2.2 bestMatchesForImageWithThreshold() [2/2]

```
QPair< double, QMap< qlonglong, double > > Digikam::HaarIface::bestMatchesForImageWithThreshold (
    qlonglong imageid,
    double requiredPercentage,
    double maximumPercentage,
    const QList< int > & targetAlbums,
    DuplicatesSearchRestrictions searchResultRestriction = DuplicatesSearchRestrictions::None,
    SketchType type = ScannedSketch )
```

Searches the database for the best matches for the specified query image. All matches with a similarity in a given threshold interval are returned. The threshold is in the range requiredPercentage..maximumPercentage.

### 6.748.2.3 findDuplicates()

```
HaarIface::DuplicatesResultsMap Digikam::HaarIface::findDuplicates (
    const QSet< qlonglong > & images2Scan,
    const QSet< qlonglong >::const_iterator & rangeBegin,
    const QSet< qlonglong >::const_iterator & rangeEnd,
    RefImageSelMethod refImageSelectionMethod,
    const QSet< qlonglong > & refs,
    double requiredPercentage,
    double maximumPercentage,
    DuplicatesSearchRestrictions searchResultRestriction = DuplicatesSearchRestrictions::None,
    HaarProgressObserver *const observer = nullptr )
```

Fill a map of duplicates images found over a list of images to scan. For each map item, the result values is list of candidate images which are duplicates of the key image. All images are referenced by id from database. The threshold is in the range 0..1, with 1 meaning identical signature.

**6.748.2.4 fulfillsRestrictions()**

```
bool Digikam::HaarIface::fulfillsRestrictions (
    qlonglong imageId,
    int albumId,
    qlonglong originalImageId,
    int originalAlbumId,
    const QList< int > & targetAlbums,
    DuplicatesSearchRestrictions searchResultRestriction )
```

Checks whether the image with the given *imageId* fulfills all restrictions given in *targetAlbums* and in respect to *searchResultRestriction*.

**6.748.2.5 getBestAndWorstPossibleScore()**

```
void Digikam::HaarIface::getBestAndWorstPossibleScore (
    Haar::SignatureData *const querySig,
    SketchType type,
    double *const lowestAndBestScore,
    double *const highestAndWorstScore )
```

For a given signature, find out the highest and lowest possible score that any other signature could reach, compared to the given signature.

**6.748.2.6 imagesFromAlbumsAndTags()**

```
QSet< qlonglong > Digikam::HaarIface::imagesFromAlbumsAndTags (
    const QList< int > & albums2Scan,
    const QList< int > & tags2Scan,
    AlbumTagRelation relation ) [static]
```

Collects all images from the given album and tag ids according to their relation.

**6.748.2.7 indexImage()**

```
bool Digikam::HaarIface::indexImage (
    const QString & filename )
```

Adds an image to the index in the database.

**6.748.2.8 loadQImage()**

```
QImage Digikam::HaarIface::loadQImage (
    const QString & filename )
```

This method loads a QImage from the given filename.

**Parameters**

<i>filename</i>	the name of the file (path)
-----------------	-----------------------------

**Returns**

A QImage, non-null on success.

**6.748.2.9 rebuildDuplicatesAlbums()**

```
void Digikam::HaarIface::rebuildDuplicatesAlbums (
    const DuplicatesResultsMap & results,
    bool isAlbumUpdate ) [static]
```

This method rebuilds the given SAlbums using the given results.

**Parameters**

<i>results</i>	Map of duplicates images found over a list of images.
<i>isAlbumUpdate</i>	if true update the SAlbums in the database.

**6.748.2.10 retrieveSignatureFromDB()**

```
bool Digikam::HaarIface::retrieveSignatureFromDB (
    qlonglong imageid,
    Haar::SignatureData & sig )
```

Retrieve the Haar signature from database using image id. Return true if item signature exist else false.

**6.748.2.11 setAlbumRootsToSearch()**

```
void Digikam::HaarIface::setAlbumRootsToSearch (
    const QList< int > & albumRootIds )
```

Give a list of albumRoots to which the search shall be limited. Calling with an empty list will disable filtering.

**6.748.2.12 signatureAsText()**

```
QString Digikam::HaarIface::signatureAsText (
    const QImage & image )
```

Calculates the Haar signature, bring it in a form as stored in the DB, and encode it to Ascii data. Can be used for bestMatchesForSignature.

**6.749 Digikam::HaarIface::Private Class Reference****Public Member Functions**

## 6.751.1 Constructor & Destructor Documentation

### 6.751.1.1 HidingStateChanger() [1/2]

```
Digikam::HidingStateChanger::HidingStateChanger (  
    QObject *const parent = nullptr ) [explicit]
```

This class provides a state change while fading in and out: When `changeValue` is called, first the items are hidden, when this is finished, the property is assigned to the object. Afterwards, the items are shown again. Note that the `targetObject` is not necessarily a controlled item!

### 6.751.1.2 HidingStateChanger() [2/2]

```
Digikam::HidingStateChanger::HidingStateChanger (  
    QObject *const target,  
    const QByteArray & property,  
    QObject *const parent = nullptr )
```

Convenience constructor: Sets target and property name

## 6.751.2 Member Function Documentation

### 6.751.2.1 finished

```
void Digikam::HidingStateChanger::finished ( ) [signal]
```

Emitted when the items were hidden, the target object's property changed, and the items shown again

### 6.751.2.2 stateChanged

```
void Digikam::HidingStateChanger::stateChanged ( ) [signal]
```

Emitted when the items were hidden and the target object's property changed

**6.754 Digikam::HistogramPainter Class Reference**

Inheritance diagram for Digikam::HistogramPainter:

## Public Member Functions

- void `disableHistogramGuide` ()
- void `enableHistogramGuideByColor` (const `DColor` &color)
- `HistogramPainter` (QObject \*const parent)
- void `initFrom` (QWidget \*const widget)
- void `render` (QPixmap &paintDevice)
- void `setChannelType` (ChannelType channelType)
- void `setHighlightSelection` (bool highlightSelection)
- void `setHistogram` (ImageHistogram \*const histogram)
- void `setRenderXGrid` (bool renderXGrid)
- void `setScale` (HistogramScale scale)
- void `setSelection` (double selectionMin, double selectionMax)
- `~HistogramPainter` () override

### 6.754.1 Detailed Description

A class that paints a histogram on a QPixmap.

Warning: before first usage of the render method, you must call `initFrom()` to initialize the painter.

### 6.754.2 Constructor & Destructor Documentation

#### 6.754.2.1 HistogramPainter()

```
Digikam::HistogramPainter::HistogramPainter (
    QObject *const parent ) [explicit]
```

Constructor.

##### Parameters

<i>parent</i>	the parent for Qt's destruction mechanism
---------------	---

#### 6.754.2.2 ~HistogramPainter()

```
Digikam::HistogramPainter::~~HistogramPainter ( ) [override]
```

Destructor.

### 6.754.3 Member Function Documentation

#### 6.754.3.1 disableHistogramGuide()

```
void Digikam::HistogramPainter::disableHistogramGuide ( )
```

Disables the rendering of the color guide.

### 6.754.3.2 enableHistogramGuideByColor()

```
void Digikam::HistogramPainter::enableHistogramGuideByColor (
    const DColor & color )
```

Starts rendering a guide that indicates where in the histogram a specified color can be found.

#### Parameters

<i>color</i>	the color to highlight in the histogram
--------------	---

### 6.754.3.3 initFrom()

```
void Digikam::HistogramPainter::initFrom (
    QWidget *const widget )
```

Stores a widget that is used to initialize the painter used in the next call to render. Therefore you must ensure that this widget will not be destroyed as long as you want to use the render method without a new call to this method!!!

#### Parameters

<i>widget</i>	the widget to initialize painting from
---------------	--

### 6.754.3.4 render()

```
void Digikam::HistogramPainter::render (
    QPixmap & paintDevice )
```

Renders the given histogram on the pixmap. The whole size of the pixmap is used for the histogram.

You must ensure that once before using this method a call to `initFrom` was made and the widget given in that call is still present.

#### Parameters

<i>paintDevice</i>	pixmap to paint the histogram on
--------------------	----------------------------------

### 6.754.3.5 setChannelType()

```
void Digikam::HistogramPainter::setChannelType (
    ChannelType channelType )
```

Set the channel type to render with the next call to render.

#### Parameters

<i>channelType</i>	channel type to render
--------------------	------------------------

### 6.754.3.6 setHighlightSelection()

```
void Digikam::HistogramPainter::setHighlightSelection (
    bool highlightSelection )
```

Decide whether to highlight a specified selection in the histogram or not. The selection must be defined with `setHighlightSelection`.

#### Parameters

<i>highlightSelection</i>	if true, a selection will be highlighted
---------------------------	--

### 6.754.3.7 setHistogram()

```
void Digikam::HistogramPainter::setHistogram (
    ImageHistogram *const histogram )
```

Set the histogram to paint with the next call to render.

#### Parameters

<i>histogram</i>	an existing pointer to a histogram to paint on next call to render. The histogram must still exist at that call.
------------------	--

### 6.754.3.8 setRenderXGrid()

```
void Digikam::HistogramPainter::setRenderXGrid (
    bool renderXGrid )
```

Decide whether to render a separation of the histogram in x direction.

#### Parameters

<i>renderXGrid</i>	if true, a separation at some significant value in x direction is rendered.
--------------------	---

### 6.754.3.9 setScale()

```
void Digikam::HistogramPainter::setScale (
    HistogramScale scale )
```

Set the scale to paint the histogram with.

#### Parameters

<i>scale</i>	scal to paint histogram with
--------------	------------------------------

### 6.754.3.10 setSelection()

```
void Digikam::HistogramPainter::setSelection (
    double selectionMin,
    double selectionMax )
```

Sets the selection to highlight.

#### Parameters

<i>selectionMin</i>	0 <= value <= 1, percent of the histogram width to start highlighting as percent. Ensure that this value is smaller then <i>selectionMax</i> .
<i>selectionMax</i>	0 <= value <= 1, percent of the histogram width to end highlighting as percent. Ensure that this value is greater then <i>selectionMin</i> .

## 6.755 Digikam::HistogramWidget Class Reference

Inheritance diagram for Digikam::HistogramWidget:

### Public Slots

- void **setChannelType** (ChannelType channel)
- void **setScaleType** (HistogramScale scale)
- void **slotMaxValueChanged** (int max)
- void **slotMinValueChanged** (int min)

## Signals

- void **signalHistogramComputationDone** (bool)
- void **signalHistogramComputationFailed** ()
- void **signalIntervalChanged** (int min, int max)
- void **signalMaximumValueChanged** (int)

## Public Member Functions

- int **animationState** () const
- ChannelType **channelType** () const
- ImageHistogram \* **currentHistogram** () const
- HistogramWidget (int w, int h, QWidget \*const parent=nullptr, bool selectMode=true, bool showProgress=true, bool statisticsVisible=false)
- HistogramRenderingType **renderingType** () const
- void **reset** ()
- HistogramScale **scaleType** () const
- void **setAnimationState** (int animationState)
- void **setDataLoading** ()
- void **setHistogramGuideByColor** (const DColor &color)
- void **setLoadingFailed** ()
- void **setRenderingType** (HistogramRenderingType type)
- void **setStatisticsVisible** (bool b)
- void **stopHistogramComputation** ()
- void **updateData** (const DImg &img, const DImg &sel=DImg(), bool showProgress=true)
- void **updateSelectionData** (const DImg &sel, bool showProgress=true)

## Protected Slots

- void **slotCalculationAboutToStart** ()
- void **slotCalculationFinished** (bool success)

## Protected Member Functions

- void **mouseMoveEvent** (QMouseEvent \*) override
- void **mousePressEvent** (QMouseEvent \*) override
- void **mouseReleaseEvent** (QMouseEvent \*) override
- void **paintEvent** (QPaintEvent \*) override

## Properties

- int **animationState**

## 6.755.1 Constructor & Destructor Documentation

### 6.755.1.1 HistogramWidget()

```
Digikam::HistogramWidget::HistogramWidget (
    int w,
    int h,
    QWidget *const parent = nullptr,
    bool selectMode = true,
    bool showProgress = true,
    bool statisticsVisible = false )
```

Standard constructor. Needed to use [updateData\(\)](#) methods after to create valid instance.

## 6.755.2 Member Function Documentation

### 6.755.2.1 currentHistogram()

```
ImageHistogram * Digikam::HistogramWidget::currentHistogram ( ) const
```

Currently rendered histogram, depending on current rendering type.

### 6.755.2.2 stopHistogramComputation()

```
void Digikam::HistogramWidget::stopHistogramComputation ( )
```

Stop current histogram computations.

### 6.755.2.3 updateData()

```
void Digikam::HistogramWidget::updateData (
    const DImg & img,
    const DImg & sel = DImg(),
    bool showProgress = true )
```

Update full image histogram data methods.

### 6.755.2.4 updateSelectionData()

```
void Digikam::HistogramWidget::updateSelectionData (
    const DImg & sel,
    bool showProgress = true )
```

Update image selection histogram data methods.

## 6.756 Digikam::HistoryEdgeProperties Class Reference

### Public Member Functions

- [HistoryEdgeProperties](#) & **operator+=** (const [FilterAction](#) &action)

### Public Attributes

- `QList< FilterAction > actions`

### 6.756.1 Detailed Description

Every edge has one associated object of this class.

For two vertices v1, v2 with and edge e, v1 -> v2, describes the actions necessary to create v2 from v2: v1 -> actions[0] -> ... -> actions[n] = v2.

## 6.757 Digikam::HistoryImageld Class Reference

### Public Types

- enum [Type](#) {  
**InvalidType** = 0 , **Original** = 1 << 0 , **Intermediate** = 1 << 1 , **Source** = 1 << 2 ,

- void **setUuid** (const QString &uuid)
- [Type](#) **type** () const
- QString **uniqueHash** () const
- QString **uuid** () const

## Public Attributes

- QDateTime **m\_creationDate**  
*The creationDate of the original image.*
- QString **m\_fileName**  
*The filename of the referred file.*
- QString **m\_filePath**  
*The path of the referred file (NOTE: without file name!, including trailing slash)*
- qlonglong **m\_fileSize** = 0  
*The file size of the referred file.*
- QString **m\_originalUUID**
- Type **m\_type** = InvalidType  
*Type of this History Image Id.*
- QString **m\_uniqueHash**  
*The uniqueHash of the referred file.*
- QString **m\_uuid**

## 6.757.1 Member Enumeration Documentation

### 6.757.1.1 Type

```
enum Digikam::HistoryImageId::Type
```

#### Enumerator

Original	The original file (typically created by a camera)
Intermediate	A file created during the editing the history, between the original file and the current file.
Source	When a file is created from multiple files, there can be no direct original (panorama) but multiple sources, or one direct original and some other, additional source files. To record source files outside of the direct history, this type is used.
Current	The "current" file. This is a special entry: It refers to the file from which this history was read. It need not be written to the file, because it describes the file itself. There is typically exactly one current entry if the history is associated with an image; there can be no current entry.

## 6.757.2 Constructor & Destructor Documentation

### 6.757.2.1 HistoryImageId()

```
Digikam::HistoryImageId::HistoryImageId ( ) [default]
```

Note: In this class, the Type is used as a simple enum, but it is also prepared for usage as flags.

## 6.757.3 Member Data Documentation

### 6.757.3.1 m\_originalUUID

```
QString Digikam::HistoryImageId::m_originalUUID
```

A unique identifier designating the *original image* from which the referred image was created. Typically, this is a RAW or JPEG created by the camera in the moment of taking the photograph.

### 6.757.3.2 m\_uuid

QString Digikam::HistoryImageId::m\_uuid

A unique identifier for the referred file. This id shall be changed each time the image is edited.

## 6.758 Digikam::HistoryVertexProperties Class Reference

### Public Member Functions

- bool **alwaysMarkedAs** ([HistoryImageId::Type](#)) const
- [ItemInfo](#) **firstItemInfo** () const
- bool **markedAs** ([HistoryImageId::Type](#)) const
- [HistoryVertexProperties](#) & **operator+=** (const [HistoryImageId](#) &info)
- [HistoryVertexProperties](#) & **operator+=** (const [ItemInfo](#) &info)
- [HistoryVertexProperties](#) & **operator+=** (const QString &uuid)
- bool **operator==** (const [HistoryImageId](#) &info) const
- bool **operator==** (const [ItemInfo](#) &info) const
- bool **operator==** (const QString &uuid) const
- bool **operator==** (qulonglong id) const

### Public Attributes

- QList< [ItemInfo](#) > **infos**
- QList< [HistoryImageId](#) > **referredImages**
- QString **uuid**

### 6.758.1 Detailed Description

Every vertex has one associated object of this class

All entries in a vertex refer to *identical* images. There can be multiple referred images in a history entry. Each single [HistoryImageId](#) can resolve into none, one, or multiple [ItemInfos](#). So there is no mapping between the two fields here.

If an image is created from multiple source images (panorama etc.), there will be one vertex per source image!

## 6.759 Digikam::HotPixelContainer Class Reference

### Public Types

- enum **Direction** { **TWODIM\_DIRECTION** = 0 , **VERTICAL\_DIRECTION** = 1 , **HORIZONTAL\_DIRECTION** = 2 }
- enum **InterpolationMethod** { **AVERAGE\_INTERPOLATION** = 0 , **LINEAR\_INTERPOLATION** = 1 , **QUADRATIC\_INTERPOLATION** = 2 , **CUBIC\_INTERPOLATION** = 3 }

## 6.760.1 Member Function Documentation

### 6.760.1.1 filterAction()

`Digikam::FilterAction` `Digikam::HotPixelFixer::filterAction ( )` `[override]`, `[virtual]`

Returns the action description corresponding to currently set options.

Implements `Digikam::DImgThreadedFilter`.

### 6.760.1.2 filterIdentifier()

`QString` `Digikam::HotPixelFixer::filterIdentifier ( )` `const` `[inline]`, `[override]`, `[virtual]`

Return the identifier for this filter in the image history.

Implements `Digikam::DImgThreadedFilter`.

### 6.760.1.3 readParameters()

`void` `Digikam::HotPixelFixer::readParameters (`  
`const` `FilterAction` `& action )` `[override]`, `[virtual]`

Implements `Digikam::DImgThreadedFilter`.

## 6.761 Digikam::HotPixelProps Class Reference

### Public Member Functions

## 6.764.1 Member Function Documentation

### 6.764.1.1 `createButton()`

```
virtual ItemViewHoverButton * Digikam::HoverButtonDelegateOverlay::createButton ( ) [protected],
[pure virtual]
```

Create your widget here. Pass `view()` as parent.

Implemented in [Digikam::FaceRejectionOverlay](#), [Digikam::ItemFullScreenOverlay](#), [Digikam::ItemRotateOverlay](#), [Digikam::ItemSelectionOverlay](#), [Digikam::ShowHideVersionsOverlay](#), [Digikam::ActionVersionsOverlay](#), and [Digikam::ImportRotateOverlay](#).

### 6.764.1.2 `createWidget()`

```
QWidget * Digikam::HoverButtonDelegateOverlay::createWidget ( ) [override], [protected], [virtual]
```

Create your widget here. When creating the object, pass `parentWidget()` as parent widget. Ownership of the object is passed. It will be deleted in `setActive(false)`.

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.764.1.3 `setActive()`

```
void Digikam::HoverButtonDelegateOverlay::setActive (
    bool active ) [override], [virtual]
```

Will call [createButton\(\)](#).

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

Reimplemented in [Digikam::ItemFullScreenOverlay](#), [Digikam::ItemRotateOverlay](#), [Digikam::ItemSelectionOverlay](#), [Digikam::ShowHideVersionsOverlay](#), and [Digikam::ImportRotateOverlay](#).

### 6.764.1.4 `updateButton()`

```
virtual void Digikam::HoverButtonDelegateOverlay::updateButton (
    const QModelIndex & index ) [protected], [pure virtual]
```

Called when a new index is entered. Reposition your button here, adjust and store state.

Implemented in [Digikam::FaceRejectionOverlay](#), [Digikam::ItemFullScreenOverlay](#), [Digikam::ItemRotateOverlay](#), [Digikam::ItemSelectionOverlay](#), [Digikam::ShowHideVersionsOverlay](#), [Digikam::ActionVersionsOverlay](#), and [Digikam::ImportRotateOverlay](#).

### 6.764.1.5 visualChange()

```
void Digikam::HoverButtonDelegateOverlay::visualChange ( ) [override], [protected], [virtual]
```

Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change

Reimplemented from [Digikam::ItemDelegateOverlay](#).

## 6.765 Digikam::HSLContainer Class Reference

## 6.766.1 Member Function Documentation

### 6.766.1.1 filterAction()

`FilterAction` Digikam::HSLFilter::filterAction ( ) [override], [virtual]

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.766.1.2 filterIdentifier()

`QString` Digikam::HSLFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

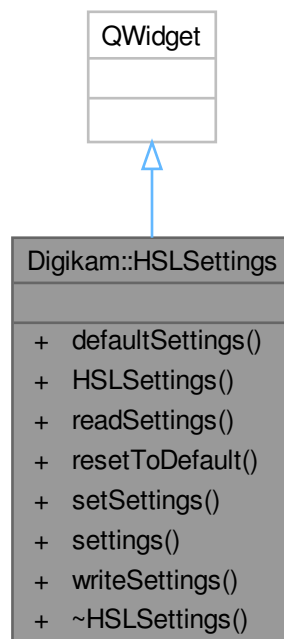

### 6.766.1.3 readParameters()

```
void Digikam::HSLFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.767 Digikam::HSLSettings Class Reference

## 6.771.1 Constructor & Destructor Documentation

### 6.771.1.1 IccManager()

```
Digikam::IccManager::IccManager (
    const DImg & image,
    const ICCSettingsContainer & settings = IccSettings::instance\(\) ->settings() )
[explicit]
```

Constructs an [IccManager](#) object. The [DImg](#) will be edited. The filePath is for display only.

## 6.771.2 Member Function Documentation

### 6.771.2.1 displaySoftProofingTransform()

```
IccTransform Digikam::IccManager::displaySoftProofingTransform (
    const IccProfile & deviceProfile,
    QWidget *const displayingWidget = nullptr )
```

Returns a display transform, with soft-proofing enabled for the given device profile.

### 6.771.2.2 imageProfile()

```
IccProfile Digikam::IccManager::imageProfile (
    ICCSettingsContainer::Behavior behavior,
    const IccProfile & specifiedProfile = IccProfile() )
```

Returns the profile that will be used to interpret the image, using the given behavior

### 6.771.2.3 isSRGB()

```
bool Digikam::IccManager::isSRGB (
    const DImg & img ) [static]
```

Returns true if a call to [transformToSRGB\(\)](#) would have an effect.

### 6.771.2.4 needsPostLoadingManagement()

```
bool Digikam::IccManager::needsPostLoadingManagement (
    const DImg & img ) [static]
```

Returns true if the given image is marked as needing user interaction for further color management decision after loading. If this returns true, use [IccPostLoadingManager](#) to do this.

### 6.771.2.5 transform()

```
void Digikam::IccManager::transform (
    ICCSettingsContainer::Behavior behavior,
    const IccProfile & specifiedProfile = IccProfile() )
```

Same as above, but not using default settings but the given settings.

### 6.771.2.6 transformDefault()

```
void Digikam::IccManager::transformDefault ( )
```

Transforms the image for full editing, using default settings. If the default settings require showing a dialog, the image is marked as such but no action is taken. See [IccPostLoadingManager](#).

### 6.771.2.7 transformForDisplay() [1/2]

```
void Digikam::IccManager::transformForDisplay ( )
```

Transforms the image for display on screen. The result is not suitable for editing or storage. You can specify the widget in which the image will be displayed, or specify the display profile yourself. You can retrieve the profile with `displayProfile()` and pass it to `transformForDisplay()` later (in a thread), or you can get a transform from `displayProfile()` and apply it yourself.

### 6.771.2.8 transformForDisplay() [2/2]

```
void Digikam::IccManager::transformForDisplay (
    QImage & qimage,
    const IccProfile & displayProfile = displayProfile() ) [static]
```

Transforms the given QImage from sRGB to given display profile.

### 6.771.2.9 transformForOutput()

```
void Digikam::IccManager::transformForOutput (
    const IccProfile & outputProfile )
```

Transforms the image for output to the specified output profile

### 6.771.2.10 transformToSRGB() [1/2]

```
void Digikam::IccManager::transformToSRGB ( )
```

Transforms the image to sRGB

### 6.771.2.11 transformToSRGB() [2/2]

```
void Digikam::IccManager::transformToSRGB (
    QImage & qimage,
    const IccProfile & inputProfile ) [static]
```

Transforms the given QImage from the given inputProfile to sRGB.

## 6.772 Digikam::IccPostLoadingManager Class Reference

Inheritance diagram for Digikam::IccPostLoadingManager:

### Public Member Functions

- `IccPostLoadingManager` (`DImg &image`, `const QString &filePath=QString()`, `const ICCSettingsContainer &settings=IccSettings::instance() ->settings()`)
- `IccTransform postLoadingManage` (`QWidget *const parent=nullptr`)

## Public Member Functions inherited from [Digikam::IccManager](#)

- [IccTransform](#) **displaySoftProofingTransform** (const [IccProfile](#) &deviceProfile, const [IccProfile](#) &display←→Profile)

## 6.772.1 Constructor & Destructor Documentation

### 6.772.1.1 IccPostLoadingManager()

```
Digikam::IccPostLoadingManager::IccPostLoadingManager (
    DImg & image,
    const QString & filePath = QString(),
    const ICCSettingsContainer & settings = ICCSettings::instance()->settings() )
[explicit]
```

Constructs an `IccPostLoadingManager` object. The `DImg` will be edited. The `filePath` is for display only.

## 6.772.2 Member Function Documentation

### 6.772.2.1 postLoadingManage()

```
ICCTransform Digikam::IccPostLoadingManager::postLoadingManage (
    QWidget *const parent = nullptr )
```

Carries out color management asking the user for his decision. Afterwards, `needsPostLoadingManagement` will return false.

## 6.773 Digikam::ICCPreviewWidget Class Reference

Inheritance diagram for Digikam::ICCPreviewWidget:

**6.774.1 Member Enumeration Documentation****6.774.1.1 ProfileType**

enum **Digikam::IccProfile::ProfileType**

## Enumerator

InvalidType	Returned for a null profile or an unknown (non-standard) profile type.
Input	For an input device like a scanner or digital camera.
Output	For an output device like a printer.
Display	For a display device like a monitor.

## 6.774.2 Constructor & Destructor Documentation

### 6.774.2.1 IccProfile() [1/3]

```
Digikam::IccProfile::IccProfile ( )
```

Creates a null profile

### 6.774.2.2 IccProfile() [2/3]

```
Digikam::IccProfile::IccProfile (
    const QByteArray & data ) [explicit]
```

Creates a profile from the given data in memory

### 6.774.2.3 IccProfile() [3/3]

```
Digikam::IccProfile::IccProfile (
    const QString & filePath ) [explicit]
```

Creates a profile from the given file

## 6.774.3 Member Function Documentation

### 6.774.3.1 close()

```
void Digikam::IccProfile::close ( )
```

Close the profile, freeing resources. You can re-open. Called automatically at destruction.

### 6.774.3.2 data()

```
QByteArray Digikam::IccProfile::data ( )
```

Returns the raw profile data. Reads the data from disk if loaded from disk and not yet loaded.

### 6.774.3.3 defaultProfiles()

```
QList< IccProfile > Digikam::IccProfile::defaultProfiles ( ) [static]
```

Returns a list with the profiles above

### 6.774.3.4 defaultSearchPaths()

```
QStringList Digikam::IccProfile::defaultSearchPaths ( ) [static]
```

Returns the default search paths for ICC profiles. This does not include any user-specified settings.

### 6.774.3.5 description()

```
QString Digikam::IccProfile::description ( )
```

Reads the profile description. Opens the profile if necessary.

### 6.774.3.6 filePath()

```
QString Digikam::IccProfile::filePath ( ) const
```

Returns the filename that this profile was read from. returns a null QString() if this profile was loaded from memory.

### 6.774.3.7 handle()

```
void * Digikam::IccProfile::handle ( ) const
```

Access to the LCMS cmsHPROFILE handle.

### 6.774.3.8 isOpen()

```
bool Digikam::IccProfile::isOpen ( ) const
```

Returns if the profile is opened.

### 6.774.3.9 isSameProfileAs()

```
bool Digikam::IccProfile::isSameProfileAs (
    IccProfile & other )
```

This method compares the actual profile data bit by bit.

**6.774.3.10 open()**

```
bool Digikam::IccProfile::open ( )
```

Open this profile. Returns true if the operation succeeded or the profile is already open. Returns false if the profile is null or the operation failed. You need to open each profile after construction.

**6.774.3.11 operator==( )**

```
bool Digikam::IccProfile::operator== (
    const IccProfile & other ) const
```

Returns true if both profiles are null, if both profiles are created from the same file profile, or if the loaded profile data is identical. Note: This will not ensure that the data is loaded. Use `isSameProfile()`.

**6.774.3.12 sRGB()**

```
IccProfile Digikam::IccProfile::sRGB ( ) [static]
```

Returns the profiles available with RawEngine. You still need to call `open()` on them.

**6.774.3.13 type()**

```
IccProfile::ProfileType Digikam::IccProfile::type ( )
```

< 'nkbf', proprietary in Nikon profiles

**6.774.3.14 writeToFile()**

```
bool Digikam::IccProfile::writeToFile (
    const QString & filePath )
```

Writes the profile to the given file.

**6.775 Digikam::IccProfileInfoDlg Class Reference**

Inheritance diagram for Digikam::IccProfileInfoDlg:

## Public Member Functions

- **ICCPProfileInfoDlg** (QWidget \*const parent, const QString &profilePath, const [IccProfile](#) &profile↔ Data=[IccProfile](#)())

## 6.776 Digikam::IccProfilesComboBox Class Reference

Inheritance diagram for Digikam::IccProfilesComboBox:

- [QSize](#) [sizeHint](#) () const override
- [SqueezedComboBox](#) ([QWidget](#) \*const parent=nullptr, const char \*name=nullptr)
- [~SqueezedComboBox](#) () override

## Additional Inherited Members

## Signals inherited from [Digikam::SqueezedComboBox](#)

- void [signalItemActivated](#) (const [QString](#) &)

## 6.776.1 Constructor & Destructor Documentation

### 6.776.1.1 IccProfilesComboBox()

```
Digikam::IccProfilesComboBox::IccProfilesComboBox (
    QWidget *const parent = nullptr ) [explicit]
```

#### Note

Use the signal [currentIndexChanged\(int\)](#) for change notification

## 6.776.2 Member Function Documentation

### 6.776.2.1 addProfileSqueezed()

```
void Digikam::IccProfilesComboBox::addProfileSqueezed (
    const IccProfile & profile,
    const QString & description = QString() )
```

Add the given profile with the given description, or, if null, a standard description. Does not test for duplicity, does not sort into existing profiles.

### 6.776.2.2 addProfilesSqueezed()

```
void Digikam::IccProfilesComboBox::addProfilesSqueezed (
    const QList< IccProfile > & profiles )
```

Checks the given profiles for validity, creates a suitable description (ICC profile description, file path), removes duplicates by file path, sorts them and adds them in sorted order.

### 6.776.2.3 currentProfile()

```
IccProfile Digikam::IccProfilesComboBox::currentProfile ( ) const
```

Retrieves the current profile, or a null profile if none is selected.

### 6.776.2.4 replaceProfilesSqueezed()

```
void Digikam::IccProfilesComboBox::replaceProfilesSqueezed (
    const QList< IccProfile > & profiles )
```

Clears, does the same as addProfilesSqueezed, and restores the current entry if possible.

### 6.776.2.5 setCurrentProfile()

```
void Digikam::IccProfilesComboBox::setCurrentProfile (
    const IccProfile & profile )
```

Sets the current profile. If profile is not in the list, sets no current item (-1)

### 6.776.2.6 setNoProfileIfEmpty()

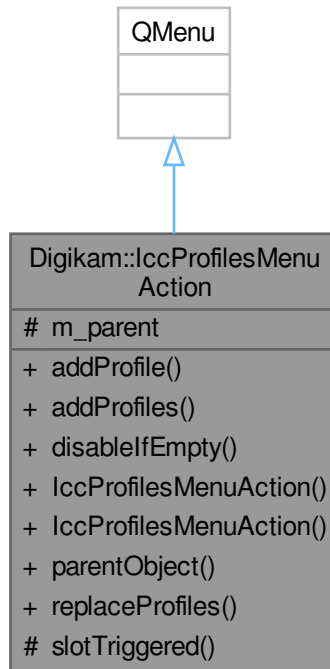

```
void Digikam::IccProfilesComboBox::setNoProfileIfEmpty (
    const QString & message )
```

Sets a message the is displayed in the combo box and disables the combo box, if the combo box is currently empty

## 6.777 Digikam::IccProfilesMenuAction Class Reference

Inheritance diagram for Digikam::IccProfilesMenuAction:

### Signals

- void **triggered** (const [IccProfile](#) &profile)

### Public Member Functions

- void [addProfile](#) (const [IccProfile](#) &profile, const QString &description=QString())
- void [addProfiles](#) (const QList< [IccProfile](#) > &profile)
- void [disableIfEmpty](#) ()
- **IccProfilesMenuAction** (const QIcon &icon, const QString &text, QObject \*const parent)
- **IccProfilesMenuAction** (const QString &text, QObject \*const parent)
- QObject \* [parentObject](#) () const
- void [replaceProfiles](#) (const QList< [IccProfile](#) > &profile)

### Protected Slots

- void **slotTriggered** (QObject \*)

## Protected Attributes

- `QObject * m_parent = nullptr`

## 6.777.1 Member Function Documentation

### 6.777.1.1 addProfile()

```
void Digikam::IccProfilesMenuAction::addProfile (
    const IccProfile & profile,
    const QString & description = QString() )
```

Add the given profile with the given description, or, if null, a standard description. Does not test for duplicity, does not sort into existing profiles.

### 6.777.1.2 addProfiles()

```
void Digikam::IccProfilesMenuAction::addProfiles (
    const QList< IccProfile > & profile )
```

Checks the given profiles for validity, creates a suitable description (ICC profile description, file path), removes duplicates (in newly added list) by file path, sorts them and adds them in sorted order.

### 6.777.1.3 disableIfEmpty()

```
void Digikam::IccProfilesMenuAction::disableIfEmpty ( )
```

Disables if the menu is currently empty.

### 6.777.1.4 parentObject()

```
QObject * Digikam::IccProfilesMenuAction::parentObject ( ) const
```

Return the parent QObject.

### 6.777.1.5 replaceProfiles()

```
void Digikam::IccProfilesMenuAction::replaceProfiles (
    const QList< IccProfile > & profile )
```

Equivalent to calling `clear()` and `addProfiles()`.

## 6.778 Digikam::IccProfilesSettings Class Reference

### 6.779.1 Member Function Documentation

#### 6.779.1.1 [getMetadataTitle\(\)](#)

```
QString Digikam::ICCPProfileWidget::getMetadataTitle ( ) const [override], [virtual]
```

Implements [Digikam::MetadataWidget](#).

#### 6.779.1.2 [getTagDescription\(\)](#)

```
QString Digikam::ICCPProfileWidget::getTagDescription (
    const QString & key ) [override], [virtual]
```

Reimplemented from [Digikam::MetadataWidget](#).

#### 6.779.1.3 [getTagTitle\(\)](#)

```
QString Digikam::ICCPProfileWidget::getTagTitle (
    const QString & key ) [override], [virtual]
```

Reimplemented from [Digikam::MetadataWidget](#).

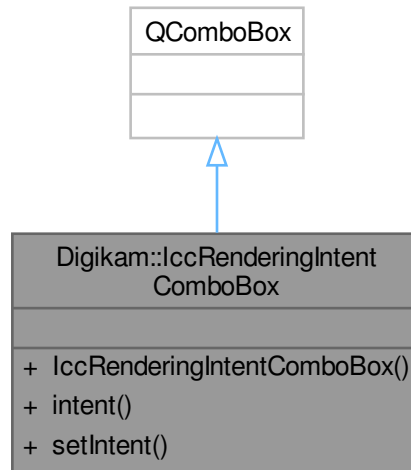

#### 6.779.1.4 [loadFromURL\(\)](#)

```
bool Digikam::ICCPProfileWidget::loadFromURL (
    const QUrl & url ) [override], [virtual]
```

Implements [Digikam::MetadataWidget](#).

## 6.780 Digikam::IccRenderingIntentComboBox Class Reference

### Static Public Member Functions

- static [IccSettings](#) \* [instance](#) ()

### Friends

- class [IccSettingsCreator](#)
- class [Private](#)

## 6.781.1 Member Function Documentation

### 6.781.1.1 [displayProfiles\(\)](#)

```
QList< IccProfile > Digikam::IccSettings::displayProfiles ( )
```

Get available profiles suitable as monitor/display profile

### 6.781.1.2 [inputProfiles\(\)](#)

```
QList< IccProfile > Digikam::IccSettings::inputProfiles ( )
```

Get available profiles suitable as input profile

### 6.781.1.3 [instance\(\)](#)

```
IccSettings * Digikam::IccSettings::instance ( ) [static]
```

Global container for ICC settings. All accessor methods are thread-safe.

### 6.781.1.4 [isEnabled\(\)](#)

```
bool Digikam::IccSettings::isEnabled ( ) const
```

Returns if color management is enabled.

### 6.781.1.5 loadAllProfilesProperties()

```
void Digikam::IccSettings::loadAllProfilesProperties ( )
```

[IccProfile](#) caches some of its properties (description, type) when it was read once. Subsequently, to read these values no opening is needed. This ensures that all profiles have these values read. May imply scanning and opening all profiles.

### 6.781.1.6 monitorProfile()

```
IccProfile Digikam::IccSettings::monitorProfile (
    QWidget *const widget = nullptr )
```

Returns the monitor profile (for color managed view). If there are multiple screens, a system-wide settings specifies the monitor profile, and the widget parameter is passed, the returned profile is for the widget's screen. If no settings is specified, the default sRGB profile is returned.

### 6.781.1.7 monitorProfileFromSystem()

```
bool Digikam::IccSettings::monitorProfileFromSystem ( ) const
```

Returns if the monitor profile (as returned by [monitorProfile\(\)](#)) is set system-wide, so that the `monitorProfile` field of the current settings need not be set and will not be used by [monitorProfile\(\)](#).

### 6.781.1.8 outputProfiles()

```
QList< IccProfile > Digikam::IccSettings::outputProfiles ( )
```

Get available profiles suitable as proof/output profiles

### 6.781.1.9 profilesForDescription()

```
QList< IccProfile > Digikam::IccSettings::profilesForDescription (
    const QString & description )
```

Returns a list of profiles with the given description()

### 6.781.1.10 setSettings()

```
void Digikam::IccSettings::setSettings (
    const ICCSettingsContainer & settings )
```

Sets the current ICC settings and writes them to config.

### 6.781.1.11 settings()

```
ICCSettingsContainer Digikam::IccSettings::settings ( )
```

Returns the current ICC settings.

### 6.781.1.12 `setUseManagedView()`

```
void Digikam::IccSettings::setUseManagedView (
    bool useManagedView )
```

Set single parts of the settings

### 6.781.1.13 `useManagedPreviews()`

```
bool Digikam::IccSettings::useManagedPreviews ( ) const
```

Returns if color management for previews is enabled.

### 6.781.1.14 `workspaceProfiles()`

```
QList< IccProfile > Digikam::IccSettings::workspaceProfiles ( )
```

Get available profiles suitable as workspace profile

## 6.782 Digikam::IccSettings::Private Class Reference

### Static Public Member Functions

- static void **init** ()

## 6.784.1 Member Function Documentation

### 6.784.1.1 apply() [1/2]

```
bool Digikam::IccTransform::apply (
    DImg & image,
    DImgLoaderObserver *const observer = nullptr )
```

Apply this transform with the set profiles and options to the image. Optionally pass an observer to get progress information.

### 6.784.1.2 apply() [2/2]

```
bool Digikam::IccTransform::apply (
    QImage & qimage )
```

Apply this transform to the QImage. This has only basic functionality.

### 6.784.1.3 close()

```
void Digikam::IccTransform::close ( )
```

Closes the transform, not the profiles. Called at destruction.

### 6.784.1.4 effectiveInputProfile()

```
IccProfile Digikam::IccTransform::effectiveInputProfile ( ) const
```

Returns the embedded profile; if none is set, the input profile; if none is set, sRGB.

### 6.784.1.5 embeddedProfile()

```
IccProfile Digikam::IccTransform::embeddedProfile ( ) const
```

Returns the contained profiles

### 6.784.1.6 init()

```
void Digikam::IccTransform::init ( ) [static]
```

Initialize LittleCMS library

### 6.784.1.7 setDoNotEmbedOutputProfile()

```
void Digikam::IccTransform::setDoNotEmbedOutputProfile (
    bool doNotEmbed )
```

Call this with 'true' if you do not want the output profile to be set as embedded profile after [apply\(\)](#) did a transformation. Default is to set the output profile as embedded profile (false).

### 6.784.1.8 setEmbeddedProfile()

```
void Digikam::IccTransform::setEmbeddedProfile (
    const QImage & image )
```

Sets the input profiles of this transform. You can call both [setEmbeddedProfile](#) and [setInputProfile](#). If the image contains an embedded profile this profile is used and takes precedence over the set input profile, which is used without an embedded profile. If none is set, sRGB is used.

**6.784.1.9 setIntent()**

```
void Digikam::IccTransform::setIntent (
    RenderingIntent intent )
```

Set options

**6.784.1.10 setOutputProfile()**

```
void Digikam::IccTransform::setOutputProfile (
    const IccProfile & profile )
```

Sets the output transform

**6.784.1.11 setProofProfile()**

```
void Digikam::IccTransform::setProofProfile (
    const IccProfile & profile )
```

Makes this transform a proofing transform, if profile is not null

**6.784.1.12 willHaveEffect()**

```
bool Digikam::IccTransform::willHaveEffect ( )
```

Returns if this transformation will have an effect, i.e. if effective input profile and output profile are different.

## 6.785 Digikam::lccTransformFilter Class Reference

## 6.785.1 Member Function Documentation

### 6.785.1.1 filterAction()

```
FilterAction Digikam::IccTransformFilter::filterAction ( ) [override], [virtual]
```

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.785.1.2 filterIdentifier()

```
QString Digikam::IccTransformFilter::filterIdentifier ( ) const [inline], [override], [virtual]
```

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.785.1.3 filterImage()

```
void Digikam::IccTransformFilter::filterImage ( ) [override], [protected], [virtual]
```

Main image filter method. Override in subclass.

Implements [Digikam::DImgThreadedFilter](#).

#### 6.785.1.4 parametersSuccessfullyRead()

```
bool Digikam::IccTransformFilter::parametersSuccessfullyRead ( ) const [override], [virtual]
```

Optional: error handling for readParameters. When readParameters() has been called, this method will return true if the call was successful, and false if not. If returning false, readParametersError() will give an error message. The default implementation always returns success. You only need to reimplement when a filter is likely to fail in a different environment, e.g. depending on availability of installed files. These methods have an undefined return value if readParameters() was not called previously.

Reimplemented from [Digikam::DImgThreadedFilter](#).

#### 6.785.1.5 progressInfo()

```
void Digikam::IccTransformFilter::progressInfo (
    float progress ) [override], [protected], [virtual]
```

Posts progress information about image IO

Reimplemented from [Digikam::DImgLoaderObserver](#).

#### 6.785.1.6 readParameters()

```
void Digikam::IccTransformFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

#### 6.785.1.7 readParametersError()

```
QString Digikam::IccTransformFilter::readParametersError (
    const FilterAction & actionThatFailed ) const [override], [virtual]
```

Reimplemented from [Digikam::DImgThreadedFilter](#).

## 6.786 Digikam::Identity Class Reference

### Public Member Functions

- QString [attribute](#) (const QString &att) const
- QMap< QString, QString > [attributesMap](#) () const
- int [id](#) () const
- [Identity](#) ()
- [Identity](#) (const [Identity](#) &other)

- void [setAttribute](#) (const QString &att, const QString &val)
- void [setAttributesMap](#) (const QMap< QString, QString > &attributes)
- void [setId](#) (int [id](#))

## 6.786.1 Constructor & Destructor Documentation

### 6.786.1.1 Identity()

```
Digikam::Identity::Identity ( )
```

Wraps a face recognition [Identity](#). An identity refers to a natural person. There is an internal id which is used the [FacesEngine](#) storage, and a number of attributes which map the identity to the outside. Prespecified attributes↵: "fullName" The full name as on the ID card, e.g. "Peter Brown" "name" The person's name without further specification, e.g. "Peter" or "Dad" "uuid" A UUID that is assigned to each new identity at creation.

For fullName and name, multiple values are allowed.

Attributes can be used to map an identity to other fields and services where natural persons play a role.

## 6.786.2 Member Function Documentation

### 6.786.2.1 attribute()

```
QString Digikam::Identity::attribute (
    const QString & att ) const
```

Attribute value accessor.

### 6.786.2.2 attributesMap()

```
QMultiMap< QString, QString > Digikam::Identity::attributesMap ( ) const
```

Attributes map accessor.

### 6.786.2.3 id()

```
int Digikam::Identity::id ( ) const
```

Id value accessor.

## 6.787 Digikam::IdentityProvider Class Reference

## 6.787.1 Member Function Documentation

### 6.787.1.1 addIdentity()

```
Identity Digikam::IdentityProvider::addIdentity (
    const QMap< QString, QString > & attributes )
```

Adds a new identity with the specified attributes. Please note that a UUID is automatically generated.

### 6.787.1.2 addIdentityDebug()

```
Identity Digikam::IdentityProvider::addIdentityDebug (
    const QMap< QString, QString > & attributes )
```

This is the debug version of addIdentity, so the identity is only added to identityCache, but not into the recognition database.

### 6.787.1.3 addTraining()

```
int Digikam::IdentityProvider::addTraining (
    const Identity & identity,
    const QString & hash,
    const cv::Mat & feature )
```

add the face features and hash to the recognition DB returns the ID of the new row

### 6.787.1.4 allIdentities()

```
QList< Identity > Digikam::IdentityProvider::allIdentities ( ) const
```

Returns all identities known to the database

### 6.787.1.5 clearAllTraining()

```
void Digikam::IdentityProvider::clearAllTraining ( )
```

clears all identities and face training from the recognition DB

### 6.787.1.6 clearTraining()

```
bool Digikam::IdentityProvider::clearTraining (
    const QString & hash )
```

Deletes the training image for the given hash, leaving the identity as such in the database.

### 6.787.1.7 deleteIdentities()

```
void Digikam::IdentityProvider::deleteIdentities (
    QList< Identity > identitiesToBeDeleted )
```

Deletes a list of identities from the database.

### 6.787.1.8 deleteIdentity()

```
void Digikam::IdentityProvider::deleteIdentity (
    const Identity & identityToBeDeleted )
```

Deletes an identity from the database.

### 6.787.1.9 findIdentity() [1/2]

```
Identity Digikam::IdentityProvider::findIdentity (
    const QMap< QString, QString > & attributes ) const
```

Finds the identity matching the given attributes. Attributes are first checked with knowledge of their meaning. Secondly, all unknown attributes are used. Returns a null [Identity](#) if no match is possible or the map is empty.

### 6.787.1.10 findIdentity() [2/2]

```
Identity Digikam::IdentityProvider::findIdentity (
    const QString & attribute,
    const QString & value ) const
```

Finds the first identity with matching attribute - value. Returns a null identity if no match is found or attribute is empty.

### 6.787.1.11 getTrainingData()

```
cv::Ptr< cv::ml::TrainData > Digikam::IdentityProvider::getTrainingData ( ) const [protected]
```

Deletes a list of identities from the database.

### 6.787.1.12 integrityCheck()

```
bool Digikam::IdentityProvider::integrityCheck ( )
```

Checks the integrity and returns true if everything is fine.

### 6.787.1.13 isValidId()

```
bool Digikam::IdentityProvider::isValidId (
    int label ) const
```

checks if the id exists in the recognition DB

### 6.787.1.14 vacuum()

```
void Digikam::IdentityProvider::vacuum ( )
```

Shrinks the database.

## 6.788 Digikam::ImageChangeset Class Reference

### Public Member Functions

- [DatabaseFields::Set changes](#) () const
- bool [containsImage](#) (qulonglong id) const
- [QList< qulonglong > ids](#) () const
- [ImageChangeset](#) ()=default
- [ImageChangeset](#) (const [QList< qulonglong > &ids](#), const [DatabaseFields::Set &changes](#))
- [ImageChangeset](#) (qulonglong id, const [DatabaseFields::Set &changes](#))

### 6.788.1 Constructor & Destructor Documentation

#### 6.788.1.1 ImageChangeset()

```
Digikam::ImageChangeset::ImageChangeset ( ) [default]
```

An [ImageChangeset](#) covers adding or changing any properties of an image. It is described by a list of affected image ids, and a set of affected database fields. There is no guarantee that information in the database has actually been changed.

- static const int **NUM\_CHANNELS** = 5
- static const int **NUMBER\_OF\_POINTS** = 17

## 6.790.1 Member Enumeration Documentation

### 6.790.1.1 CurveType

```
enum Digikam::ImageCurves::CurveType
```

Enumerator

CURVE_SMOOTH	Smooth curve type.
CURVE_FREE	Freehand curve type.

## 6.790.2 Member Function Documentation

### 6.790.2.1 channelToBinary()

```
QByteArray Digikam::ImageCurves::channelToBinary (
```

```
int channel ) const
```

Writes the given channel to a raw binary representation. Note that 16bit free curves take a lot of memory (~85kB) while all other forms take less than 400 bytes.

Binary format:

Version 1 :16 Type 0,1,2 : 8 Bytes depth 1,2 : 8 reserved :32 count :32

Type 0 (linear curve): Type 1 (smooth curve): for (0...count) point.x :32 point.y :32 Type 2 (free curve): for (0...count) if (Bytes depth == 1) value : 8 else if (Bytes depth == 2) value :16

In Big Endian byte order. Data then converted to base64.

### 6.790.2.2 fillFromOtherCurves()

```
void Digikam::ImageCurves::fillFromOtherCurves (
    const ImageCurves *const otherCurves )
```

Fills this curves with the data supplied by another curves object. This ensures that 8 and 16 bit curves are properly converted.

Parameters

<i>otherCurves</i>	other curves object to adapt config from
--------------------	--

### 6.790.2.3 getContainer() [1/2]

```
CurvesContainer Digikam::ImageCurves::getContainer ( ) const
```

Returns a container with the settings for all channels of this Curves object

### 6.790.2.4 getContainer() [2/2]

```
CurvesContainer Digikam::ImageCurves::getContainer (
    int channel ) const
```

Returns a container containing the values of this Curves object for the given channel, and linear values for all other channels.

### 6.790.2.5 isLinear()

```
bool Digikam::ImageCurves::isLinear (
    int channel ) const
```

Returns true if the curve is linear for the given channel, or all channels.

### 6.790.2.6 setChannelFromBinary()

```
bool Digikam::ImageCurves::setChannelFromBinary (
    int channel,
    const QByteArray & array )
```

Set the channel from the given raw binary representation. The data is checked for validity, only on valid data true is returned. Note that the bytes depth (isSixteenBits()) of the encoded representation must match the depth of this curves object.

## 6.790.3 Member Data Documentation

### 6.790.3.1 MULTIPLIER\_16BIT

```
const int Digikam::ImageCurves::MULTIPLIER_16BIT = 255 [static]
```

Curve points have to multiplied with this value for 16 bit images.

### 6.790.3.2 NUM\_CHANNELS

```
const int Digikam::ImageCurves::NUM_CHANNELS = 5 [static]
```

Number of channels in a curve.

### 6.790.3.3 NUMBER\_OF\_POINTS

```
const int Digikam::ImageCurves::NUMBER_OF_POINTS = 17 [static]
```

The max number of points contained in a curve.

## 6.791 Digikam::ImageDialog Class Reference

## 6.797.1 Member Function Documentation

### 6.797.1.1 `calculate()`

```
void Digikam::ImageHistogram::calculate ( )
```

Started computation: synchronous or threaded.

### 6.797.1.2 `calculationAboutToStart`

```
void Digikam::ImageHistogram::calculationAboutToStart ( ) [signal]
```

when calculation in thread is initiated, from other thread

### 6.797.1.3 `calculationStarted`

```
void Digikam::ImageHistogram::calculationStarted ( ) [signal]
```

emitted from calculation thread

### 6.797.1.4 `isSixteenBit()`

```
bool Digikam::ImageHistogram::isSixteenBit ( ) const
```

Methods to access the histogram data.

### 6.797.1.5 `run()`

```
void Digikam::ImageHistogram::run ( ) [override], [protected], [virtual]
```

Implement this pure virtual function in your subclass.

Implements [Digikam::DynamicThread](#).

### 6.797.1.6 stopCalculation()

```
void Digikam::ImageHistogram::stopCalculation ( )
```

Stop threaded computation.

## 6.798 Digikam::ImageHistoryEntry Class Reference

## 6.799.1 Member Enumeration Documentation

### 6.799.1.1 PreviewType

```
enum Digikam::ImageIface::PreviewType
```

Enumerator

FullImage	Preview will be rendered using full image.
ImageSelection	Preview will be rendered using current selection from editor canvas.

## 6.799.2 Constructor & Destructor Documentation

### 6.799.2.1 ImageIface()

```
Digikam::ImageIface::ImageIface (
    const QSize & size = QSize(0, 0) ) [explicit]
```

Standard constructor. Size is the constrain dimension of preview. This can be null size.

## 6.799.3 Member Function Documentation

### 6.799.3.1 colorInfoFromOriginal()

```
DColor Digikam::ImageIface::colorInfoFromOriginal (
    const QPoint & point ) const
```

Get colors from original, (unchanged) preview or target preview (set by setPreviewImage) image.

### 6.799.3.2 convertOriginalColorDepth()

```
void Digikam::ImageIface::convertOriginalColorDepth (
    int depth )
```

Convert depth of original image.

### 6.799.3.3 convertToPixmap()

```
QPixmap Digikam::ImageIface::convertToPixmap (
    const DImg & img ) const
```

Convert a [DImg](#) image to a pixmap for screen using color managed view if necessary.

#### 6.799.3.4 crop()

```
void Digikam::ImageIface::crop (
    const QRect & region )
```

Crop the original image currently hosted by editor to the region.

#### 6.799.3.5 original()

```
DImg * Digikam::ImageIface::original ( ) const
```

Return a pointer to the [DImg](#) object representing the original image. This object may not be modified or stored. Make copies if you need.

#### 6.799.3.6 originalIccProfile()

```
IccProfile Digikam::ImageIface::originalIccProfile ( ) const
```

Original image meta-data management methods.

#### 6.799.3.7 originalSize()

```
QSize Digikam::ImageIface::originalSize ( ) const
```

Methods to get/set original image information.

#### 6.799.3.8 paint()

```
void Digikam::ImageIface::paint (
    QPaintDevice *const device,
    const QRect & rect,
    QPainter *const painter = nullptr )
```

Paint the current target preview image (or the preview image, if `setPreview` has not been called) on the given paint device. at `x|y`, with given maximum width and height taken from rectangle `rect`.

#### 6.799.3.9 preview()

```
DImg Digikam::ImageIface::preview ( ) const
```

Return a [DImg](#) object representing the preview image.

#### 6.799.3.10 previewReference()

```
DImg * Digikam::ImageIface::previewReference ( )
```

Return a pointer to the [DImg](#) object representing the preview image. This function is a backdoor for preview editing.

### 6.799.3.11 previewSize()

```
QSize Digikam::ImageIface::previewSize ( ) const
```

Methods to get/set preview image information.

### 6.799.3.12 selection()

```
DImg Digikam::ImageIface::selection ( ) const
```

Return a [DImg](#) object representing the current original image selection.

### 6.799.3.13 selectionRect()

```
QRect Digikam::ImageIface::selectionRect ( ) const
```

Return current image selection position and size into original image coordinates.

### 6.799.3.14 setOriginal()

```
void Digikam::ImageIface::setOriginal (
    const QString & caller,
    const QAction & action,
    const DImg & img )
```

Replace the data of the original with the given image. The characteristics of the data must match the characteristics of the original image as returned by the original...() methods, The size of image can be changed. Caller is an i18n'ed string that will be shown as the undo/redo action name.

### 6.799.3.15 setOriginalIccProfile()

```
void Digikam::ImageIface::setOriginalIccProfile (
    const IccProfile & profile )
```

Set the color profile of the original image.

### 6.799.3.16 setPreview()

```
void Digikam::ImageIface::setPreview (
    const DImg & img )
```

Replace the stored target preview with the given image. The characteristics of the data must match the characteristics of the current as returned by the preview...() methods. The target preview image is used by the [paint\(\)](#) and [colorInfoFromTargetPreview\(\)](#) methods. The image returned by [getPreview\(\)](#) is unaffected.

**6.799.3.17 setPreviewIccProfile()**

```
void Digikam::ImageIface::setPreviewIccProfile (
    const IccProfile & profile )
```

Set the color profile of the preview image.

**6.799.3.18 setPreviewSize()**

```
DImg Digikam::ImageIface::setPreviewSize (
    const QSize & size ) const
```

Sets preview size and returns new preview as with `getPreview`. The parameters are only hints, `previewSize()` may differ from size.

**6.799.3.19 setPreviewType()**

```
void Digikam::ImageIface::setPreviewType (
    PreviewType type = FullImage )
```

If `useSelection` is true, preview will be rendered using current selection in editor instead the full image. Default preview is `FullImage`.

**6.799.3.20 setSelection()**

```
void Digikam::ImageIface::setSelection (
    const QString & caller,
    const FilterAction & action,
    const DImg & img )
```

Replace the data of the current original image selection with the given data. The characteristics of the data must match the characteristics of the current selection as returned by the `selectionWidth()`, `selectionHeight()`, `originalSixteenBit()` and `originalHasAlpha()` methods. Caller is an i18n'ed string that will be shown as the undo/redo action name.

- void **setLevelHighOutputValue** (int channel, int val)
- void **setLevelLowInputValue** (int channel, int val)
- void **setLevelLowOutputValue** (int channel, int val)

## 6.800.1 Member Function Documentation

### 6.800.1.1 levelsChannelReset()

```
void Digikam::ImageLevels::levelsChannelReset (  
    int channel )
```

Methods to manipulate the levels data.

### 6.800.1.2 saveLevelsToGimpLevelsFile()

```
bool Digikam::ImageLevels::saveLevelsToGimpLevelsFile (  
    const QUrl & fileUrl )
```

Methods to save/load the levels values to/from a Gimp levels text file.

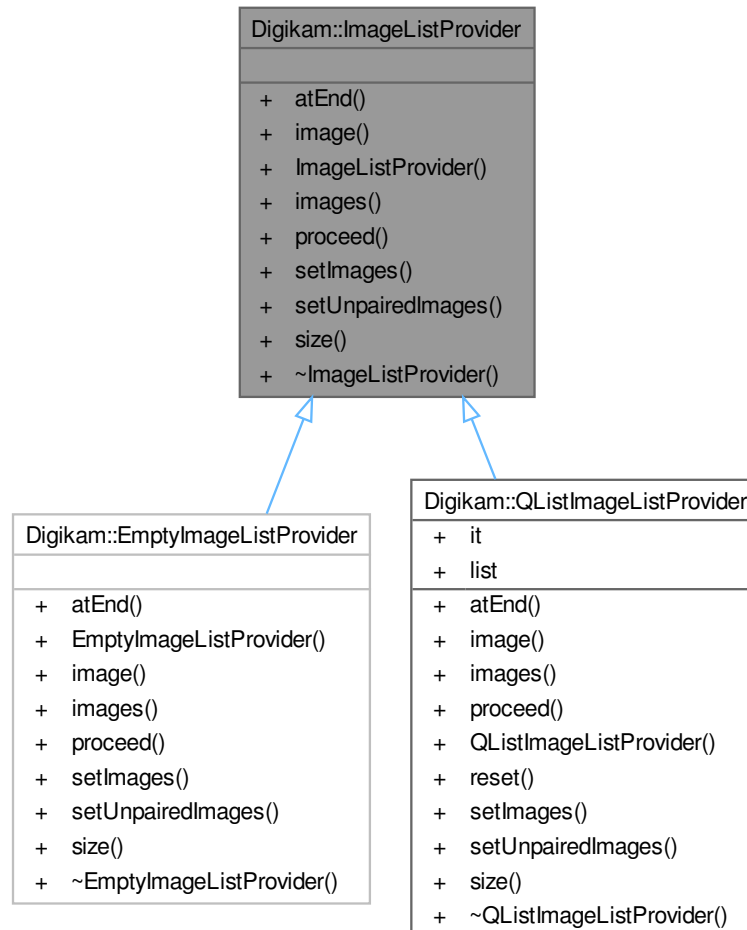

### 6.800.1.3 setLevelGammaValue()

```
void Digikam::ImageLevels::setLevelGammaValue (  
    int channel,  
    double val )
```

Methods to set manually the levels values.

## 6.801 Digikam::ImageListProvider Class Reference

Inheritance diagram for Digikam::ImageListProvider:

### Public Member Functions

- virtual bool **atEnd** () const =0
- virtual QPair< QImage \*, QString > **image** ()=0
- virtual QList< QPair< QImage \*, QString > > **images** ()=0
- virtual void **proceed** (int steps=1)=0
- virtual void **setImages** (const QList< QPair< QImage \*, QString > > &)=0
- virtual void **setUnpairedImages** (const QList< QImage \* > &)=0
- virtual int **size** () const =0

### 6.801.1 Detailed Description

This class provides access to a list of unspecified entities, where for each entry a QImage can be provided. Only forward iteration is required.

## 6.802 Digikam::ImageMetadataContainer Class Reference

### Public Attributes

- bool **allFieldsNull** = true
- QString **aperture**
- QString **exposureMode**
- QString **exposureProgram**
- QString **exposureTime**
- QString **flashMode**
- QString **focalLength**
- QString **focalLength35**
- QString **lens**

## Protected Attributes inherited from [Digikam::GraphicsDImgItem](#)

- `GraphicsDImgItemPrivate *const d_ptr`

## 6.804 Digikam::ImageQualityCalculator Class Reference

### Classes

- struct [ResultDetection](#)

**Public Member Functions**

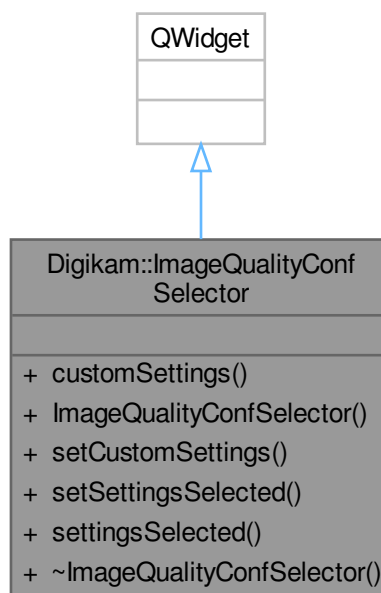

- void **addDetectionResult** (const QString &name, const float score, const float weight) const
- float **calculateQuality** () const

**6.805 Digikam::ImageQualityCalculator::ResultDetection Struct Reference****Public Attributes**

- QString **detetionType**
- float **score**
- float **weight**

**6.806 Digikam::ImageQualityConfSelector Class Reference**

Inheritance diagram for Digikam::ImageQualityConfSelector:

**Public Types**

- enum `SettingsType` { `GlobalSettings` = 0 , `CustomSettings` }

## Signals

- void **signalQualitySetup** ()
- void **signalSettingsChanged** ()

## Public Member Functions

- [ImageQualityContainer](#) **customSettings** () const
- **ImageQualityConfSelector** (QWidget \*const parent=nullptr)
- void **setCustomSettings** (const [ImageQualityContainer](#) &settings)
- void **setSettingsSelected** ([SettingsType](#) type)
- [SettingsType](#) **settingsSelected** () const

## 6.806.1 Member Enumeration Documentation

### 6.806.1.1 SettingsType

```
enum Digikam::ImageQualityConfSelector::SettingsType
```

#### Enumerator

GlobalSettings	Global settings available in setup dialog.
CustomSettings	Settings customized by end-user.

## 6.807 Digikam::ImageQualityContainer Class Reference

### Public Member Functions

- **ImageQualityContainer** (const [ImageQualityContainer](#) &other)
- [ImageQualityContainer](#) & **operator=** (const [ImageQualityContainer](#) &other)
- void **readFromConfig** ()
- void **readFromConfig** (const KConfigGroup &)
- void **writeToConfig** ()
- void **writeToConfig** (KConfigGroup &)

### Public Attributes

- int **acceptedThreshold**  
*Item accepted threshold.*
- int **blurWeight**  
*Item blur level.*
- int **compressionWeight**  
*Item compression level.*
- bool **detectAesthetic**  
*Enable image aesthetic detection.*
- bool **detectBlur**

- Enable image blur detection.*
- bool **detectCompression**

*Enable image compression detection.*
- bool **detectExposure**

*Enable image over and under exposure detection.*
- bool **detectNoise**

*Enable image noise detection.*
- int **exposureWeight**

*Item exposure level.*
- bool **highQAccepted**

*Assign Accepted property to high quality.*
- bool **lowQRejected**

*Assign Rejected property to low quality.*
- bool **mediumQPending**

*Assign Pending property to medium quality.*
- int **noiseWeight**

*Item noise level.*
- int **pendingThreshold**

*Item pending threshold.*
- int **rejectedThreshold**

*Item rejection threshold.*

## 6.808 Digikam::ImageQualityParser Class Reference

Inheritance diagram for Digikam::ImageQualityParser:

## Classes

- class [Private](#)

## Public Member Functions

- void **cancelAnalyse** ()
- [ImageQualityParser](#) (const [DImg](#) &image, const [ImageQualityContainer](#) &settings, PickLabel \*const label)
- void **startAnalyse** ()

## Static Public Member Functions

- static void **unloadDLModel** ()

## 6.808.1 Constructor & Destructor Documentation

### 6.808.1.1 ImageQualityParser()

```
Digikam::ImageQualityParser::ImageQualityParser (
    const DImg & image,
    const ImageQualityContainer & settings,
    PickLabel *const label ) [explicit]
```

Standard constructor with picklabel container to fill at end of analyze.

## 6.808.2 Member Function Documentation

### 6.808.2.1 startAnalyse()

```
void Digikam::ImageQualityParser::startAnalyse ( )
```

Perform quality estimation and fill Pick Label value accordingly.

## 6.809 Digikam::ImageQualityParser::Private Class Reference

### Public Attributes

- [ImageQualityCalculator](#) \* **calculator** = nullptr
- [DImg](#) **image**  
*original image*
- [ImageQualityContainer](#) **imq**
- PickLabel \* **label** = nullptr
- volatile bool **running** = true

## 6.810 Digikam::ImageQualitySettings Class Reference

Inheritance diagram for Digikam::ImageQualitySettings:

### Signals

- void **signalSettingsChanged** ()

### Public Member Functions

- void **applySettings** ()
- void **applySettings** (KConfigGroup &)
- [ImageQualityContainer](#) **defaultSettings** () const
- [ImageQualityContainer](#) **getImageQualityContainer** () const
- **ImageQualitySettings** (QWidget \*const parent=nullptr)
- void **readSettings** ()
- void **readSettings** (const KConfigGroup &)
- void **resetToDefault** ()
- void **setImageQualityContainer** (const [ImageQualityContainer](#) &imq)

## 6.811 Digikam::ImageQualitySorter Class Reference

Inheritance diagram for Digikam::ImageQualitySorter:

### Public Types

- enum `QualityScanMode` { `AllItems = 0`, `NonAssignedItems` }

### Public Member Functions

- [ImageQualitySorter](#) ([QualityScanMode](#) mode, const AlbumList &list=AlbumList(), const [ImageQualityContainer](#) &quality=[ImageQualityContainer](#)(), [ProgressItem](#) \*const parent=nullptr)
- void [setUseMultiCoreCPU](#) (bool b) override

### Public Member Functions inherited from [Digikam::MaintenanceTool](#)

- [MaintenanceTool](#) (const QString &id, [ProgressItem](#) \*const parent=nullptr)
- void [setNotificationEnabled](#) (bool b)

### Public Member Functions inherited from [Digikam::ProgressItem](#)

- void [addChild](#) ([ProgressItem](#) \*const kiddo)
- bool [advance](#) (unsigned int v)
  - Advance total items processed by n values and update percentage in progressbar.*
- bool [canBeCanceled](#) () const
- void [cancel](#) ()
- bool [canceled](#) () const
- unsigned int [completedItems](#) () const
- bool [hasThumbnail](#) () const
- const QString & [id](#) () const
- bool [incCompletedItems](#) (unsigned int v=1)
- void [incTotalItems](#) (unsigned int v=1)
- const QString & [label](#) () const
- [ProgressItem](#) \* [parent](#) () const
- unsigned int [progress](#) () const
- [ProgressItem](#) ([ProgressItem](#) \*const parent, const QString &id, const QString &label, const QString &status, bool [canBeCanceled](#), bool hasThumb)
- void [removeChild](#) ([ProgressItem](#) \*const kiddo)
- void [reset](#) ()
  - Reset the progress value of this item to 0 and the status string to the empty string.*
- void [setComplete](#) ()
  - Tell the item it has finished. This will emit [progressItemCompleted\(\)](#) result in the destruction of the item after all slots connected to this signal have executed. This is the only way to get rid of an item and needs to be called even if the item is canceled. Don't use the item after this has been called on it.*
- bool [setCompletedItems](#) (unsigned int v)
- void [setLabel](#) (const QString &v)
- void [setProgress](#) (unsigned int v)
  - Set the progress (percentage of completion) value of this item.*
- void [setShowAtStart](#) (bool showAtStart)
  - Set the property to pop-up item when it's added in progress manager. Use this method if you consider that item is important to be notified to end-user.*
- void [setStatus](#) (const QString &v)
  - Set the string to be used for showing this item's current status.*
- void [setThumbnail](#) (const QIcon &icon)
  - Sets whether this item has a thumbnail.*
- void [setTotalItems](#) (unsigned int v)
- void [setUsesBusyIndicator](#) (bool useBusyIndicator)
  - Sets whether this item uses a busy indicator instead of real progress for its progress bar. If it uses a busy indicator, you are still responsible for calling [setProgress\(\)](#) from time to time to update the busy indicator.*
- bool [showAtStart](#) () const
- const QString & [status](#) () const
- bool [totalCompleted](#) () const
- unsigned int [totalItems](#) () const
- void [updateProgress](#) ()
  - Recalculate progress according to total/completed items and update.*
- bool [usesBusyIndicator](#) () const

## Additional Inherited Members

### Public Slots inherited from [Digikam::MaintenanceTool](#)

- void **start** ()

### Signals inherited from [Digikam::MaintenanceTool](#)

- void [signalCanceled](#) ()
- void [signalComplete](#) ()

### Signals inherited from [Digikam::ProgressItem](#)

- void [progressItemAdded](#) ([ProgressItem](#) \*item)  
*Emitted when a new [ProgressItem](#) is added.*
- void [progressItemCanceled](#) ([ProgressItem](#) \*item)  
*Emitted when an item was canceled. It will not go away immediately, only when the owner sets it complete, which will usually happen. Can be used to visually indicate the canceled status of an item. Should be used by the owner of the item to make sure it is set completed even if it is canceled. There is a [ProgressManager::slotStandardCancelHandler](#) which simply sets the item completed and can be used if no other work needs to be done on cancel.*
- void **progressItemCanceledById** (const QString &id)
- void [progressItemCompleted](#) ([ProgressItem](#) \*item)  
*Emitted when a progress item was completed. The item will be deleted afterwards, so slots connected to this are the last chance to work with this item.*
- void [progressItemLabel](#) ([ProgressItem](#) \*item, const QString &label)  
*Emitted when the label of an item changed. Should be used by progress dialogs to update the label of an item.*
- void [progressItemProgress](#) ([ProgressItem](#) \*item, unsigned int v)  
*Emitted when the progress value of an item changes.*
- void [progressItemStatus](#) ([ProgressItem](#) \*item, const QString &mess)  
*Emitted when the status message of an item changed. Should be used by progress dialogs to update the status message for an item.*
- void [progressItemThumbnail](#) ([ProgressItem](#) \*item, const QPixmap &thumb)  
*Emitted when the thumbnail data must be set in item.*
- void [progressItemUsesBusyIndicator](#) ([ProgressItem](#) \*item, bool value)  
*Emitted when the busy indicator state of an item changes. Should be used by progress dialogs so that they can adjust the display of the progress bar to the new mode.*

### Protected Slots inherited from [Digikam::MaintenanceTool](#)

- virtual void **slotCancel** ()
- virtual void **slotDone** ()
- virtual void **slotStart** ()

## 6.811.1 Member Enumeration Documentation

### 6.811.1.1 QualityScanMode

```
enum Digikam::ImageQualitySorter::QualityScanMode
```

## Enumerator

AllItems	Clean all Pick Labels assignments and re-scan all items.
NonAssignedItems	Scan only items with no Pick Labels assigned.

## 6.811.2 Constructor & Destructor Documentation

### 6.811.2.1 ImageQualitySorter()

```
Digikam::ImageQualitySorter::ImageQualitySorter (
    QualityScanMode mode,
    const AlbumList & list = AlbumList(),
    const ImageQualityContainer & quality = ImageQualityContainer(),
    ProgressItem *const parent = nullptr ) [explicit]
```

Constructor using AlbumList as argument. If list is empty, whole Albums collection is processed.

## 6.811.3 Member Function Documentation

### 6.811.3.1 setUseMultiCoreCPU()

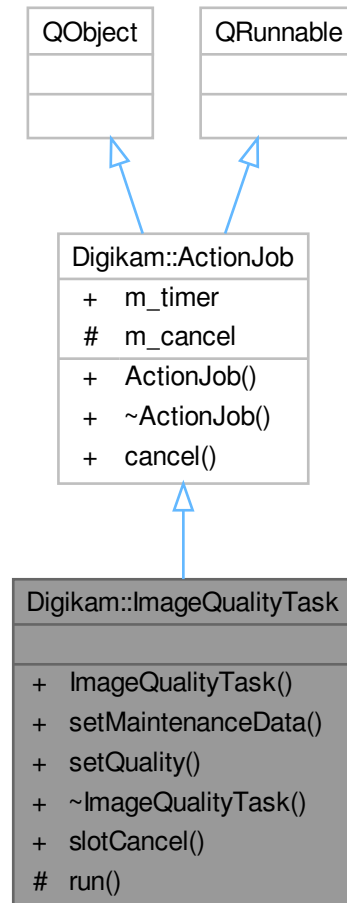

```
void Digikam::ImageQualitySorter::setUseMultiCoreCPU (
    bool ) [override], [virtual]
```

Re-implement this method if your tool is able to use multi-core CPU to process item in parallel

Reimplemented from [Digikam::MaintenanceTool](#).

## 6.816.1 Member Function Documentation

### 6.816.1.1 `getOriginalImageRegionToRender()`

```
QRect Digikam::ImageRegionWidget::getOriginalImageRegionToRender ( ) const
```

To get target image region area to render.

### 6.816.1.2 `getOriginalRegionImage()`

```
DImg Digikam::ImageRegionWidget::getOriginalRegionImage (
    bool useDownscaledImage = false ) const
```

To get target image region image to use for render operations If the bool parameter is true a downscaled version of the image region at screen resolution will be sent. Should be use to increase preview speed for the effects whose behaviour is a function of each pixel.

### Additional Inherited Members

### Public Types inherited from [Digikam::DCategorizedSortFilterProxyModel](#)

- enum `AdditionalRoles` { `CategoryDisplayRole` = 0x17CE990A , `CategorySortRole` = 0x27857E60 }

## 6.818.1 Member Function Documentation

### 6.818.1.1 imageFilterModel()

```
ItemFilterModel * Digikam::ImageSortFilterModel::imageFilterModel ( ) const [virtual]
```

Returns this, any chained [ItemFilterModel](#), or 0.

Reimplemented in [Digikam::ItemFilterModel](#).

### 6.818.1.2 imageInfosSorted()

```
QList< ItemInfo > Digikam::ImageSortFilterModel::imageInfosSorted ( ) const
```

Returns a list of all image infos, sorted according to this model. If you do not need a sorted list, use [ItemModel](#)'s [imageInfos\(\)](#) method.

### 6.818.1.3 mapListToSource()

```
QList< QModelIndex > Digikam::ImageSortFilterModel::mapListToSource (
    const QList< QModelIndex > & indexes ) const
```

Convenience methods mapped to [ItemModel](#). Mentioned indexes returned come from the source image model.

### 6.818.1.4 setDirectSourceItemModel()

```
void Digikam::ImageSortFilterModel::setDirectSourceItemModel (
    ItemModel *const model ) [protected], [virtual]
```

Reimplement if needed. Called only when model shall be set as (direct) sourceModel.

Reimplemented in [Digikam::ItemFilterModel](#).

## 6.819 Digikam::ImageTagChangeset Class Reference

### Public Types

- enum [Operation](#) {  
    **Unknown** , **Added** , **Moved** , **Removed** ,  
    **RemovedAll** , **PropertiesChanged** }

## Public Member Functions

## 6.819.1 Member Enumeration Documentation

### 6.819.1.1 Operation

```
enum Digikam::ImageTagChangeset::Operation
```

An [ImageTagChangeset](#) covers adding and removing the association of a tag with an image. It is described by a list of affected image ids, a list of affected tags, and an operation. There is no guarantee that information in the database has actually been changed.

## 6.819.2 Member Function Documentation

### 6.819.2.1 operator<<()

```
ImageTagChangeset & Digikam::ImageTagChangeset::operator<< (
    const ImageTagChangeset & other )
```

Combines two [ImageTagChangesets](#). The operations shall not differ between the two sets; the operation is set to Unknown if it differs. This is especially not suitable for RemovedAll changesets.

### 6.822.1 Member Function Documentation

#### 6.822.1.1 infoface()

```
DInfoInterface * Digikam::ImageWindow::infoIface (
    DPluginAction *const ac ) [override], [virtual]
```

Return the interface instance to access to items information.

Implements [Digikam::DXmlGuiWindow](#).

### 6.822.1.2 versionManager()

`VersionManager * Digikam::ImageWindow::versionManager ( ) const [override], [virtual]`

Reimplemented from [Digikam::EditorWindow](#).

## 6.823 Digikam::ImageWindow::Private Class Reference

## Protected Attributes

- QWidget \* [m\\_displayWidget](#) = nullptr
- QSizeF [m\\_size](#)
- double [m\\_zoom](#) = 1.0
- double [m\\_zoomConst](#) = 1.0

## 6.824.1 Member Function Documentation

### 6.824.1.1 fitToSize()

```
void Digikam::ImageZoomSettings::fitToSize (
    const QSizeF & frameSize,
    FitToSizeMode mode = AlwaysFit )
```

Sets the current zoom factor to the factor needed to fit the current (original) image size into the given view size. Aspect ratio will be respected, that means the frameSize may not be completely filled in one dimension, and [zoomedSize\(\)](#) can differ from frameSize in one dimension.

### 6.824.1.2 fitToSizeZoomFactor()

```
double Digikam::ImageZoomSettings::fitToSizeZoomFactor (
    const QSizeF & frameSize,
    FitToSizeMode mode = AlwaysFit ) const
```

Returns the zoom factor that would be used by [fitToSize\(\)](#) called with the given frameSize.

### 6.824.1.3 imageSize()

```
QSizeF Digikam::ImageZoomSettings::imageSize ( ) const
```

Returns the (available) image size

### 6.824.1.4 mapImageToZoom() [1/2]

```
QPointF Digikam::ImageZoomSettings::mapImageToZoom (
    const QPointF & imagePoint ) const
```

For a given point (in (0,0), [imageSize\(\)](#)) returns the corresponding point in (0,0),[zoomedSize\(\)](#).

### 6.824.1.5 mapImageToZoom() [2/2]

```
QRectF Digikam::ImageZoomSettings::mapImageToZoom (
    const QRectF & imagePoint ) const
```

For a given rect contained in ((0,0), [imageSize\(\)](#)) returns the corresponding rectangle in (0,0),[zoomedSize\(\)](#).

### 6.824.1.6 mapZoomToImage()

```
QPointF Digikam::ImageZoomSettings::mapZoomToImage (
    const QPointF & zoomedPoint ) const
```

For a given point (in (0,0), [zoomedSize\(\)](#)) returns the corresponding point in (0,0),[imageSize\(\)](#).

### 6.824.1.7 originalImageSize()

```
QSizeF Digikam::ImageZoomSettings::originalImageSize ( ) const
```

Return the original image size. Can be identical to size().

### 6.824.1.8 realZoomFactor()

```
double Digikam::ImageZoomSettings::realZoomFactor ( ) const
```

Return the real zoom factor dependent on device pixel ratio

### 6.824.1.9 setDisplayWidget()

```
void Digikam::ImageZoomSettings::setDisplayWidget (
    QWidget *const widget )
```

Set the graphics view widget to track the device pixel ratio.

#### 6.824.1.10 setImageSize()

```
void Digikam::ImageZoomSettings::setImageSize (
    const QSize & size,
    const QSize & originalSize = QSize() )
```

Sets the size of the (available) image data. Optionally, you can specify an original size, if the available image data is a scaled-down version. In this case, zoom factors will refer to the original size. The zoom factor is unchanged, you need to call `fitToSize` again.

#### 6.824.1.11 setImageSmoothScale()

```
void Digikam::ImageZoomSettings::setImageSmoothScale (
    bool enable ) [static]
```

Static functions to define the smooth scaling of the image.

#### 6.824.1.12 setZoomFactor()

```
void Digikam::ImageZoomSettings::setZoomFactor (
    double zoom )
```

Sets the current zoom factor, relative to (original) size.

#### 6.824.1.13 snappedZoomFactor()

```
double Digikam::ImageZoomSettings::snappedZoomFactor (
    double newZoom,
    const QSizeF & frameSize ) const
```

When setting a new zoom factor (absolute value), the new value may be very close to a special value. Returns this special value if this is the case, returns `newZoom` if not applicable.

#### 6.824.1.14 snappedZoomStep()

```
double Digikam::ImageZoomSettings::snappedZoomStep (
    double nextZoom,
    const QSizeF & frameSize ) const
```

When changing the zoom from current zoom to given `nextZoom`, sometimes a special value may be crossed, and this could then be used instead of `nextZoom`. Returns this special zoom, or `nextZoom` if not applicable.

#### 6.824.1.15 sourceRect()

```
QRectF Digikam::ImageZoomSettings::sourceRect (
    const QRectF & imageRect ) const
```

For a given rectangle contained in `((0,0), zoomedSize())` returns the corresponding rectangle in `(0,0), imageSize()`.

**6.824.1.16 zoomedSize()**

```
QSizeF Digikam::ImageZoomSettings::zoomedSize ( ) const
```

Return the size of the image when the current zoom factor is applied. This is the size the image should be displayed at.

**6.824.1.17 zoomFactor()**

```
double Digikam::ImageZoomSettings::zoomFactor ( ) const
```

Return the currently set zoom factor

## 6.825 Digikam::ImportCategorizedView Class Reference

Inheritance diagram for Digikam::ImportCategorizedView:

## 6.825.1 Member Function Documentation

### 6.825.1.1 activated()

```
void Digikam::ImportCategorizedView::activated (
    const CamItemInfo & info,
    Qt::KeyboardModifiers modifiers ) [protected], [virtual]
```

Reimplemented in [Digikam::ImportIconView](#).

### 6.825.1.2 addOverlay()

```
void Digikam::ImportCategorizedView::addOverlay (
    ItemDelegateOverlay * overlay,
    ImportDelegate * delegate = nullptr )
```

Add and remove an overlay. It will as well be removed automatically when destroyed. Unless you pass a different delegate, the current delegate will be used.

### 6.825.1.3 camItemInfoActivated

```
void Digikam::ImportCategorizedView::camItemInfoActivated (
    const CamItemInfo & info ) [signal]
```

Emitted when the given [CamItemInfo](#) is activated. Info is never null.

### 6.825.1.4 deselected

```
void Digikam::ImportCategorizedView::deselected (
    const QList< CamItemInfo > & nowDeselectedInfos ) [signal]
```

Emitted when items are deselected. There may be other selected infos left. This signal is not emitted when the model is reset; then only selectionCleared is emitted.

### 6.825.1.5 dragDropHandler()

```
AbstractItemDragDropHandler * Digikam::ImportCategorizedView::dragDropHandler ( ) const [override],
[protected], [virtual]
```

You need to implement these three methods Returns the drag drop handler.

Implements [Digikam::DragDropViewImplementation](#).

### 6.825.1.6 filterModel()

```
QSortFilterProxyModel * Digikam::ImportCategorizedView::filterModel ( ) const [override],
[protected], [virtual]
```

Implements [Digikam::ItemViewCategorized](#).

### 6.825.1.7 hintAt

```
void Digikam::ImportCategorizedView::hintAt (
    const CamItemInfo & info ) [slot]
```

Does something to gain attention for info, but not changing current selection

### 6.825.1.8 importFilterModel()

```
ImportFilterModel * Digikam::ImportCategorizedView::importFilterModel ( ) const
```

Returns any [ImportFilterModel](#) in chain. May not be sourceModel()

### 6.825.1.9 importThumbnailModel()

```
ImportThumbnailModel * Digikam::ImportCategorizedView::importThumbnailModel ( ) const
```

Returns 0 if the [ImportItemModel](#) is not an [ImportThumbnailModel](#)

### 6.825.1.10 indexActivated()

```
void Digikam::ImportCategorizedView::indexActivated (
    const QModelIndex & index,
    Qt::KeyboardModifiers modifiers ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

### 6.825.1.11 modelChanged

```
void Digikam::ImportCategorizedView::modelChanged ( ) [signal]
```

Emitted when a new model is set

### 6.825.1.12 nextIndexHint()

```
QModelIndex Digikam::ImportCategorizedView::nextIndexHint (
    const QModelIndex & indexToAnchor,
    const QItemSelectionRange & removed ) const [override], [protected], [virtual]
```

Assuming the given indexes would be removed (hypothetically!), return the index to be selected instead, starting from anchor. The default implementation returns the next remaining sibling.

Reimplemented from [Digikam::ItemViewCategorized](#).

#### 6.825.1.13 nextInOrder()

```
CamItemInfo Digikam::ImportCategorizedView::nextInOrder (
    const CamItemInfo & startingPoint,
    int nth )
```

Returns the n-th info after the given one. Specifically, return the previous info for  $nth = -1$  and the next info for  $n = 1$ . Returns a null info if either startingPoint or the nth info are not contained in the model

#### 6.825.1.14 selected

```
void Digikam::ImportCategorizedView::selected (
    const QList< CamItemInfo > & newSelectedInfos ) [signal]
```

Emitted when new items are selected. The parameter includes only the newly selected infos, there may be other already selected infos.

#### 6.825.1.15 setCurrentInfo

```
void Digikam::ImportCategorizedView::setCurrentInfo (
    const CamItemInfo & info ) [slot]
```

Set as current item the item identified by the [CamItemInfo](#)

#### 6.825.1.16 setCurrentUrl

```
void Digikam::ImportCategorizedView::setCurrentUrl (
    const QUrl & url ) [slot]
```

Set as current item the item identified by its file url

#### 6.825.1.17 setCurrentWhenAvailable

```
void Digikam::ImportCategorizedView::setCurrentWhenAvailable (
    qulonglong camItemId ) [slot]
```

Scroll the view to the given item when it becomes available

#### 6.825.1.18 setSelectedCamItemInfos

```
void Digikam::ImportCategorizedView::setSelectedCamItemInfos (
    const QList< CamItemInfo > & infos ) [slot]
```

Set selected items

### 6.825.1.19 setSelectedUrls

```
void Digikam::ImportCategorizedView::setSelectedUrls (
    const QList< QUrl > & urlList ) [slot]
```

Set selected items identified by their file urls

### 6.825.1.20 showContextMenuOnIndex()

```
void Digikam::ImportCategorizedView::showContextMenuOnIndex (
    QContextMenuEvent * event,
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

### 6.825.1.21 toIndex()

```
void Digikam::ImportCategorizedView::toIndex (
    const QUrl & url )
```

Selects the index as current and scrolls to it

## 6.826 Digikam::ImportCategoryDrawer Class Reference

Inheritance diagram for Digikam::ImportCategoryDrawer:

### Public Member Functions

- int `categoryHeight` (const `QModelIndex` &index, const `QStyleOption` &option) const override

## 6.826.1 Member Function Documentation

### 6.826.1.1 categoryHeight()

```
int Digikam::ImportCategoryDrawer::categoryHeight (
    const QModelIndex & index,
    const QStyleOption & option ) const [override], [virtual]
```

#### Returns

The category height for the category represented by index `index` with style options `option`.

Reimplemented from [Digikam::DCategoryDrawer](#).

### 6.826.1.2 drawCategory()

```
void Digikam::ImportCategoryDrawer::drawCategory (
    const QModelIndex & index,
    int sortRole,
    const QStyleOption & option,
    QPainter * painter ) const [override], [virtual]
```

This method purpose is to draw a category represented by the given

## Parameters

<i>index</i>	with the given
<i>sortRole</i>	sorting role
<i>option</i>	painter style options
<i>painter</i>	painter instance

## Note

This method will be called one time per category, always with the first element in that category

Reimplemented from [Digikam::DCategoryDrawer](#).

## 6.827 Digikam::ImportContextMenuHelper Class Reference

Inheritance diagram for Digikam::ImportContextMenuHelper:

## Public Types

- typedef const QList< qlonglong > **itemIds**

## Signals

- void **signalAddNewTagFromABCMenu** (const QString &)
- void **signalAssignColorLabel** (int)
- void **signalAssignPickLabel** (int)
- void **signalAssignRating** (int)

## Public Member Functions

- void [addRotateMenu](#) (itemIds &ids)
- void [addSeparator](#) ()
- void [addServicesMenu](#) (const QList< QUrl > &selectedItems)
- void [addSubMenu](#) (QMenu \*subMenu)
- QAction \* [exec](#) (const QPoint &pos, QAction \*at=nullptr)
- [ImportContextMenuHelper](#) (QMenu \*const parent, KActionCollection \*const actionCollection=nullptr)
- void [setImportFilterModel](#) ([ImportFilterModel](#) \*model)

## 6.827.1 Constructor & Destructor Documentation

### 6.827.1.1 ImportContextMenuHelper()

```
Digikam::ImportContextMenuHelper::ImportContextMenuHelper (
    QMenu *const parent,
    KActionCollection *const actionCollection = nullptr ) [explicit]
```

Constructs the helper class.

#### Parameters

<i>parent</i>	the menu the helper class is linked to
<i>actionCollection</i>	the actionCollection that should be used. If not set, the standard action from <a href="#">DigikamApp</a> is used

## 6.827.2 Member Function Documentation

### 6.827.2.1 addAction() [1/3]

```
void Digikam::ImportContextMenuHelper::addAction (
    const QString & name,
    bool addDisabled = false )
```

Add an action from the actionCollection.

This method adds actions from the actionCollection. The actionCollection can be set in the constructor of the [ImportContextMenuHelper](#) class.

#### Parameters

<i>name</i>	the name of the action in the actionCollection
<i>addDisabled</i>	if set, disabled actions are added to the menu

### 6.827.2.2 addAction() [2/3]

```
void Digikam::ImportContextMenuHelper::addAction (
    QAction * action,
    bool addDisabled = false )
```

Add a temporary action.

Sometimes it is necessary to define actions that only exist in the current context menu content. Use this method to add such an action.

#### Parameters

<i>action</i>	the action to add
<i>addDisabled</i>	if set, disabled actions are added to the menu

### 6.827.2.3 addAction() [3/3]

```
void Digikam::ImportContextMenuHelper::addAction (
    QAction * action,
    QObject * recv,
    const char * slot,
    bool addDisabled = false )
```

Add a temporary action and assign it to a custom slot.

Use this method if you want to add a temporary action and immediately connect it to the receiving slot.

#### Parameters

<i>action</i>	the action to add
<i>recv</i>	the receiver of the triggered action
<i>slot</i>	the slot to connect the triggered action to
<i>addDisabled</i>	if set, disabled actions are added to the menu

### 6.827.2.4 addAssignTagsMenu()

```
void Digikam::ImportContextMenuHelper::addAssignTagsMenu (
    itemIds & ids )
```

Add actions to add, remove or edit a tag. The tag modification helper is used to execute the action. You must set the parent tag to use on modification helper. Add "Assign Tags" menu.

This menu will provide a list of all tags available so that they can be assigned to the current selected items.

To make this menu work, you need to run `exec()` from this class, otherwise the signals are not emitted and you will not be able to react on triggered actions from this menu. Make sure to connect the signals to the appropriate slots in the context menu handling method.

#### Parameters

<code>ids</code>	the selected items
------------------	--------------------

#### See also

[exec\(\)](#)  
[signalAssignTag\(\)](#)

#### 6.827.2.5 addGroupMenu()

```
void Digikam::ImportContextMenuHelper::addGroupMenu (
    itemIds & ids )
```

Add a "Group" menu. This menu will provide actions open, close, add to, remove from, or split a group.

`addGroupActions` will add the actions as a flat list, not in a submenu. Note: Call `setItemFilterModel` before to have Open/Close group actions.

#### 6.827.2.6 addLabelsAction()

```
void Digikam::ImportContextMenuHelper::addLabelsAction ( )
```

Add "Pick/Color/Rating Labels" action.

This action will provide methods to assign pick/color/rating labels to the currently selected items.

To make this menu work, you need to run `exec()` from this class, otherwise the signals are not emitted and you will not be able to react on triggered actions from this menu. Make sure to connect the signals to the appropriate slots in the context menu handling method.

#### See also

[exec\(\)](#)  
[signalAssignPickLabel\(\)](#)  
[signalAssignColorLabel\(\)](#)  
[signalAssignRating\(\)](#)

#### 6.827.2.7 addRemoveTagsMenu()

```
void Digikam::ImportContextMenuHelper::addRemoveTagsMenu (
    itemIds & ids )
```

Add "Remove Tags" menu.

This menu will provide a list of all tags assigned to the current items. Actions triggered in here will remove the selected tag from the items.

To make this menu work, you need to run `exec()` from this class, otherwise the signals are not emitted and you will not be able to react on triggered actions from this menu. Make sure to connect the signals to the appropriate slots in the context menu handling method.

**Parameters**

<i>ids</i>	the selected items
------------	--------------------

**See also**

[exec\(\)](#)  
[signalRemoveTag\(\)](#)

**6.827.2.8 addRotateMenu()**

```
void Digikam::ImportContextMenuHelper::addRotateMenu (
    itemIds & ids )
```

Add a menu to rotate item.

**Parameters**

<i>ids</i>	the selected items
------------	--------------------

**6.827.2.9 addSeparator()**

```
void Digikam::ImportContextMenuHelper::addSeparator ( )
```

Add a separator to the context menu

**6.827.2.10 addServicesMenu()**

```
void Digikam::ImportContextMenuHelper::addServicesMenu (
    const QList< QUrl > & selectedItems )
```

Add the services menu to the menu.

The services menu is used to open the selected items in a different application. It will query the item for registered services and provide them in a submenu. The menu will be titled "Open With...".

**Parameters**

<i>selectedItems</i>	the list of selected items
----------------------	----------------------------

**6.827.2.11 addSubMenu()**

```
void Digikam::ImportContextMenuHelper::addSubMenu (
    QMenu * subMenu )
```

Add a submenu to the parent context menu.

**Parameters**

<i>subMenu</i>	the submenu to be added
----------------	-------------------------

**6.827.2.12 exec()**

```
QAction * Digikam::ImportContextMenuHelper::exec (
    const QPoint & pos,
    QAction * at = nullptr )
```

Execute the registered parent menu and evaluate the triggered actions.

Always use this method instead the one from the parent menu. It will ensure that the signals are emitted and special cases are handled.

**Parameters**

<i>pos</i>	position of the triggered action in the registered menu
<i>at</i>	the action that should be at the position pos

**Returns**

the triggered action

**6.827.2.13 setImportFilterModel()**

```
void Digikam::ImportContextMenuHelper::setImportFilterModel (
    ImportFilterModel * model )
```

Set a filter model. Some of the group actions will operate directly on the model.

### 6.828.1 Member Function Documentation

#### 6.828.1.1 checkIndex()

```
bool Digikam::ImportCoordinatesOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Return true here if you want to show the overlay for the given index. The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

#### 6.828.1.2 createWidget()

```
QWidget * Digikam::ImportCoordinatesOverlay::createWidget ( ) [override], [protected], [virtual]
```

Create your widget here. When creating the object, pass [parentWidget\(\)](#) as parent widget. Ownership of the object is passed. It will be deleted in [setActive\(false\)](#).

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.828.1.3 setActive()

```
void Digikam::ImportCoordinatesOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots. If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.828.1.4 slotEntered()

```
void Digikam::ImportCoordinatesOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Default implementation shows the widget iff the index is valid and checkIndex returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.828.1.5 visualChange()

```
void Digikam::ImportCoordinatesOverlay::visualChange ( ) [override], [protected], [virtual]
```

Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change

Reimplemented from [Digikam::ItemDelegateOverlay](#).

## 6.829.1 Member Function Documentation

### 6.829.1.1 acceptsActivation()

```
bool Digikam::ImportDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect = nullptr ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 6.829.1.2 acceptsToolTip()

```
bool Digikam::ImportDelegate::acceptsToolTip (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * tooltipRect = nullptr ) const [override], [virtual]
```

These methods take four parameters: The position on viewport, the rect on viewport, the index, and optionally a parameter into which, if the return value is true, a rectangle can be written for which the return value will be true as well.

Implements [Digikam::DItemDelegate](#).

### 6.829.1.3 clearCaches()

```
void Digikam::ImportDelegate::clearCaches ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::DItemDelegate](#).

#### 6.829.1.4 clearModelDataCaches()

```
void Digikam::ImportDelegate::clearModelDataCaches ( ) [protected], [virtual]
```

Reimplement to clear caches based on model indexes (hash on row number etc.) Change signals are listened to this is called whenever such properties become invalid.

#### 6.829.1.5 imageInformationRect()

```
QRect Digikam::ImportDelegate::imageInformationRect ( ) const [override], [virtual]
```

Returns the area where the image information is drawn, or null if empty / not supported. The image information is textual or graphical information, but not the pixmap. The [ratingRect\(\)](#) will e.g. typically be contained in this area.

Reimplemented from [Digikam::ItemViewImportDelegate](#).

#### 6.829.1.6 invalidatePaintingCache()

```
void Digikam::ImportDelegate::invalidatePaintingCache ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewImportDelegate](#).

#### 6.829.1.7 pixmapForDrag()

```
QPixmap Digikam::ImportDelegate::pixmapForDrag (
    const QStyleOptionViewItem & option,
    const QList< QModelIndex > & indexes ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

#### 6.829.1.8 pixmapRect()

```
QRect Digikam::ImportDelegate::pixmapRect ( ) const [override], [virtual]
```

Returns the area where the pixmap is drawn, or null if not supported

Reimplemented from [Digikam::ItemViewImportDelegate](#).

#### 6.829.1.9 retrieveThumbnailPixmap()

```
QPixmap Digikam::ImportDelegate::retrieveThumbnailPixmap (
    const QModelIndex & index,
    int thumbnailSize ) [static]
```

Retrieve the thumbnail pixmap in given size for the [ImportItemModel::ThumbnailRole](#) for the given index from the given index, which must adhere to [ImportThumbnailModel](#) semantics.

#### 6.829.1.10 `setDefaultViewOptions()`

```
void Digikam::ImportDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

Style option with standard values to use for cached rendering. `option.rect` shall be the viewport rectangle. Call on resize, font change.

Implements [Digikam::DItemDelegate](#).

Reimplemented in [Digikam::ImportThumbnailDelegate](#).

#### 6.829.1.11 `setSpacing()`

```
void Digikam::ImportDelegate::setSpacing (
    int spacing ) [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

#### 6.829.1.12 `updateContentWidth()`

```
void Digikam::ImportDelegate::updateContentWidth ( ) [protected], [virtual]
```

Reimplement this to set `contentWidth`. This is the maximum width of all content rectangles, typically excluding margins on both sides.

Reimplemented in [Digikam::ImportThumbnailDelegate](#).

#### 6.829.1.13 `updateRects()`

```
virtual void Digikam::ImportDelegate::updateRects ( ) [protected], [pure virtual]
```

In a subclass, you need to implement this method to set up the rects for drawing. The `paint()` method operates depending on these rects.

Implemented in [Digikam::ImportThumbnailDelegate](#), and [Digikam::ImportNormalDelegate](#).

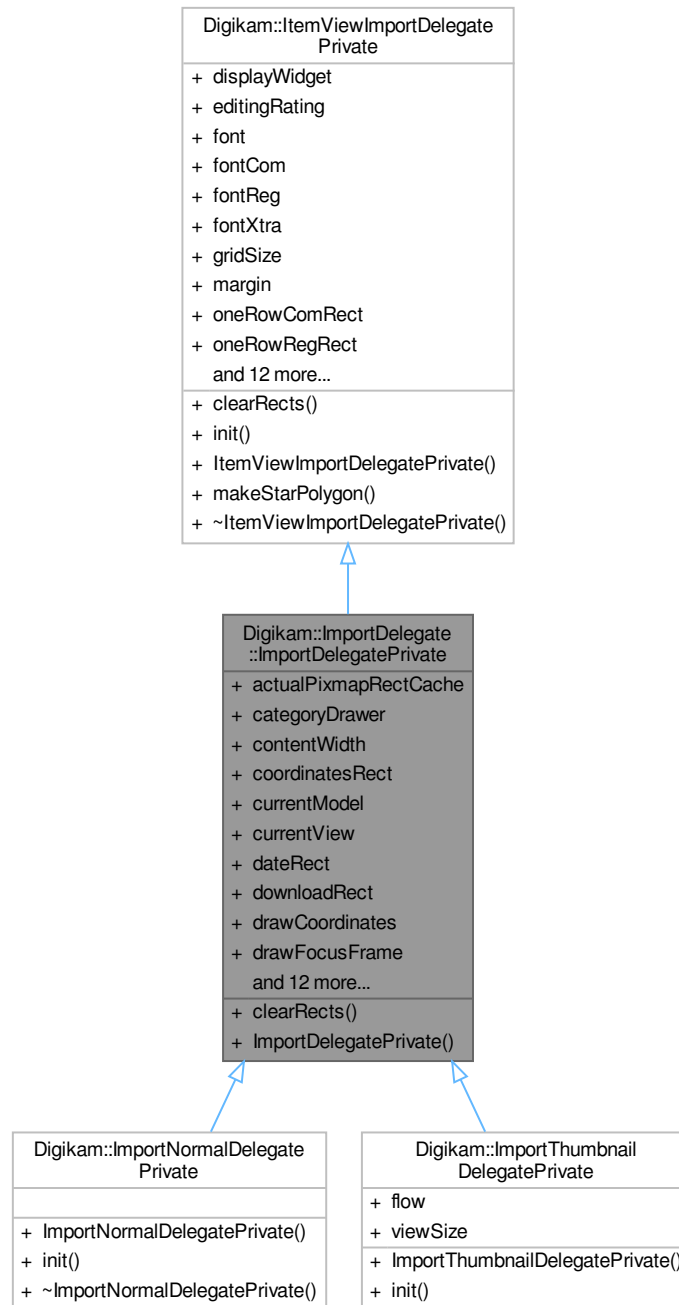

#### 6.829.1.14 `updateSizeRectsAndPixmaps()`

```
void Digikam::ImportDelegate::updateSizeRectsAndPixmaps ( ) [override], [protected], [virtual]
```

Implements [Digikam::ItemViewImportDelegate](#).

## 6.830 Digikam::ImportDelegate::ImportDelegatePrivate Class Reference

### 6.831.1 Member Function Documentation

#### 6.831.1.1 checkIndex()

```
bool Digikam::ImportDownloadOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Return true here if you want to show the overlay for the given index. The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

#### 6.831.1.2 createWidget()

```
QWidget * Digikam::ImportDownloadOverlay::createWidget ( ) [override], [protected], [virtual]
```

Create your widget here. When creating the object, pass [parentWidget\(\)](#) as parent widget. Ownership of the object is passed. It will be deleted in [setActive\(false\)](#).

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.831.1.3 setActive()

```
void Digikam::ImportDownloadOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots. If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.831.1.4 slotEntered()

```
void Digikam::ImportDownloadOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Default implementation shows the widget iff the index is valid and checkIndex returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.831.1.5 visualChange()

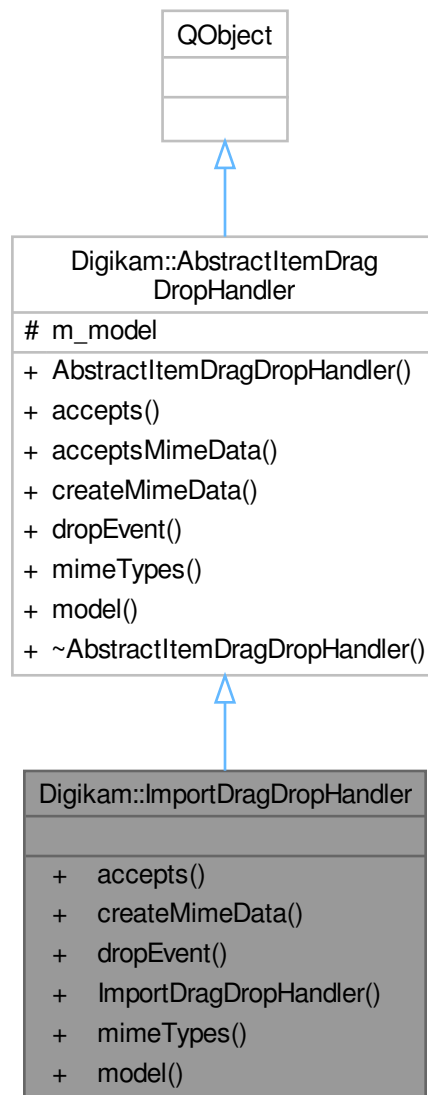

```
void Digikam::ImportDownloadOverlay::visualChange ( ) [override], [protected], [virtual]
```

Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change

Reimplemented from [Digikam::ItemDelegateOverlay](#).

## 6.832 Digikam::ImportDragDropHandler Class Reference

Inheritance diagram for Digikam::ImportDragDropHandler:

### Public Member Functions

- Qt::DropAction `accepts` (const QDropEvent \*e, const QModelIndex &dropIndex) override
- QMimeData \* `createMimeData` (const QList< QModelIndex > &) override
- bool `dropEvent` (QAbstractItemView \*view, const QDropEvent \*e, const QModelIndex &droppedOn) override
- **ImportDragDropHandler** (`ImportItemModel` \*const model)
- QStringList `mimeTypes` () const override
- `ImportItemModel` \* **model** () const

## Public Member Functions inherited from [Digikam::AbstractItemDragDropHandler](#)

- **AbstractItemDragDropHandler** (QAbstractItemModel \*const model)
- virtual bool [acceptsMimeData](#) (const QMimeData \*data)
- QAbstractItemModel \* **model** () const

## Additional Inherited Members

## Protected Attributes inherited from [Digikam::AbstractItemDragDropHandler](#)

- QAbstractItemModel \* **m\_model** = nullptr

## 6.832.1 Member Function Documentation

### 6.832.1.1 [accepts\(\)](#)

```
Qt::DropAction Digikam::ImportDragDropHandler::accepts (
    const QDropEvent * e,
    const QModelIndex & dropIndex ) [override], [virtual]
```

Returns if the given mime data is accepted for drop on dropIndex. Returns the proposed action, or Qt::IgnoreAction if not accepted.

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 6.832.1.2 [createMimeData\(\)](#)

```
QMimeData * Digikam::ImportDragDropHandler::createMimeData (
    const QList< QModelIndex > & ) [override], [virtual]
```

Create a mime data object for starting a drag from the given Albums

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 6.832.1.3 [dropEvent\(\)](#)

```
bool Digikam::ImportDragDropHandler::dropEvent (
    QAbstractItemView * view,
    const QDropEvent * e,
    const QModelIndex & droppedOn ) [override], [virtual]
```

Gives the view and the occurring drop event. The index is the index where the drop was dropped on. It may be invalid (dropped on decoration, viewport) Returns true if the event is to be accepted.

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 6.832.1.4 mimeTypees()

```
QStringList Digikam::ImportDragDropHandler::mimeTypees ( ) const [override], [virtual]
```

Returns the supported mime types. Called by the default implementation of model's [mimeTypees\(\)](#).

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

## 6.833 Digikam::ImportFilterComboBox Class Reference

**6.835.1 Member Enumeration Documentation****6.835.1.1 ImportFilterModelRoles**

```
enum Digikam::ImportFilterModel::ImportFilterModelRoles
```

## Enumerator

CategorizationModeRole	Returns the current categorization mode.
SortOrderRole	Returns the current sort order.
CategoryFormatRole	Returns the format of the index which is used for category.
CategoryDateRole	Returns the date of the index which is used for category.
ImportFilterModelPointerRole	Returns true if the given camera item is a group leader, and the group is opened.

## 6.835.2 Member Function Documentation

### 6.835.2.1 camItemInfosAdded

```
void Digikam::ImportFilterModel::camItemInfosAdded (
    const QList< CamItemInfo > & infos ) [signal]
```

Changes the current image filter settings and refilters. Changes the current image sort settings and resorts. These signals need to be explicitly enabled with `setSendItemInfoSignals()`.

### 6.835.2.2 categoryIdentifier()

```
QString Digikam::ImportFilterModel::categoryIdentifier (
    const CamItemInfo & info ) const [protected], [virtual]
```

Returns a unique identifier for the category if info. The string need not be for user display.

### 6.835.2.3 compareCategories()

```
int Digikam::ImportFilterModel::compareCategories (
    const QModelIndex & left,
    const QModelIndex & right ) const [override], [protected], [virtual]
```

This method compares the category of the `left` index with the category of the `right` index.

Internally and if not reimplemented, this method will ask for `left` and `right` models for role `Category↔SortRole`. In order to correctly sort categories, the `data()` method of the model should return a `qulonglong` (or numeric) value, or a `QString` object. `QString` objects will be sorted with `QString::localeAwareCompare` if `sortCategoriesByNaturalComparison()` is true.

#### Note

Please have present that: `QString(QChar(QChar::ObjectReplacementCharacter)) > QString(QChar(QChar↔::ReplacementCharacter)) > [ all possible strings ] > QString();`

This means that `QString()` will be sorted the first one, while `QString(QChar(QChar::ObjectReplacementCharacter))` and `QString(QChar(QChar::ReplacementCharacter))` will be sorted in last position.

### Warning

Please note that `data()` method of the model should return always information of the same type. If you return a `QString` for an index, you should return always `QStrings` for all indexes for role `CategorySortRole` in order to correctly sort categories. You can't mix by returning a `QString` for one index, and a `qlonglong` for other.

### Note

If you need a more complex layout, you will have to reimplement this method.

### Returns

A negative value if the category of `left` should be placed before the category of `right`. 0 if `left` and `right` are on the same category, and a positive value if the category of `left` should be placed after the category of `right`.

Reimplemented from [Digikam::DCategorizedSortFilterProxyModel](#).

#### 6.835.2.4 `compareInfosCategories()`

```
int Digikam::ImportFilterModel::compareInfosCategories (
    const CamItemInfo & left,
    const CamItemInfo & right ) const [protected], [virtual]
```

Reimplement to customize category sorting, Return negative if category of `left` < category `right`, Return 0 if `left` and `right` are in the same category, else return positive.

#### 6.835.2.5 `importFilterModel()`

```
ImportFilterModel * Digikam::ImportFilterModel::importFilterModel ( ) const [override], [virtual]
```

Reimplemented from [Digikam::ImportSortFilterModel](#).

#### 6.835.2.6 `infosLessThan()`

```
bool Digikam::ImportFilterModel::infosLessThan (
    const CamItemInfo & left,
    const CamItemInfo & right ) const [protected], [virtual]
```

Reimplement to customize sorting. Do not take categories into account here.

#### 6.835.2.7 `setDirectSourceImportModel()`

```
void Digikam::ImportFilterModel::setDirectSourceImportModel (
    ImportItemModel *const sourceModel ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ImportSortFilterModel](#).

### 6.835.2.8 subSortLessThan()

```
bool Digikam::ImportFilterModel::subSortLessThan (  
    const QModelIndex & left,  
    const QModelIndex & right ) const [override], [protected], [virtual]
```

This method has a similar purpose as [lessThan\(\)](#) has on `QSortFilterProxyModel`. It is used for sorting items that are in the same category.

#### Returns

Returns true if the item `left` is less than the item `right` when sorting.

Reimplemented from [Digikam::DCategorizedSortFilterProxyModel](#).

# 6.836 Digikam::ImportIconView Class Reference

Inheritance diagram for Digikam::ImportIconView:

## Classes

- class [Private](#)

**Public Slots**

- void **assignColorLabel** (const QModelIndex &index, int colorId)

## 6.836.1 Member Function Documentation

### 6.836.1.1 activated()

```
void Digikam::ImportIconView::activated (
    const CamItemInfo & info,
    Qt::KeyboardModifiers modifiers ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ImportCategorizedView](#).

### 6.836.1.2 setThumbnailSize()

```
void Digikam::ImportIconView::setThumbnailSize (
    const ThumbnailSize & size ) [override], [virtual]
```

Reimplemented from [Digikam::ImportCategorizedView](#).

### 6.836.1.3 showContextMenu()

```
void Digikam::ImportIconView::showContextMenu (
    QContextMenuEvent * event ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

### 6.836.1.4 showContextMenuOnInfo()

```
void Digikam::ImportIconView::showContextMenuOnInfo (
    QContextMenuEvent * event,
    const CamItemInfo & info ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ImportCategorizedView](#).

### 6.836.1.5 slotSetupChanged()

```
void Digikam::ImportIconView::slotSetupChanged ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

## 6.838.1 Member Enumeration Documentation

### 6.838.1.1 ImportItemModelRoles

```
enum Digikam::ImportItemModel::ImportItemModelRoles
```

Enumerator

ImportItemModelPointerRole	An ImportItemModel* pointer to this model
ThumbnailRole	Returns a thumbnail pixmap. May be implemented by subclasses. Returns either a valid pixmap or a null QVariant.
ExtraDataRole	Return (optional) extraData field
ExtraDataDuplicateCount	Returns the number of duplicate indexes for the same image id

## 6.838.2 Member Function Documentation

### 6.838.2.1 addCamItemInfoSynchronously()

```
void Digikam::ImportItemModel::addCamItemInfoSynchronously (
    const CamItemInfo & info )
```

addCamItemInfo() is asynchronous if a preprocessor is set. This method first adds the info, synchronously. Only afterwards, the preprocessor will have the opportunity to process it. This method also bypasses any incremental updates.

### 6.838.2.2 allRefreshingFinished

```
void Digikam::ImportItemModel::allRefreshingFinished ( ) [signal]
```

Signals that the model has finished currently with all scheduled refreshing, full or incremental, and all preprocessing. The model is in polished, clean situation right now.

### 6.838.2.3 camItemInfo() [1/2]

```
CamItemInfo Digikam::ImportItemModel::camItemInfo (
    const QModelIndex & index ) const
```

Returns the [CamItemInfo](#) object, reference from the underlying data pointed to by the index. For camItemInfo and camItemInfoRef if the index is not valid they will return a null [CamItemInfo](#), and 0 respectively, camItemInfoRef must not be called with an invalid index as it will crash.

### 6.838.2.4 camItemInfo() [2/2]

```
CamItemInfo Digikam::ImportItemModel::camItemInfo (
    int row ) const
```

Returns the [CamItemInfo](#) object, reference from the underlying data of the given row (parent is the invalid QModelIndex, column is 0). Note that camItemInfoRef must not be called with an invalid index as it will crash.

### 6.838.2.5 camItemInfosCleared()

```
virtual void Digikam::ImportItemModel::camItemInfosCleared ( ) [inline], [protected], [virtual]
```

Called when the internal storage is cleared.

### 6.838.2.6 clearCamItemInfos()

```
void Digikam::ImportItemModel::clearCamItemInfos ( )
```

Clears the CamItemInfos and resets the model.

### 6.838.2.7 indexForCamItemInfo()

```
QModelIndex Digikam::ImportItemModel::indexForCamItemInfo (
    const CamItemInfo & info ) const
```

Return the index of a given [CamItemInfo](#), if it exists in the model.

### 6.838.2.8 indexForUrl()

```
QModelIndex Digikam::ImportItemModel::indexForUrl (
    const QUrl & fileUrl ) const
```

Returns the index or [CamItemInfo](#) object from the underlying data for the given file url. In case of multiple occurrences of the same file, the simpler overrides returns any one found first, use the QList methods to retrieve all occurrences.

### 6.838.2.9 isRefreshing()

```
bool Digikam::ImportItemModel::isRefreshing ( ) const
```

Returns true if this model is currently refreshing. For a preprocessor this means that, although the preprocessor may currently have processed all it got, more batches are to be expected.

### 6.838.2.10 itemInfosAboutToBeAdded

```
void Digikam::ImportItemModel::itemInfosAboutToBeAdded (
    const QList< CamItemInfo > & infos ) [signal]
```

Notifies that ItemInfos will be added to the model. This signal is sent before the model data is changed and views are informed.

### 6.838.2.11 itemInfosAboutToBeRemoved [1/2]

```
void Digikam::ImportItemModel::itemInfosAboutToBeRemoved (
    const QList< CamItemInfo > & infos ) [signal]
```

Notifies that CamItemInfos will be removed from the model. This signal is sent before the model data is changed and views are informed. Note: You need to explicitly enable sending of this signal. It is not sent in [clearCamItemInfos\(\)](#).

#### 6.838.2.12 itemInfosAboutToBeRemoved() [2/2]

```
virtual void Digikam::ImportItemModel::itemInfosAboutToBeRemoved (
    int ,
    int ) [inline], [protected], [virtual]
```

Called before rowsAboutToBeRemoved

#### 6.838.2.13 itemInfosAdded

```
void Digikam::ImportItemModel::itemInfosAdded (
    const QList< CamItemInfo > & infos ) [signal]
```

Informs that ItemInfos have been added to the model. This signal is sent after the model data is changed and views are informed.

#### 6.838.2.14 itemInfosRemoved

```
void Digikam::ImportItemModel::itemInfosRemoved (
    const QList< CamItemInfo > & infos ) [signal]
```

Informs that CamItemInfos have been removed from the model. This signal is sent after the model data is changed and views are informed. Note: You need to explicitly enable sending of this signal. It is not sent in [clearCamItemInfos\(\)](#).

#### 6.838.2.15 preprocess

```
void Digikam::ImportItemModel::preprocess (
    const QList< CamItemInfo > & infos ) [signal]
```

Connect to this signal only if you are the current preprocessor.

#### 6.838.2.16 readyForIncrementalRefresh

```
void Digikam::ImportItemModel::readyForIncrementalRefresh ( ) [signal]
```

Signals that the model is right now ready to start an incremental refresh. This is guaranteed only for the scope of emitting this signal.

#### 6.838.2.17 removeIndex()

```
void Digikam::ImportItemModel::removeIndex (
    const QModelIndex & index )
```

Remove the given infos or indexes directly from the model.

### 6.838.2.18 requestIncrementalRefresh()

```
void Digikam::ImportItemModel::requestIncrementalRefresh ( ) [protected]
```

As soon as the model is ready to start an incremental refresh, the signal [readyForIncrementalRefresh\(\)](#) will be emitted. The signal will be emitted inline if the model is ready right now.

### 6.838.2.19 retrieveCamItemInfo()

```
CamItemInfo Digikam::ImportItemModel::retrieveCamItemInfo (
    const QModelIndex & index ) [static]
```

Retrieve the [CamItemInfo](#) object from the `data()` function of the given index. The index may be from a [QSortFilterProxyModel](#) as long as an [ImportItemModel](#) is at the end.

### 6.838.2.20 setCameraThumbsController()

```
void Digikam::ImportItemModel::setCameraThumbsController (
    CameraThumbsCtrl *const controller ) [virtual]
```

Used to set the camera controller, and connect with it.

Reimplemented in [Digikam::ImportThumbnailModel](#).

### 6.838.2.21 setCamItemInfos()

```
void Digikam::ImportItemModel::setCamItemInfos (
    const CamItemInfoList & infos )
```

Clears and adds infos.

### 6.838.2.22 setKeepsFileUrlCache()

```
void Digikam::ImportItemModel::setKeepsFileUrlCache (
    bool keepCache )
```

If a cache is kept, lookup by file path is fast, without a cache it is  $O(n)$ . Default is false.

### 6.838.2.23 setSendRemovalSignals()

```
void Digikam::ImportItemModel::setSendRemovalSignals (
    bool send )
```

Enable sending of `itemInfosAboutToBeRemoved` and `itemInfosRemoved` signals. Default: false

**6.838.2.24 startIncrementalRefresh()**

```
void Digikam::ImportItemModel::startIncrementalRefresh ( ) [protected]
```

Starts an incremental refresh operation. You shall only call this method from a slot connected to [readyForIncrementalRefresh\(\)](#). To initiate an incremental refresh, call [requestIncrementalRefresh\(\)](#).

**6.838.2.25 startRefresh()**

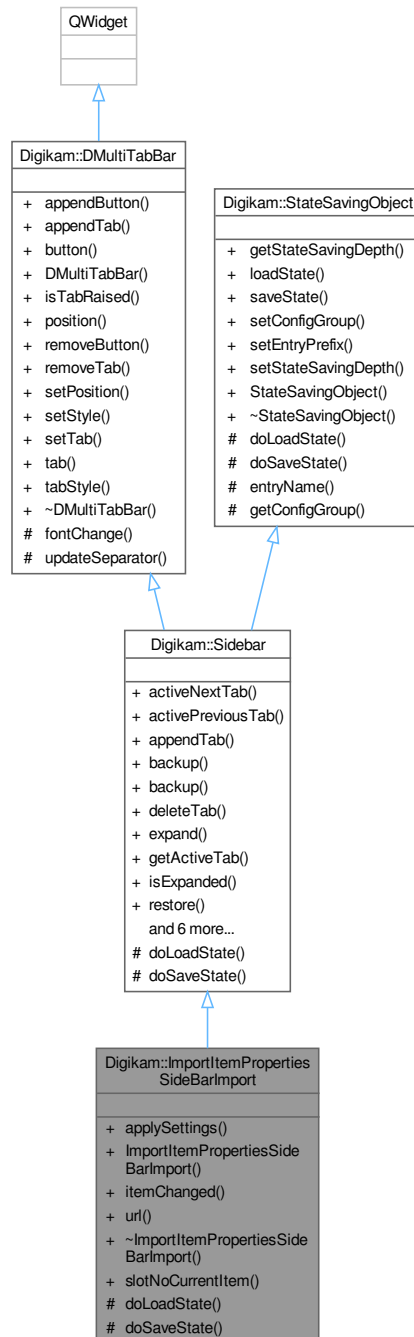

```
void Digikam::ImportItemModel::startRefresh ( ) [protected]
```

Subclasses that add CamItemInfos in batches shall call [startRefresh\(\)](#) when they start sending batches and [finishRefresh\(\)](#) when they have finished. No incremental refreshes will be started while listing. A [clearCamItemInfos\(\)](#) always stops listing, calling [finishRefresh\(\)](#) is then not necessary.

## 6.839 Digikam::ImportItemPropertiesSideBarImport Class Reference

## Protected Slots inherited from [Digikam::ItemDelegateOverlay](#)

### 6.841.1 Member Function Documentation

#### 6.841.1.1 `checkIndex()`

```
bool Digikam::ImportLockOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Return true here if you want to show the overlay for the given index. The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

#### 6.841.1.2 `createWidget()`

```
QWidget * Digikam::ImportLockOverlay::createWidget ( ) [override], [protected], [virtual]
```

Create your widget here. When creating the object, pass `parentWidget()` as parent widget. Ownership of the object is passed. It will be deleted in `setActive(false)`.

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.841.1.3 setActive()

```
void Digikam::ImportLockOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots. If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.841.1.4 slotEntered()

```
void Digikam::ImportLockOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Default implementation shows the widget iff the index is valid and checkIndex returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.841.1.5 visualChange()

```
void Digikam::ImportLockOverlay::visualChange ( ) [override], [protected], [virtual]
```

Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change

Reimplemented from [Digikam::ItemDelegateOverlay](#).

## 6.842.1 Member Function Documentation

### 6.842.1.1 `updateRects()`

```
void Digikam::ImportNormalDelegate::updateRects ( ) [override], [protected], [virtual]
```

In a subclass, you need to implement this method to set up the rects for drawing. The `paint()` method operates depending on these rects.

Implements [Digikam::ImportDelegate](#).

## 6.843 Digikam::ImportNormalDelegatePrivate Class Reference

## 6.846.1 Member Function Documentation

### 6.846.1.1 [createWidget\(\)](#)

```
QWidget * Digikam::ImportRatingOverlay::createWidget ( ) [override], [protected], [virtual]
```

Create your widget here. When creating the object, pass [parentWidget\(\)](#) as parent widget. Ownership of the object is passed. It will be deleted in [setActive\(false\)](#).

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.846.1.2 [hide\(\)](#)

```
void Digikam::ImportRatingOverlay::hide ( ) [override], [protected], [virtual]
```

Called when the widget shall be hidden (mouse cursor left index, viewport, uninstalled etc.). Default implementation [hide\(\)](#)s [m\\_widget](#).

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.846.1.3 setActive()

```
void Digikam::ImportRatingOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots. If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.846.1.4 slotEntered()

```
void Digikam::ImportRatingOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Default implementation shows the widget iff the index is valid and checkIndex returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.846.1.5 visualChange()

```
void Digikam::ImportRatingOverlay::visualChange ( ) [override], [protected], [virtual]
```

Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change

Reimplemented from [Digikam::ItemDelegateOverlay](#).

### 6.846.1.6 widgetEnterEvent()

```
void Digikam::ImportRatingOverlay::widgetEnterEvent ( ) [override], [protected], [virtual]
```

Called when a QEvent::Enter resp. QEvent::Leave event for the widget is received. The default implementation does nothing.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.846.1.7 widgetLeaveEvent()

```
void Digikam::ImportRatingOverlay::widgetLeaveEvent ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 6.848.1 Member Function Documentation

### 6.848.1.1 checkIndex()

```
bool Digikam::ImportRotateOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Return true here if you want to show the overlay for the given index. The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.848.1.2 createButton()

```
ItemViewHoverButton * Digikam::ImportRotateOverlay::createButton ( ) [override], [protected],
[virtual]
```

Create your widget here. Pass view() as parent.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 6.848.1.3 setActive()

```
void Digikam::ImportRotateOverlay::setActive (
    bool active ) [override], [virtual]
```

Will call [createButton\(\)](#).

Reimplemented from [Digikam::HoverButtonDelegateOverlay](#).

### 6.848.1.4 updateButton()

```
void Digikam::ImportRotateOverlay::updateButton (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Called when a new index is entered. Reposition your button here, adjust and store state.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 6.848.1.5 widgetEnterEvent()

```
void Digikam::ImportRotateOverlay::widgetEnterEvent ( ) [override], [protected], [virtual]
```

Called when a QEvent::Enter resp. QEvent::Leave event for the widget is received. The default implementation does nothing.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 6.848.1.6 widgetLeaveEvent()

```
void Digikam::ImportRotateOverlay::widgetLeaveEvent ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 6.849 Digikam::ImportRotateOverlayButton Class Reference

- void [stopFading](#) ()

## 6.849.1 Member Function Documentation

### 6.849.1.1 icon()

```
QIcon Digikam::ImportRotateOverlayButton::icon ( ) [override], [protected], [virtual]
```

Return your icon here. Will be queried again on toggle.

Implements [Digikam::ItemViewHoverButton](#).

### 6.849.1.2 sizeHint()

```
QSize Digikam::ImportRotateOverlayButton::sizeHint ( ) const [override], [virtual]
```

Reimplement to match the size of your icon

Implements [Digikam::ItemViewHoverButton](#).

### 6.849.1.3 updateToolTip()

```
void Digikam::ImportRotateOverlayButton::updateToolTip ( ) [override], [protected], [virtual]
```

Optionally update tooltip here. Will be called again on state change.

Reimplemented from [Digikam::ItemViewHoverButton](#).

## 6.851.1 Member Function Documentation

### 6.851.1.1 [camItemInfosSorted\(\)](#)

```
QList< CamItemInfo > Digikam::ImportSortFilterModel::camItemInfosSorted ( ) const
```

Returns a list of all camera infos, sorted according to this model. If you do not need a sorted list, use [ImportItemModel](#)'s [camItemInfo\(\)](#) method.

### 6.851.1.2 [importFilterModel\(\)](#)

```
ImportFilterModel * Digikam::ImportSortFilterModel::importFilterModel ( ) const [virtual]
```

Reimplemented in [Digikam::ImportFilterModel](#).

### 6.851.1.3 [mapToSourceImportModel\(\)](#)

```
QModelIndex Digikam::ImportSortFilterModel::mapToSourceImportModel (
    const QModelIndex & proxyIndex ) const
```

Convenience methods mapped to [ImportItemModel](#). Mentioned indexes returned come from the source import image model.

### 6.851.1.4 [setDirectSourceImportModel\(\)](#)

```
void Digikam::ImportSortFilterModel::setDirectSourceImportModel (
    ImportItemModel *const sourceModel ) [protected], [virtual]
```

Reimplemented in [Digikam::ImportFilterModel](#).

## 6.853.1 Member Function Documentation

### 6.853.1.1 `setModelsFiltered()`

```
void Digikam::ImportThumbnailBar::setModelsFiltered (
    ImportItemModel * model,
    ImportSortFilterModel * filterModel )
```

This installs a duplicate filter model, if the [ImportItemModel](#) may contain duplicates. Otherwise, just use `setModels()`.

### 6.853.1.2 `setScrollBarPolicy()`

```
void Digikam::ImportThumbnailBar::setScrollBarPolicy (
    Qt::ScrollBarPolicy policy )
```

Sets the policy always for the one scroll bar which is relevant, depending on orientation

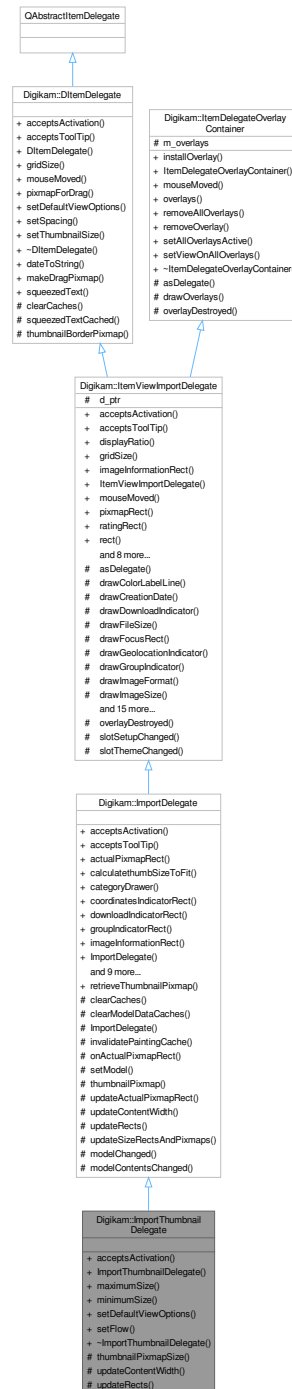

### 6.853.1.3 `slotSetupChanged()`

```
void Digikam::ImportThumbnailBar::slotSetupChanged ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

## 6.854 Digikam::ImportThumbnailDelegate Class Reference

## 6.854.1 Member Function Documentation

### 6.854.1.1 `acceptsActivation()`

```
bool Digikam::ImportThumbnailDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect ) const [override], [virtual]
```

Reimplemented from [Digikam::ImportDelegate](#).

### 6.854.1.2 `maximumSize()`

```
int Digikam::ImportThumbnailDelegate::maximumSize ( ) const
```

Returns the minimum or maximum viewport size in the limiting dimension, width or height, depending on current flow.

### 6.854.1.3 `setDefaultViewOptions()`

```
void Digikam::ImportThumbnailDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

Style option with standard values to use for cached rendering. `option.rect` shall be the viewport rectangle. Call on resize, font change.

Reimplemented from [Digikam::ImportDelegate](#).

#### 6.854.1.4 updateContentWidth()

```
void Digikam::ImportThumbnailDelegate::updateContentWidth ( ) [override], [protected], [virtual]
```

Reimplement this to set contentWidth. This is the maximum width of all content rectangles, typically excluding margins on both sides.

Reimplemented from [Digikam::ImportDelegate](#).

#### 6.854.1.5 updateRects()

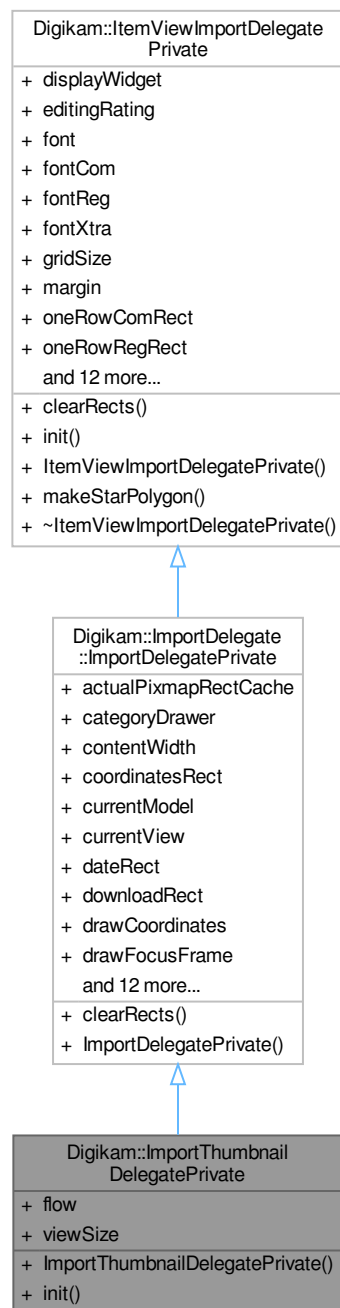

```
void Digikam::ImportThumbnailDelegate::updateRects ( ) [override], [protected], [virtual]
```

In a subclass, you need to implement this method to set up the rects for drawing. The paint() method operates depending on these rects.

Implements [Digikam::ImportDelegate](#).

## 6.856.1 Constructor & Destructor Documentation

### 6.856.1.1 ImportThumbnailModel()

```
Digikam::ImportThumbnailModel::ImportThumbnailModel (
    QObject *const parent ) [explicit]
```

This model provides thumbnail loading, it uses the Camera Controller to retrieve thumbnails for CamItemInfos. It also provides preloading of thumbnails, and caching facility. Thumbnails size can be adjusted.

## 6.856.2 Member Function Documentation

### 6.856.2.1 data()

```
QVariant Digikam::ImportThumbnailModel::data (
    const QModelIndex & index,
    int role = Qt::DisplayRole ) const [override]
```

Handles the ThumbnailRole. If the pixmap is available, returns it in the QVariant. If it still needs to be loaded, returns a null QVariant and emits thumbnailAvailable() as soon as it is available.

### 6.856.2.2 setCameraThumbsController()

```
void Digikam::ImportThumbnailModel::setCameraThumbsController (
    CameraThumbsCtrl *const thumbsCtrl ) [override], [virtual]
```

Reimplemented from [Digikam::ImportItemModel](#).

### 6.856.2.3 setData()

```
bool Digikam::ImportThumbnailModel::setData (
    const QModelIndex & index,
    const QVariant & value,
    int role = Qt::DisplayRole ) [override]
```

You can override the current thumbnail size by giving an integer value for ThumbnailRole. Set a null QVariant to use the thumbnail size set by setThumbnailSize() again. The index given here is ignored for this purpose.

### 6.856.2.4 setEmitDataChanged()

```
void Digikam::ImportThumbnailModel::setEmitDataChanged (
    bool emitSignal )
```

Enable emitting dataChanged() when a thumbnail becomes available. The thumbnailAvailable() signal will be emitted in any case. Default is true.

## 6.866.1 Member Function Documentation

### 6.866.1.1 filterAction()

```
FilterAction Digikam::InvertFilter::filterAction ( ) [override], [virtual]
```

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.866.1.2 filterIdentifier()

```
QString Digikam::InvertFilter::filterIdentifier ( ) const [inline], [override], [virtual]
```

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.866.1.3 readParameters()

```
void Digikam::InvertFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.870 Digikam::IOJobsManager Class Reference

Inheritance diagram for Digikam::IOJobsManager:

### Public Member Functions

- `IOJobsThread * buildCollectionTrashCounters ()`  
*Starts a thread for count trash items for all collections.*
- `IOJobsThread * startDTrashItemsListingForCollection (const QString &collectionPath)`  
*Starts a thread for listing items inside trash for specific collection.*
- `IOJobsThread * startIOJobs (IOJobData *const data)`  
*startIOJobs: Starts a thread to copy, move, delete or rename items*

### Static Public Member Functions

- static `IOJobsManager * instance ()`  
*instance: returns the singleton of IO Jobs Manager*

### Friends

- class `IOJobsManagerCreator`

## 6.870.1 Member Function Documentation

### 6.870.1.1 buildCollectionTrashCounters()

`IOJobsThread * Digikam::IOJobsManager::buildCollectionTrashCounters ( )`

#### Returns

`IOJobsThread` pointer for signal/slot connection

### 6.870.1.2 instance()

```
IOJobsManager * Digikam::IOJobsManager::instance ( ) [static]
```

#### Returns

[IOJobsManager](#) global instance

### 6.870.1.3 startDTrashItemsListingForCollection()

```
IOJobsThread * Digikam::IOJobsManager::startDTrashItemsListingForCollection (
    const QString & collectionPath )
```

#### Parameters

<i>collectionPath</i>	the path for collection to list items for it's trash
-----------------------	--

#### Returns

[IOJobsThread](#) pointer for signal/slot connection

### 6.870.1.4 startIOJobs()

```
IOJobsThread * Digikam::IOJobsManager::startIOJobs (
    IOJobData *const data )
```

#### Parameters

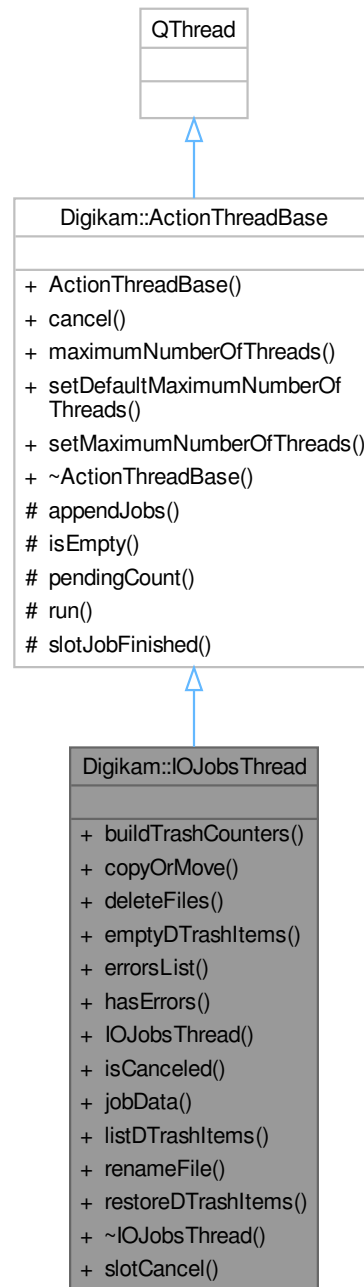

<i>data</i>	<a href="#">IOJobData</a> container with source and destination url
-------------	---

#### Returns

[IOJobsThread](#) pointer for signal/slot connection

## 6.871 Digikam::IOJobsThread Class Reference

Inheritance diagram for Digikam::IOJobsThread:

### Public Slots

- void **slotCancel** ()  
*cancels thread execution*

## Signals

- void **collectionTrashItemInfo** (const [DTrashItemInfo](#) &trashItemInfo)
- void **signalFinished** ()
- void **signalOneProcessed** (const [QUrl](#) &url)
- void **signalRenameFailed** (const [QUrl](#) &url)
- void **signalTrashCountersMap** (const [QMap](#)< [QString](#), int > &counterMap)

## Public Member Functions

- void **buildTrashCounters** ()  
*creates a job for count trash items from all collections*
- void **copyOrMove** ([IOJobData](#) \*const data)  
*Starts a number of jobs to copy or move source files to destination.*
- void **deleteFiles** ([IOJobData](#) \*const data)  
*Starts a number of jobs to delete multiple files.*
- void **emptyDTrashItems** ([IOJobData](#) \*const data)  
*creates a job for every item to delete from collection trash*
- [QStringList](#) & **errorsList** () const
- bool **hasErrors** () const  
*hasErrors*
- **IOJobsThread** ([QObject](#) \*const parent)
- bool **isCanceled** () const  
*isCanceled*
- [IOJobData](#) \* **jobData** () const
- void **listDTrashItems** (const [QString](#) &collectionPath)  
*Starts a job for listing trash items in a collection.*
- void **renameFile** ([IOJobData](#) \*const data)  
*Starts one job to rename a file to a new name.*
- void **restoreDTrashItems** ([IOJobData](#) \*const data)  
*creates a job for every item to restore back to album*

## Public Member Functions inherited from [Digikam::ActionThreadBase](#)

- void [run](#) () override

### 6.871.1 Member Function Documentation

#### 6.871.1.1 [copyOrMove\(\)](#)

```
void Digikam::IOJobsThread::copyOrMove (
    IOJobData *const data )
```

##### Parameters

<i>data</i>	IOJobsData container
-------------	----------------------

#### 6.871.1.2 [deleteFiles\(\)](#)

```
void Digikam::IOJobsThread::deleteFiles (
    IOJobData *const data )
```

##### Parameters

<i>data</i>	IOJobsData container
-------------	----------------------

#### 6.871.1.3 [emptyDTrashItems\(\)](#)

```
void Digikam::IOJobsThread::emptyDTrashItems (
    IOJobData *const data )
```

##### Parameters

<i>data</i>	IOJobsData container
-------------	----------------------

#### 6.871.1.4 [errorsList\(\)](#)

```
QStringList & Digikam::IOJobsThread::errorsList ( ) const
```

##### Returns

the current errors list

### 6.871.1.5 hasErrors()

```
bool Digikam::IOJobsThread::hasErrors ( ) const
```

#### Returns

true if string list was not empty

### 6.871.1.6 isCanceled()

```
bool Digikam::IOJobsThread::isCanceled ( ) const
```

#### Returns

true if the thread was interrupted

### 6.871.1.7 jobData()

```
IOJobData * Digikam::IOJobsThread::jobData ( ) const
```

#### Returns

the current data job instance

### 6.871.1.8 listDTrashItems()

```
void Digikam::IOJobsThread::listDTrashItems (
    const QString & collectionPath )
```

#### Parameters

<i>collectionPath</i>	
-----------------------	--

### 6.871.1.9 renameFile()

```
void Digikam::IOJobsThread::renameFile (
    IOJobData *const data )
```

#### Parameters

<i>data</i>	IOJobsData container
-------------	----------------------

### 6.871.1.10 restoreDTrashItems()

```
void Digikam::IOJobsThread::restoreDTrashItems (
    IOJobData *const data )
```

#### Parameters

<i>data</i>	IOJobsData container
-------------	----------------------

## 6.876.1 Member Function Documentation

### 6.876.1.1 `compareInfosCategories()` [1/2]

```
int Digikam::ItemAlbumFilterModel::compareInfosCategories (
    const ItemInfo & left,
    const ItemInfo & right ) const [override], [protected], [virtual]
```

Reimplement to customize category sorting. Return negative if category of left < category right, Return 0 if left and right are in the same category, else return positive.

Reimplemented from [Digikam::ItemFilterModel](#).

### 6.876.1.2 compareInfosCategories() [2/2]

```
int Digikam::ItemAlbumFilterModel::compareInfosCategories (
    const ItemInfo & left,
    const ItemInfo & right,
    const FaceTagsIface & leftFace,
    const FaceTagsIface & rightFace ) const [override], [protected], [virtual]
```

In order to be able to Categorize by Faces, it's necessary to pass in the face as well. One image may have multiple Faces in it, hence just the [ItemInfo](#) isn't sufficient.

Reimplemented from [Digikam::ItemFilterModel](#).

### 6.876.1.3 setItemFilterSettings()

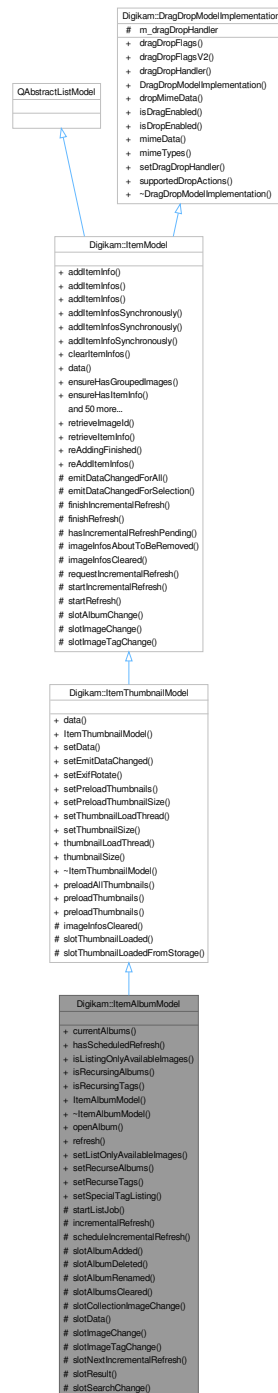

```
void Digikam::ItemAlbumFilterModel::setItemFilterSettings (
    const ItemFilterSettings & settings ) [override], [virtual]
```

Changes the current image filter settings and refilters.

Reimplemented from [Digikam::ItemFilterModel](#).

## 6.877 Digikam::ItemAlbumModel Class Reference

Inheritance diagram for Digikam::ItemAlbumModel:

### Public Slots

- void `openAlbum` (const QList< Album \* > &albums)

## 6.877.1 Member Function Documentation

### 6.877.1.1 `openAlbum`

```
void Digikam::ItemAlbumModel::openAlbum (
    const QList< Album * > & albums ) [slot]
```

Call this method to populate the model with data from the given album. If called with 0, the model will be empty. Opening the same album again is a no-op. Extra safety, ensure that no null pointers are added

### 6.877.1.2 `refresh`

```
void Digikam::ItemAlbumModel::refresh ( ) [slot]
```

Reloads the current album

### 6.877.1.3 `slotImageChange`

```
void Digikam::ItemAlbumModel::slotImageChange (
    const ImageChangeset & changeset ) [override], [protected], [slot]
```

QList is designed for multiple selection, for now, only tags are supported for [SAlbum](#) it will be a list with one element

## 6.878 Digikam::ItemAttributesWatch Class Reference

Inheritance diagram for Digikam::ItemAttributesWatch:

### Signals

- void [signalFileMetadataChanged](#) (const `QUrl` &url)
- void **signalImageCaptionChanged** (qulonglong imageId)
- void **signalImageDateChanged** (qulonglong imageId)
- void [signalImageRatingChanged](#) (qulonglong imageId)
- void [signalImagesChanged](#) (int albumId)
- void [signalImageTagsChanged](#) (qulonglong imageId)

### Public Member Functions

- void **fileMetadataChanged** (const `QUrl` &url)

### Static Public Member Functions

- static void **cleanUp** ()
- static [ItemAttributesWatch](#) \* **instance** ()
- static void **shutDown** ()

## 6.878.1 Member Function Documentation

### 6.878.1.1 signalFileMetadataChanged

```
void Digikam::ItemAttributesWatch::signalFileMetadataChanged (
    const QUrl & url ) [signal]
```

Indicates that the metadata if the given file has been changed (a write operation on the file on disk). Usually, the database is updated accordingly, so then this signal is sent in combination with one or more of the above signals.

### 6.878.1.2 signalImageRatingChanged

```
void Digikam::ItemAttributesWatch::signalImageRatingChanged (
    qlonglong imageId ) [signal]
```

These signals indicated that the rating, data or caption of the image with given *imageId* was set. There is no guarantee that it actually changed.

### 6.878.1.3 signalImagesChanged

```
void Digikam::ItemAttributesWatch::signalImagesChanged (
    int albumId ) [signal]
```

Indicates that images in the given *albumId* may have changed their tags. This signal, the signal above, or both may be sent.

### 6.878.1.4 signalImageTagsChanged

```
void Digikam::ItemAttributesWatch::signalImageTagsChanged (
    qlonglong imageId ) [signal]
```

Indicates that tags have been assigned or removed for image with given *imageId*. There is no guarantee that the tags were actually changed. This signal, the signal below, or both may be sent.

- void [setCurrentInfo](#) (const [ItemInfo](#) &info)

### 6.879.1 Member Function Documentation

#### 6.879.1.1 activated()

```
void Digikam::ItemCategorizedView::activated (
    const ItemInfo & info,
    Qt::KeyboardModifiers modifiers ) [protected], [virtual]
```

Reimplemented in [Digikam::DigikamItemView](#).

#### 6.879.1.2 albumAt()

```
Album * Digikam::ItemCategorizedView::albumAt (
    const QPoint & pos ) const
```

If the model is categorized by an album, returns the album of the category that contains the position. If this is not applicable, return the current album. May return 0.

#### 6.879.1.3 dragDropHandler()

```
AbstractItemDragDropHandler * Digikam::ItemCategorizedView::dragDropHandler ( ) const [override],
[protected], [virtual]
```

You need to implement these three methods Returns the drag drop handler.

Implements [Digikam::DragDropViewImplementation](#).

#### 6.879.1.4 filterModel()

```
QSortFilterProxyModel * Digikam::ItemCategorizedView::filterModel ( ) const [override], [protected], [virtual]
```

Implements [Digikam::ItemViewCategorized](#).

#### 6.879.1.5 hintAt

```
void Digikam::ItemCategorizedView::hintAt (
    const ItemInfo & info ) [slot]
```

Does something to gain attention for info, but not changing current selection.

#### 6.879.1.6 indexActivated()

```
void Digikam::ItemCategorizedView::indexActivated (
    const QModelIndex & index,
    Qt::KeyboardModifiers modifiers ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

#### 6.879.1.7 nextIndexHint()

```
QModelIndex Digikam::ItemCategorizedView::nextIndexHint (
    const QModelIndex & indexToAnchor,
    const QItemSelectionRange & removed ) const [override], [protected], [virtual]
```

Assuming the given indexes would be removed (hypothetically!), return the index to be selected instead, starting from anchor. The default implementation returns the next remaining sibling.

Reimplemented from [Digikam::ItemViewCategorized](#).

#### 6.879.1.8 nextInOrder()

```
ItemInfo Digikam::ItemCategorizedView::nextInOrder (
    const ItemInfo & startingPoint,
    int nth )
```

Returns the n-th info after the given one. Specifically, return the previous info for nth = -1 and the next info for n = 1. Returns a null info if either startingPoint or the nth info are not contained in the model.

#### 6.879.1.9 setCurrentInfo

```
void Digikam::ItemCategorizedView::setCurrentInfo (
    const ItemInfo & info ) [slot]
```

Set as current item the item identified by the imageinfo.

#### 6.879.1.10 setCurrentUrl

```
void Digikam::ItemCategorizedView::setCurrentUrl (
    const QUrl & url ) [slot]
```

Set as current item the item identified by its file url.

#### 6.879.1.11 setCurrentUrlWhenAvailable

```
void Digikam::ItemCategorizedView::setCurrentUrlWhenAvailable (
    const QUrl & url ) [slot]
```

Set as current item when it becomes available, the item identified by its file url.

#### 6.879.1.12 setCurrentWhenAvailable

```
void Digikam::ItemCategorizedView::setCurrentWhenAvailable (
    qlonglong imageId ) [slot]
```

Scroll the view to the given item when it becomes available.

#### 6.879.1.13 setSelectedItemInfos

```
void Digikam::ItemCategorizedView::setSelectedItemInfos (
    const QList< ItemInfo > & infos ) [slot]
```

Set selected items.

#### 6.879.1.14 setSelectedUrls

```
void Digikam::ItemCategorizedView::setSelectedUrls (
    const QList< QUrl > & urlList ) [slot]
```

Set selected items identified by their file urls.

#### 6.879.1.15 showContextMenuOnIndex()

```
void Digikam::ItemCategorizedView::showContextMenuOnIndex (
    QContextMenuEvent * event,
    const QModelIndex & index ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

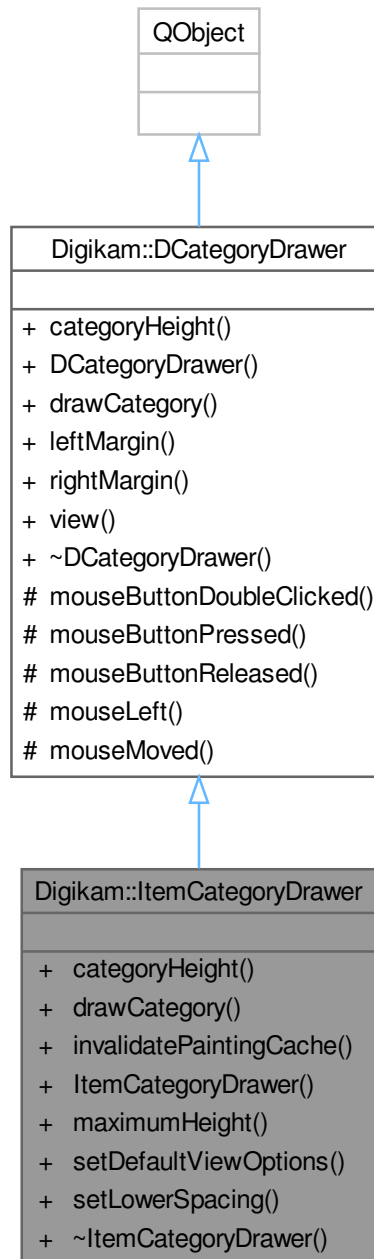

#### 6.879.1.16 toIndex()

```
void Digikam::ItemCategorizedView::toIndex (
    const QUrl & url )
```

Selects the index as current and scrolls to it.

## 6.880 Digikam::ItemCategoryDrawer Class Reference

Inheritance diagram for Digikam::ItemCategoryDrawer:

### Public Member Functions

- int [categoryHeight](#) (const QModelIndex &index, const QStyleOption &option) const override
- void [drawCategory](#) (const QModelIndex &index, int sortRole, const QStyleOption &option, QPainter \*painter) const override

- void `invalidatePaintingCache` ()
- `ItemCategoryDrawer` (`ItemCategorizedView` \*const parent)
- virtual int `maximumHeight` () const
- void `setDefaultViewOptions` (const `QStyleOptionViewItem` &option)
- void `setLowerSpacing` (int spacing)

## Public Member Functions inherited from `Digikam::DCategoryDrawer`

- `DCategoryDrawer` (`DCategorizedView` \*const view)
- virtual int `leftMargin` () const
- virtual int `rightMargin` () const
- `DCategorizedView` \* view () const

## Additional Inherited Members

## Signals inherited from `Digikam::DCategoryDrawer`

- void `actionRequested` (int action, const `QModelIndex` &index)
- void `collapseOrExpandClicked` (const `QModelIndex` &index)

## Protected Member Functions inherited from `Digikam::DCategoryDrawer`

- virtual void `mouseButtonDoubleClicked` (const `QModelIndex` &index, const `QRect` &blockRect, `QMouseEvent` \*event)
- virtual void `mouseButtonPressed` (const `QModelIndex` &index, const `QRect` &blockRect, `QMouseEvent` \*event)
- virtual void `mouseButtonReleased` (const `QModelIndex` &index, const `QRect` &blockRect, `QMouseEvent` \*event)
- virtual void `mouseLeft` (const `QModelIndex` &index, const `QRect` &blockRect)
- virtual void `mouseMoved` (const `QModelIndex` &index, const `QRect` &blockRect, `QMouseEvent` \*event)

## 6.880.1 Member Function Documentation

### 6.880.1.1 `categoryHeight()`

```
int Digikam::ItemCategoryDrawer::categoryHeight (
    const QModelIndex & index,
    const QStyleOption & option ) const [override], [virtual]
```

#### Returns

The category height for the category represented by index `index` with style options `option`.

Reimplemented from `Digikam::DCategoryDrawer`.

### 6.880.1.2 `drawCategory()`

```
void Digikam::ItemCategoryDrawer::drawCategory (
    const QModelIndex & index,
    int sortRole,
    const QStyleOption & option,
    QPainter * painter ) const [override], [virtual]
```

This method purpose is to draw a category represented by the given

## Parameters

<i>index</i>	with the given
<i>sortRole</i>	sorting role
<i>option</i>	painter style options
<i>painter</i>	painter instance

## Note

This method will be called one time per category, always with the first element in that category

Reimplemented from [Digikam::DCategoryDrawer](#).

## 6.881 Digikam::ItemChangeHint Class Reference

### Public Types

## Protected Attributes

- QSharedPointer< Private > d

## 6.882.1 Member Enumeration Documentation

### 6.882.1.1 LanguageChoiceBehavior

```
enum Digikam::ItemComments::LanguageChoiceBehavior
```

The [ItemComments](#) class shall provide short-lived objects that provide read/write access to the comments stored in the database. It is a mere wrapper around the less convenient access methods in [CoreDB](#). Database results are cached, but the object will not listen to database changes from other places.

Changes are applied to the database only after calling [apply\(\)](#), which you can call any time and which will in any case be called from the destructor.

#### Enumerator

ReturnMatchingLanguageOnly	Return only a comment if the language code (at least the language code, the country part may differ) is identical. Else returns a null QString.
ReturnMatchingOrDefaultLanguage	If no matching language as above is found, return the default language.
ReturnMatchingDefaultOrFirstLanguage	If no matching or default language is found, return the first comment. Returns a null string only if no comment is available.

### 6.882.1.2 UniqueBehavior

```
enum Digikam::ItemComments::UniqueBehavior
```

#### Enumerator

UniquePerLanguage	Allow only one comment per language. Default setting.
UniquePerLanguageAndAuthor	Allow multiple comments per language, each with a different author

## 6.882.2 Constructor & Destructor Documentation

### 6.882.2.1 ItemComments() [1/3]

```
Digikam::ItemComments::ItemComments ( )
```

Create a null [ItemComments](#) object

### 6.882.2.2 ItemComments() [2/3]

```
Digikam::ItemComments::ItemComments (
    qlonglong imageid ) [explicit]
```

Create a [ItemComments](#) object for the image with the specified id.

### 6.882.2.3 ItemComments() [3/3]

```
Digikam::ItemComments::ItemComments (
    const CoreDbAccess & access,
    qlonglong imageid )
```

Create a [ItemComments](#) object for the image with the specified id. The existing [CoreDbAccess](#) object will be used to access the database.

## 6.882.3 Member Function Documentation

### 6.882.3.1 addComment()

```
void Digikam::ItemComments::addComment (
    const QString & comment,
    const QString & language = QString(),
    const QString & author = QString(),
    const QDateTime & date = QDateTime(),
    DatabaseComment::Type type = DatabaseComment::Comment )
```

Add a new comment to the list of normal image comments, specified with language and author. Checking for unique comments is done as set by `setUniqueBehavior`. If you pass a null string as language, it will be translated to the language code designating the default language ("x-default"). If you just want to change the one comment of the image, call `addComment(myComment)`;

### 6.882.3.2 addHeadline()

```
void Digikam::ItemComments::addHeadline (
    const QString & headline,
    const QString & language = QString(),
    const QString & author = QString(),
    const QDateTime & date = QDateTime() )
```

Convenience method to add a comment of type Headline. Calls `addComment`, see above for more info.

### 6.882.3.3 addTitle()

```
void Digikam::ItemComments::addTitle (
    const QString & title,
    const QString & language = QString(),
    const QString & author = QString(),
    const QDateTime & date = QDateTime() )
```

Convenience method to add a comment of type Headline. Calls `addComment`, see above for more info.

#### 6.882.3.4 apply()

```
void Digikam::ItemComments::apply ( )
```

Apply all changes. Also called in destructor, so you typically do not need to call this.

#### 6.882.3.5 changeComment()

```
void Digikam::ItemComments::changeComment (
    int index,
    const QString & comment )
```

Access individual properties. Please ensure that the specified index is a valid index

#### 6.882.3.6 commentForLanguage()

```
QString Digikam::ItemComments::commentForLanguage (
    const QString & languageCode,
    int *const index = nullptr,
    LanguageChoiceBehavior behavior = ReturnMatchingDefaultOrFirstLanguage ) const
```

Returns a comment for the specified language. Matching behavior can be specified. Optionally also returns the index with which you can access further information about the comment.

#### 6.882.3.7 defaultComment()

```
QString Digikam::ItemComments::defaultComment (
    DatabaseComment::Type type = DatabaseComment::Comment ) const
```

This methods presents one of the comment strings of the available comment as the default value, when you just want to have one string. Optionally also returns the index with which you can access further information about the comment.

#### 6.882.3.8 language()

```
QString Digikam::ItemComments::language (
    int index ) const
```

RFC 3066 notation, or "x-default"

#### 6.882.3.9 numberOfComments()

```
int Digikam::ItemComments::numberOfComments ( ) const
```

Returns the number of comments available.

### 6.882.3.10 remove()

```
void Digikam::ItemComments::remove (
    int index )
```

Remove the entry referred to by index.

### 6.882.3.11 removeAll() [1/2]

```
void Digikam::ItemComments::removeAll ( )
```

Remove all entries of all types: Comments, Headlines, Titles

### 6.882.3.12 removeAll() [2/2]

```
void Digikam::ItemComments::removeAll (
    DatabaseComment::Type type )
```

Remove all entries of the given type

### 6.882.3.13 removeAllComments()

```
void Digikam::ItemComments::removeAllComments ( )
```

Convenience method: remove all entries of type Comment

### 6.882.3.14 replaceComments()

```
void Digikam::ItemComments::replaceComments (
    const CaptionsMap & comments,
    DatabaseComment::Type type = DatabaseComment::Comment )
```

Replaces all existing comments with the given set of comments and associated language. Optionally date and author can be specified in [CaptionsMap](#) container.

### 6.882.3.15 replaceFrom()

```
void Digikam::ItemComments::replaceFrom (
    const ItemComments & source )
```

Replaces all entries in this object with all entries from source.

### 6.882.3.16 setUniqueBehavior()

```
void Digikam::ItemComments::setUniqueBehavior (
    UniqueBehavior behavior )
```

Changes the behavior to unique comments per language, see the enum above for possible values. Default value is UniquePerLanguage. Note: This is *not* a property of the database, but only of this single [ItemComments](#) object,

**6.882.3.17 toCaptionsMap()**

```
CaptionsMap Digikam::ItemComments::toCaptionsMap (  
    DatabaseComment::Type type = DatabaseComment::Comment ) const
```

Returns all entries of the given type in a [CaptionsMap](#) container.

**6.882.3.18 type()**

```
DatabaseComment::Type Digikam::ItemComments::type (  
    int index ) const
```

Access individual properties. Please ensure that the specified index is a valid index

## 6.883 Digikam::ItemCoordinatesOverlay Class Reference

Inheritance diagram for Digikam::ItemCoordinatesOverlay:

### Public Member Functions

- `CoordinatesOverlayWidget * buttonWidget () const`
- `ItemCoordinatesOverlay (QObject *const parent)`

- bool **viewHasMultiSelection** () const

## Protected Attributes

- QPersistentModelIndex **m\_index**

**Protected Attributes inherited from [Digikam::AbstractWidgetDelegateOverlay](#)**

- bool **m\_mouseButtonPressedOnWidget** = false
- QWidget \* **m\_widget** = nullptr

**Protected Attributes inherited from [Digikam::ItemDelegateOverlay](#)**

- QAbstractItemDelegate \* **m\_delegate** = nullptr
- QAbstractItemView \* **m\_view** = nullptr

**Additional Inherited Members****Signals inherited from [Digikam::ItemDelegateOverlay](#)**

- void **hideNotification** ()
- void **requestNotification** (const QModelIndex &index, const QString &message)
- void **update** (const QModelIndex &index)

**Protected Slots inherited from [Digikam::AbstractWidgetDelegateOverlay](#)**

- virtual void **slotLayoutChanged** ()
- virtual void **slotReset** ()
- virtual void **slotRowsRemoved** (const QModelIndex &parent, int start, int end)
- virtual void **slotViewportEntered** ()

**Protected Slots inherited from [Digikam::ItemDelegateOverlay](#)****6.883.1 Member Function Documentation****6.883.1.1 [checkIndex\(\)](#)**

```
bool Digikam::ItemCoordinatesOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Return true here if you want to show the overlay for the given index. The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

**6.883.1.2 [createWidget\(\)](#)**

```
QWidget * Digikam::ItemCoordinatesOverlay::createWidget ( ) [override], [protected], [virtual]
```

Create your widget here. When creating the object, pass [parentWidget\(\)](#) as parent widget. Ownership of the object is passed. It will be deleted in [setActive\(false\)](#).

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.883.1.3 setActive()

```
void Digikam::ItemCoordinatesOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots. If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.883.1.4 slotEntered()

```
void Digikam::ItemCoordinatesOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Default implementation shows the widget iff the index is valid and checkIndex returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.883.1.5 visualChange()

```
void Digikam::ItemCoordinatesOverlay::visualChange ( ) [override], [protected], [virtual]
```

Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change

Reimplemented from [Digikam::ItemDelegateOverlay](#).

## 6.884 Digikam::ItemCopyMoveHint Class Reference

### Public Member Functions

- int **albumIdDst** () const

## 6.884.1 Constructor & Destructor Documentation

### 6.884.1.1 ItemCopyMoveHint()

```
Digikam::ItemCopyMoveHint::ItemCopyMoveHint ( ) [default]
```

An [ItemCopyMoveHint](#) describes a list of existing items that will be copied, moved or renamed to an album given by album root id and album id. In the new album, the items will have the filenames given in dstNames.

## 6.885 Digikam::ItemCopyright Class Reference

## 6.885.1 Member Enumeration Documentation

### 6.885.1.1 ReplaceMode

```
enum Digikam::ItemCopyright::ReplaceMode
```

#### Enumerator

<a href="#">ReplaceAllEntries</a>	Remove entries for all languages and add one new entry.
<a href="#">ReplaceLanguageEntry</a>	Only replace the entry with the given language.
<a href="#">AddEntryToExisting</a>	No constraints on adding the entry.

## 6.885.2 Constructor & Destructor Documentation

### 6.885.2.1 ItemCopyright()

```
Digikam::ItemCopyright::ItemCopyright ( ) [default]
```

Create a null [ItemCopyright](#) object

## 6.885.3 Member Function Documentation

### 6.885.3.1 contactInfo()

```
IptcCoreContactInfo Digikam::ItemCopyright::contactInfo ( )
```

Returns the creator's contact info. This is `Iptc4xmpCore:CreatorContactInfo` in XMP. The creator's contact information provides all necessary information to get in contact with the creator of this news object and comprises a set of sub-properties for proper addressing.

### 6.885.3.2 copyrightNotice()

```
QString Digikam::ItemCopyright::copyrightNotice (
    const QString & languageCode = QString() )
```

Returns the copyright notice. This is Photoshop Copyright Notice. This is IPTC Copyright Notice. This is DC Rights. This is `dc:rights` in XMP. Contains any necessary copyright notice for claiming the intellectual property for this news object and should identify the current owner of the copyright for the news object. Other entities like the creator of the news object may be added. Notes on usage rights should be provided in Rights usage terms. Note on language matching: You can specify a language code. If the requested language is not available, the entry with default language code is returned. If a default-language entry is not available, the first entry is returned. If you pass a null string as `languageCode`, the local language is returned.

### 6.885.3.3 creator()

```
QStringList Digikam::ItemCopyright::creator ( ) const
```

Returns the author/creator/byline. This is Photoshop Author. This is IPTC By-line. This is DC creator. This is `dc:creator` in XMP. Contains preferably the name of the person who created the content of this news object, a photographer for photos, a graphic artist for graphics, or a writer for textual news. If it is not appropriate to add the name of a person the name of a company or organization could be applied as well. Aligning with IIM notions IPTC Core intends to have only one creator for this news object despite the underlying XMP property `dc:creator` allows for more than one item to be included. If there are more than one item in this array the first one should be considered as the IPTC Core Creator value.

### 6.885.3.4 creatorJobTitle()

```
QString Digikam::ItemCopyright::creatorJobTitle ( ) const
```

Returns the creator's job title. This is Photoshop AuthorsPosition. This is IPTC By-line Title. This is `photoshop:AuthorsPosition` in XMP. Contains the job title of the person who created the content of this news object. As this is sort of a qualifier the Creator element has to be filled in as mandatory prerequisite for using Creator's Jobtitle.

### 6.885.3.5 fillTemplate()

```
void Digikam::ItemCopyright::fillTemplate (
    Template & t )
```

Fills the information fields in template concerning copyright info (note there are other fields in the a [Template](#). There will not be touched)

### 6.885.3.6 instructions()

```
QString Digikam::ItemCopyright::instructions ( )
```

Returns the instructions. This is Photoshop Instructions. This is IPTC Special Instruction. This is photoshop:Instructions in XMP. Any of a number of instructions from the provider or creator to the receiver of the news object which might include any of the following: embargoes (NewsMagazines OUT) and other restrictions not covered by the Rights Usage Terms field; information regarding the original means of capture (scanning notes, colorspace info) or other specific text information that the user may need for accurate reproduction; additional permissions or credits required when publishing.

### 6.885.3.7 provider()

```
QString Digikam::ItemCopyright::provider ( ) const
```

Returns the credit/provider. This is Photoshop Credit. This is IPTC Credit. This is photoshop:Credit in XMP Identifies the provider of the news object, who is not necessarily the owner/creator.

### 6.885.3.8 removeAll()

```
void Digikam::ItemCopyright::removeAll ( )
```

Calls all remove...() methods in this class

### 6.885.3.9 replaceFrom()

```
void Digikam::ItemCopyright::replaceFrom (
    const ItemCopyright & source )
```

Removes all entries and replaces them with the entries from source.

### 6.885.3.10 rightsUsageTerms()

```
QString Digikam::ItemCopyright::rightsUsageTerms (
    const QString & languageCode = QString() )
```

Returns the right usage terms. This has no equivalent in Photoshop, IPTC, or DC. This is xmpRights:UsageTerms in XMP. Language matching is done as with [copyrightNotice\(\)](#). Free text instructions on how this news object can be legally used.

### 6.885.3.11 setCopyrightNotice()

```
void Digikam::ItemCopyright::setCopyrightNotice (
    const QString & notice,
    const QString & languageCode = QString(),
    ReplaceMode mode = ReplaceLanguageEntry )
```

Sets the copyright notice. If you supply a null QString as language code, this is regarded as an entry for the default language ("x-default"). The ReplaceMode determines how existing entries are handled.

### 6.885.3.12 setCreator()

```
void Digikam::ItemCopyright::setCreator (
    const QString & creator,
    ReplaceMode mode = ReplaceAllEntries )
```

Sets the creator. If you want to specify only one creator, set the replace mode to ReplaceAllEntries. If you want to add it to a list of existing entries, pass AddEntryToExisting. You shall not use ReplaceLanguageEntry for this method, creators have no language associated.

### 6.885.3.13 setFromTemplate()

```
void Digikam::ItemCopyright::setFromTemplate (
    const Template & t )
```

Sets all database copyright fields from the template. This does not clear any fields before.

### 6.885.3.14 source()

```
QString Digikam::ItemCopyright::source ( )
```

Returns the source. This is Photoshop Source. This is IPTC Source. This is photoshop::Source in XMP. Identifies the original owner of the copyright for the intellectual content of the news object. This could be an agency, a member of an agency or an individual. Source could be different from Creator and from the entities in the CopyrightNotice. As the original owner can not change the content of this property should never be changed or deleted after the information is entered following the news object's initial creation.

## 6.886 Digikam::ItemDelegate Class Reference

Inheritance diagram for Digikam::ItemDelegate:

## 6.886.1 Member Function Documentation

### 6.886.1.1 `acceptsActivation()`

```
bool Digikam::ItemDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect = nullptr ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 6.886.1.2 `acceptsToolTip()`

```
bool Digikam::ItemDelegate::acceptsToolTip (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * tooltipRect = nullptr ) const [override], [virtual]
```

These methods take four parameters: The position on viewport, the rect on viewport, the index, and optionally a parameter into which, if the return value is true, a rectangle can be written for which the return value will be true as well.

Implements [Digikam::DItemDelegate](#).

### 6.886.1.3 `clearCaches()`

```
void Digikam::ItemDelegate::clearCaches ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::DItemDelegate](#).

#### 6.886.1.4 clearModelDataCaches()

```
void Digikam::ItemDelegate::clearModelDataCaches ( ) [protected], [virtual]
```

Reimplement to clear caches based on model indexes (hash on row number etc.) Change signals are listened to this is called whenever such properties become invalid.

#### 6.886.1.5 imageInformationRect()

```
QRect Digikam::ItemDelegate::imageInformationRect ( ) const [override], [virtual]
```

Returns the area where the image information is drawn, or null if empty / not supported. The image information is textual or graphical information, but not the pixmap. The [ratingRect\(\)](#) will e.g. typically be contained in this area.

Reimplemented from [Digikam::ItemViewDelegate](#).

#### 6.886.1.6 invalidatePaintingCache()

```
void Digikam::ItemDelegate::invalidatePaintingCache ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewDelegate](#).

#### 6.886.1.7 pixmapForDrag()

```
QPixmap Digikam::ItemDelegate::pixmapForDrag (
    const QStyleOptionViewItem & option,
    const QList< QModelIndex > & indexes ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

#### 6.886.1.8 pixmapRect()

```
QRect Digikam::ItemDelegate::pixmapRect ( ) const [override], [virtual]
```

Returns the area where the pixmap is drawn, or null if not supported.

Reimplemented from [Digikam::ItemViewDelegate](#).

#### 6.886.1.9 retrieveThumbnailPixmap()

```
QPixmap Digikam::ItemDelegate::retrieveThumbnailPixmap (
    const QModelIndex & index,
    int thumbnailSize ) [static]
```

Retrieve the thumbnail pixmap in given size for the [ItemModel::ThumbnailRole](#) for the given index from the given index, which must adhere to [ItemThumbnailModel](#) semantics.

#### 6.886.1.10 `setDefaultViewOptions()`

```
void Digikam::ItemDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

Style option with standard values to use for cached rendering. `option.rect` shall be the viewport rectangle. Call on resize, font change.

Implements [Digikam::DItemDelegate](#).

Reimplemented in [Digikam::ItemThumbnailDelegate](#).

#### 6.886.1.11 `setSpacing()`

```
void Digikam::ItemDelegate::setSpacing (
    int spacing ) [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

#### 6.886.1.12 `updateContentWidth()`

```
void Digikam::ItemDelegate::updateContentWidth ( ) [protected], [virtual]
```

Reimplement this to set `contentWidth`. This is the maximum width of all content rectangles, typically excluding margins on both sides.

Reimplemented in [Digikam::ItemThumbnailDelegate](#).

#### 6.886.1.13 `updateRects()`

```
virtual void Digikam::ItemDelegate::updateRects ( ) [protected], [pure virtual]
```

In a subclass, you need to implement this method to set up the rects for drawing. The `paint()` method operates depending on these rects.

Implemented in [Digikam::DigikamItemDelegate](#), [Digikam::ItemFaceDelegate](#), and [Digikam::ItemThumbnailDelegate](#).

#### 6.886.1.14 `updateSizeRectsAndPixmap()`

```
void Digikam::ItemDelegate::updateSizeRectsAndPixmap ( ) [override], [protected], [virtual]
```

Implements [Digikam::ItemViewDelegate](#).

## 6.887 Digikam::ItemDelegate::ItemDelegatePrivate Class Reference

## Protected Slots

- virtual void [visualChange](#) ()

## Protected Member Functions

- QList< QModelIndex > **affectedIndexes** (const QModelIndex &index) const
- bool [affectsMultiple](#) (const QModelIndex &index) const
- int **numberOfAffectedIndexes** (const QModelIndex &index) const
- bool [viewHasMultiSelection](#) () const

## Protected Attributes

- QAbstractItemDelegate \* **m\_delegate** = nullptr
- QAbstractItemView \* **m\_view** = nullptr

## 6.888.1 Member Function Documentation

### 6.888.1.1 [affectsMultiple\(\)](#)

```
bool Digikam::ItemDelegateOverlay::affectsMultiple (
    const QModelIndex & index ) const [protected]
```

For the context that an overlay can affect multiple items: Assuming the currently overlaid index is given. Will an operation affect only the single item, or multiple? If multiple, retrieve the affected selection.

### 6.888.1.2 [mouseMoved\(\)](#)

```
void Digikam::ItemDelegateOverlay::mouseMoved (
    QMouseEvent * e,
    const QRect & visualRect,
    const QModelIndex & index ) [virtual]
```

Only these two methods are implemented as virtual methods. For all other events, connect to the view's signals. There are a few signals specifically for overlays and all QAbstractItemView standard signals.

### 6.888.1.3 [setActive\(\)](#)

```
void Digikam::ItemDelegateOverlay::setActive (
    bool active ) [virtual]
```

Called when the overlay was installed and shall begin working, and before it is removed and shall stop. [Setup](#) your connections to view and delegate here. You will be disconnected automatically on removal.

Reimplemented in [Digikam::FaceRejectionOverlay](#), [Digikam::ItemCoordinatesOverlay](#), [Digikam::ItemFullScreenOverlay](#), [Digikam::ItemRotateOverlay](#), [Digikam::ItemSelectionOverlay](#), [Digikam::ShowHideVersionsOverlay](#), [Digikam::ActionVersionsOverlay](#), [Digikam::AbstractWidgetDelegateOverlay](#), [Digikam::HoverButtonDelegateOverlay](#), [Digikam::PersistentWidgetDelegateOverlay](#), [ShowFoto::ShowfotoCoordinatesOverlay](#), [Digikam::ImportCoordinatesOverlay](#), [Digikam::ImportLockOverlay](#), [Digikam::ImportDownloadOverlay](#), [Digikam::ImportRotateOverlay](#), [Digikam::AssignNameOverlay](#), [Digikam::GroupIndicatorOverlay](#), [Digikam::ItemRatingOverlay](#), [Digikam::TagsLineEditOverlay](#), and [Digikam::ImportRatingOverlay](#).

#### 6.888.1.4 viewHasMultiSelection()

```
bool Digikam::ItemDelegateOverlay::viewHasMultiSelection ( ) const [protected]
```

Utility method

#### 6.888.1.5 visualChange

```
void Digikam::ItemDelegateOverlay::visualChange ( ) [protected], [virtual], [slot]
```

Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change

Reimplemented in [Digikam::AssignNameOverlay](#), [Digikam::GroupIndicatorOverlay](#), [Digikam::ItemCoordinatesOverlay](#), [Digikam::ItemRatingOverlay](#), [Digikam::TagsLineEditOverlay](#), [Digikam::HoverButtonDelegateOverlay](#), [ShowFoto::ShowfotoCoordinatesOverlay](#), [Digikam::ImportCoordinatesOverlay](#), [Digikam::ImportLockOverlay](#), [Digikam::ImportDownloadOverlay](#), and [Digikam::ImportRatingOverlay](#).

## 6.889 Digikam::ItemDelegateOverlayContainer Class Reference

Inheritance diagram for Digikam::ItemDelegateOverlayContainer:

### Public Member Functions

- void **installOverlay** ([ItemDelegateOverlay](#) \*overlay)
- [ItemDelegateOverlayContainer](#) ()=default
- void **mouseMoved** (QMouseEvent \*e, const QRect &visualRect, const QModelIndex &index)

- `QList< ItemDelegateOverlay * > overlays ()` const
- `void removeAllOverlays ()`
- `void removeOverlay (ItemDelegateOverlay *overlay)`
- `void setAllOverlaysActive (bool active)`
- `void setViewOnAllOverlays (QAbstractItemView *view)`

### Protected Member Functions

- virtual `QAbstractItemDelegate * asDelegate ()=0`  
*Returns the delegate, typically, the derived class.*
- virtual void **drawOverlays** (`QPainter *p`, const `QStyleOptionViewItem &option`, const `QModelIndex &index`) const
- virtual void **overlayDestroyed** (`QObject *o`)  
*Declare as slot in the derived class calling this method.*

### Protected Attributes

- `QList< ItemDelegateOverlay * > m_overlays`

## 6.889.1 Constructor & Destructor Documentation

### 6.889.1.1 ItemDelegateOverlayContainer()

```
Digikam::ItemDelegateOverlayContainer::ItemDelegateOverlayContainer ( ) [default]
```

This is a sample implementation for delegate management methods, to be inherited by a delegate. Does not inherit `QObject`, the delegate already does.

## 6.889.2 Member Function Documentation

### 6.889.2.1 asDelegate()

```
virtual QAbstractItemDelegate * Digikam::ItemDelegateOverlayContainer::asDelegate ( ) [protected],  
[pure virtual]
```

Implemented in [Digikam::VersionsDelegate](#), [Digikam::ItemViewDelegate](#), [ShowFoto::ShowfotoItemViewDelegate](#), and [Digikam::ItemViewImportDelegate](#).

## 6.890 Digikam::ItemDescEditTab Class Reference

## 6.892.1 Member Function Documentation

### 6.892.1.1 [accepts\(\)](#)

```
Qt::DropAction Digikam::ItemDragDropHandler::accepts (
    const QDropEvent * e,
    const QModelIndex & dropIndex ) [override], [virtual]
```

Returns if the given mime data is accepted for drop on dropIndex. Returns the proposed action, or Qt::IgnoreAction if not accepted.

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 6.892.1.2 [createMimeData\(\)](#)

```
QMimeData * Digikam::ItemDragDropHandler::createMimeData (
    const QList< QModelIndex > & ) [override], [virtual]
```

Create a mime data object for starting a drag from the given Albums

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 6.892.1.3 dropEvent()

```
bool Digikam::ItemDragDropHandler::dropEvent (
    QAbstractItemView * view,
    const QDropEvent * e,
    const QModelIndex & droppedOn ) [override], [virtual]
```

Gives the view and the occurring drop event. The index is the index where the drop was dropped on. It may be invalid (dropped on decoration, viewport) Returns true if the event is to be accepted.

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 6.892.1.4 mimeTypees()

```
QStringList Digikam::ItemDragDropHandler::mimeTypees ( ) const [override], [virtual]
```

Returns the supported mime types. Called by the default implementation of model's [mimeTypees\(\)](#).

Reimplemented from [Digikam::AbstractItemDragDropHandler](#).

### 6.892.1.5 setReadOnlyDrop()

```
void Digikam::ItemDragDropHandler::setReadOnlyDrop (
    bool readOnly )
```

Enables a mode in which dropping will never start an operation which copies or moves files on disk. Only the signals are emitted.

## 6.893 Digikam::ItemExtendedProperties Class Reference

### Public Member Functions

## 6.893.1 Constructor & Destructor Documentation

### 6.893.1.1 ItemExtendedProperties()

```
Digikam::ItemExtendedProperties::ItemExtendedProperties ( ) [default]
```

Create a null [ItemExtendedProperties](#) object

## 6.893.2 Member Function Documentation

### 6.893.2.1 intellectualGenre()

```
QString Digikam::ItemExtendedProperties::intellectualGenre ( )
```

Return the Intellectual Genre. This is Photoshop Object Attribute Reference. “ Describes the nature, intellectual or journalistic characteristic of a news object, not specifically its content. Note / Examples: Journalistic genres: actuality, interview, background, feature, summary, wrapup News category related genres: daybook, obituary, press release, transcript It is advised to use terms from a controlled vocabulary.”

### 6.893.2.2 jobId()

```
QString Digikam::ItemExtendedProperties::jobId ( )
```

Returns the Job ID. This is Photoshop Transmission Reference. This is IPTC Original Transmission Reference “ Number or identifier for the purpose of improved workflow handling. This ID should be added by the creator or provider for transmission and routing purposes only and should have no significance for archiving.”

### 6.893.2.3 location()

```
IptcCoreLocationInfo Digikam::ItemExtendedProperties::location ( )
```

Return the IPTC Core Location. This includes Country, Country Code, City, Location and ProvinceState. This includes IPTC Country Name, Country Code, City, SubLocation and ProvinceState.

**6.893.2.4 scene()**

```
QStringList Digikam::ItemExtendedProperties::scene ( )
```

Returns the Scene. “ Describes the scene of a photo content. Specifies one ore more terms from the IPTC ‘Scene-NewsCodes’. Each Scene is represented as a string of 6 digits in an unordered list.”

**6.893.2.5 similarityTo()**

```
double Digikam::ItemExtendedProperties::similarityTo (
    const qlonglong imageId )
```

Returns the similarity. of the image to the given image.

**6.893.2.6 subjectCode()**

```
QStringList Digikam::ItemExtendedProperties::subjectCode ( )
```

Returns the Subject Code. This is IPTC Subject Reference. “ Specifies one or more Subjects from the IPTC ‘Subject-NewsCodes’ taxonomy to categorize the content. Each Subject is represented as a string of 8 digits in an unordered list. Note: Only Subjects from a controlled vocabulary should be used in this metadata element, free text has to be put into the Keyword element. More about IPTC Subject-NewsCodes at [www.newscodes.org](http://www.newscodes.org).”

## 6.894.1 Member Function Documentation

### 6.894.1.1 thumbnailPixmap()

```
QPixmap Digikam::ItemFaceDelegate::thumbnailPixmap (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemDelegate](#).

### 6.894.1.2 updateRects()

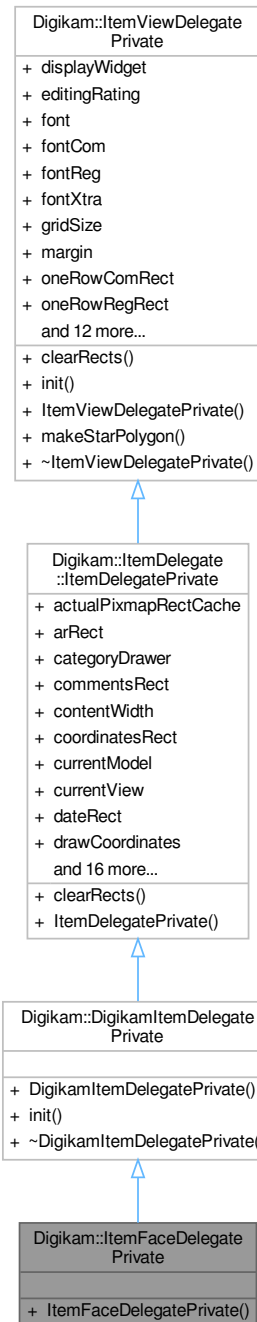

```
void Digikam::ItemFaceDelegate::updateRects ( ) [override], [protected], [virtual]
```

In a subclass, you need to implement this method to set up the rects for drawing. The paint() method operates depending on these rects.

Reimplemented from [Digikam::DigikamItemDelegate](#).

## 6.896.1 Member Enumeration Documentation

### 6.896.1.1 ItemFilterModelRoles

```
enum Digikam::ItemFilterModel::ItemFilterModelRoles
```

#### Enumerator

CategorizationModeRole	Returns the current categorization mode.
SortOrderRole	Returns the current sort order.
CategoryAlbumIdRole	Returns the number of items in the index category. Returns the id of the <a href="#">PAlbum</a> of the index which is used for category
CategoryFormatRole	Returns the format of the index which is used for category.
CategoryDateRole	Returns the date of the index which is used for category.
CategoryFaceRole	Returns the suggested name for the face in this index.
GroupsOpenRole	Returns true if the given image is a group leader, and the group is opened.

## 6.896.2 Member Function Documentation

### 6.896.2.1 addPrepareHook()

```
void Digikam::ItemFilterModel::addPrepareHook (
    ItemFilterModelPrepareHook *const hook )
```

Add a hook to get added images for preparation tasks before they are added in the model

### 6.896.2.2 categoryIdentifier()

```
QString Digikam::ItemFilterModel::categoryIdentifier (
    const ItemInfo & info,
    const FaceTagsIface & face ) const [protected], [virtual]
```

Returns a unique identifier for the category if info. The string need not be for user display.

### 6.896.2.3 compareCategories()

```
int Digikam::ItemFilterModel::compareCategories (
    const QModelIndex & left,
    const QModelIndex & right ) const [override], [protected], [virtual]
```

This method compares the category of the `left` index with the category of the `right` index.

Internally and if not reimplemented, this method will ask for `left` and `right` models for role `CategorySortRole`. In order to correctly sort categories, the `data()` method of the model should return a `qlonglong` (or numeric) value, or a `QString` object. `QString` objects will be sorted with `QString::localeAwareCompare` if `sortCategoriesByNaturalComparison()` is true.

#### Note

Please have present that: `QString(QChar(QChar::ObjectReplacementCharacter)) > QString(QChar(QChar::ReplacementCharacter)) > [ all possible strings ] > QString();`

This means that `QString()` will be sorted the first one, while `QString(QChar(QChar::ObjectReplacementCharacter))` and `QString(QChar(QChar::ReplacementCharacter))` will be sorted in last position.

#### Warning

Please note that `data()` method of the model should return always information of the same type. If you return a `QString` for an index, you should return always `QStrings` for all indexes for role `CategorySortRole` in order to correctly sort categories. You can't mix by returning a `QString` for one index, and a `qlonglong` for other.

#### Note

If you need a more complex layout, you will have to reimplement this method.

#### Returns

A negative value if the category of `left` should be placed before the category of `right`. 0 if `left` and `right` are on the same category, and a positive value if the category of `left` should be placed after the category of `right`.

Reimplemented from [Digikam::DCategorizedSortFilterProxyModel](#).

#### 6.896.2.4 compareInfosCategories() [1/2]

```
int Digikam::ItemFilterModel::compareInfosCategories (
    const ItemInfo & left,
    const ItemInfo & right ) const [protected], [virtual]
```

Reimplement to customize category sorting. Return negative if category of left < category right, Return 0 if left and right are in the same category, else return positive.

Reimplemented in [Digikam::ItemAlbumFilterModel](#).

#### 6.896.2.5 compareInfosCategories() [2/2]

```
int Digikam::ItemFilterModel::compareInfosCategories (
    const ItemInfo & left,
    const ItemInfo & right,
    const FaceTagsIface & leftFace,
    const FaceTagsIface & rightFace ) const [protected], [virtual]
```

In order to be able to Categorize by Faces, it's necessary to pass in the face as well. One image may have multiple Faces in it, hence just the [ItemInfo](#) isn't sufficient.

Reimplemented in [Digikam::ItemAlbumFilterModel](#).

#### 6.896.2.6 data()

```
QVariant Digikam::ItemFilterModel::data (
    const QModelIndex & index,
    int role = Qt::DisplayRole ) const [override]
```

Keeping track of the Face (if any) associated with this Model Index is important to allow categorization by Face.

#### 6.896.2.7 filterMatches

```
void Digikam::ItemFilterModel::filterMatches (
    bool matches ) [signal]
```

Signals that the set filter matches at least one index

#### 6.896.2.8 filterMatchesForText

```
void Digikam::ItemFilterModel::filterMatchesForText (
    bool matchesByText ) [signal]
```

Signals that the set text filter matches at least one entry. If no text filter is set, this signal is emitted with 'false' when [filterMatches\(\)](#) is emitted.

### 6.896.2.9 filterSettingsChanged

```
void Digikam::ItemFilterModel::filterSettingsChanged (
    const ItemFilterSettings & settings ) [signal]
```

Emitted when the filter settings have been changed (the model may not yet have been updated)

### 6.896.2.10 imageFilterModel()

```
ItemFilterModel * Digikam::ItemFilterModel::imageFilterModel ( ) const [override], [virtual]
```

Returns this, any chained [ItemFilterModel](#), or 0.

Reimplemented from [Digikam::ImageSortFilterModel](#).

### 6.896.2.11 imageInfosAdded

```
void Digikam::ItemFilterModel::imageInfosAdded (
    const QList< ItemInfo > & infos ) [signal]
```

These signals need to be explicitly enabled with [setSendItemInfoSignals\(\)](#)

### 6.896.2.12 infosLessThan()

```
bool Digikam::ItemFilterModel::infosLessThan (
    const ItemInfo & left,
    const ItemInfo & right ) const [protected], [virtual]
```

Reimplement to customize sorting. Do not take categories into account here.

### 6.896.2.13 isGroupOpen()

```
bool Digikam::ItemFilterModel::isGroupOpen (
    qlonglong group ) const
```

group is identified by the id of its group leader

### 6.896.2.14 setDayFilter

```
void Digikam::ItemFilterModel::setDayFilter (
    const QList< QDateTime > & days ) [slot]
```

Adjust the current [ItemFilterSettings](#). Equivalent to retrieving the current filter settings, adjusting the parameter and calling [setItemFilterSettings](#). Provided for convenience. It is encouraged to use [setItemFilterSettings](#) if you change more than one parameter at a time.

### 6.896.2.15 setDirectSourceItemModel()

```
void Digikam::ItemFilterModel::setDirectSourceItemModel (
    ItemModel *const model ) [override], [protected], [virtual]
```

Reimplement if needed. Called only when model shall be set as (direct) sourceModel.

Reimplemented from [Digikam::ImageSortFilterModel](#).

### 6.896.2.16 setGroupItemFilterSettings

```
void Digikam::ItemFilterModel::setGroupItemFilterSettings (
    const GroupItemFilterSettings & settings ) [slot]
```

Changes the current version image filter settings and refilters.

### 6.896.2.17 setItemFilterSettings

```
void Digikam::ItemFilterModel::setItemFilterSettings (
    const ItemFilterSettings & settings ) [virtual], [slot]
```

Changes the current image filter settings and refilters.

Reimplemented in [Digikam::ItemAlbumFilterModel](#).

### 6.896.2.18 setItemSortSettings

```
void Digikam::ItemFilterModel::setItemSortSettings (
    const ItemSortSettings & settings ) [virtual], [slot]
```

Changes the current image sort settings and resorts.

### 6.896.2.19 setSendItemInfoSignals()

```
void Digikam::ItemFilterModel::setSendItemInfoSignals (
    bool sendSignals )
```

Enables sending imageInfosAdded and imageInfosAboutToBeRemoved

### 6.896.2.20 setVersionItemFilterSettings

```
void Digikam::ItemFilterModel::setVersionItemFilterSettings (
    const VersionItemFilterSettings & settings ) [slot]
```

Changes the current version image filter settings and refilters.

### 6.896.2.21 subSortLessThan()

```
bool Digikam::ItemFilterModel::subSortLessThan (
    const QModelIndex & left,
    const QModelIndex & right ) const [override], [protected], [virtual]
```

This method has a similar purpose as [lessThan\(\)](#) has on [QSortFilterProxyModel](#). It is used for sorting items that are in the same category.

#### Returns

Returns true if the item `left` is less than the item `right` when sorting.

Reimplemented from [Digikam::DCategorizedSortFilterProxyModel](#).

### 6.896.2.22 suggestedWatchFlags()

```
DatabaseFields::Set Digikam::ItemFilterModel::suggestedWatchFlags ( ) const
```

Returns a set of [DatabaseFields](#) suggested to set as watch flags on the source [ItemModel](#). The contained flags will be those that this model can sort or filter by.

  - *Change notification* —

## 6.902.1 Member Function Documentation

### 6.902.1.1 matches()

```
bool Digikam::ItemFilterSettings::matches (
    const ItemInfo & info,
    bool *const foundText = nullptr ) const
```

Returns true if the given [ItemInfo](#) matches the filter criteria. Optionally, foundText is set to true if it matched by text search.

### 6.902.1.2 watchFlags()

```
DatabaseFields::Set Digikam::ItemFilterSettings::watchFlags ( ) const
```

Returns database fields a change in which would affect the current filtering. To find out if an image tag change affects filtering, test [isFilteringByTags\(\)](#). The text filter will also be affected by changes in tags and album names.

## 6.903 Digikam::ItemFiltersHistoryItemDelegate Class Reference

Inheritance diagram for Digikam::ItemFiltersHistoryItemDelegate:

## 6.906.1 Member Function Documentation

### 6.906.1.1 checkIndex()

```
bool Digikam::ItemFullScreenOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Return true here if you want to show the overlay for the given index. The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.906.1.2 createButton()

```
ItemViewHoverButton * Digikam::ItemFullScreenOverlay::createButton ( ) [override], [protected],
[virtual]
```

Create your widget here. Pass view() as parent.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 6.906.1.3 setActive()

```
void Digikam::ItemFullScreenOverlay::setActive (
    bool active ) [override], [virtual]
```

Will call [createButton\(\)](#).

Reimplemented from [Digikam::HoverButtonDelegateOverlay](#).

### 6.906.1.4 updateButton()

```
void Digikam::ItemFullScreenOverlay::updateButton (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Called when a new index is entered. Reposition your button here, adjust and store state.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 6.906.1.5 widgetEnterEvent()

```
void Digikam::ItemFullScreenOverlay::widgetEnterEvent ( ) [override], [protected], [virtual]
```

Called when a QEvent::Enter resp. QEvent::Leave event for the widget is received. The default implementation does nothing.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.906.1.6 widgetLeaveEvent()

```
void Digikam::ItemFullScreenOverlay::widgetLeaveEvent ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 6.907 Digikam::ItemFullScreenOverlayButton Class Reference

## 6.907.1 Member Function Documentation

### 6.907.1.1 icon()

```
QIcon Digikam::ItemFullScreenOverlayButton::icon ( ) [override], [protected], [virtual]
```

Return your icon here. Will be queried again on toggle.

Implements [Digikam::ItemViewHoverButton](#).

### 6.907.1.2 sizeHint()

```
QSize Digikam::ItemFullScreenOverlayButton::sizeHint ( ) const [override], [virtual]
```

Reimplement to match the size of your icon

Implements [Digikam::ItemViewHoverButton](#).

### 6.907.1.3 updateToolTip()

```
void Digikam::ItemFullScreenOverlayButton::updateToolTip ( ) [override], [protected], [virtual]
```

Optionally update tooltip here. Will be called again on state change.

Reimplemented from [Digikam::ItemViewHoverButton](#).

- static [ItemHistoryGraph](#) [fromInfo](#) (const [ItemInfo](#) &info, [HistoryLoadingMode](#) loadingMode=[LoadAll](#), [ProcessingMode](#) processingMode=[PrepareForDisplay](#))

## 6.910.1 Member Enumeration Documentation

### 6.910.1.1 HistoryLoadingFlag

```
enum Digikam::ItemHistoryGraph::HistoryLoadingFlag
```

#### Enumerator

LoadRelationCloud	Load the relation cloud to the graph. Will give all edges, but no further info.
LoadSubjectHistory	Will load the <a href="#">DImageHistory</a> of the given subject.
LoadLeavesHistory	Will load the <a href="#">DImageHistory</a> of all leave vertices of the graph.

## 6.910.2 Member Function Documentation

### 6.910.2.1 addHistory()

```
void Digikam::ItemHistoryGraph::addHistory (
```

```
const DImageHistory & history,
const ItemInfo & historySubject = ItemInfo() )
```

Add the given history. The optionally given info or id is used as the "current" image of the history. If you read a history from a file's metadata or the database, you shall give the relevant subject.

#### 6.910.2.2 addRelations()

```
void Digikam::ItemHistoryGraph::addRelations (
    const QList< QPair< qlonglong, qlonglong > > & pairs )
```

Add images and their relations from the given pairs. Each pair (a,b) means "a is derived from b".

#### 6.910.2.3 addScannedHistory()

```
void Digikam::ItemHistoryGraph::addScannedHistory (
    const DImageHistory & history,
    qlonglong historySubjectId )
```

This is very similar to addHistory. The only difference is that no attempt is made to retrieve an [ItemInfo](#) for the historySubjectId. Can be useful in the context of scanning

#### 6.910.2.4 allImages()

```
QList< ItemInfo > Digikam::ItemHistoryGraph::allImages ( ) const
```

Returns image infos / ids from all vertices in this graph.

#### 6.910.2.5 categorize()

```
QHash< ItemInfo, HistoryImageId::Types > Digikam::ItemHistoryGraph::categorize ( ) const
```

Attempts at a categorization of all images in the graph into the types defined by [HistoryImageId](#). The type will be invalid if no decision can be made due to conflicting data.

#### 6.910.2.6 clear()

```
void Digikam::ItemHistoryGraph::clear ( )
```

Clears this graph.

#### 6.910.2.7 dropUnresolvedEntries()

```
void Digikam::ItemHistoryGraph::dropUnresolvedEntries ( )
```

Remove all vertices from the graph for which no existing [ItemInfo](#) could be found in the database.

**6.910.2.8 fromInfo()**

```
ItemHistoryGraph Digikam::ItemHistoryGraph::fromInfo (
    const ItemInfo & info,
    HistoryLoadingMode loadingMode = LoadAll,
    ProcessingMode processingMode = PrepareForDisplay ) [static]
```

Convenience: Reads all available history for the given info from the database and returns the created graph. Depending on mode, the graph will be preparedForDisplay(). If no history is recorded and no relations found, a single-vertex graph is returned.

**6.910.2.9 hasEdges()**

```
bool Digikam::ItemHistoryGraph::hasEdges ( ) const
```

Returns if the graph contains any edges. Because loops are not allowed, this also means (!isEmpty() && !isSingleVertex()).

**6.910.2.10 hasUnresolvedEntries()**

```
bool Digikam::ItemHistoryGraph::hasUnresolvedEntries ( ) const
```

Returns true if for any entry no [ItemInfo](#) could be located.

**6.910.2.11 leafImages()**

```
QList< ItemInfo > Digikam::ItemHistoryGraph::leafImages ( ) const
```

Returns image infos / ids from all leaf vertices in this graph, i.e. vertices with no subsequent history.

**6.910.2.12 prepareForDisplay()**

```
void Digikam::ItemHistoryGraph::prepareForDisplay (
    const ItemInfo & subject )
```

Combines [reduceEdges\(\)](#), [dropOrphans\(\)](#) and [sortForInfo\(\)](#).

**6.910.2.13 reduceEdges()**

```
void Digikam::ItemHistoryGraph::reduceEdges ( )
```

Remove edges which provide only duplicate information (performs a transitive reduction). Especially call this when [addRelations\(\)](#) was used.

**6.910.2.14 relationCloud()**

```
QList< QPair< qlonglong, qlonglong > > Digikam::ItemHistoryGraph::relationCloud ( ) const
```

Returns all possible relations between images in this graph, the edges of the transitive closure. The first variant returns (1,2),(3,4),(6,8), the second (1,3,6)(2,4,8).

**6.910.2.15 rootImages()**

```
QList< ItemInfo > Digikam::ItemHistoryGraph::rootImages ( ) const
```

Returns image infos / ids from all root vertices in this graph, i.e. vertices with no precedent history.

**6.910.2.16 sortForInfo()**

```
void Digikam::ItemHistoryGraph::sortForInfo (
    const ItemInfo & subject )
```

Sort vertex information prioritizing for the given vertex.

## 6.911 Digikam::ItemHistoryGraphData Class Reference

## 6.912.1 Member Function Documentation

### 6.912.1.1 `imageModel()`

```
ItemListModel * Digikam::ItemHistoryGraphModel::imageModel ( ) const
```

Returns an internal image model used for entries representing images. Note: Set a thumbnail thread on this model if you need thumbnails.

### 6.912.1.2 `imageModelIndex()`

```
QModelIndex Digikam::ItemHistoryGraphModel::imageModelIndex (
    const QModelIndex & index ) const
```

If the given index is represented by the internal image model, return the image model's index. Otherwise an invalid index is returned.

### 6.912.1.3 `indexForInfo()`

```
QModelIndex Digikam::ItemHistoryGraphModel::indexForInfo (
    const ItemInfo & info ) const
```

Note: There may be multiple indexes for an info. The index found first is returned.

### 6.912.1.4 `setHistory()`

```
void Digikam::ItemHistoryGraphModel::setHistory (
    const ItemInfo & subject,
    const ItemHistoryGraph & graph = ItemHistoryGraph() )
```

Set the history subject and the history graph. Per default, the subject's history graph is read.

## 6.913.1 Member Function Documentation

### 6.913.1.1 allNeedGroupResolving()

```
bool Digikam::ItemIconView::allNeedGroupResolving (
    const OperationType type ) const
```

Query whether the operation to be performed on currently selected or all all items in the currently active view should be performed on all grouped items or just the first.

### 6.913.1.2 allUrls()

```
QList< QUrl > Digikam::ItemIconView::allUrls (
    bool grouping = false ) const
```

Get all items in the current view. Whether only the first or all grouped items are returned is determined as described above.

### 6.913.1.3 selectedUrls()

```
QList< QUrl > Digikam::ItemIconView::selectedUrls (
    bool grouping = false ) const
```

Get currently selected items. By default only the first images in groups are given, while all can be obtained by setting the grouping parameter to true. Given an operation, it will be determined from settings/user query whether only the first or all items in a group are returned. Ideally only the latter (giving an operation) is used.

### 6.913.1.4 slotFitToWindow

```
void Digikam::ItemIconView::slotFitToWindow ( ) [slot]
```

### 6.913.1.5 slotImageQualitySorter

```
void Digikam::ItemIconView::slotImageQualitySorter ( ) [slot]
```

Tools methods (Editor, BQM, Light Table) - itemiconview\_tools.cpp.

### 6.913.1.6 slotRemoveTag

```
void Digikam::ItemIconView::slotRemoveTag (
    int tagID ) [slot]
```

Implementation for Automatic Icon Removal of Confirmed Tags. QTimer to ensure TagRemoval is complete.

If the face just removed was the final face associated with that Tag, reset Tag Icon.

- double **currentSimilarity** () const
- qlonglong **currentReferenceImage** () const
- size\_t **hash** () const
- QList< [ItemInfo](#) > **fromUniqueHash** (const QString &uniqueHash, qlonglong fileSize)
- QString **uniqueHash** () const

### Operations with Tags

- void [setTag](#) (int tagId)
- void [addTagPaths](#) (const QStringList &tagPaths)
- void [removeTag](#) (int tagId)
- void [removeAllTags](#) ()
- [ItemTagPair](#) **imageTagPair** (int tagId) const
- QList< [ItemTagPair](#) > **availableItemTagPairs** () const
- QList< int > **tagIds** () const

### Operations with Thumbnails

- [ThumbnailIdentifier](#) **thumbnailIdentifier** () const
- [ThumbnailInfo](#) **thumbnailInfo** () const
- static [ThumbnailIdentifier](#) **thumbnailIdentifier** (qlonglong id)

## 6.915.1 Detailed Description

### Note

access rules for all methods in this class: [ItemInfoData](#) members shall be accessed only under [CoreDbAccess](#) lock. The id and albumId are the exception to this rule, as they are primitive and will never change during the lifetime of an object.

## 6.915.2 Constructor & Destructor Documentation

### 6.915.2.1 ItemInfo() [1/4]

```
Digikam::ItemInfo::ItemInfo ( )
```

Constructor Creates a null image info

### 6.915.2.2 ItemInfo() [2/4]

```
Digikam::ItemInfo::ItemInfo (
    qlonglong ID ) [explicit]
```

Constructor. Creates an [ItemInfo](#) object without any cached data initially.

#### Parameters

<i>ID</i>	the unique ID for this image
-----------	------------------------------

### 6.915.2.3 ItemInfo() [3/4]

```
Digikam::ItemInfo::ItemInfo (
    const ItemListerRecord & record ) [explicit]
```

Constructor. Creates an [ItemInfo](#) object where the provided information will initially be available cached, without database access.

### 6.915.2.4 ItemInfo() [4/4]

```
Digikam::ItemInfo::ItemInfo (
    const ItemInfo & info )
```

Copy constructor.

### 6.915.2.5 ~ItemInfo()

```
Digikam::ItemInfo::~ItemInfo ( )
```

Destructor

## 6.915.3 Member Function Documentation

### 6.915.3.1 addTagPaths()

```
void Digikam::ItemInfo::addTagPaths (
    const QStringList & tagPaths )
```

Adds tags in the list to the item. Tags are created if they do not yet exist

### 6.915.3.2 addToGroup()

```
void Digikam::ItemInfo::addToGroup (
    const ItemInfo & info )
```

Group this image behind the given image

### 6.915.3.3 albumId()

```
int Digikam::ItemInfo::albumId ( ) const
```

#### Returns

the id of the [PAlbum](#) to which this item belongs

### 6.915.3.4 albumRootId()

```
int Digikam::ItemInfo::albumRootId ( ) const
```

The album root id

### 6.915.3.5 aspectRatio()

```
double Digikam::ItemInfo::aspectRatio ( ) const
```

#### Returns

the id of the Aspect Ratio for this item

### 6.915.3.6 category()

```
DatabaseItem::Category Digikam::ItemInfo::category ( ) const
```

Returns the category of the item: Image, Audio, Video

### 6.915.3.7 clearGroup()

```
void Digikam::ItemInfo::clearGroup ( )
```

This image [hasGroupedImages\(\)](#): Split up the group, remove all [groupedImages\(\)](#) from this image's group.

### 6.915.3.8 colorLabel()

```
int Digikam::ItemInfo::colorLabel ( ) const
```

Returns the Color Label Id (see ColorLabel values in globals.h)

### 6.915.3.9 comment()

```
QString Digikam::ItemInfo::comment ( ) const
```

#### Returns

the default comment for this item

### 6.915.3.10 copyItem()

```
ItemInfo Digikam::ItemInfo::copyItem (
    int dstAlbumID,
    const QString & dstFileName )
```

Copy database information of this item to a newly created item

#### Parameters

<i>dstAlbumID</i>	destination album id
<i>dstFileName</i>	new filename

#### Returns

an [ItemInfo](#) object of the new item

### 6.915.3.11 currentReferenceImage()

```
qulonglong Digikam::ItemInfo::currentReferenceImage ( ) const
```

Returns the id of the current fuzzy search reference image.

### 6.915.3.12 dateTime()

```
QDateTime Digikam::ItemInfo::dateTime ( ) const
```

#### Returns

the datetime of the image

### 6.915.3.13 dimensions()

```
QSize Digikam::ItemInfo::dimensions ( ) const
```

#### Returns

the dimensions of the image (valid only if dimensions have been requested)

### 6.915.3.14 faceCount()

```
int Digikam::ItemInfo::faceCount ( ) const
```

#### Returns

the number of Faces in this item.

### 6.915.3.15 filePath()

```
QString Digikam::ItemInfo::filePath ( ) const
```

Returns the file path to the image

### 6.915.3.16 fileSize()

```
qulonglong Digikam::ItemInfo::fileSize ( ) const
```

#### Returns

the filesize of the image

### 6.915.3.17 fileUrl()

```
QUrl Digikam::ItemInfo::fileUrl ( ) const
```

Returns the [file://](#) url. This is equivalent to `QUrl::fromLocalFile(filePath())`

### 6.915.3.18 format()

```
QString Digikam::ItemInfo::format ( ) const
```

Returns the image format / mimetype as a standardized string (see project/documents/DBSCHEMA.ODS).

### 6.915.3.19 fromLocalFile()

```
ItemInfo Digikam::ItemInfo::fromLocalFile (
    const QString & path ) [static]
```

Creates an [ItemInfo](#) object from a file url.

### 6.915.3.20 fromLocationAlbumAndName()

```
ItemInfo Digikam::ItemInfo::fromLocationAlbumAndName (
    int locationId,
    const QString & album,
    const QString & name ) [static]
```

Create an [ItemInfo](#) object from the given combination, which must be cleaned and corresponding to the values in the database

### 6.915.3.21 fromUniqueHash()

```
QList< ItemInfo > Digikam::ItemInfo::fromUniqueHash (
    const QString & uniqueHash,
    qlonglong fileSize )
```

Scans the database for items with the given signature.

### 6.915.3.22 getDatabaseFieldsRaw()

```
ItemInfo::DatabaseFieldsHashRaw Digikam::ItemInfo::getDatabaseFieldsRaw (
    const DatabaseFields::Set & requestedSet ) const
```

### 6.915.3.23 getSuggestedNames()

```
QMap< QString, QString > Digikam::ItemInfo::getSuggestedNames ( ) const
```

#### Returns

the map of Tag Region (in XML form) to Suggested Names for all Faces in the Image. Used to categorize images based on Face Suggestions.

#### 6.915.3.24 groupedImages()

```
QList< ItemInfo > Digikam::ItemInfo::groupedImages ( ) const
```

Returns the list of images grouped behind this image (not including this image itself) and an empty list if there is none.

#### 6.915.3.25 groupImage()

```
ItemInfo Digikam::ItemInfo::groupImage ( ) const
```

Returns the leading image of the group. Returns a null image if this image is not grouped ([isGrouped\(\)](#))

#### 6.915.3.26 hasDerivedImages()

```
bool Digikam::ItemInfo::hasDerivedImages ( ) const
```

Retrieve information about images from which this image is derived ([ancestorImages](#)) and images that have been derived from this images ([derivedImages](#)).

#### 6.915.3.27 hasGroupedImages()

```
bool Digikam::ItemInfo::hasGroupedImages ( ) const
```

The image is the leading image of a group, there are other images grouped behind this one.

#### 6.915.3.28 hash()

```
size_t Digikam::ItemInfo::hash ( ) const
```

Return a signature for the item.

#### 6.915.3.29 historyImageId()

```
HistoryImageId Digikam::ItemInfo::historyImageId ( ) const
```

Constructs a [HistoryImageId](#) with all available information for this image.

#### 6.915.3.30 id()

```
qulonglong Digikam::ItemInfo::id ( ) const
```

##### Returns

the unique image id for this item

### 6.915.3.31 imageComments()

```
ItemComments Digikam::ItemInfo::imageComments (
    const CoreDbAccess & access ) const
```

Retrieve the [ItemComments](#) object for this item. This object allows full read and write access to all comments and their properties. You need to hold [CoreDbAccess](#) to ensure the validity. For simple, cached read access see [comment\(\)](#).

### 6.915.3.32 imageCommonContainer()

```
ImageCommonContainer Digikam::ItemInfo::imageCommonContainer ( ) const
```

Retrieve information about the image, in form of numbers and user presentable strings, for certain defined fields of information (see [databaseinfocontainers.h](#))

### 6.915.3.33 imageCopyright()

```
ItemCopyright Digikam::ItemInfo::imageCopyright ( ) const
```

Retrieve the [ItemCopyright](#) object for this item. This object allows full read and write access to all copyright values.

### 6.915.3.34 imageExtendedProperties()

```
ItemExtendedProperties Digikam::ItemInfo::imageExtendedProperties ( ) const
```

Retrieve the [ItemExtendedProperties](#) object for this item. This object allows full read and write access to all extended properties values.

### 6.915.3.35 imageHistory()

```
DImageHistory Digikam::ItemInfo::imageHistory ( ) const
```

Retrieves and sets the image history from the database. Note: The image history retrieved here does typically include all steps from the original to this image, but does not reference this image itself.

### 6.915.3.36 imagePosition()

```
ItemPosition Digikam::ItemInfo::imagePosition ( ) const
```

Retrieve the [ItemPosition](#) object for this item.

### 6.915.3.37 imageTagPair()

```
ItemTagPair Digikam::ItemInfo::imageTagPair (
    int tagId ) const
```

Retrieve an [ItemTagPair](#) object for a single tag, or for all image/tag pairs for which properties are available (not necessarily the assigned tags)

**6.915.3.38 isGrouped()**

```
bool Digikam::ItemInfo::isGrouped ( ) const
```

The image is grouped in the group of another (leading) image.

**6.915.3.39 isLocationAvailable()**

```
bool Digikam::ItemInfo::isLocationAvailable ( ) const
```

Returns true if this is a valid [ItemInfo](#), and the location of the image is currently available (information freshly obtained from [CollectionManager](#))

**6.915.3.40 isNull()**

```
bool Digikam::ItemInfo::isNull ( ) const
```

Returns if this objects contains valid data

**6.915.3.41 isRemoved()**

```
bool Digikam::ItemInfo::isRemoved ( ) const
```

Returns true if the corresponding file was not deleted.

**6.915.3.42 isVisible()**

```
bool Digikam::ItemInfo::isVisible ( ) const
```

Returns true if the image is marked as visible in the database.

**6.915.3.43 longitudeNumber()**

```
double Digikam::ItemInfo::longitudeNumber ( ) const
```

Retrieves the coordinates and the altitude. Returns 0 if [hasCoordinates\(\)](#), or [hasAltitude](#) resp, is false.

**6.915.3.44 manualOrder()**

```
qlonglong Digikam::ItemInfo::manualOrder ( ) const
```

Returns the manual sort order

### 6.915.3.45 markDerivedFrom()

```
void Digikam::ItemInfo::markDerivedFrom (
    const ItemInfo & ancestorImage )
```

Add a relation to the database: This image is derived from the ancestorImage.

### 6.915.3.46 metadataTemplate()

```
Template Digikam::ItemInfo::metadataTemplate ( ) const
```

Retrieve metadata template information about the image.

### 6.915.3.47 modDateTime()

```
QDateTime Digikam::ItemInfo::modDateTime ( ) const
```

#### Returns

the modification datetime of the image

### 6.915.3.48 name()

```
QString Digikam::ItemInfo::name ( ) const
```

#### Returns

the name of the image

### 6.915.3.49 orientation()

```
int Digikam::ItemInfo::orientation ( ) const
```

Returns the orientation of the image, ([MetaEngine::ImageOrientation](#), EXIF standard)

### 6.915.3.50 pickLabel()

```
int Digikam::ItemInfo::pickLabel ( ) const
```

Returns the Pick Label Id (see PickLabel values in globals.h)

### 6.915.3.51 rating()

```
int Digikam::ItemInfo::rating ( ) const
```

Returns the rating

**6.915.3.52 relationCloud()**

```
QList< QPair< qlonglong, qlonglong > > Digikam::ItemInfo::relationCloud ( ) const
```

Returns the cloud of all directly or indirectly related images, derived images or ancestors, in from of "a derived from b" pairs.

**6.915.3.53 relativePath()**

```
QString Digikam::ItemInfo::relativePath ( ) const
```

Returns the relative path part to the image

**6.915.3.54 removeAllTags()**

```
void Digikam::ItemInfo::removeAllTags ( )
```

Remove all tags from the item (removes it from database)

**6.915.3.55 removeFromGroup()**

```
void Digikam::ItemInfo::removeFromGroup ( )
```

This image is grouped behind another image: Remove this image from its group

**6.915.3.56 removeMetadataTemplate()**

```
void Digikam::ItemInfo::removeMetadataTemplate ( )
```

Remove all template info about the image from database.

**6.915.3.57 removeTag()**

```
void Digikam::ItemInfo::removeTag (
    int tagID )
```

Remove a tag from the item (removes it from database)

**Parameters**

<i>tagID</i>	the ID of the tag to remove
--------------	-----------------------------

**6.915.3.58 setColorLabel()**

```
void Digikam::ItemInfo::setColorLabel (
```

```
int value )
```

Set the color Label Id for the item (see ColorLabel values from globals.h)

### 6.915.3.59 setDateTime()

```
void Digikam::ItemInfo::setDateTime (
    const QDateTime & dateTime )
```

Set the date and time (write it to database)

#### Parameters

<i>dateTime</i>	the new date and time.
-----------------	------------------------

### 6.915.3.60 setManualOrder()

```
void Digikam::ItemInfo::setManualOrder (
    qulonglong value )
```

Set the manual sorting order for the item

### 6.915.3.61 setMetadataTemplate()

```
void Digikam::ItemInfo::setMetadataTemplate (
    const Template & t )
```

Set metadata template information (write it to database)

#### Parameters

<i>t</i>	the new template data.
----------	------------------------

### 6.915.3.62 setModDateTime()

```
void Digikam::ItemInfo::setModDateTime (
    const QDateTime & dateTime )
```

Set the modification date and time (write it to database)

#### Parameters

<i>dateTime</i>	the new modification date and time.
-----------------	-------------------------------------

**6.915.3.63 setName()**

```
void Digikam::ItemInfo::setName (
    const QString & newName )
```

Set the name (write it to database)

**Parameters**

<i>newName</i>	the new name.
----------------	---------------

**6.915.3.64 setOrientation()**

```
void Digikam::ItemInfo::setOrientation (
    int value )
```

Set the orientation for the item

**6.915.3.65 setPickLabel()**

```
void Digikam::ItemInfo::setPickLabel (
    int value )
```

Set the pick Label Id for the item (see PickLabel values from globals.h)

**6.915.3.66 setRating()**

```
void Digikam::ItemInfo::setRating (
    int value )
```

Set the rating for the item

**6.915.3.67 setTag()**

```
void Digikam::ItemInfo::setTag (
    int tagID )
```

Adds a tag to the item (writes it to database)

**Parameters**

<i>tagID</i>	the ID of the tag to add
--------------	--------------------------

**6.915.3.68 setVisible()**

```
void Digikam::ItemInfo::setVisible (
```

```
bool isVisible )
```

Set the visibility flag - triggers between Visible and Hidden

### 6.915.3.69 tagIds()

```
QList< int > Digikam::ItemInfo::tagIds ( ) const
```

#### Returns

a list of IDs of tags assigned to this item

#### See also

[tagNames](#)

[tagPaths](#)

[Album::id\(\)](#)

### 6.915.3.70 thumbnailIdentifier()

```
ThumbnailIdentifier Digikam::ItemInfo::thumbnailIdentifier ( ) const
```

Fills a [ThumbnailIdentifier](#) / [ThumbnailInfo](#) from this [ItemInfo](#)

### 6.915.3.71 title()

```
QString Digikam::ItemInfo::title ( ) const
```

#### Returns

the default title for this item

### 6.915.3.72 unconfirmedFaceCount()

```
int Digikam::ItemInfo::unconfirmedFaceCount ( ) const
```

#### Returns

the number of Unconfirmed Faces in this item.

### 6.915.3.73 uniqueHash()

```
QString Digikam::ItemInfo::uniqueHash ( ) const
```

#### Returns

the unique hash signature as string of the image.

### 6.915.3.74 uuid()

```
QString Digikam::ItemInfo::uuid ( ) const
```

Retrieves and sets this' images UUID

## 6.916 Digikam::ItemInfoAlbumsJob Class Reference

Inheritance diagram for Digikam::ItemInfoAlbumsJob:

### Signals

- void **signalCompleted** (const [ItemInfoList](#) &items)

### Public Member Functions

- void **allItemsFromAlbums** (const AlbumList &albumsList)
- **ItemInfoAlbumsJob** (QObject \*const parent=nullptr)
- void **stop** ()

## 6.917 Digikam::ItemInfoCache Class Reference

Inheritance diagram for Digikam::ItemInfoCache:

### Public Member Functions

- `QString albumRelativePath (int albumId)`
- `void cacheByName (const QExplicitlySharedDataPointer< ItemInfoData > &infoPtr)`
- `void dropInfo (const QExplicitlySharedDataPointer< ItemInfoData > &infoPtr)`
- `int getImageGroupedCount (qulonglong id)`
- `QExplicitlySharedDataPointer< ItemInfoData > infoForId (qulonglong id)`
- `QExplicitlySharedDataPointer< ItemInfoData > infoForPath (int albumRootId, const QString &relativePath, const QString &name)`
- `void invalidate ()`

### 6.917.1 Member Function Documentation

#### 6.917.1.1 albumRelativePath()

```

QString Digikam::ItemInfoCache::albumRelativePath (
    int albumId )
  
```

Returns the cached relativePath for the given album id.

### 6.917.1.2 cacheByName()

```
void Digikam::ItemInfoCache::cacheByName (
    const QExplicitlySharedDataPointer< ItemInfoData > & infoPtr )
```

Call this to put data in the hash by file name if you have newly created data and the name is filled. Call under write lock.

### 6.917.1.3 dropInfo()

```
void Digikam::ItemInfoCache::dropInfo (
    const QExplicitlySharedDataPointer< ItemInfoData > & infoPtr )
```

Call this when the data has been dereferenced, before deletion.

### 6.917.1.4 getImageGroupedCount()

```
int Digikam::ItemInfoCache::getImageGroupedCount (
    qlonglong id )
```

Returns the cached grouped count for the given image id.

### 6.917.1.5 infoForId()

```
QExplicitlySharedDataPointer< ItemInfoData > Digikam::ItemInfoCache::infoForId (
    qlonglong id )
```

Return an [ItemInfoData](#) object for the given image id. A new object is created, or an existing object is returned. If a new object is created, the id field will be initialized.

### 6.917.1.6 infoForPath()

```
QExplicitlySharedDataPointer< ItemInfoData > Digikam::ItemInfoCache::infoForPath (
    int albumRootId,
    const QString & relativePath,
    const QString & name )
```

Return an [ItemInfoData](#) object for the given album root, relativePath and file name triple. Works if previously cached with [cacheByName](#). Returns 0 if not found.

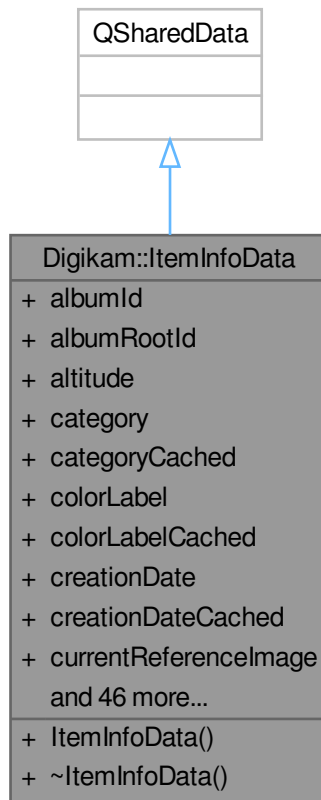

### 6.917.1.7 invalidate()

```
void Digikam::ItemInfoCache::invalidate ( )
```

Invalidate the cache and all its cached data

## 6.918 Digikam::ItemInfoData Class Reference

Inheritance diagram for Digikam::ItemInfoData:

### Public Types

- typedef `DatabaseFields::Hash` < QVariant > `DatabaseFieldsHashRaw`

### Public Attributes

### Classes

- class [Private](#)

## Public Member Functions

- void [list](#) ([ItemListerReceiver](#) \*const receiver, const [CoreDbUrl](#) &url)
- void [listDateRange](#) ([ItemListerReceiver](#) \*const receiver, const [QDate](#) &startDate, const [QDate](#) &endDate)
- void [setListOnlyAvailable](#) (bool listOnlyAvailable)
- void [setRecursive](#) (bool recursive)

## Operations with TAlbum

- void [listTag](#) ([ItemListerReceiver](#) \*const receiver, const [QList](#)< int > &tagIds)
- void [listImageTagPropertySearch](#) ([ItemListerReceiver](#) \*const receiver, const [QString](#) &xml)
- [QString](#) [tagSearchXml](#) (int tagId, const [QString](#) &type, bool includeChildTags) const

## Operations with SAlbum

- void [listSearch](#) ([ItemListerReceiver](#) \*const receiver, const [QString](#) &xml, int limit=0, qlonglong reference←  
ImageId=-1)
- void [listHaarSearch](#) ([ItemListerReceiver](#) \*const receiver, const [QString](#) &xml)
- void [listAreaRange](#) ([ItemListerReceiver](#) \*const receiver, double lat1, double lat2, double lon1, double lon2)

## Operations with PAlbum

- void [listPAlbum](#) ([ItemListerReceiver](#) \*const receiver, int albumRootId, const [QString](#) &album)

## 6.927.1 Member Function Documentation

### 6.927.1.1 list()

```
void Digikam::ItemLister::list (
    ItemListerReceiver *const receiver,
    const CoreDbUrl & url )
```

Convenience method for [Album](#), [Tag](#) and [Date](#) URLs, *not* for [Search](#) URLs.

### 6.927.1.2 listAreaRange()

```
void Digikam::ItemLister::listAreaRange (
    ItemListerReceiver *const receiver,
    double lat1,
    double lat2,
    double lon1,
    double lon2 )
```

List the images whose coordinates are between coordinates contained in [areaCoordinates](#)(lat1, lat2, lng1, lng2).

### 6.927.1.3 listDateRange()

```
void Digikam::ItemLister::listDateRange (
    ItemListerReceiver *const receiver,
    const QDate & startDate,
    const QDate & endDate )
```

List those images whose date lies in the range beginning with startDate (inclusive) and ending before endDate (exclusive).

### 6.927.1.4 listHaarSearch()

```
void Digikam::ItemLister::listHaarSearch (
    ItemListerReceiver *const receiver,
    const QString & xml )
```

Execute the search specified by search XML describing a Haar search

#### Parameters

<i>receiver</i>	the receiver for the searches
<i>xml</i>	SearchXml describing the query

### 6.927.1.5 listImageTagPropertySearch()

```
void Digikam::ItemLister::listImageTagPropertySearch (
    ItemListerReceiver *const receiver,
    const QString & xml )
```

Execute the search specified by search XML describing a Tag Properties search. Two special add-ons: Non-unique by image id; if enabled, uses the extended ImageRecord protocol to pass the property value in the record's extra↔ Value.

#### Parameters

<i>receiver</i>	the receiver for the searches
<i>xml</i>	SearchXml describing the query

### 6.927.1.6 listPAlbum()

```
void Digikam::ItemLister::listPAlbum (
    ItemListerReceiver *const receiver,
    int albumRootId,
    const QString & album )
```

List images in the [Album](#) (physical album) specified by albumRoot, album. The results will be fed to the specified receiver.

### 6.927.1.7 listSearch()

```
void Digikam::ItemLister::listSearch (
    ItemListerReceiver *const receiver,
    const QString & xml,
    int limit = 0,
    qlonglong referenceImageId = -1 )
```

Execute the search specified by search XML

#### Parameters

<i>receiver</i>	the receiver for the searches
<i>xml</i>	SearchXml describing the query
<i>limit</i>	the limit the count of the result set. If limit = 0, then no limit is set.
<i>referenceImageId</i>	the id of a reference image in the search query.

### 6.927.1.8 listTag()

```
void Digikam::ItemLister::listTag (
    ItemListerReceiver *const receiver,
    const QList< int > & tagIds )
```

List the images which have assigned the tags specified by tagIds Updated to support multiple tags

### 6.927.1.9 setListOnlyAvailable()

```
void Digikam::ItemLister::setListOnlyAvailable (
    bool listOnlyAvailable )
```

Adjust the setting if images from collections that are currently not in the state "available" will be included in the listing. Default: true.

### 6.927.1.10 setRecursive()

```
void Digikam::ItemLister::setRecursive (
    bool recursive )
```

Adjust the setting if album or tags will be listed recursively (i.e. including subalbums / subtags)

```
bool Digikam::ItemMarkerTiler::indicesEqual (
    const QVariant & a,
    const QVariant & b ) const [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

**6.936.1.9 onIndicesClicked()**

```
void Digikam::ItemMarkerTiler::onIndicesClicked (
    const ClickInfo & clickInfo ) [override], [virtual]
```

Reimplemented from [Digikam::AbstractMarkerTiler](#).

**6.936.1.10 onIndicesMoved()**

```
void Digikam::ItemMarkerTiler::onIndicesMoved (
    const TileIndex::List & tileIndicesList,
    const GeoCoordinates & targetCoordinates,
    const QPersistentModelIndex & targetSnapIndex ) [override], [virtual]
```

Reimplemented from [Digikam::AbstractMarkerTiler](#).

**6.936.1.11 pixmapFromRepresentativeIndex()**

```
QPixmap Digikam::ItemMarkerTiler::pixmapFromRepresentativeIndex (
    const QVariant & index,
    const QSize & size ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

**6.936.1.12 prepareTiles()**

```
void Digikam::ItemMarkerTiler::prepareTiles (
    const GeoCoordinates & upperLeft,
    const GeoCoordinates & lowerRight,
    int level ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

**6.936.1.13 regenerateTiles()**

```
void Digikam::ItemMarkerTiler::regenerateTiles ( ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

**6.936.1.14 removeMarkerIndexFromGrid()**

```
void Digikam::ItemMarkerTiler::removeMarkerIndexFromGrid (
    const QModelIndex & markerIndex,
    const bool ignoreSelection = false )
```

**Parameters**

<i>markerIndex</i>	The marker index to remove
<i>ignoreSelection</i>	Do not remove the marker from the count of selected items. This is only used by slotSourceModelRowsAboutToBeRemoved internally, because the selection model sends us an extra signal about the deselection.

**6.936.1.15 setActive()**

```
void Digikam::ItemMarkerTiler::setActive (
    const bool state ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

**6.936.1.16 tileNew()**

```
AbstractMarkerTiler::Tile * Digikam::ItemMarkerTiler::tileNew ( ) [override], [virtual]
```

Implements [Digikam::AbstractMarkerTiler](#).

**6.936.1.17 tilerFlags()**

```
AbstractMarkerTiler::TilerFlags Digikam::ItemMarkerTiler::tilerFlags ( ) const [override],
[virtual]
```

Reimplemented from [Digikam::AbstractMarkerTiler](#).

**6.937 Digikam::ItemMetadataAdjustmentHint Class Reference****Public Types**

- qlonglong **m\_id** = 0
- QDateTime **m\_modificationDate**
- [AdjustmentStatus](#) **m\_status** = [AboutToEditMetadata](#)

**6.937.1 Member Enumeration Documentation****6.937.1.1 AdjustmentStatus**

```
enum Digikam::ItemMetadataAdjustmentHint::AdjustmentStatus
```

The file's has been edited writing out information from the database, i.e., the db is already guaranteed to contain all changed information in the file's metadata. There is no need for a full rescan, optimizations are possible.

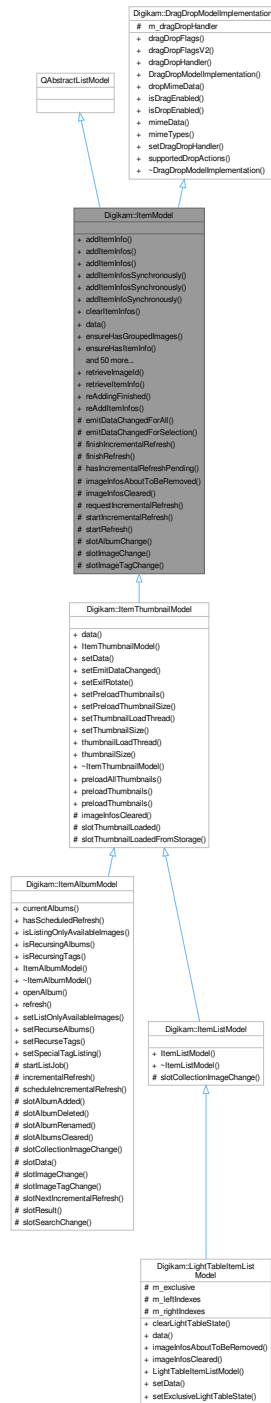

## Enumerator

AboutToEditMetadata	The file is about to be edited. Suspends scanning. The Finished hint must follow.
MetadataEditingFinished	The file's metadata has been edited as described above.
MetadataEditingAborted	The file's metadata has not been edited, despite sending AboutToEditMedata.

## 6.938 Digikam::ItemModel Class Reference

Inheritance diagram for Digikam::ItemModel:

### Public Types

- enum `ItemModelRoles` {
  - `ItemModelPointerRole` = Qt::UserRole , `ItemModelInternalId` = Qt::UserRole + 1 , `ThumbnailRole` = Qt::UserRole + 2 , `CreationDateRole` = Qt::UserRole + 3 ,

## 6.938.1 Member Enumeration Documentation

### 6.938.1.1 ItemModelRoles

```
enum Digikam::ItemModel::ItemModelRoles
```

#### Enumerator

<a href="#">ItemModelPointerRole</a>	An <a href="#">ItemModel*</a> pointer to this model
<a href="#">ThumbnailRole</a>	Returns a thumbnail pixmap. May be implemented by subclasses. Returns either a valid pixmap or a null <a href="#">QVariant</a> .
<a href="#">CreationDateRole</a>	Returns a <a href="#">QDateTime</a> with the creation date
<a href="#">ExtraDataRole</a>	Return (optional) <a href="#">extraData</a> field
<a href="#">ExtraDataDuplicateCount</a>	Returns the number of duplicate indexes for the same image id
<a href="#">LLeftPanelRole</a>	Roles which are defined here but not implemented by <a href="#">ItemModel</a> Returns position of item in Left Light Table preview.
<a href="#">LRightPanelRole</a>	Returns position of item in Right Light Table preview.
<a href="#">SubclassRoles</a>	For use by subclasses
<a href="#">FilterModelRoles</a>	For use by filter models

## 6.938.2 Member Function Documentation

### 6.938.2.1 addItemInfo()

```
void Digikam::ItemModel::addItemInfo (
    const ItemInfo & info )
```

Main entry point for subclasses adding image infos to the model. If you list entries not unique per image id, you must add an `extraValue` so that every entry is unique by `imageId` and `extraValues`. Please note that these methods do not prevent addition of duplicate entries.

### 6.938.2.2 addItemInfoSynchronously()

```
void Digikam::ItemModel::addItemInfoSynchronously (
    const ItemInfo & info )
```

[addItemInfo\(\)](#) is asynchronous if a preprocessor is set. This method first adds the info, synchronously. Only afterwards, the preprocessor will have the opportunity to process it. This method also bypasses any incremental updates. Please note that these methods do not prevent addition of duplicate entries.

### 6.938.2.3 allRefreshingFinished

```
void Digikam::ItemModel::allRefreshingFinished ( ) [signal]
```

Signals that the model has finished currently with all scheduled refreshing, full or incremental, and all preprocessing. The model is in polished, clean situation right now.

### 6.938.2.4 clearItemInfos()

```
void Digikam::ItemModel::clearItemInfos ( )
```

Clears image infos and resets model.

### 6.938.2.5 ensureHasGroupedImages()

```
void Digikam::ItemModel::ensureHasGroupedImages (
    const ItemInfo & groupLeader )
```

Ensure that all images grouped on the given leader are contained in the model.

### 6.938.2.6 ensureHasItemInfo()

```
void Digikam::ItemModel::ensureHasItemInfo (
    const ItemInfo & info )
```

Add the given entries. Method returns immediately, the addition may happen later asynchronously. These methods prevent the addition of duplicate entries.

**6.938.2.7 imageChange**

```
void Digikam::ItemModel::imageChange (
    const ImageChangeset & ,
    const QItemSelection & ) [signal]
```

If an [ImageChangeset](#) affected indexes of this model with changes as set in `watchFlags()`, this signal contains the `changeset` and the affected indexes.

**6.938.2.8 imageInfo() [1/2]**

```
ItemInfo Digikam::ItemModel::imageInfo (
    const QModelIndex & index ) const
```

Returns the [ItemInfo](#) object, reference or image id from the underlying data pointed to by the index. If the index is not valid, `imageInfo` will return a null [ItemInfo](#), `imageId` will return 0, `imageInfoRef` must not be called with an invalid index.

**6.938.2.9 imageInfo() [2/2]**

```
ItemInfo Digikam::ItemModel::imageInfo (
    int row ) const
```

Returns the [ItemInfo](#) object, reference or image id from the underlying data of the given row (parent is the invalid `QModelIndex`, column is 0). Note that `imageInfoRef` will crash if index is invalid.

**6.938.2.10 imageInfosAboutToBeAdded**

```
void Digikam::ItemModel::imageInfosAboutToBeAdded (
    const QList< ItemInfo > & infos ) [signal]
```

Informs that `ItemInfos` will be added to the model. This signal is sent before the model data is changed and views are informed.

**6.938.2.11 imageInfosAboutToBeRemoved [1/2]**

```
void Digikam::ItemModel::imageInfosAboutToBeRemoved (
    const QList< ItemInfo > & infos ) [signal]
```

Informs that `ItemInfos` will be removed from the model. This signal is sent before the model data is changed and views are informed. Note: You need to explicitly enable sending of this signal. It is not sent in [clearItemInfos\(\)](#).

**6.938.2.12 imageInfosAboutToBeRemoved() [2/2]**

```
virtual void Digikam::ItemModel::imageInfosAboutToBeRemoved (
    int ,
    int ) [inline], [protected], [virtual]
```

Called before `rowsAboutToBeRemoved`

### 6.938.2.13 imageInfosAdded

```
void Digikam::ItemModel::imageInfosAdded (
    const QList< ItemInfo > & infos ) [signal]
```

Informs that ItemInfos have been added to the model. This signal is sent after the model data is changed and views are informed.

### 6.938.2.14 imageInfosCleared()

```
virtual void Digikam::ItemModel::imageInfosCleared ( ) [inline], [protected], [virtual]
```

Called when the internal storage is cleared

Reimplemented in [Digikam::ItemThumbnailModel](#).

### 6.938.2.15 imageInfosRemoved

```
void Digikam::ItemModel::imageInfosRemoved (
    const QList< ItemInfo > & infos ) [signal]
```

Informs that ItemInfos have been removed from the model. This signal is sent after the model data is changed and views are informed. \* Note: You need to explicitly enable sending of this signal. It is not sent in [clearItemInfos\(\)](#).

### 6.938.2.16 imageTagChange

```
void Digikam::ItemModel::imageTagChange (
    const ImageTagChangeset & ,
    const QItemSelection & ) [signal]
```

If an [ImageTagChangeset](#) affected indexes of this model, this signal contains the changeset and the affected indexes.

### 6.938.2.17 indexForItemInfo()

```
QModelIndex Digikam::ItemModel::indexForItemInfo (
    const ItemInfo & info ) const
```

Return the index for the given [ItemInfo](#) or id, if contained in this model.

### 6.938.2.18 indexForPath()

```
QModelIndex Digikam::ItemModel::indexForPath (
    const QString & filePath ) const
```

Returns the index or [ItemInfo](#) object from the underlying data for the given file path. This is fast if `keepsFilePathCache` is enabled. The file path is as returned by [ItemInfo.filePath\(\)](#). In case of multiple occurrences of the same file, the simpler variants return any one found first, use the QList methods to retrieve all occurrences.

### 6.938.2.19 isRefreshing()

```
bool Digikam::ItemModel::isRefreshing ( ) const
```

Returns true if this model is currently refreshing. For a preprocessor this means that, although the preprocessor may currently have processed all it got, more batches are to be expected.

### 6.938.2.20 preprocess

```
void Digikam::ItemModel::preprocess (
    const QList< ItemInfo > & infos,
    const QList< QVariant > & ) [signal]
```

Connect to this signal only if you are the current preprocessor.

### 6.938.2.21 readyForIncrementalRefresh

```
void Digikam::ItemModel::readyForIncrementalRefresh ( ) [signal]
```

Signals that the model is right now ready to start an incremental refresh. This is guaranteed only for the scope of emitting this signal.

### 6.938.2.22 removeIndex()

```
void Digikam::ItemModel::removeIndex (
    const QModelIndex & indexes )
```

Directly remove the given indexes or infos from the model.

### 6.938.2.23 requestIncrementalRefresh()

```
void Digikam::ItemModel::requestIncrementalRefresh ( ) [protected]
```

As soon as the model is ready to start an incremental refresh, the signal [readyForIncrementalRefresh\(\)](#) will be emitted. The signal will be emitted inline if the model is ready right now.

### 6.938.2.24 retrieveItemInfo()

```
ItemInfo Digikam::ItemModel::retrieveItemInfo (
    const QModelIndex & index ) [static]
```

Retrieves the `imageInfo` object from the `data()` method of the given index. The index may be from a `QSortFilterProxyModel` as long as an `ItemModel` is at the end.

### 6.938.2.25 setItemInfos()

```
void Digikam::ItemModel::setItemInfos (
    const QList< ItemInfo > & infos )
```

Clears and adds the infos.

### 6.938.2.26 setKeepsFilePathCache()

```
void Digikam::ItemModel::setKeepsFilePathCache (
    bool keepCache )
```

If a cache is kept, lookup by file path is fast, without a cache it is O(n). Default is false.

### 6.938.2.27 setPreprocessor()

```
void Digikam::ItemModel::setPreprocessor (
    QObject *const processor )
```

Install an object as a preprocessor for ItemInfos added to this model. For every QList of ItemInfos added to addItemInfo, the signal [preprocess\(\)](#) will be emitted. The preprocessor may process the items and shall then readd them by calling [reAddItemInfos\(\)](#). It may take some time to process. It shall discard any held infos when the [modelReset\(\)](#) signal is sent. It shall call [readdFinished\(\)](#) when no reset occurred and all infos on the way have been readded. This means that only after calling this method, you shall make three connections (preprocess -> your slot, your signal -> [reAddItemInfos](#), your signal -> [reAddingFinished](#)) and make or already hold a connection [modelReset\(\)](#) -> your slot. There is only one preprocessor at a time, a previously set object will be disconnected.

### 6.938.2.28 setSendRemovalSignals()

```
void Digikam::ItemModel::setSendRemovalSignals (
    bool send )
```

Enable sending of [imageInfosAboutToBeRemoved](#) and [imageInfosRemoved](#) signals. Default: false

### 6.938.2.29 setWatchFlags()

```
void Digikam::ItemModel::setWatchFlags (
    const DatabaseFields::Set & set )
```

Set a set of database fields to watch. If either of these is changed, [dataChanged\(\)](#) will be emitted. Default is no flag (no signal will be emitted).

### 6.938.2.30 startIncrementalRefresh()

```
void Digikam::ItemModel::startIncrementalRefresh ( ) [protected]
```

Starts an incremental refresh operation. You shall only call this method from a slot connected to [readyForIncrementalRefresh\(\)](#). To initiate an incremental refresh, call [requestIncrementalRefresh\(\)](#).

### 6.938.2.31 startRefresh()

```
void Digikam::ItemModel::startRefresh ( ) [protected]
```

Subclasses that add ItemInfos in batches shall call [startRefresh\(\)](#) when they start sending batches and [finishRefresh\(\)](#) when they have finished. No incremental refreshes will be started while listing. A [clearItemInfos\(\)](#) always stops listing, calling [finishRefresh\(\)](#) is then not necessary.

### 6.939.1 Constructor & Destructor Documentation

#### 6.939.1.1 ItemPosition() [1/2]

```
Digikam::ItemPosition::ItemPosition ( )
```

Creates a null [ItemPosition](#) object

### 6.939.1.2 ItemPosition() [2/2]

```
Digikam::ItemPosition::ItemPosition (
    qlonglong imageId ) [explicit]
```

Creates an [ItemPosition](#) object for the given image. The information is read from the database.

## 6.939.2 Member Function Documentation

### 6.939.2.1 altitude()

```
double Digikam::ItemPosition::altitude ( ) const
```

The altitude in meters

### 6.939.2.2 altitudeFormatted()

```
QString Digikam::ItemPosition::altitudeFormatted ( ) const
```

Returns the altitude formatted in a user-presentable way in the form "43.45m"

### 6.939.2.3 apply()

```
void Digikam::ItemPosition::apply ( )
```

Apply all changes made to this object. (Also called from destructor)

### 6.939.2.4 isEmpty()

```
bool Digikam::ItemPosition::isEmpty ( ) const
```

An object is empty if no entry exists in the [ItemPosition](#) table for the referenced image, or if the object is null. An empty object is empty even if values have been set; it becomes not empty after calling [apply\(\)](#).

### 6.939.2.5 latitude()

```
QString Digikam::ItemPosition::latitude ( ) const
```

Returns latitude/longitude in the format as described by the XMP specification as "GPSCoordinate": A Text value in the form ?DDD,MM,SSk? or ?DDD,MM.mmk?. This provides lossless storage.

### 6.939.2.6 latitudeFormatted()

```
QString Digikam::ItemPosition::latitudeFormatted ( ) const
```

Returns the latitude/longitude in a user-presentable version, in the form "30°45'55.123" East"

### 6.939.2.7 latitudeNumber()

```
double Digikam::ItemPosition::latitudeNumber ( ) const
```

Returns latitude/longitude as a double in degrees. North and East have a positive sign, South and West negative. This provides high precision, with the usual floating point concerns, and possible problems finding the exact text form when converting *back* to fractions.

### 6.939.2.8 latitudeUserPresentableNumbers()

```
bool Digikam::ItemPosition::latitudeUserPresentableNumbers (
    int * degrees,
    int * minutes,
    double * seconds,
    char * directionReference )
```

Returns latitude/longitude as user-presentable numbers. This means that degrees and minutes are integer, the seconds fractional. Direction reference is 'N'/'S', 'E'/'W' resp. This is for the purpose of presenting to the user, there are no guarantees on precision. Returns true if the values have been changed.

### 6.939.2.9 remove()

```
void Digikam::ItemPosition::remove ( )
```

Removes the whole data set for the referenced image from the database. This object and any [ItemPosition](#) object created later will be empty.

### 6.939.2.10 removeAltitude()

```
void Digikam::ItemPosition::removeAltitude ( )
```

Removes the altitude for the referenced image from the database.

### 6.939.2.11 setAltitude()

```
void Digikam::ItemPosition::setAltitude (
    double altitude )
```

Set the altitude in meters

### 6.939.2.12 setLatitude() [1/2]

```
bool Digikam::ItemPosition::setLatitude (
    const QString & latitude )
```

Sets the latitude/longitude from the GPSCoordinate string as described by XMP. Returns true if the format is accepted.

**6.939.2.13 setLatitude()** [2/2]

```
bool Digikam::ItemPosition::setLatitude (
    double latitudeNumber )
```

Sets the latitude/longitude from a double floating point number, as described for [latitudeNumber\(\)](#) above. Returns true if the value is valid and accepted.

## 6.940 Digikam::ItemPreviewCanvas Class Reference

## 6.948.1 Member Function Documentation

### 6.948.1.1 aspectRatioToString()

```
bool Digikam::ItemPropertiesTab::aspectRatioToString (
    int width,
    int height,
    QString & arString ) [static]
```

Write a string with aspect ratio information formatted

### 6.948.1.2 humanReadableBytesCount()

```
QString Digikam::ItemPropertiesTab::humanReadableBytesCount (
    quint64 bytes,
    bool si = false ) [static]
```

Return an human readable string of file size in 'bytes'. If 'si' is true, a decade of bytes is interpreted on base of 1000 byte, else 1024.

### 6.948.1.3 permissionsString()

```
QString Digikam::ItemPropertiesTab::permissionsString (
    const QFileInfo & fi ) [static]
```

Return file permissions string.

### 6.948.1.4 shortenedMakeInfo()

```
void Digikam::ItemPropertiesTab::shortenedMakeInfo (
    QString & make ) [static]
```

This methods shortens make an model camera info to prevent bloating GUI See bug #265231 for details.

### 6.948.1.5 shortenedTagPaths()

```
QStringList Digikam::ItemPropertiesTab::shortenedTagPaths (
    const QStringList & tagPaths,
    QList< QVariant > * identifiers = nullptr ) [static]
```

Shortens the tag paths by sorting and then cutting identical paths from the second and following paths (only the first item gives the full path). If you want to retain information about which tag path is sorted where, you can optionally give a QVariant list. This list shall contain an identifier for the tag path at the same index and will be resorted as the returned list.

- static void **addSqlOperator** (QString &sql, SearchXml::Operator op, bool isFirst)
- static void **addSqlRelation** (QString &sql, SearchXml::Relation rel)

### Protected Member Functions

- bool **buildField** (QString &sql, [SearchXmlCachingReader](#) &reader, const QString &name, QList< QVariant > \*boundValues, [ItemQueryPostHooks](#) \*const hooks) const
- void **buildGroup** (QString &sql, [SearchXmlCachingReader](#) &reader, QList< QVariant > \*boundValues, [ItemQueryPostHooks](#) \*const hooks) const
- QString **possibleDate** (const QString &str, bool &exact) const

### Protected Attributes

- bool **m\_imageTagPropertiesJoined** = false
- QString **m\_longMonths** [12]
- QString **m\_shortMonths** [12]

## 6.951.1 Member Function Documentation

### 6.951.1.1 setImageTagPropertiesJoined()

```
void Digikam::ItemQueryBuilder::setImageTagPropertiesJoined (
    bool isJoined )
```

Use for special queries where ImageTagProperties table is JOIN'ed. (Default: false)

## 6.952 Digikam::ItemQueryPostHook Class Reference

### Public Member Functions

- virtual bool **checkPosition** (double, double)
- [ItemQueryPostHook](#) ()=default

## 6.952.1 Constructor & Destructor Documentation

### 6.952.1.1 ItemQueryPostHook()

```
Digikam::ItemQueryPostHook::ItemQueryPostHook ( ) [default]
```

This is the single hook, ItemQueryPostHookS is the container.

## 6.953 Digikam::ItemQueryPostHooks Class Reference

### Public Member Functions

- void [addHook](#) ([ItemQueryPostHook](#) \*const hook)
- bool [checkPosition](#) (double latitudeNumber, double longitudeNumber)

### Protected Attributes

- [QList](#)< [ItemQueryPostHook](#) \* > **m\_postHooks**

## 6.953.1 Member Function Documentation

### 6.953.1.1 addHook()

```
void Digikam::ItemQueryPostHooks::addHook (
    ItemQueryPostHook *const hook )
```

Called by [ItemQueryBuilder](#). Ownership of the object is passed.

### 6.953.1.2 checkPosition()

```
bool Digikam::ItemQueryPostHooks::checkPosition (
    double latitudeNumber,
    double longitudeNumber )
```

Call this method after passing the object to buildQuery and executing the statement. Returns true if the search is matched.

## 6.954 Digikam::ItemRatingOverlay Class Reference

- QAbstractItemView \* [m\\_view](#) = nullptr

## 6.954.1 Member Function Documentation

### 6.954.1.1 [createWidget\(\)](#)

```
QWidget * Digikam::ItemRatingOverlay::createWidget ( ) [override], [protected], [virtual]
```

Create your widget here. When creating the object, pass [parentWidget\(\)](#) as parent widget. Ownership of the object is passed. It will be deleted in [setActive\(false\)](#).

Implements [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.954.1.2 [hide\(\)](#)

```
void Digikam::ItemRatingOverlay::hide ( ) [override], [protected], [virtual]
```

Called when the widget shall be hidden (mouse cursor left index, viewport, uninstalled etc.). Default implementation [hide\(\)](#)s [m\\_widget](#).

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.954.1.3 setActive()

```
void Digikam::ItemRatingOverlay::setActive (
    bool active ) [override], [protected], [virtual]
```

If active is true, this will call [createWidget\(\)](#), initialize the widget for use, and setup connections for the virtual slots. If active is false, this will delete the widget and disconnect all signal from model and view to this object (!)

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.954.1.4 slotEntered()

```
void Digikam::ItemRatingOverlay::slotEntered (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Default implementation shows the widget iff the index is valid and checkIndex returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.954.1.5 visualChange()

```
void Digikam::ItemRatingOverlay::visualChange ( ) [override], [protected], [virtual]
```

Called when any change from the delegate occurs - when the overlay is installed, when size hints, styles or fonts change

Reimplemented from [Digikam::ItemDelegateOverlay](#).

### 6.954.1.6 widgetEnterEvent()

```
void Digikam::ItemRatingOverlay::widgetEnterEvent ( ) [override], [protected], [virtual]
```

Called when a QEvent::Enter resp. QEvent::Leave event for the widget is received. The default implementation does nothing.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.954.1.7 widgetLeaveEvent()

```
void Digikam::ItemRatingOverlay::widgetLeaveEvent ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 6.955 Digikam::ItemRotateOverlay Class Reference

- QAbstractItemView \* [m\\_view](#) = nullptr

## 6.955.1 Member Function Documentation

### 6.955.1.1 checkIndex()

```
bool Digikam::ItemRotateOverlay::checkIndex (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Return true here if you want to show the overlay for the given index. The default implementation returns true.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

### 6.955.1.2 createButton()

```
ItemViewHoverButton * Digikam::ItemRotateOverlay::createButton ( ) [override], [protected],
[virtual]
```

Create your widget here. Pass view() as parent.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 6.955.1.3 setActive()

```
void Digikam::ItemRotateOverlay::setActive (
    bool active ) [override], [virtual]
```

Will call [createButton\(\)](#).

Reimplemented from [Digikam::HoverButtonDelegateOverlay](#).

### 6.955.1.4 updateButton()

```
void Digikam::ItemRotateOverlay::updateButton (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Called when a new index is entered. Reposition your button here, adjust and store state.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 6.955.1.5 widgetEnterEvent()

```
void Digikam::ItemRotateOverlay::widgetEnterEvent ( ) [override], [protected], [virtual]
```

Called when a QEvent::Enter resp. QEvent::Leave event for the widget is received. The default implementation does nothing.

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 6.955.1.6 widgetLeaveEvent()

```
void Digikam::ItemRotateOverlay::widgetLeaveEvent ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::AbstractWidgetDelegateOverlay](#).

## 6.956 Digikam::ItemRotateOverlayButton Class Reference

Inheritance diagram for Digikam::ItemRotateOverlayButton:

### Public Member Functions

- void [refreshIcon](#) ()
- void [setFadingValue](#) (int value)
- void [startFading](#) ()
- void [stopFading](#) ()

## 6.956.1 Member Function Documentation

### 6.956.1.1 icon()

```
QIcon Digikam::ItemRotateOverlayButton::icon ( ) [override], [protected], [virtual]
```

Return your icon here. Will be queried again on toggle.

Implements [Digikam::ItemViewHoverButton](#).

### 6.956.1.2 sizeHint()

```
QSize Digikam::ItemRotateOverlayButton::sizeHint ( ) const [override], [virtual]
```

Reimplement to match the size of your icon

Implements [Digikam::ItemViewHoverButton](#).

### 6.956.1.3 updateToolTip()

```
void Digikam::ItemRotateOverlayButton::updateToolTip ( ) [override], [protected], [virtual]
```

Optionally update tooltip here. Will be called again on state change.

Reimplemented from [Digikam::ItemViewHoverButton](#).

## 6.958.1 Constructor & Destructor Documentation

### 6.958.1.1 ItemScanner() [1/3]

```
Digikam::ItemScanner::ItemScanner (
    const QFileInfo & info,
    const ItemScanInfo & Iteminfo )
```

Construct an [ItemScanner](#) object from an existing QFileInfo and [ItemScanInfo](#) object. This constructor shall be used with [fileModified\(\)](#) or [fullScan\(\)](#).

### 6.958.1.2 ItemScanner() [2/3]

```
Digikam::ItemScanner::ItemScanner (
    const QFileInfo & info ) [explicit]
```

Construct an [ItemScanner](#) from an existing QFileInfo object. Use this constructor if you intend to call [newFile\(\)](#).

### 6.958.1.3 ItemScanner() [3/3]

```
Digikam::ItemScanner::ItemScanner (
    qlonglong imageid ) [explicit]
```

Construct an [ItemScanner](#) for an image in the database. File info, Scan info and the category will be retrieved from the database.

## 6.958.2 Member Function Documentation

### 6.958.2.1 cleanScan()

```
void Digikam::ItemScanner::cleanScan ( )
```

This is the same as [rescan\(\)](#) but the database metadata will be cleaned up if the corresponding metadata write option is enabled.

### 6.958.2.2 commit()

```
void Digikam::ItemScanner::commit ( )
```

Commits the scanned information to the database. You must call this after scanning was done for any changes to take effect. Only this method will perform write operations to the database.

### 6.958.2.3 copiedFrom()

```
void Digikam::ItemScanner::copiedFrom (
    int albumId,
    qlonglong srcId )
```

Similar to [newFile](#). Call this when you want [ItemScanner](#) to add a new file to the database which is a copy of another file, copying attributes from the src and rescanning other attributes as appropriate. Give the id of the album of the new file, and the id of the src file.

### 6.958.2.4 creationDateFromFilesystem()

```
QDateTime Digikam::ItemScanner::creationDateFromFilesystem (
    const QFileInfo & info ) [static]
```

Returns a suitable creation date from file system information. Use this as a fallback if metadata is not available.

### 6.958.2.5 fileModified()

```
void Digikam::ItemScanner::fileModified ( )
```

Call this when you have detected that a file in the database has been modified on disk. Only two groups of fields will be updated in the database:

- filesystem specific properties (those that signaled you that the file has been modified because their state on disk differed from the state in the database)
- image specific properties, for which a difference in the database independent from the actual file does not make sense (width/height, bit depth, color model)

### 6.958.2.6 fillCommonContainer()

```
void Digikam::ItemScanner::fillCommonContainer (
    qlonglong imageid,
    ImageCommonContainer *const container ) [static]
```

Returns File-metadata container with user-presentable information. These methods provide the reverse service: Not writing into the db, but reading from the db.

### 6.958.2.7 fillVideoMetadataContainer()

```
void Digikam::ItemScanner::fillVideoMetadataContainer (
    qlonglong imageid,
    VideoMetadataContainer *const container ) [static]
```

Returns Video container with user-presentable information. These methods provide the reverse service: Not writing into the db, but reading from the db.

### 6.958.2.8 formatToString()

```
QString Digikam::ItemScanner::formatToString (
    const QString & format ) [static]
```

Helper method to translate enum values to user presentable strings

### 6.958.2.9 hasHistoryToResolve()

```
bool Digikam::ItemScanner::hasHistoryToResolve ( ) const
```

Returns true if this file has been marked as needing history resolution at a later stage

### 6.958.2.10 id()

```
qlonglong Digikam::ItemScanner::id ( ) const
```

Returns the image id of the scanned file, if (yet) available.

### 6.958.2.11 iptcCorePropertyName()

```
QString Digikam::ItemScanner::iptcCorePropertyName (
    MetadataInfo::Field field ) [static]
```

Helper method to return official property name by which IPTC core properties are stored in the database ([ItemCopyright](#) and [ImageProperties](#) table). Allowed arguments: All `MetadataInfo::Fields` starting with "IptcCore..."

### 6.958.2.12 itemScanInfo()

```
const ItemScanInfo & Digikam::ItemScanner::itemScanInfo ( ) const
```

Provides access to the information retrieved by scanning. The validity depends on the previously executed scan.

### 6.958.2.13 loadFromDisk()

```
void Digikam::ItemScanner::loadFromDisk ( )
```

Loads data from disk (metadata, image file properties). This method is called from any of the main entry points above. You can call it before if you want to control the time when it is executed. Calling it a second time with data already loaded will do nothing.

### 6.958.2.14 newFile()

```
void Digikam::ItemScanner::newFile (
    int albumId )
```

Call this when you want [ItemScanner](#) to add a new file to the database and read all information into the database.

### 6.958.2.15 newFileFullScan()

```
void Digikam::ItemScanner::newFileFullScan (
    int albumId )
```

Call this when you want [ItemScanner](#) to add a new file to the database and read all information into the database. This variant will not use the unique hash to establish identify with an existing entry, but read all information newly from the file.

### 6.958.2.16 rescan()

```
void Digikam::ItemScanner::rescan ( )
```

Call this to take an existing image in the database, but re-read all information from the file into the database, possibly overwriting information there.

### 6.958.2.17 resolvedImageHistory()

```
DImageHistory Digikam::ItemScanner::resolvedImageHistory (
    const DImageHistory & history,
    bool mustBeAvailable = false ) [static]
```

All referred images of the given history will be resolved. In the returned history, the actions are the same, while each referred image actually exists in the collection (if `mustBeAvailable` is true, it is even in a currently available collection). That means the number of referred images may be less or greater than initially. Note that this history may have peculiar properties, like multiple Original or Current entries (if the source entry resolves to multiple collection images), so this history is only for internal use, not for storage.

### 6.958.2.18 resolveHistoryImageId()

```
QList< qlonglong > Digikam::ItemScanner::resolveHistoryImageId (
    const HistoryImageId & historyId ) [static]
```

Returns all image ids fulfilling the given image id.

### 6.958.2.19 resolveImageHistory()

```
bool Digikam::ItemScanner::resolveImageHistory (
    qlonglong id,
    QList< qlonglong > * needTaggingIds = nullptr ) [static]
```

Resolves the image history of the image id by filling the ImageRelations table for all contained referred images. If `needTaggingIds` is given, all ids marked for needing tagging of the history graph are added.

### 6.958.2.20 sameReferredImage()

```
bool Digikam::ItemScanner::sameReferredImage (
    const HistoryImageId & id1,
    const HistoryImageId & id2 ) [static]
```

Determines if the two ids refer to the same image. Does not check if such a referred image really exists.

### 6.958.2.21 setCategory()

```
void Digikam::ItemScanner::setCategory (
    DatabaseItem::Category category )
```

Inform the scanner about the category of the file. Required at least for `newFile()` calls, recommended for calls with the first constructor above as well.

### 6.958.2.22 sortByProximity()

```
void Digikam::ItemScanner::sortByProximity (
    QList< ItemInfo > & infos,
    const ItemInfo & subject ) [static]
```

Sort a list of infos by proximity to the given subject. Infos are near if they are e.g. in the same album. They are not near if they are e.g. in different collections.

### 6.958.2.23 tagItemHistoryGraph()

```
void Digikam::ItemScanner::tagItemHistoryGraph (
    qulonglong id ) [static]
```

Takes the history graph reachable from the given image, and assigns versioning tags to all entries based on history image types and graph structure

## 6.961.1 Member Function Documentation

### 6.961.1.1 createButton()

```
ItemViewHoverButton * Digikam::ItemSelectionOverlay::createButton ( ) [override], [protected], [virtual]
```

Create your widget here. Pass view() as parent.

Implements [Digikam::HoverButtonDelegateOverlay](#).

### 6.961.1.2 setActive()

```
void Digikam::ItemSelectionOverlay::setActive (
    bool active ) [override], [virtual]
```

Will call [createButton\(\)](#).

Reimplemented from [Digikam::HoverButtonDelegateOverlay](#).

### 6.961.1.3 updateButton()

```
void Digikam::ItemSelectionOverlay::updateButton (
    const QModelIndex & index ) [override], [protected], [virtual]
```

Called when a new index is entered. Reposition your button here, adjust and store state.

Implements [Digikam::HoverButtonDelegateOverlay](#).

## 6.962 Digikam::ItemSelectionOverlayButton Class Reference

Inheritance diagram for Digikam::ItemSelectionOverlayButton:

## 6.962.1 Member Function Documentation

### 6.962.1.1 icon()

```
QIcon Digikam::ItemSelectionOverlayButton::icon ( ) [override], [protected], [virtual]
```

Return your icon here. Will be queried again on toggle.

Implements [Digikam::ItemViewHoverButton](#).

### 6.962.1.2 sizeHint()

```
QSize Digikam::ItemSelectionOverlayButton::sizeHint ( ) const [override], [virtual]
```

Reimplement to match the size of your icon

Implements [Digikam::ItemViewHoverButton](#).

### 6.962.1.3 updateToolTip()

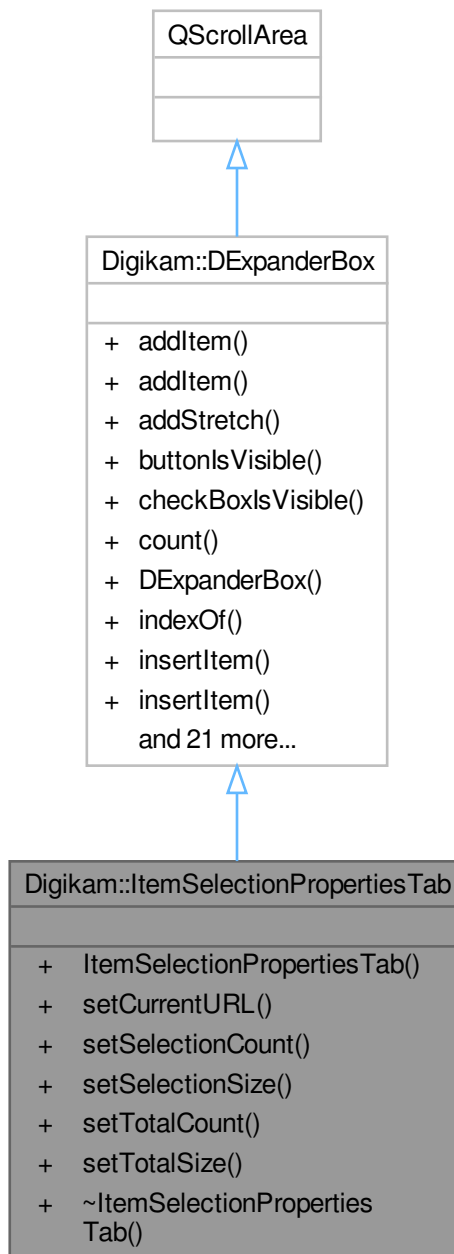

```
void Digikam::ItemSelectionOverlayButton::updateToolTip ( ) [override], [protected], [virtual]
```

Optionally update tooltip here. Will be called again on state change.

Reimplemented from [Digikam::ItemViewHoverButton](#).

## 6.963 Digikam::ItemSelectionPropertiesTab Class Reference

## 6.966.1 Member Enumeration Documentation

### 6.966.1.1 CategorizationMode

```
enum Digikam::ItemSortSettings::CategorizationMode
```

#### Enumerator

NoCategories	categorization switched off
OneCategory	all items in one global category

### 6.966.1.2 SortOrder

```
enum Digikam::ItemSortSettings::SortOrder
```

#### Enumerator

DefaultOrder	sort order depends on the chosen sort role
--------------	--

### 6.966.1.3 SortRole

```
enum Digikam::ItemSortSettings::SortRole
```

#### Enumerator

SortByImageSize	pixel number
SortByAspectRatio	width / height * 100000
SortByFaces	count of unconfirmed faces

## 6.966.2 Member Function Documentation

### 6.966.2.1 compare()

```
int Digikam::ItemSortSettings::compare (
    const ItemInfo & left,
    const ItemInfo & right ) const
```

Compares the ItemInfos left and right. Return -1 if left is less than right, 1 if left is greater than right, and 0 if left equals right comparing the current sort role's value. Adheres to set sort role and sort order.

### 6.966.2.2 compareByOrder()

```
static int Digikam::ItemSortSettings::compareByOrder (
    int compareResult,
    Qt::SortOrder sortOrder ) [inline], [static]
```

Takes a typical result from a compare method (0 is equal, -1 is less than, 1 is greater than) and applies the given sort order to it.

### 6.966.2.3 compareCategories()

```
int Digikam::ItemSortSettings::compareCategories (
    const ItemInfo & left,
    const ItemInfo & right,
    const FaceTagsIface & leftFace,
    const FaceTagsIface & rightFace ) const
```

Compares the categories of left and right. Return -1 if left is less than right, 0 if both fall in the same category, and 1 if left is greater than right. Adheres to set categorization mode and current category sort order. Face passed in to allow Categorization by Faces. Pass in an empty Face if not needed.

### 6.966.2.4 compareValue()

```
template<typename T >
static int Digikam::ItemSortSettings::compareValue (
    const T & a,
    const T & b ) [inline], [static]
```

Returns the usual compare result of -1, 0, or 1 for lessThan, equals and greaterThan.

### 6.966.2.5 lessThan() [1/2]

```
bool Digikam::ItemSortSettings::lessThan (
    const ItemInfo & left,
    const ItemInfo & right ) const
```

Returns true if left is less than right. Adheres to current sort role and sort order.

### 6.966.2.6 lessThan() [2/2]

```
bool Digikam::ItemSortSettings::lessThan (
    const QVariant & left,
    const QVariant & right ) const
```

Returns true if left QVariant is less than right. Adheres to current sort role and sort order. Use for extraValue, if necessary.

### 6.966.2.7 lessThanByOrder()

```
template<typename T >
static bool Digikam::ItemSortSettings::lessThanByOrder (
    const T & a,
    const T & b,
    Qt::SortOrder sortOrder ) [inline], [static]
```

Returns  $a < b$  if sortOrder is Ascending, or  $b < a$  if order is descending.

### 6.966.2.8 naturalCompare()

```
static int Digikam::ItemSortSettings::naturalCompare (
    const QString & a,
    const QString & b,
    Qt::SortOrder sortOrder,
    Qt::CaseSensitivity caseSensitive = Qt::CaseSensitive,
    bool natural = true ) [inline], [static]
```

Compares the two string by natural comparison and adheres to given sort order

### 6.966.2.9 watchFlags()

```
DatabaseFields::Set Digikam::ItemSortSettings::watchFlags ( ) const
```

Returns database fields a change in which would affect the current sorting.

## 6.967 Digikam::ItemTagPair Class Reference

### Static Public Member Functions

- static QList< [ItemTagPair](#) > [availablePairs](#) (const [ItemInfo](#) &info)
- static QList< [ItemTagPair](#) > [availablePairs](#) (qlonglong imageld)

### 6.967.1 Constructor & Destructor Documentation

#### 6.967.1.1 ItemTagPair() [1/2]

```
Digikam::ItemTagPair::ItemTagPair ( )
```

This class provides a wrapper over the Database methods to access the properties of tag / image association. It is meant to be a short-lived object, it does not listen to external database changes. Creates a null pair.

### 6.967.1.2 ItemTagPair() [2/2]

```
Digikam::ItemTagPair::ItemTagPair (
    qlonglong imageId,
    int tagId )
```

Access the properties of the given image - tag pair

## 6.967.2 Member Function Documentation

### 6.967.2.1 addProperty()

```
void Digikam::ItemTagPair::addProperty (
    const QString & key,
    const QString & value )
```

Adds the given property. Does not change any previous occurrences of this property, allowing multiple properties with the same key. (duplicates of same key *and* value are not added, though)

### 6.967.2.2 assignTag()

```
void Digikam::ItemTagPair::assignTag ( )
```

Assigns the tag to the image

### 6.967.2.3 availablePairs()

```
QList< ItemTagPair > Digikam::ItemTagPair::availablePairs (
    qlonglong imageId ) [static]
```

Return all pairs for the given image for which entries exist. This list of tags may not be identical to the tags assigned to the image.

### 6.967.2.4 isAssigned()

```
bool Digikam::ItemTagPair::isAssigned ( ) const
```

Returns if the tag is assigned to the image

### 6.967.2.5 unAssignTag()

```
void Digikam::ItemTagPair::unAssignTag ( )
```

Removes the tag from the image

## 6.968 Digikam::ItemThumbnailBar Class Reference

## Additional Inherited Members

### Signals inherited from [Digikam::ItemCategorizedView](#)

- void **currentChanged** (const [ItemInfo](#) &info)
- void **deselected** (const QList< [ItemInfo](#) > &nowDeselectedInfos)
 

*Emitted when items are deselected. There may be other selected infos left. This signal is not emitted when the model is reset; then only selectionCleared is emitted.*
- void **imageActivated** (const [ItemInfo](#) &info)
 

*Emitted when the given image is activated. Info is never null.*
- void **modelChanged** ()
 

*Emitted when a new model is set.*
- void **selected** (const QList< [ItemInfo](#) > &newSelectedInfos)
 

*Emitted when new items are selected. The parameter includes only the newly selected infos, there may be other already selected infos.*

### Signals inherited from [Digikam::ItemViewCategorized](#)

- void [clicked](#) (const QMouseEvent \*e, const QModelIndex &index)
- void **entered** (const QMouseEvent \*e, const QModelIndex &index)
- void [keyPressed](#) (QKeyEvent \*e)
- void [selectionChanged](#) ()
- void [selectionCleared](#) ()
- void [viewportClicked](#) (const QMouseEvent \*e)
- void **zoomInStep** ()
- void **zoomOutStep** ()

### Protected Slots inherited from [Digikam::ItemCategorizedView](#)

- void **slotCurrentUrlTimer** ()
- void **slotItemInfosAdded** ()

### Protected Slots inherited from [Digikam::ItemViewCategorized](#)

- void **layoutAboutToBeChanged** ()
- void **layoutWasChanged** ()

## 6.968.1 Member Function Documentation

### 6.968.1.1 hasHiddenGroupedImages()

```
bool Digikam::ItemThumbnailBar::hasHiddenGroupedImages (
    const ItemInfo & ) const [override], [protected], [virtual]
```

Reimplemented from [Digikam::GroupingViewImplementation](#).

### 6.968.1.2 setModelsFiltered()

```
void Digikam::ItemThumbnailBar::setModelsFiltered (
    ItemModel * model,
    ImageSortFilterModel * filterModel )
```

This installs a duplicate filter model, if the [ItemModel](#) may contain duplicates. Otherwise, just use `setModels()`.

### 6.968.1.3 setScrollBarPolicy()

```
void Digikam::ItemThumbnailBar::setScrollBarPolicy (
    Qt::ScrollBarPolicy policy )
```

Sets the policy always for the one scroll bar which is relevant, depending on orientation.

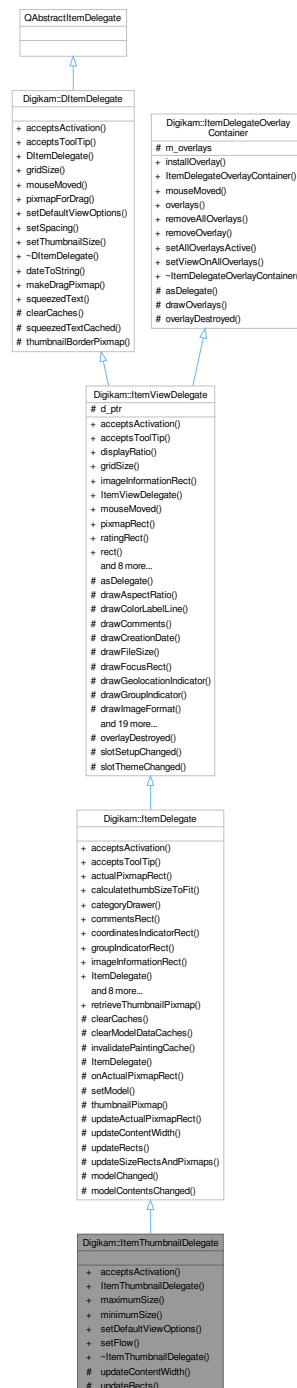

### 6.968.1.4 slotSetupChanged()

```
void Digikam::ItemThumbnailBar::slotSetupChanged ( ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::ItemViewCategorized](#).

## 6.969.1 Member Function Documentation

### 6.969.1.1 `acceptsActivation()`

```
bool Digikam::ItemThumbnailDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect ) const [override], [virtual]
```

Reimplemented from [Digikam::ItemDelegate](#).

### 6.969.1.2 `maximumSize()`

```
int Digikam::ItemThumbnailDelegate::maximumSize ( ) const
```

Returns the minimum or maximum viewport size in the limiting dimension, width or height, depending on current flow.

### 6.969.1.3 `setDefaultViewOptions()`

```
void Digikam::ItemThumbnailDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

Style option with standard values to use for cached rendering. `option.rect` shall be the viewport rectangle. Call on resize, font change.

Reimplemented from [Digikam::ItemDelegate](#).

#### 6.969.1.4 updateContentWidth()

```
void Digikam::ItemThumbnailDelegate::updateContentWidth ( ) [override], [protected], [virtual]
```

Reimplement this to set contentWidth. This is the maximum width of all content rectangles, typically excluding margins on both sides.

Reimplemented from [Digikam::ItemDelegate](#).

#### 6.969.1.5 updateRects()

```
void Digikam::ItemThumbnailDelegate::updateRects ( ) [override], [protected], [virtual]
```

In a subclass, you need to implement this method to set up the rects for drawing. The paint() method operates depending on these rects.

Implements [Digikam::ItemDelegate](#).

## 6.971.1 Constructor & Destructor Documentation

### 6.971.1.1 ItemThumbnailModel()

```
Digikam::ItemThumbnailModel::ItemThumbnailModel (
    QWidget *const parent ) [explicit]
```

An [ItemModel](#) that supports thumbnail loading. You need to set a [ThumbnailLoadThread](#) to enable thumbnail loading. Adjust the thumbnail size to your needs. Note that `setKeepsFilePathCache` is enabled per default.

## 6.971.2 Member Function Documentation

### 6.971.2.1 data()

```
QVariant Digikam::ItemThumbnailModel::data (
    const QModelIndex & index,
    int role = Qt::DisplayRole ) const [override]
```

Handles the ThumbnailRole. If the pixmap is available, returns it in the QVariant. If it still needs to be loaded, returns a null QVariant and emits `thumbnailAvailable()` as soon as it is available.

### 6.971.2.2 imageInfosCleared()

```
void Digikam::ItemThumbnailModel::imageInfosCleared ( ) [override], [protected], [virtual]
```

Called when the internal storage is cleared

Reimplemented from [Digikam::ItemModel](#).

### 6.971.2.3 preloadThumbnails

```
void Digikam::ItemThumbnailModel::preloadThumbnails (
    const QList< ItemInfo > & infos ) [slot]
```

Preload thumbnail for the given infos resp. indexes. Note: Use `setPreloadThumbnails` to automatically preload all entries in the model. Note: This only ensures thumbnail generation. It is not guaranteed that pixmaps are stored in the cache. For thumbnails that are expect to be drawn immediately, include them in `prepareThumbnails()`. Note: Stops preloading of previously added thumbnails.

#### 6.971.2.4 setData()

```
bool Digikam::ItemThumbnailModel::setData (
    const QModelIndex & index,
    const QVariant & value,
    int role = Qt::DisplayRole ) [override]
```

You can override the current thumbnail size by giving an integer value for ThumbnailRole. Set a null QVariant to use the thumbnail size set by [setThumbnailSize\(\)](#) again. The index given here is ignored for this purpose.

#### 6.971.2.5 setEmitDataChanged()

```
void Digikam::ItemThumbnailModel::setEmitDataChanged (
    bool emitSignal )
```

Enable emitting dataChanged() when a thumbnail becomes available. The thumbnailAvailable() signal will be emitted in any case. Default is true.

#### 6.971.2.6 setPreloadThumbnails()

```
void Digikam::ItemThumbnailModel::setPreloadThumbnails (
    bool preload )
```

Enable preloading of thumbnails: If preloading is enabled, for every entry in the model a thumbnail generation is started. Default: false.

#### 6.971.2.7 setThumbnailLoadThread()

```
void Digikam::ItemThumbnailModel::setThumbnailLoadThread (
    ThumbnailLoadThread *const thread )
```

Enable thumbnail loading and set the thread that shall be used. The thumbnail size of this thread will be adjusted.

## 6.972 Digikam::ItemVersionsModel Class Reference

### 6.973.1 Member Function Documentation

#### 6.973.1.1 clicked

```
void Digikam::ItemViewCategorized::clicked (
    const QMouseEvent * e,
    const QModelIndex & index ) [signal]
```

For overlays: Like the respective parent class signals, but with additional info. Do not change the mouse events.

#### 6.973.1.2 filterModel()

```
virtual QSortFilterProxyModel * Digikam::ItemViewCategorized::filterModel ( ) const [pure virtual]
```

Implemented in [ShowFoto::ShowfotoCategorizedView](#), and [Digikam::ImportCategorizedView](#).

#### 6.973.1.3 indexForCategoryAt()

```
QModelIndex Digikam::ItemViewCategorized::indexForCategoryAt (
    const QPoint & pos ) const [protected]
```

Returns an index that is representative for the category at position pos

#### 6.973.1.4 keyPressed

```
void Digikam::ItemViewCategorized::keyPressed (
    QKeyEvent * e ) [signal]
```

Remember you may want to check if the event is accepted or ignored. This signal is emitted after being handled by this widget. You can accept it if ignored.

#### 6.973.1.5 mapIndexForDragDrop()

```
QModelIndex Digikam::ItemViewCategorized::mapIndexForDragDrop (
    const QModelIndex & index ) const [override], [protected], [virtual]
```

Note: pure virtual [dragDropHandler\(\)](#) still open from [DragDropViewImplementation](#)

[cut\(\)](#), [copy\(\)](#), [paste\(\)](#), [dragEnterEvent\(\)](#), [dragMoveEvent\(\)](#), [dropEvent\(\)](#), [startDrag\(\)](#) are implemented by [DragDropViewImplementation](#)

Implements [Digikam::DragDropViewImplementation](#).

#### 6.973.1.6 nextIndexHint()

```
QModelIndex Digikam::ItemViewCategorized::nextIndexHint (
    const QModelIndex & indexToAnchor,
    const QItemSelectionRange & removed ) const [protected], [virtual]
```

Assuming the given indexes would be removed (hypothetically!), return the index to be selected instead, starting from anchor. The default implementation returns the next remaining sibling.

Reimplemented in [Digikam::ItemCategorizedView](#), [ShowFoto::ShowfotoCategorizedView](#), and [Digikam::ImportCategorizedView](#).

#### 6.973.1.7 pixmapForDrag()

```
QPixmap Digikam::ItemViewCategorized::pixmapForDrag (
    const QList< QModelIndex > & indexes ) const [override], [protected], [virtual]
```

Creates a pixmap for dragging the given indexes.

Implements [Digikam::DragDropViewImplementation](#).

#### 6.973.1.8 rowsRemoved()

```
void Digikam::ItemViewCategorized::rowsRemoved (
    const QModelIndex & parent,
    int start,
    int end ) [override], [protected], [virtual]
```

Reimplemented from [Digikam::DCategorizedView](#).

### 6.973.1.9 scrollToRelaxed()

```
void Digikam::ItemViewCategorized::scrollToRelaxed (
    const QModelIndex & index,
    ScrollHint hint = EnsureVisible )
```

Like `scrollTo`, but only scrolls if the index is not visible, regardless of hint.

### 6.973.1.10 selectionChanged

```
void Digikam::ItemViewCategorized::selectionChanged ( ) [signal]
```

Emitted when any selection change occurs. Any of the signals below will be emitted before.

### 6.973.1.11 selectionCleared

```
void Digikam::ItemViewCategorized::selectionCleared ( ) [signal]
```

Emitted when the selection is completely cleared.

### 6.973.1.12 setInitialSelectedItem()

```
void Digikam::ItemViewCategorized::setInitialSelectedItem (
    bool enabled )
```

Ensure a initial selected item.

### 6.973.1.13 setScrollCurrentToCenter()

```
void Digikam::ItemViewCategorized::setScrollCurrentToCenter (
    bool enabled )
```

Scroll automatically the current index to center of the view.

### 6.973.1.14 setScrollStepGranularity()

```
void Digikam::ItemViewCategorized::setScrollStepGranularity (
    int factor )
```

Determine a step size for scrolling: The larger this number, the smaller and more precise is the scrolling. Default is 10.

### 6.973.1.15 setSpacing()

```
void Digikam::ItemViewCategorized::setSpacing (
    int spacing )
```

Sets the spacing. Does not use [setSpacing\(\)/spacing\(\)](#) from `QListView`

#### 6.973.1.16 `setUsePointingHandCursor()`

```
void Digikam::ItemViewCategorized::setUsePointingHandCursor (
    bool useCursor )
```

Set if the PointingHand Cursor should be shown over the activation area

#### 6.973.1.17 `showContextMenuOnIndex()`

```
void Digikam::ItemViewCategorized::showContextMenuOnIndex (
    QContextMenuEvent * event,
    const QModelIndex & index ) [protected], [virtual]
```

Reimplemented in [Digikam::ItemCategorizedView](#), [ShowFoto::ShowfotoCategorizedView](#), and [Digikam::ImportCategorizedView](#).

#### 6.973.1.18 `showToolTip()`

```
bool Digikam::ItemViewCategorized::showToolTip (
    const QModelIndex & index,
    QStyleOptionViewItem & option,
    QHelpEvent * e = nullptr ) [protected], [virtual]
```

Provides default behavior, can reimplement in a subclass. Returns true if a tooltip was shown. The help event is optional.

#### 6.973.1.19 `toFirstIndex()`

```
void Digikam::ItemViewCategorized::toFirstIndex ( )
```

Selects the index as current and scrolls to it

#### 6.973.1.20 `viewportClicked`

```
void Digikam::ItemViewCategorized::viewportClicked (
    const QMouseEvent * e ) [signal]
```

While [clicked\(\)](#) is emitted with a valid index, this corresponds to clicking on empty space

## 6.974 Digikam::ItemViewDelegate Class Reference

## 6.974.1 Member Function Documentation

### 6.974.1.1 `acceptsActivation()`

```
bool Digikam::ItemViewDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect = nullptr ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 6.974.1.2 `acceptsToolTip()`

```
bool Digikam::ItemViewDelegate::acceptsToolTip (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * tooltipRect = nullptr ) const [override], [virtual]
```

These methods take four parameters: The position on viewport, the rect on viewport, the index, and optionally a parameter into which, if the return value is true, a rectangle can be written for which the return value will be true as well.

Implements [Digikam::DItemDelegate](#).

### 6.974.1.3 `asDelegate()`

```
QAbstractItemDelegate * Digikam::ItemViewDelegate::asDelegate ( ) [override], [protected], [virtual]
```

Implements [Digikam::ItemDelegateOverlayContainer](#).

#### 6.974.1.4 drawThumbnail()

```
QRect Digikam::ItemViewDelegate::drawThumbnail (
    QPainter * p,
    const QRect & thumbRect,
    const QPixmap & background,
    const QPixmap & thumbnail,
    bool isGrouped ) const [protected]
```

Use the tool methods for painting in subclasses

#### 6.974.1.5 gridSize()

```
QSize Digikam::ItemViewDelegate::gridSize ( ) const [override], [virtual]
```

Returns the gridsize to be set by the view. It's sizeHint plus spacing.

Implements [Digikam::DItemDelegate](#).

#### 6.974.1.6 imageInformationRect()

```
QRect Digikam::ItemViewDelegate::imageInformationRect ( ) const [virtual]
```

Returns the area where the image information is drawn, or null if empty / not supported. The image information is textual or graphical information, but not the pixmap. The [ratingRect\(\)](#) will e.g. typically be contained in this area.

Reimplemented in [Digikam::ItemDelegate](#).

#### 6.974.1.7 mouseMoved()

```
void Digikam::ItemViewDelegate::mouseMoved (
    QMouseEvent * e,
    const QRect & visualRect,
    const QModelIndex & index ) [override], [virtual]
```

##### Note

to be called by [ItemViewCategorized](#) only

Implements [Digikam::DItemDelegate](#).

#### 6.974.1.8 pixmapRect()

```
QRect Digikam::ItemViewDelegate::pixmapRect ( ) const [virtual]
```

Returns the area where the pixmap is drawn, or null if not supported.

Reimplemented in [Digikam::ItemDelegate](#).

### 6.974.1.9 ratingPixmap()

```
QPixmap Digikam::ItemViewDelegate::ratingPixmap (
    int rating,
    bool selected ) const [protected]
```

Returns the relevant pixmap from the cached rating pixmaps.

### 6.974.1.10 ratingRect()

```
QRect Digikam::ItemViewDelegate::ratingRect ( ) const [virtual]
```

Returns the rectangle where the rating is drawn, or a null rectangle if not supported.

### 6.974.1.11 setDefaultViewOptions()

```
void Digikam::ItemViewDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

Style option with standard values to use for cached rendering. `option.rect` shall be the viewport rectangle. Call on resize, font change.

Implements [Digikam::DItemDelegate](#).

### 6.974.1.12 setRatingEdited()

```
void Digikam::ItemViewDelegate::setRatingEdited (
    const QModelIndex & index )
```

Can be used to temporarily disable drawing of the rating. Call with `QModelIndex()` afterwards.

### 6.974.1.13 setSpacing()

```
void Digikam::ItemViewDelegate::setSpacing (
    int spacing ) [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 6.974.1.14 setThumbnailSize()

```
void Digikam::ItemViewDelegate::setThumbnailSize (
    const ThumbnailSize & thumbSize ) [override], [virtual]
```

You must set these options from the view

Implements [Digikam::DItemDelegate](#).

## 6.975 Digikam::ItemViewDelegatePrivate Class Reference

Inheritance diagram for Digikam::ItemViewDelegatePrivate:

### Public Member Functions

- virtual void `clearRects` ()
- void `init` (`ItemViewDelegate *const _q`, `QWidget *const _widget`)
- void `makeStarPolygon` ()

## Public Attributes

  - QPolygon **starPolygon**
  - QSize **starPolygonSize**
  - [ThumbnailSize](#) **thumbSize** = [ThumbnailSize](#)(0)

## 6.975.1 Member Function Documentation

### 6.975.1.1 clearRects()

```
void Digikam::ItemViewDelegatePrivate::clearRects ( ) [virtual]
```

Resets cached rects. Remember to reimplement in subclass for added rects.

Reimplemented in [Digikam::ItemDelegate::ItemDelegatePrivate](#).

## 6.976 Digikam::ItemViewHoverButton Class Reference

Inheritance diagram for Digikam::ItemViewHoverButton:

## Public Member Functions

- QModelIndex **index** () const
- void **initIcon** ()
- **ItemViewHoverButton** (QAbstractItemView \*const parentView)
- void **reset** ()
- void **setIndex** (const QModelIndex &index)
- void **setVisible** (bool visible) override

## Protected Slots

- void **refreshIcon** ()
- void **setFadingValue** (int value)
- void **startFading** ()
- void **stopFading** ()

## Protected Member Functions

- void **enterEvent** (QEnterEvent \*event)
- virtual QIcon **icon** ()=0
- void **leaveEvent** (QEvent \*event)
- void **paintEvent** (QPaintEvent \*event)
- void **setup** ()
- virtual void **updateToolTip** ()

## Protected Attributes

- QTimeline \* **m\_fadingTimeLine** = nullptr
- int **m\_fadingValue** = 0
- QIcon **m\_icon**
- QPersistentModelIndex **m\_index**
- bool **m\_isHovered** = false

## 6.976.1 Member Function Documentation

### 6.976.1.1 icon()

```
virtual QIcon Digikam::ItemViewHoverButton::icon ( ) [protected], [pure virtual]
```

Return your icon here. Will be queried again on toggle.

Implemented in [Digikam::FaceRejectionOverlayButton](#), [Digikam::ItemFullScreenOverlayButton](#), [Digikam::ItemRotateOverlayButton](#), [Digikam::ItemSelectionOverlayButton](#), and [Digikam::ImportRotateOverlayButton](#).

### 6.976.1.2 setup()

```
void Digikam::ItemViewHoverButton::setup ( ) [protected]
```

to call in children class constructors to init signal/slot connections.

### 6.976.1.3 sizeHint()

```
QSize Digikam::ItemViewHoverButton::sizeHint ( ) const [override], [pure virtual]
```

Reimplement to match the size of your icon

Implemented in [Digikam::FaceRejectionOverlayButton](#), [Digikam::ItemFullScreenOverlayButton](#), [Digikam::ItemRotateOverlayButton](#), [Digikam::ItemSelectionOverlayButton](#), and [Digikam::ImportRotateOverlayButton](#).

### 6.976.1.4 updateToolTip()

```
void Digikam::ItemViewHoverButton::updateToolTip ( ) [protected], [virtual]
```

Optionally update tooltip here. Will be called again on state change.

Reimplemented in [Digikam::FaceRejectionOverlayButton](#), [Digikam::ItemFullScreenOverlayButton](#), [Digikam::ItemRotateOverlayButton](#), [Digikam::ItemSelectionOverlayButton](#), and [Digikam::ImportRotateOverlayButton](#).

## 6.977.1 Member Function Documentation

### 6.977.1.1 `acceptsActivation()`

```
bool Digikam::ItemViewImportDelegate::acceptsActivation (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * activationRect = nullptr ) const [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

### 6.977.1.2 `acceptsToolTip()`

```
bool Digikam::ItemViewImportDelegate::acceptsToolTip (
    const QPoint & pos,
    const QRect & visualRect,
    const QModelIndex & index,
    QRect * tooltipRect = nullptr ) const [override], [virtual]
```

These methods take four parameters: The position on viewport, the rect on viewport, the index, and optionally a parameter into which, if the return value is true, a rectangle can be written for which the return value will be true as well.

Implements [Digikam::DItemDelegate](#).

### 6.977.1.3 `asDelegate()`

```
QAbstractItemDelegate * Digikam::ItemViewImportDelegate::asDelegate ( ) [override], [protected], [virtual]
```

Implements [Digikam::ItemDelegateOverlayContainer](#).

#### 6.977.1.4 gridSize()

```
QSize Digikam::ItemViewImportDelegate::gridSize ( ) const [override], [virtual]
```

Returns the gridsize to be set by the view. It's sizeHint plus spacing.

Implements [Digikam::DItemDelegate](#).

#### 6.977.1.5 imageInformationRect()

```
QRect Digikam::ItemViewImportDelegate::imageInformationRect ( ) const [virtual]
```

Returns the area where the image information is drawn, or null if empty / not supported. The image information is textual or graphical information, but not the pixmap. The [ratingRect\(\)](#) will e.g. typically be contained in this area.

Reimplemented in [Digikam::ImportDelegate](#).

#### 6.977.1.6 invalidatePaintingCache()

```
void Digikam::ItemViewImportDelegate::invalidatePaintingCache ( ) [protected], [virtual]
```

Reimplemented in [Digikam::ImportDelegate](#).

#### 6.977.1.7 mouseMoved()

```
void Digikam::ItemViewImportDelegate::mouseMoved (
    QMouseEvent * e,
    const QRect & visualRect,
    const QModelIndex & index ) [override], [virtual]
```

##### Note

to be called by [ItemViewCategorized](#) only

Implements [Digikam::DItemDelegate](#).

#### 6.977.1.8 pixmapRect()

```
QRect Digikam::ItemViewImportDelegate::pixmapRect ( ) const [virtual]
```

Returns the area where the pixmap is drawn, or null if not supported

Reimplemented in [Digikam::ImportDelegate](#).

#### 6.977.1.9 prepareRatingPixmaps()

```
void Digikam::ItemViewImportDelegate::prepareRatingPixmaps (
    bool composeOverBackground = true ) [protected]
```

Please call this method after [prepareBackground\(\)](#) and when `d->ratingPixmap` is set

#### 6.977.1.10 ratingRect()

```
QRect Digikam::ItemViewImportDelegate::ratingRect ( ) const [virtual]
```

Returns the rectangle where the rating is drawn, or a null rectangle if not supported.

#### 6.977.1.11 setDefaultViewOptions()

```
void Digikam::ItemViewImportDelegate::setDefaultViewOptions (
    const QStyleOptionViewItem & option ) [override], [virtual]
```

Style option with standard values to use for cached rendering. option.rect shall be the viewport rectangle. Call on resize, font change.

Implements [Digikam::DItemDelegate](#).

#### 6.977.1.12 setRatingEdited()

```
void Digikam::ItemViewImportDelegate::setRatingEdited (
    const QModelIndex & index )
```

Can be used to temporarily disable drawing of the rating. Call with QModelIndex() afterwards.

#### 6.977.1.13 setSpacing()

```
void Digikam::ItemViewImportDelegate::setSpacing (
    int spacing ) [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

#### 6.977.1.14 setThumbnailSize()

```
void Digikam::ItemViewImportDelegate::setThumbnailSize (
    const ThumbnailSize & thumbSize ) [override], [virtual]
```

Implements [Digikam::DItemDelegate](#).

## 6.978 Digikam::ItemViewImportDelegatePrivate Class Reference

Inheritance diagram for Digikam::ItemViewImportDelegatePrivate:

### Public Member Functions

- void **paintEvent** (QPaintEvent \*) override
- void **renderArrows** ()
- void **reposition** ()
- void **resizeEvent** (QResizeEvent \*) override
- bool **toolTipsEmpty** () const
- void **updateToolTip** ()

### 6.979.1 Member Function Documentation

#### 6.979.1.1 repositionRect()

```
QRect Digikam::ItemViewToolTip::repositionRect ( ) [override], [protected], [virtual]
```

Implements [Digikam::DItemToolTip](#).

#### 6.979.1.2 show()

```
void Digikam::ItemViewToolTip::show (
    const QStyleOptionViewItem & option,
    const QModelIndex & index )
```

Show the tooltip for the given item. The rect of the given option is taken as area for which the tooltip is shown.

#### 6.979.1.3 tipContents()

```
QString Digikam::ItemViewToolTip::tipContents ( ) [override], [virtual]
```

Default implementation is based on `setTipContents()`. Reimplement if you dynamically provide the contents.

Implements [Digikam::DItemToolTip](#).

## 6.981.1 Member Enumeration Documentation

### 6.981.1.1 IncludeFadingOutMode

```
enum Digikam::ItemVisibilityController::IncludeFadingOutMode
```

## Enumerator

IncludeFadingOut	In addition to items visible or fading in, return those fading out.
ExcludeFadingOut	Do not return those items currently fading out (soon to be hidden)

**6.981.1.2 State**

```
enum Digikam::ItemVisibilityController::State
```

This class handles complex visibility situations for items. There is a 3-tiered approach: 1) shallBeShown determines if the items shall at any time be shown. If it is false, items will never be shown. Default is true, so you can ignore this setting. 2) visible determines if the items shall be shown now. Only takes effect if shallBeShown is true. Default is false: Initially, controlled items are hidden. 3) Opacity and individual item visibility: When showing, items are first set to individually visible, then their opacity is increased from 0 to 1. When hiding, opacity is first decreased from 1 to 0, then they are set individually to hidden. Different types of items can be handled:

- a group of items with an "opacity" and "visible" property
- a single item with an "opacity" and "visible" property
- a proxy object with these properties (see above)

**6.981.2 Member Function Documentation****6.981.2.1 addItem()**

```
void Digikam::ItemVisibilityController::addItem (
    QObject *const object )
```

Add and remove objects. The given objects shall provide an "opacity" and a "visible" property. You can, for convenience, use a [ItemVisibilityControllerPropertyObject](#) as a value container, if your items do not provide these properties directly. No ownership is taken, so the objects should live as long as this object is used.

**6.981.2.2 clear()**

```
void Digikam::ItemVisibilityController::clear ( )
```

Remove all animations

**6.981.2.3 createAnimation()**

```
QPropertyAnimation * Digikam::ItemVisibilityController::createAnimation (
    QObject * item ) [protected], [virtual]
```

Creates the animation for showing and hiding the given item. The item is given for information only, you do not need to use it. The default implementation creates an animation for "opacity" from 0.0 to 1.0, using default easing curve and duration, which can and will be changed by setEasingCurve and setAnimationDuration.

#### 6.981.2.4 hasVisibleItems()

```
bool Digikam::ItemVisibilityController::hasVisibleItems (
    IncludeFadingOutMode mode = IncludeFadingOut ) const
```

This returns the "result" of isVisible and shallBeShown: Something is indeed visible on the scene. Also returns false if no items are available.

#### 6.981.2.5 hiddenAndRemoved

```
void Digikam::ItemVisibilityController::hiddenAndRemoved (
    QObject * item ) [signal]
```

Emitted when hideAndRemoveItem has finished

#### 6.981.2.6 hideAndRemoveItem

```
void Digikam::ItemVisibilityController::hideAndRemoveItem (
    QObject * item ) [slot]
```

Hide the item, and then remove it. When finished, [hiddenAndRemoved\(\)](#) is emitted.

#### 6.981.2.7 items()

```
QList< QObject * > Digikam::ItemVisibilityController::items ( ) const
```

Returns all items under control

#### 6.981.2.8 propertiesAssigned [1/2]

```
void Digikam::ItemVisibilityController::propertiesAssigned (
    bool visible ) [signal]
```

Emitted when the (main) transition has finished

#### 6.981.2.9 propertiesAssigned [2/2]

```
void Digikam::ItemVisibilityController::propertiesAssigned (
    QObject * item,
    bool visible ) [signal]
```

Emitted when a transition for a single item finished (see setItemVisible())

#### 6.981.2.10 setEasingCurve()

```
void Digikam::ItemVisibilityController::setEasingCurve (
    const QEasingCurve & easing )
```

Allows to change the default parameters of all animations.

### 6.981.2.11 setItemThatShallBeShown

```
void Digikam::ItemVisibilityController::setItemThatShallBeShown (
    QObject * item ) [slot]
```

Sets a single item to be shown. Calling setVisible() will effectively effect only this single item, as if calling setItemVisible(). Reset by calling with 0 or [setShallBeShown\(\)](#).

### 6.981.2.12 setShallBeShown

```
void Digikam::ItemVisibilityController::setShallBeShown (
    bool shallBeShown ) [slot]
```

Adjusts the first condition - the items are shown if shallBeShown is true and isVisible is true

### 6.981.2.13 show

```
void Digikam::ItemVisibilityController::show ( ) [slot]
```

Adjusts the main condition. All items are affected. If any items were shown or hidden separately, they will be resynchronized. "Directly" means no animation is employed.

### 6.981.2.14 showItem

```
void Digikam::ItemVisibilityController::showItem (
    QObject * item ) [slot]
```

Shows or hides a single item. The item's status is changed individually. The next call to the "global" method will take precedence again. "Directly" means no animation is employed.

### 6.981.2.15 visibleItems()

```
QList< QObject * > Digikam::ItemVisibilityController::visibleItems (
    IncludeFadingOutMode mode = IncludeFadingOut ) const
```

Returns all currently visible items.

## 6.982 Digikam::ItemVisibilityControllerPropertyObject Class Reference

Inheritance diagram for Digikam::ItemVisibilityControllerPropertyObject:

### Signals

- void **opacityChanged** ()
- void **visibleChanged** ()

### Public Member Functions

- bool **isVisible** () const
- [ItemVisibilityControllerPropertyObject](#) (QObject \*const parent=nullptr)
- qreal **opacity** () const
- void **setOpacity** (qreal opacity)
- void **setVisible** (bool visible)

### Protected Attributes

- qreal **m\_opacity** = 0.0
- bool **m\_visible** = false

### Properties

- qreal **opacity**
- bool **visible**

## 6.982.1 Constructor & Destructor Documentation

### 6.982.1.1 ItemVisibilityControllerPropertyObject()

```
Digikam::ItemVisibilityControllerPropertyObject::ItemVisibilityControllerPropertyObject (
    QObject *const parent = nullptr ) [explicit]
```

You can use this object as a container providing the properties set by [ItemVisibilityController](#). Connect to the signals accordingly, e.g. to trigger a repaint.

## 6.983 Digikam::JPEGUtils::digikam\_source\_mgr Struct Reference

### Public Attributes

- JOCTET **eoI** [2]
- struct jpeg\_source\_mgr **pub**

## 6.984 Digikam::JPEGUtils::JpegRotator Class Reference

### Public Member Functions

- bool [autoExifTransform](#) ()
- bool [exifTransform](#) (const [MetaEngineRotation](#) &matrix)
- bool [exifTransform](#) ([TransformAction](#) action)
- [JpegRotator](#) (const QString &file)
- void [setCurrentOrientation](#) ([MetaEngine::ImageOrientation](#) orientation)
- void [setDestinationFile](#) (const QString &dest)
- void [setDocumentName](#) (const QString &documentName)
- [~JpegRotator](#) ()

## Protected Member Functions

- bool **performJpegTransform** ([TransformAction](#) action, const QString &src, const QString &dest)
- void **updateMetadata** (const QString &fileName, const [MetaEngineRotation](#) &matrix)

## Protected Attributes

- QString **m\_destFile**
- QString **m\_documentName**
- QString **m\_file**
- [DMetadata](#) \* **m\_metadata** = nullptr
- [MetaEngine::ImageOrientation](#) **m\_orientation** = MetaEngine::ORIENTATION\_UNSPECIFIED
- QSize **m\_originalSize**

## 6.984.1 Constructor & Destructor Documentation

### 6.984.1.1 JpegRotator()

```
Digikam::JPEGUtils::JpegRotator::JpegRotator (
    const QString & file ) [explicit]
```

Create a [JpegRotator](#) reading from the given file. Per default, it will replace the file, read the current orientation from the metadata, and use the src file name as documentName.

### 6.984.1.2 ~JpegRotator()

```
Digikam::JPEGUtils::JpegRotator::~~JpegRotator ( )
```

Destructor

## 6.984.2 Member Function Documentation

### 6.984.2.1 autoExifTransform()

```
bool Digikam::JPEGUtils::JpegRotator::autoExifTransform ( )
```

Rotate the JPEG file's content according to the current orientation, resetting the current orientation to normal. The final result of loading the image does not change.

### 6.984.2.2 exifTransform() [1/2]

```
bool Digikam::JPEGUtils::JpegRotator::exifTransform (
    const MetaEngineRotation & matrix )
```

Rotate the given image by the given [Matrix](#). The matrix describes the final transformation, it is not adjusted by current rotation.

### 6.984.2.3 exifTransform() [2/2]

```
bool Digikam::JPEGUtils::JpegRotator::exifTransform (
    TransformAction action )
```

Rotate the given image by the given TransformAction. The current orientation will be taken into account

### 6.984.2.4 setCurrentOrientation()

```
void Digikam::JPEGUtils::JpegRotator::setCurrentOrientation (
    MetaEngine::ImageOrientation orientation )
```

Per default, the orientation is read from the metadata of the file. You can override this value

### 6.984.2.5 setDestinationFile()

```
void Digikam::JPEGUtils::JpegRotator::setDestinationFile (
    const QString & dest )
```

Set the destination file. By default, the source file will be overwritten by atomic operation if the operation had succeeded.

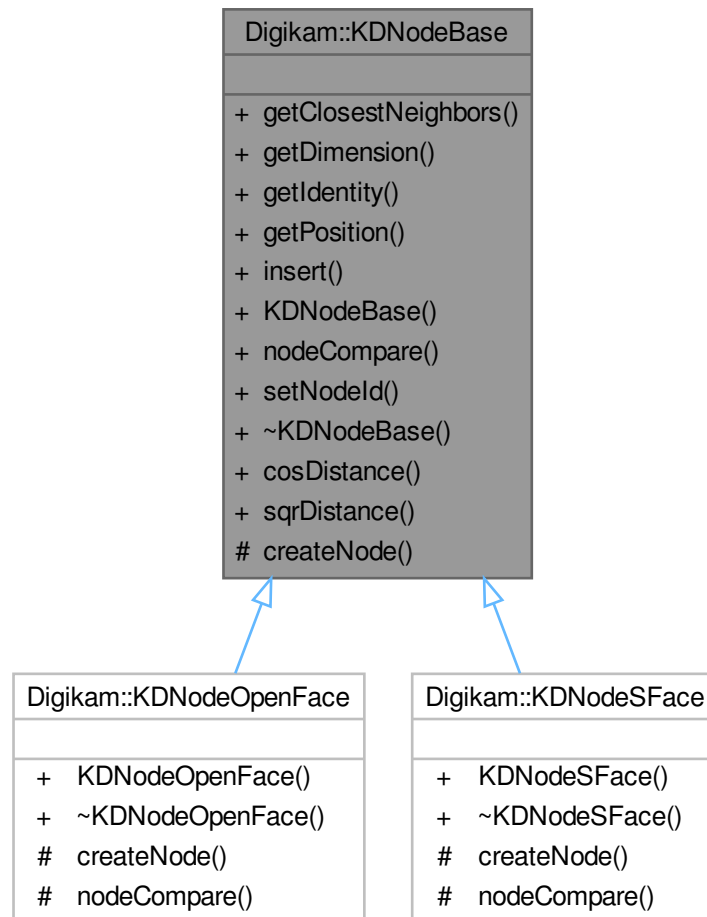

### 6.984.2.6 setDocumentName()

```
void Digikam::JPEGUtils::JpegRotator::setDocumentName (
    const QString & documentName )
```

Set the Exif document name of the destination file. Default value is the source's file name

## 6.985 Digikam::KNodeBase Class Reference

Inheritance diagram for Digikam::KNodeBase:

### Classes

- struct [NodeCompareResult](#)

### Public Member Functions

- double [getClosestNeighbors](#) (QMap< double, QVector< int > > &neighborList, const cv::Mat &position, float sqRange, float cosThreshold, int maxNbNeighbors) const
- int [getDimension](#) ()

- static float **sqrDistance** (const float \*const pos1, const float \*const pos2, int dimension)

### Protected Member Functions

- virtual [KNodeBase](#) \* **createNode** (const cv::Mat &nodePos, const int identity, int splitAxis, int dimension)=0

## 6.985.1 Member Function Documentation

### 6.985.1.1 createNode()

```
virtual KNodeBase * Digikam::KNodeBase::createNode (
    const cv::Mat & nodePos,
    const int identity,
    int splitAxis,
    int dimension ) [protected], [pure virtual]
```

Pure virtual functions to be overridden in child classes.

Implemented in [Digikam::KNodeOpenFace](#), and [Digikam::KNodeSFace](#).

### 6.985.1.2 getClosestNeighbors()

```
double Digikam::KNodeBase::getClosestNeighbors (
    QMap< double, QVector< int > > & neighborList,
    const cv::Mat & position,
    float sqRange,
    float cosThreshold,
    int maxNbNeighbors ) const
```

Return a list of closest neighbors, limited by maxNbNeighbors and sqRange.

### 6.985.1.3 getIdentity()

```
int Digikam::KNodeBase::getIdentity ( )
```

Return identity of the node.

### 6.985.1.4 getPosition()

```
cv::Mat Digikam::KNodeBase::getPosition ( ) const
```

Return position vector of a node.

### 6.985.1.5 insert()

```
KDNodeBase * Digikam::KDNodeBase::insert (
    const cv::Mat & nodePos,
    const int identity )
```

Insert a new node to the sub-tree.

### 6.985.1.6 setNodeId()

```
void Digikam::KDNodeBase::setNodeId (
    int id )
```

Set database entry ID of the node.

## 6.986 Digikam::KDNodeBase::NodeCompareResult Struct Reference

### Public Attributes

- double **distance1**
- double **distance2**
- bool **result**

## 6.987 Digikam::KNodeOpenFace Class Reference

## 6.988.1 Member Function Documentation

### 6.988.1.1 createNode()

```
KNodeBase * Digikam::KNodeSFace::createNode (
    const cv::Mat & nodePos,
    const int identity,
    int splitAxis,
    int dimension ) [override], [protected], [virtual]
```

Pure virtual functions to be overridden in child classes.

Implements [Digikam::KNodeBase](#).

### 6.988.1.2 nodeCompare()

```
KNodeBase::NodeCompareResult Digikam::KNodeSFace::nodeCompare (
    const cv::Mat & queryPosition,
    const cv::Mat & currentPosition,
    float sqRange,
    float cosThreshold,
    int nbDimension ) const [override], [protected], [virtual]
```

Implements [Digikam::KNodeBase](#).

## 6.989 Digikam::KDTreeBase Class Reference

Inheritance diagram for Digikam::KDTreeBase:

### Public Member Functions

- virtual [KDNodeBase](#) \* [add](#) (const cv::Mat &position, const int identity)  
*add new node to KD-Tree*
- virtual [KDNodeBase](#) \* [createNode](#) (const cv::Mat &nodePos, const int identity, int splitAxis, int dimension)=0  
*create an ew node*
- virtual QMap< double, QVector< int > > [getClosestNeighbors](#) (const cv::Mat &position, float sqRange, int maxNbNeighbors) const
- [KDTreeBase](#) (int dim, int kdtreeThreshold=KDTREE\_MAP\_THRESHOLD)  
*Constructor of the class implementing the KD-Tree for vector space partitioning.*

### 6.989.1 Constructor & Destructor Documentation

#### 6.989.1.1 KDTreeBase()

```

Digikam::KDTreeBase::KDTreeBase (
    int dim,
    int kdtreeThreshold = KDTREE_MAP_THRESHOLD ) [explicit]
  
```

#### Parameters

<i>dim</i>	The dimension of the tree.
<i>kdtreeThreshold</i>	The KD-Tree threshold. Above this value, we start using the KD-Tree instead of the vector. If the vector grows to default KDTREE_MAP_THRESHOLD items, start using the KDTree.

**Note**

Due to sparse data density in the tree, we initially use a vector of nodes to compare the target to the samples once we have achieved a suitable data density we delete the vector (but not the nodes) and begin using the tree.

Using this to compare brute force vs kdtree performance due to sparse data in k-dimensions (128 dimensions for face features).

**6.989.2 Member Function Documentation****6.989.2.1 add()**

```
KDNodeBase * Digikam::KDTreeBase::add (
    const cv::Mat & position,
    const int identity ) [virtual]
```

**Parameters**

<i>position</i>	K-dimension vector
<i>identity</i>	identity of this face vector

**Returns**

the KD-Tree node base instance

**6.989.2.2 createNode()**

```
virtual KDNodeBase * Digikam::KDTreeBase::createNode (
    const cv::Mat & nodePos,
    const int identity,
    int splitAxis,
    int dimension ) [pure virtual]
```

**Parameters**

<i>nodePos</i>	extracted face vectors
<i>identity</i>	identity of this face vector
<i>splitAxis</i>	current axis/dimension of the vector
<i>dimension</i>	number of dimensions (usually 128)

**Returns**

the KD-Tree node base instance

**6.989.2.3 getClosestNeighbors()**

```
QMap< double, QVector< int > > Digikam::KDTreeBase::getClosestNeighbors (
    const cv::Mat & position,
```

```
float sqRange,
int maxNbNeighbors ) const [virtual]
```

**Returns**

Map of N-nearest neighbors, sorted by distance

**6.990 Digikam::KDTreeOpenFace Class Reference**

## 6.994.1 Member Function Documentation

### 6.994.1.1 [applySettings\(\)](#)

```
void Digikam::LabelsSideBarWidget::applySettings ( ) [override], [virtual]
```

This method is invoked when the application settings should be (re-) applied to this widget.

Implements [Digikam::SidebarWidget](#).

### 6.994.1.2 changeAlbumFromHistory()

```
void Digikam::LabelsSideBarWidget::changeAlbumFromHistory (
    const QList< Album * > & album ) [override], [virtual]
```

This is called on this widget when the history requires to move back to the specified album

Implements [Digikam::SidebarWidget](#).

### 6.994.1.3 doLoadState()

```
void Digikam::LabelsSideBarWidget::doLoadState ( ) [override], [virtual]
```

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.994.1.4 doSaveState()

```
void Digikam::LabelsSideBarWidget::doSaveState ( ) [override], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.994.1.5 getCaption()

```
const QString Digikam::LabelsSideBarWidget::getCaption ( ) [override], [virtual]
```

Must be implemented to return the title of this sidebar's tab.

#### Returns

localized title string

Implements [Digikam::SidebarWidget](#).

### 6.994.1.6 getIcon()

```
const QIcon Digikam::LabelsSideBarWidget::getIcon ( ) [override], [virtual]
```

Must be implemented and return the icon that shall be visible for this sidebar widget.

#### Returns

pixmap icon

Implements [Digikam::SidebarWidget](#).

### 6.994.1.7 setActive()

```
void Digikam::LabelsSideBarWidget::setActive (
    bool active ) [override], [virtual]
```

This method is called if the visible sidebar widget is changed.

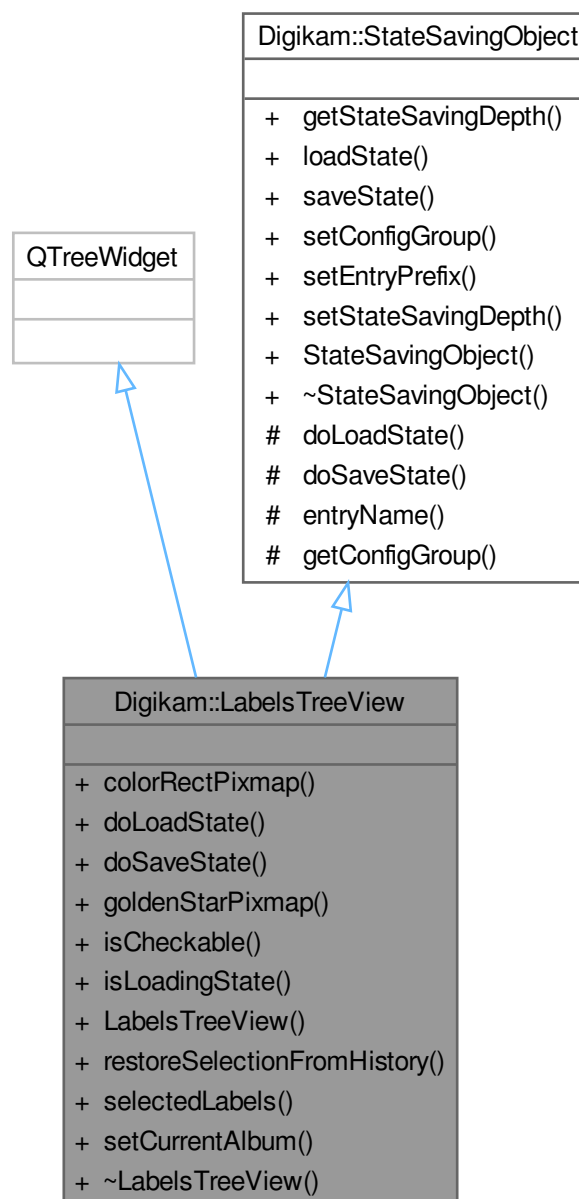

## Parameters

<i>active</i>	if true, this widget is the new active widget, if false another widget is active
---------------	--

Implements [Digikam::SidebarWidget](#).

## 6.995 Digikam::LabelsTreeView Class Reference

Inheritance diagram for Digikam::LabelsTreeView:

## Public Types

- enum **Labels** { **Ratings** = 0 , **Picks** , **Colors** }

## Public Types inherited from [Digikam::StateSavingObject](#)

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }

## Signals

- void **signalSetCurrentAlbum** ()

## Public Member Functions

- QPixmap [colorRectPixmap](#) (const QColor &color) const  
*Creates a 30\*30 rectangular pixmap with specific color.*
- void [doLoadState](#) () override  
*Loading and saving state function inherited from [StateSavingObject](#).*
- void [doSaveState](#) () override
- QPixmap [goldenStarPixmap](#) (bool fillin=true) const
- bool [isCheckable](#) () const
- bool [isLoadingState](#) () const
- **LabelsTreeView** (QWidget \*const parent=nullptr, bool setCheckable=false)
- void [restoreSelectionFromHistory](#) (QHash< Labels, QList< int > > neededLabels)  
*Restores the selection state from the [AlbumHistory](#) class.*
- QHash< Labels, QList< int > > [selectedLabels](#) ()  
*Provide the current selection from the tree-view hierarchy.*
- void **setCurrentAlbum** ()  
*Emits a signal to the search handler to set the Current album from currently selected labels.*

## Public Member Functions inherited from [Digikam::StateSavingObject](#)

- [StateSavingDepth](#) [getStateSavingDepth](#) () const
- void [loadState](#) ()
- void [saveState](#) ()
- virtual void [setConfigGroup](#) (const KConfigGroup &group)

## Additional Inherited Members

## Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- QString [entryName](#) (const QString &base) const
- KConfigGroup [getConfigGroup](#) () const

## 6.995.1 Member Function Documentation

### 6.995.1.1 [colorRectPixmap\(\)](#)

```
QPixmap Digikam::LabelsTreeView::colorRectPixmap (
    const QColor & color ) const
```

**Parameters**

<i>color</i>	wanted to be set
--------------	------------------

**Returns**

pixmap has a rectangle filled with the color

**6.995.1.2 doLoadState()**

```
void Digikam::LabelsTreeView::doLoadState ( ) [override], [virtual]
```

Implements [Digikam::StateSavingObject](#).

**6.995.1.3 doSaveState()**

```
void Digikam::LabelsTreeView::doSaveState ( ) [override], [virtual]
```

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

**6.995.1.4 goldenStarPixmap()**

```
QPixmap Digikam::LabelsTreeView::goldenStarPixmap (
    bool fillin = true ) const
```

**Returns**

a QPixmap of a 30\*30 pixels golden star used for rating and widget icon

**6.995.1.5 isCheckable()**

```
bool Digikam::LabelsTreeView::isCheckable ( ) const
```

**Returns**

true if the tree widget is checkable and false if not

**6.995.1.6 isLoadingState()**

```
bool Digikam::LabelsTreeView::isLoadingState ( ) const
```

**Returns**

true if Loading state function is running

**6.995.1.7 restoreSelectionFromHistory()**

```
void Digikam::LabelsTreeView::restoreSelectionFromHistory (
    QHash< Labels, QList< int > > neededLabels )
```

## Parameters

<code>neededLabels</code>	is a QHash to restore the selection from it, the hash is formatted just like the hash generated from
---------------------------	--

## See also

[selectedLabels\(\)](#)

## 6.995.1.8 selectedLabels()

```
QHash< LabelsTreeView::Labels, QList< int > > Digikam::LabelsTreeView::selectedLabels ( )
```

## Returns

a QHash with three keys: "Ratings", "Picks", and "Colors", every key dedicated to an int list which holds the rows selected

## 6.996 Digikam::LanguagesList Class Reference

## 6.998.1 Member Function Documentation

### 6.998.1.1 filterAction()

```
FilterAction Digikam::LensDistortionFilter::filterAction ( ) [override], [virtual]
```

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.998.1.2 filterIdentifier()

```
QString Digikam::LensDistortionFilter::filterIdentifier ( ) const [inline], [override], [virtual]
```

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.998.1.3 readParameters()

```
void Digikam::LensDistortionFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.999 Digikam::LensDistortionPixelAccess Class Reference

### Public Member Functions

- **LensDistortionPixelAccess** ([DImg](#) \*srcImage)
- void **pixelAccessGetCubic** (double srcX, double srcY, double brighten, uchar \*dst)

### Protected Member Functions

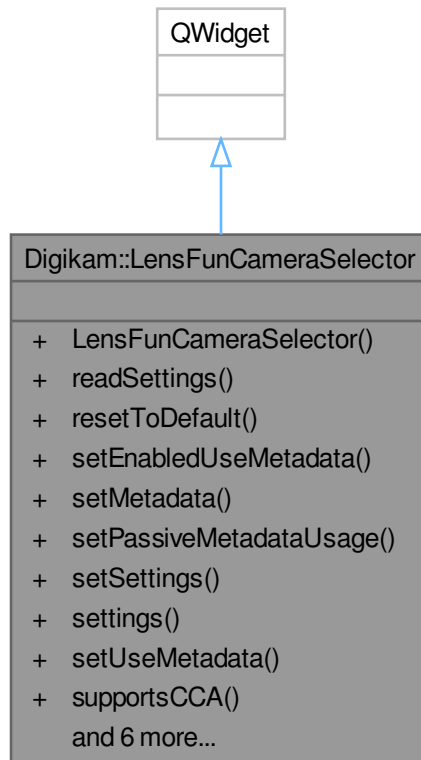

- void **cubicInterpolate** (uchar \*src, int rowStride, uchar \*dst, bool sixteenBit, double dx, double dy, double brighten)
- uchar \* **pixelAccessAddress** (int i, int j)
- void **pixelAccessDoEdge** (int i, int j)
- void **pixelAccessReposition** (int xInt, int yInt)
- void **pixelAccessSelectRegion** (int n)

### 6.999.1 Detailed Description

[LensDistortionPixelAccess](#) class: solving the eternal problem: random, cubic-interpolated, sub-pixel coordinate access to an image. Assuming that accesses are at least slightly coherent, [LensDistortionPixelAccess](#) keeps [LensDistortionPixelAccessRegions](#) buffers, each containing a [LensDistortionPixelAccessWidth](#) x [LensDistortionPixelAccessHeight](#) region of pixels. Buffer[0] is always checked first, so move the last accessed region into that position. When a request arrives which is outside all the regions, get a new region. The new region is placed so that the requested pixel is positioned at [[LensDistortionPixelAccessXOffset](#), [LensDistortionPixelAccessYOffset](#)] in the region.

## 6.1000 Digikam::LensFunCameraSelector Class Reference

Inheritance diagram for Digikam::LensFunCameraSelector:

### Public Types

- typedef `QMap< QString, QString >` **Device**

### Signals

- void **signalLensSettingsChanged** ()

## 6.1007.1 Member Function Documentation

### 6.1007.1.1 filterAction()

`FilterAction` Digikam::LevelsFilter::filterAction ( ) [override], [virtual]

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1007.1.2 filterIdentifier()

`QString` Digikam::LevelsFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1007.1.3 readParameters()

```
void Digikam::LevelsFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.1008 Digikam::LibsInfoDlg Class Reference

Inheritance diagram for Digikam::LibsInfoDlg:

### Public Member Functions

## 6.1012.1 Member Function Documentation

### 6.1012.1.1 infoface()

```
DInfoInterface * Digikam::LightTableWindow::infoIface (
    DPluginAction *const ac ) [override], [virtual]
```

Return the interface instance to access to items information.

Implements [Digikam::DXmlGuiWindow](#).

### 6.1012.1.2 loadItemInfos()

```
void Digikam::LightTableWindow::loadItemInfos (
    const ItemInfoList & list,
    const ItemInfo & givenItemInfoCurrent,
    bool addTo )
```

We get here either

- via CTRL+L (from the albumview) a) digikamapp.cpp: CTRL+key\_L leads to slotImageLightTable() b) digikamview.cpp: void ItemIconView::slotImageLightTable() calls d->iconView->insertToLightTable(list, info); c) albumiconview.cpp: AlbumIconView::insertToLightTable calls lview->loadItemInfos(list, current);
- via drag&drop, i.e. calls issued by the ...Dropped... routines

### 6.1012.1.3 setLeftRightItems()

```
void Digikam::LightTableWindow::setLeftRightItems (
    const ItemInfoList & list,
    bool addTo )
```

Set the images for the left and right panel.

### 6.1012.1.4 slotApplicationSettingsChanged

```
void Digikam::LightTableWindow::slotApplicationSettingsChanged ( ) [slot]
```

## 6.1013 Digikam::LightTableWindow::Private Class Reference

- void **setData** (`const QList< QVariant > &data`)

## 6.1014.1 Member Function Documentation

### 6.1014.1.1 containsItem()

```
ListItem * Digikam::ListItem::containsItem (  
    ListItem *const item ) const
```

#### Parameters

<i>item</i>	- <a href="#">ListItem</a> pointer for which we should search if there is a similar item
-------------	--

#### Returns

- NULL if no similar item was found and a valid [ListItem](#) if a [ListItem](#) with the same data was found

## 6.1015 Digikam::ListViewComboBox Class Reference

Inheritance diagram for Digikam::ListViewComboBox:

- QAbstractItemView \* **m\_view** = nullptr

## Protected Attributes inherited from [Digikam::ModelIndexBasedComboBox](#)

- QPersistentModelIndex **m\_currentIndex**

## 6.1015.1 Constructor & Destructor Documentation

### 6.1015.1.1 [ListViewComboBox\(\)](#)

```
Digikam::ListViewComboBox::ListViewComboBox (
    QWidget * parent = nullptr ) [explicit]
```

This class provides an implementation of a [StayPoppedUpComboBox](#) with a QListView. This is the standard view of a QComboBox, but in conjunction with [StayPoppedUpComboBox](#) some extra steps are needed. You need three steps: Construct the object, call `setModel()` with an appropriate QAbstractItemModel, then call [installView\(\)](#).

## 6.1015.2 Member Function Documentation

### 6.1015.2.1 installView()

```
void Digikam::ListViewComboBox::installView (
    QAbstractItemView * view = nullptr ) [virtual]
```

Replace the standard combo box list view with a QTreeView. Call this after installing an appropriate model.

Reimplemented in [Digikam::ChoiceSearchComboBox](#).

### 6.1015.2.2 sendViewportEventToView()

```
void Digikam::ListViewComboBox::sendViewportEventToView (
    QEvent * e ) [override], [protected], [virtual]
```

Implement in subclass: Send the given event to the viewportEvent() method of m\_view. This method is protected for a usual QAbstractItemView. You can override, pass a view, and call parent implementation. The existing view will be used. You must then also reimplement sendViewportEventToView.

Implements [Digikam::StayPoppedUpComboBox](#).

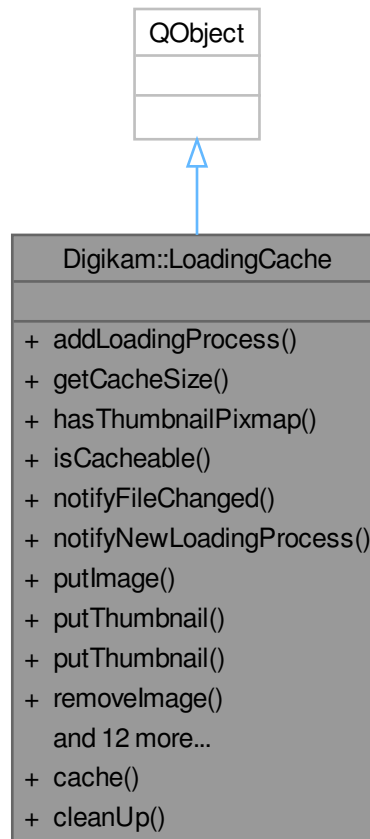

### 6.1015.2.3 view()

```
QListView * Digikam::ListViewComboBox::view ( ) const
```

Returns the QTreeView of this class. Valid after [installView\(\)](#) has been called.

## 6.1016 Digikam::LoadingCache Class Reference

Inheritance diagram for Digikam::LoadingCache:

### Classes

- class [CacheLock](#)

### Signals

- void [fileChanged](#) (const QString &filePath)

### Public Member Functions

- const QPixmap \* [retrieveThumbnailPixmap](#) (const QString &cacheKey) const
- void [setCacheSize](#) (int megabytes)
- void [setFileWatch](#) ([LoadingCacheFileWatch](#) \*const watch)
- void [setThumbnailCacheSize](#) (int numberOfQImages, int numberOfQPixmaps)

### Static Public Member Functions

- static [LoadingCache](#) \* [cache](#) ()
- static void [cleanUp](#) ()

### Friends

- class [CacheLock](#)
- class [LoadingCacheFileWatch](#)

## 6.1016.1 Member Function Documentation

### 6.1016.1.1 addLoadingProcess()

```
void Digikam::LoadingCache::addLoadingProcess (
    LoadingProcess *const process )
```

Add a loading process to the list. Only one loading process for the same cache key is registered at a time.

### 6.1016.1.2 fileChanged

```
void Digikam::LoadingCache::fileChanged (
    const QString & filePath ) [signal]
```

This signal is emitted when the cache is notified that a file was changed. There is no information in this signal if the file was ever contained in the cache. The signal may be emitted under [CacheLock](#). Strongly consider a queued connection.

### 6.1016.1.3 getCacheSize()

```
quint64 Digikam::LoadingCache::getCacheSize ( ) const
```

Get the cache size in bytes.

#### 6.1016.1.4 isCacheable()

```
bool Digikam::LoadingCache::isCacheable (
    const DImg & img ) const
```

Returns whether the given [DImg](#) fits in the cache.

#### 6.1016.1.5 notifyFileChanged()

```
void Digikam::LoadingCache::notifyFileChanged (
    const QString & filePath,
    bool notify = true )
```

Remove all entries from cache that were loaded from filePath. Emits relevant signals if notify = true.

#### 6.1016.1.6 notifyNewLoadingProcess()

```
void Digikam::LoadingCache::notifyNewLoadingProcess (
    LoadingProcess *const process,
    const LoadingDescription & description )
```

Notify all currently registered loading processes

#### 6.1016.1.7 putImage()

```
bool Digikam::LoadingCache::putImage (
    const QString & cacheKey,
    const DImg & img,
    const QString & filePath ) const
```

Put image into for given string into the cache. Returns true if image has been put in the cache, false otherwise. Ownership of the [DImg](#) instance is passed to the cache. When it cannot be put in the cache it is deleted. The third parameter specifies a file path that will be watched. If this file changes, the object will be removed from the cache.

#### 6.1016.1.8 putThumbnail()

```
void Digikam::LoadingCache::putThumbnail (
    const QString & cacheKey,
    const QImage & thumb,
    const QString & filePath )
```

Puts a thumbnail into the thumbnail cache.

#### 6.1016.1.9 removeImage()

```
void Digikam::LoadingCache::removeImage (
    const QString & cacheKey )
```

Remove entries for the given cacheKey from the cache

### 6.1016.1.10 removeImages()

```
void Digikam::LoadingCache::removeImages ( )
```

Remove all entries from the cache

### 6.1016.1.11 removeLoadingProcess()

```
void Digikam::LoadingCache::removeLoadingProcess (
    LoadingProcess *const process )
```

Remove loading process for given cache key

### 6.1016.1.12 removeThumbnail()

```
void Digikam::LoadingCache::removeThumbnail (
    const QString & cacheKey )
```

Remove the thumbnail for the given file path from the thumbnail cache

### 6.1016.1.13 removeThumbnails()

```
void Digikam::LoadingCache::removeThumbnails ( )
```

Remove all thumbnails

### 6.1016.1.14 retrieveImage()

```
DImg * Digikam::LoadingCache::retrieveImage (
    const QString & cacheKey ) const
```

Retrieves an image for the given string from the cache, or 0 if no image is found.

### 6.1016.1.15 retrieveLoadingProcess()

```
LoadingProcess * Digikam::LoadingCache::retrieveLoadingProcess (
    const QString & cacheKey ) const
```

Find the loading process for given cacheKey, or 0 if not found

### 6.1016.1.16 retrieveThumbnail()

```
const QImage * Digikam::LoadingCache::retrieveThumbnail (
    const QString & cacheKey ) const
```

The [LoadingCache](#) support both the caching of QImage and QPixmap objects. QPixmaps can only be accessed from the main thread, so the tasks cannot access this cache. Retrieves a thumbnail for the given filePath from the thumbnail cache, or a 0 if the thumbnail is not found.

**6.1016.1.17 setCacheSize()**

```
void Digikam::LoadingCache::setCacheSize (
    int megabytes )
```

Sets the cache size in megabytes. The thumbnail cache is not affected and `setThumbnailCacheSize` takes the maximum number.

**6.1016.1.18 setFileWatch()**

```
void Digikam::LoadingCache::setFileWatch (
    LoadingCacheFileWatch *const watch )
```

Sets a [LoadingCacheFileWatch](#) to watch the files contained in this cache. Ownership of this object is transferred to the cache.

**6.1016.1.19 setThumbnailCacheSize()**

```
void Digikam::LoadingCache::setThumbnailCacheSize (
    int numberOfQImages,
    int numberOfQPixmaps )
```

Sets the size of the thumbnail cache

**Parameters**

<i>numberOfQImages</i>	The maximum number of thumbnails of max possible size in QImage format that will be cached. If the size of the images is smaller, a larger number will be cached.
<i>numberOfQPixmaps</i>	The maximum number of thumbnails of max possible size in QPixmap format that will be cached. If the size of the images is smaller, a larger number will be cached. Note: The main cache is unaffected by this method, and <code>setCacheSize</code> takes megabytes as parameter. Note: A good caching strategy will be to set one of the numbers to 0 Default values: (0, 100)

**6.1017 Digikam::LoadingCache::CacheLock Class Reference****Public Member Functions**

- **CacheLock** ([LoadingCache](#) \*const cache)
- void **timedWait** ()
- void **wakeAll** ()

**6.1017.1 Detailed Description****Warning**

All methods of [LoadingCache](#) shall only be called when a [CacheLock](#) is held

## 6.1018 Digikam::LoadingCacheFileWatch Class Reference

Inheritance diagram for Digikam::LoadingCacheFileWatch:

### Public Member Functions

- void **addedImage** (const QString &filePath)
- void **checkFileWatch** (const QString &filePath)
- void **removeImage** (const QString &filePath)

### Protected Member Functions

- void [notifyFileChanged](#) (const QString &filePath)

### Protected Attributes

- class [LoadingCache](#) \* **m\_cache** = nullptr
- QHash< QString, QPair< quint64, QDateTime > > **m\_watchHash**

## Friends

- class **LoadingCache**

## 6.1018.1 Member Function Documentation

### 6.1018.1.1 notifyFileChanged()

```
void Digikam::LoadingCacheFileWatch::notifyFileChanged (
    const QString & filePath ) [protected]
```

Convenience method. Call this to tell the cache to remove stored images for filePath from the cache. Calling this method is fast, you do not need to check if the file is contained in the cache. Do not hold the CacheLock when calling this method.

## 6.1019 Digikam::LoadingCacheInterface Class Reference

### Static Public Member Functions

- static void [cleanCache](#) ()
- static void [cleanThumbnailCache](#) ()
- static void [cleanUp](#) ()
- static void [connectToSignalFileChanged](#) (QObject \*const object, const char \*slot)
- static void [fileChanged](#) (const QString &filePath, bool notify=true)
- static void [initialize](#) ()
- static void [putImage](#) (const QString &filePath, const [DImg](#) &img)
- static void [setCacheOptions](#) (int cacheSize)

## 6.1019.1 Member Function Documentation

### 6.1019.1.1 cleanCache()

```
void Digikam::LoadingCacheInterface::cleanCache ( ) [static]
```

remove all images from the cache (e.g. when loading settings changed) Does not affect thumbnails.

### 6.1019.1.2 cleanThumbnailCache()

```
void Digikam::LoadingCacheInterface::cleanThumbnailCache ( ) [static]
```

Remove all thumbnails from the thumbnail cache. Does not affect main image cache.

### 6.1019.1.3 cleanUp()

```
void Digikam::LoadingCacheInterface::cleanUp ( ) [static]
```

clean up cache at shutdown

#### 6.1019.1.4 connectToSignalFileChanged()

```
void Digikam::LoadingCacheInterface::connectToSignalFileChanged (
    QObject *const object,
    const char * slot ) [static]
```

Connect the given object/slot to the signal void fileChanged(const QString& filePath); which is emitted when the cache gains knowledge about a possible change of this file on disk.

#### 6.1019.1.5 fileChanged()

```
void Digikam::LoadingCacheInterface::fileChanged (
    const QString & filePath,
    bool notify = true ) [static]
```

Remove an image from the cache because it may have changed on disk

#### 6.1019.1.6 putImage()

```
void Digikam::LoadingCacheInterface::putImage (
    const QString & filePath,
    const QImage & img ) [static]
```

add a copy of the image to cache

#### 6.1019.1.7 setCacheOptions()

```
void Digikam::LoadingCacheInterface::setCacheOptions (
    int cacheSize ) [static]
```

Set cache size in Megabytes. Set to 0 to disable caching.

## 6.1020 Digikam::LoadingDescription Class Reference

### Classes

- class [PostProcessingParameters](#)
- class [PreviewParameters](#)

### Public Types

- static QStringList [possibleThumbnailCacheKeys](#) (const QString &filePath)

## Public Attributes

- QString [filePath](#)
- [PostProcessingParameters](#) [postProcessingParameters](#)
- [PreviewParameters](#) [previewParameters](#)
- [RawDecodingHint](#) [rawDecodingHint](#) = [RawDecodingDefaultSettings](#)
- [DRawDecoding](#) [rawDecodingSettings](#)

## 6.1020.1 Member Enumeration Documentation

### 6.1020.1.1 ColorManagementSettings

```
enum Digikam::LoadingDescription::ColorManagementSettings
```

#### Enumerator

ApplyTransform	IccData is an <a href="#">IccTransform</a> .
ConvertForDisplay	IccData can be the output profile.
ConvertForOutput	IccData is the output profile.

### 6.1020.1.2 RawDecodingHint

```
enum Digikam::LoadingDescription::RawDecodingHint
```

## Enumerator

RawDecodingDefaultSettings	The raw decoding options passed are taken from default, hardcoded settings
RawDecodingGlobalSettings	The raw decoding options passed are taken from global settings
RawDecodingCustomSettings	The raw decoding options may be customly edited by the user
RawDecodingTimeOptimized	The raw decoding options are hardcoded settings optimized for loading time The halfSizeColorImage and 16bit settings can be adjusted separately

## 6.1020.2 Constructor & Destructor Documentation

### 6.1020.2.1 LoadingDescription() [1/4]

```
Digikam::LoadingDescription::LoadingDescription ( )
```

An invalid [LoadingDescription](#)

### 6.1020.2.2 LoadingDescription() [2/4]

```
Digikam::LoadingDescription::LoadingDescription (
    const QString & filePath,
    ColorManagementSettings cm = NoColorConversion ) [explicit]
```

Use this for full loading of non-raw files

### 6.1020.2.3 LoadingDescription() [3/4]

```
Digikam::LoadingDescription::LoadingDescription (
    const QString & filePath,
    const DRawDecoding & settings,
    RawDecodingHint rawDecodingHint = RawDecodingCustomSettings,
    ColorManagementSettings cm = NoColorConversion )
```

Use this for full loading of raw files

### 6.1020.2.4 LoadingDescription() [4/4]

```
Digikam::LoadingDescription::LoadingDescription (
    const QString & filePath,
    const PreviewSettings & settings,
    int size,
    ColorManagementSettings cm = NoColorConversion,
    PreviewParameters::PreviewType type = PreviewParameters::PreviewImage )
```

For preview and thumbnail jobs: Stores preview max size and Exif rotation. Raw files / preview jobs: If size is not 0, the embedded preview will be loaded if available. If size is 0, [DImg](#) based loading will be used with default raw decoding settings. You can also adjust raw decoding settings and hint in this case.

### 6.1020.3 Member Function Documentation

#### 6.1020.3.1 cacheKey()

```
QString Digikam::LoadingDescription::cacheKey ( ) const
```

Return the cache key for this description

#### 6.1020.3.2 equalsIgnoreReducedVersion()

```
bool Digikam::LoadingDescription::equalsIgnoreReducedVersion (
    const LoadingDescription & other ) const
```

Returns whether the other loading task equals this one ignoring parameters used to specify a reduced version.

#### 6.1020.3.3 equalsOrBetterThan()

```
bool Digikam::LoadingDescription::equalsOrBetterThan (
    const LoadingDescription & other ) const
```

Returns whether this loading task equals the other one or is superior to it, if the other one is a reduced version

#### 6.1020.3.4 isPreviewImage()

```
bool Digikam::LoadingDescription::isPreviewImage ( ) const
```

Returns if this description will load a preview

#### 6.1020.3.5 isReducedVersion()

```
bool Digikam::LoadingDescription::isReducedVersion ( ) const
```

Returns whether this description describes a loading operation which loads the image in a reduced version (quality, size etc.)

#### 6.1020.3.6 isThumbnail()

```
bool Digikam::LoadingDescription::isThumbnail ( ) const
```

Returns if this description will load a thumbnail

#### 6.1020.3.7 lookupCacheKeys()

```
QStringList Digikam::LoadingDescription::lookupCacheKeys ( ) const
```

Return all possible cache keys, starting with the best choice, for which a result may be found in the cache for this description. Included in the list are better quality versions, if this description is reduced.

### 6.1020.3.8 needCheckRawDecoding()

```
bool Digikam::LoadingDescription::needCheckRawDecoding ( ) const
```

For some RAW images, the same cache key is not enough to say it is the correct result. You must check the raw decoding settings in this case.

### 6.1020.3.9 operator==( )

```
bool Digikam::LoadingDescription::operator== (
    const LoadingDescription & other ) const
```

Returns whether the other loading task equals this one

### 6.1020.3.10 possibleCacheKeys()

```
QStringList Digikam::LoadingDescription::possibleCacheKeys (
    const QString & filePath ) [static]
```

Returns all possible cacheKeys for the given file path (all cache keys under which the given file could be stored in the cache).

### 6.1020.3.11 thumbnailIdentifier()

```
ThumbnailIdentifier Digikam::LoadingDescription::thumbnailIdentifier ( ) const
```

If this referenced a thumbnail, recreate the identifier

## 6.1021 Digikam::LoadingDescription::PostProcessingParameters Class Reference

### Public Member Functions

- bool **hasProfile** ( ) const

## 6.1025.1 Member Function Documentation

### 6.1025.1.1 [continueQuery\(\)](#)

bool [Digikam::LoadingTask::continueQuery](#) ( ) [override], [virtual]

Implements [Digikam::LoadSaveTask](#).

### 6.1025.1.2 execute()

```
void Digikam::LoadingTask::execute ( ) [override], [virtual]
```

Implements [Digikam::LoadSaveTask](#).

### 6.1025.1.3 progressInfo()

```
void Digikam::LoadingTask::progressInfo (
    float progress ) [override], [virtual]
```

Implements [Digikam::LoadSaveTask](#).

### 6.1025.1.4 type()

```
LoadingTask::TaskType Digikam::LoadingTask::type ( ) [override], [virtual]
```

Implements [Digikam::LoadSaveTask](#).

## 6.1026 Digikam::LoadSaveFileInfoProvider Class Reference

Inheritance diagram for Digikam::LoadSaveFileInfoProvider:

## Public Member Functions

- virtual QSize [dimensionsHint](#) (const QString &path)=0
- virtual int [orientationHint](#) (const QString &path)=0

### 6.1026.1 Member Function Documentation

#### 6.1026.1.1 dimensionsHint()

```
virtual QSize Digikam::LoadSaveFileInfoProvider::dimensionsHint (  
    const QString & path ) [pure virtual]
```

Gives a hint at the size of the image. This can be used to supersede the Exif information in the file.

Implemented in [Digikam::DatabaseLoadSaveFileInfoProvider](#).

#### 6.1026.1.2 orientationHint()

```
virtual int Digikam::LoadSaveFileInfoProvider::orientationHint (  
    const QString & path ) [pure virtual]
```

Gives a hint at the orientation of the image. This can be used to supersede the Exif information in the file. Will not be used if DMetadata::ORIENTATION\_UNSPECIFIED (default value)

Implemented in [Digikam::DatabaseLoadSaveFileInfoProvider](#).

## 6.1027 Digikam::LoadSaveNotifier Class Reference

Inheritance diagram for Digikam::LoadSaveNotifier:

### Public Member Functions

- virtual void **imageLoaded** (const [LoadingDescription](#) &loadingDescription, const [DImg](#) &img)=0
- virtual void **imageSaved** (const QString &filePath, bool success)=0

- virtual void **imageStartedLoading** (const [LoadingDescription](#) &loadingDescription)=0
- virtual void **imageStartedSaving** (const QString &filePath)=0

- void [stop](#) ()
- void [wait](#) ()

## 6.1029.1 Member Enumeration Documentation

### 6.1029.1.1 AccessMode

enum [Digikam::LoadSaveThread::AccessMode](#)

used by [SharedLoadSaveThread](#) only

#### Enumerator

<a href="#">AccessModeRead</a>	image will only be used for reading
<a href="#">AccessModeReadWrite</a>	image data will possibly be changed

### 6.1029.1.2 NotificationPolicy

enum `Digikam::LoadSaveThread::NotificationPolicy`

#### Enumerator

<code>NotificationPolicyDirect</code>	Always send notification, unless the last event is still in the event queue
<code>NotificationPolicyTimeLimited</code>	Always wait for a certain amount of time after the last event sent. In particular, the first event will be sent only after waiting for this time span. (Or no event will be sent, when the loading has finished before) This is the default.

## 6.1029.2 Constructor & Destructor Documentation

### 6.1029.2.1 ~LoadSaveThread()

`Digikam::LoadSaveThread::~~LoadSaveThread ( ) [override]`

Destructor: The thread will execute all pending tasks and wait for this upon destruction

## 6.1029.3 Member Function Documentation

### 6.1029.3.1 exifOrientation()

```
int Digikam::LoadSaveThread::exifOrientation (
    const QString & filePath,
    const DMetadata & metadata,
    bool isRaw,
    bool fromRawEmbeddedPreview ) [static]
```

Retrieves the Exif orientation, either from the info provider if available, or from the metadata

### 6.1029.3.2 imageLoaded()

```
void Digikam::LoadSaveThread::imageLoaded (
    const LoadingDescription & loadingDescription,
    const DImg & img ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

### 6.1029.3.3 imageSaved()

```
void Digikam::LoadSaveThread::imageSaved (
    const QString & filePath,
    bool success ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

#### 6.1029.3.4 imageStartedLoading()

```
void Digikam::LoadSaveThread::imageStartedLoading (
    const LoadingDescription & loadingDescription ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

#### 6.1029.3.5 imageStartedSaving()

```
void Digikam::LoadSaveThread::imageStartedSaving (
    const QString & filePath ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

#### 6.1029.3.6 load()

```
void Digikam::LoadSaveThread::load (
    const LoadingDescription & description )
```

Append a task to load the given file to the task list

#### 6.1029.3.7 loadingProgress()

```
void Digikam::LoadSaveThread::loadingProgress (
    const LoadingDescription & loadingDescription,
    float progress ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

#### 6.1029.3.8 moreCompleteLoadingAvailable()

```
void Digikam::LoadSaveThread::moreCompleteLoadingAvailable (
    const LoadingDescription & oldLoadingDescription,
    const LoadingDescription & newLoadingDescription ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

#### 6.1029.3.9 run()

```
void Digikam::LoadSaveThread::run ( ) [override], [protected], [virtual]
```

Implement this pure virtual function in your subclass.

Implements [Digikam::DynamicThread](#).

### 6.1029.3.10 save()

```
void Digikam::LoadSaveThread::save (
    const QImage & image,
    const QString & filePath,
    const QString & format )
```

Append a task to save the image to the task list

### 6.1029.3.11 savingProgress()

```
void Digikam::LoadSaveThread::savingProgress (
    const QString & filePath,
    float progress ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

### 6.1029.3.12 signalImageLoaded

```
void Digikam::LoadSaveThread::signalImageLoaded (
    const LoadingDescription & loadingDescription,
    const QImage & img ) [signal]
```

This signal is emitted when the loading process has finished. If the process failed, img is null.

### 6.1029.3.13 signalImageStartedLoading

```
void Digikam::LoadSaveThread::signalImageStartedLoading (
    const LoadingDescription & loadingDescription ) [signal]
```

All signals are delivered to the thread from where the [LoadSaveThread](#) object has been created. This thread must use its event loop to get the signals. You must connect to these signals with `Qt::AutoConnection` (default) or `Qt::QueuedConnection`. This signal is emitted when the loading process begins.

### 6.1029.3.14 signalLoadingProgress

```
void Digikam::LoadSaveThread::signalLoadingProgress (
    const LoadingDescription & loadingDescription,
    float progress ) [signal]
```

This signal is emitted whenever new progress info is available and the notification policy allows emitting the signal. No progress info will be sent for preloaded images ([ManagedLoadSaveThread](#)).

### 6.1029.3.15 signalMoreCompleteLoadingAvailable

```
void Digikam::LoadSaveThread::signalMoreCompleteLoadingAvailable (
    const LoadingDescription & oldLoadingDescription,
    const LoadingDescription & newLoadingDescription ) [signal]
```

This signal is emitted if

- you are doing shared loading ([SharedLoadSaveThread](#))
- you started a loading operation with a [LoadingDescription](#) for a reduced version of the image
- another thread started a loading operation for a more complete version You may want to cancel the current operation and start with the given loadingDescription

### 6.1029.3.16 thumbnailLoaded()

```
void Digikam::LoadSaveThread::thumbnailLoaded (
    const LoadingDescription & loadingDescription,
    const QImage & img ) [override], [virtual]
```

Implements [Digikam::LoadSaveNotifier](#).

Reimplemented in [Digikam::ThumbnailLoadThread](#).

## 6.1030 Digikam::LocalContrastContainer Class Reference

## 6.1031.1 Member Function Documentation

### 6.1031.1.1 filterAction()

`FilterAction` Digikam::LocalContrastFilter::filterAction ( ) [override], [virtual]

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1031.1.2 filterIdentifier()

`QString` Digikam::LocalContrastFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1031.1.3 readParameters()

`void` Digikam::LocalContrastFilter::readParameters (   
 const `FilterAction` & *action* ) [override], [virtual]

Implements [Digikam::DImgThreadedFilter](#).

## 6.1032 Digikam::LocalContrastSettings Class Reference

Inheritance diagram for Digikam::LocalContrastSettings:

## Signals

- void **signalSettingsChanged** ()

## Public Member Functions

Inheritance diagram for Digikam::LocalizeConfig:

## Public Member Functions

- void **applySettings** ()
- **LocalizeConfig** (QWidget \*const parent=nullptr)
- void **readSettings** ()

## 6.1034 Digikam::LocalizeContainer Class Reference

### Public Member Functions

- void **readFromConfig** (const KConfigGroup &group)
- void **writeToConfig** (KConfigGroup &group) const

### Public Attributes

- QStringList **alternativeLang**  
*List of langges to use with Alternative Languages Text editor.*
- QString **defaultLanguage**
- bool **enableSpellCheck** = false  
*Enable spell-checking feature.*
- QStringList **ignoredWords**  
*Default language code to use with x-default (empty for auto-detection).*
- [DOnlineTranslator::Engine](#) **translatorEngine** = [DOnlineTranslator::Google](#)  
*Online translator to use.*
- QStringList **translatorLang**  
*List of langues to use with Online translator.*

### 6.1034.1 Detailed Description

The class [LocalizeContainer](#) encapsulates all spell-check and localize related settings.

### 6.1034.2 Member Data Documentation

#### 6.1034.2.1 ignoredWords

```
QStringList Digikam::LocalizeContainer::ignoredWords
```

Words to ignore with spell-checking.

## 6.1035 Digikam::LocalizeSelector Class Reference

Inheritance diagram for Digikam::LocalizeSelector:

### Signals

- void **signalTranslate** (const QString &lang)

### Public Member Functions

- **LocalizeSelector** (QWidget \*const parent)
- void **populateTranslationEntries** ()

## Public Member Functions inherited from Digikam::DHBox

- **DHBox** (QWidget \*const parent=nullptr)
- QSize **minimumSizeHint** () const override
- void **setContentMargins** (const QMargins &argins)
- void **setContentMargins** (int left, int top, int right, int bottom)
- void **setSpacing** (int space)
- void **setStretchFactor** (QWidget \*const widget, int stretch)
- QSize **sizeHint** () const override

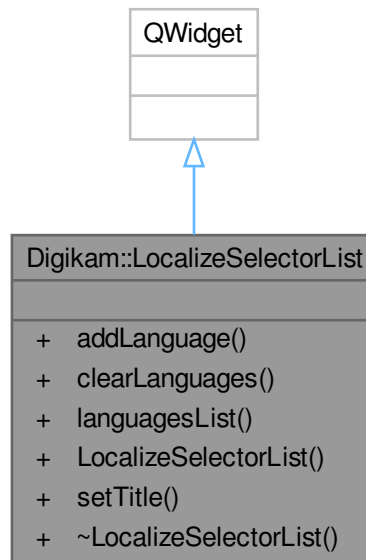

## Additional Inherited Members

## Protected Member Functions inherited from Digikam::DHBox

- void **childEvent** (QChildEvent \*e) override
- **DHBox** (bool vertical, QWidget \*const parent)

## 6.1036 Digikam::LocalizeSelectorList Class Reference

Inheritance diagram for Digikam::LocalizeSelectorList:

## Signals

- void **signalSettingsChanged** ()

### Public Member Functions

- void **addLanguage** (const QString &code)
- void **clearLanguages** ()
- QStringList **languagesList** () const
- **LocalizeSelectorList** (QWidget \*const parent)
- void **setTitle** (const QString &title)

## 6.1037 Digikam::LocalizeSettings Class Reference

Inheritance diagram for Digikam::LocalizeSettings:

### Public Types

- enum **ConfigPart** { **LocalizeConfig** , **SpellCheckConfig** , **AllConfig** }

### Signals

- void **signalOpenLocalizeSetup** ()
- void **signalSettingsChanged** ()

### Public Member Functions

- void **openLocalizeSetup** ()
- void **setSettings** (const [LocalizeContainer](#) &settings, ConfigPart config)
- [LocalizeContainer](#) **settings** () const

## Static Public Member Functions

- static [LocalizeSettings](#) \* [instance](#) ()

## Friends

- class [LocalizeSettingsCreator](#)

## 6.1037.1 Member Function Documentation

### 6.1037.1.1 [instance\(\)](#)

```
LocalizeSettings * Digikam::LocalizeSettings::instance ( ) [static]
```

Global container for spell-check and localize settings. All accessor methods are thread-safe.

### 6.1037.1.2 [setSettings\(\)](#)

```
void Digikam::LocalizeSettings::setSettings (
    const LocalizeContainer & settings,
    ConfigPart config )
```

Sets the current Metadata settings and writes them to config.

### 6.1037.1.3 [settings\(\)](#)

```
LocalizeContainer Digikam::LocalizeSettings::settings ( ) const
```

Returns the current Metadata settings.

## 6.1038 Digikam::LookupAltitude Class Reference

Inheritance diagram for Digikam::LookupAltitude:

### Classes

- class [Request](#)

## Public Types

- enum **StatusEnum** { **StatusInProgress** = 0 , **StatusSuccess** = 1 , **StatusCanceled** = 2 , **StatusError** = 3 }

## Signals

- void **signalDone** ()
- void **signalRequestsReady** (const QList< int > &readyRequests)

## Public Member Functions

## 6.1047.1 Member Function Documentation

### 6.1047.1.1 signalAddItemsToProcess

```
void Digikam::MaintenanceThread::signalAddItemsToProcess (
    int count ) [signal]
```

Signal to emit the count of additional items to process.

### 6.1047.1.2 signalAdvance [1/2]

```
void Digikam::MaintenanceThread::signalAdvance ( ) [signal]
```

Emit when an item was processed and on additional information is necessary.

### 6.1047.1.3 signalAdvance [2/2]

```
void Digikam::MaintenanceThread::signalAdvance (
    const ItemInfo & ,
    const QImage & ,
    int ) [signal]
```

Emit when an item have been processed. QImage can be used to pass item thumbnail processed.

### 6.1047.1.4 signalCanceled

```
void Digikam::MaintenanceThread::signalCanceled ( ) [signal]
```

Signal to emit to sub-tasks to cancel processing.

### 6.1047.1.5 signalCompleted

```
void Digikam::MaintenanceThread::signalCompleted ( ) [signal]
```

Emit when a items list have been fully processed.

### 6.1047.1.6 signalData

```
void Digikam::MaintenanceThread::signalData (
    const QList< qlonglong > & staleImageIds,
    const QList< int > & staleThumbIds,
    const QList< Identity > & staleIdentities,
    const QList< qlonglong > & staleSimilarityImageIds ) [signal]
```

Signal to emit junk data for db cleaner.

### 6.1047.1.7 signalFinished

```
void Digikam::MaintenanceThread::signalFinished (
    bool done,
    bool errorFree ) [signal]
```

Signal to emit after processing with info if the processing was done and if yes, without errors.

### 6.1047.1.8 signalRemovePending

```
void Digikam::MaintenanceThread::signalRemovePending (
    const ItemInfo & info ) [signal]
```

Signal to remove pending item from lazy sync.

### 6.1047.1.9 signalStarted

```
void Digikam::MaintenanceThread::signalStarted ( ) [signal]
```

Emit when the task has started it's work.

## 6.1048 Digikam::MaintenanceTool Class Reference

Inheritance diagram for Digikam::MaintenanceTool:

### Public Slots

- void **start** ()

### Signals

- void [signalCanceled](#) ()
- void [signalComplete](#) ()

## Signals inherited from [Digikam::ProgressItem](#)

- void [progressItemAdded](#) ([ProgressItem](#) \*item)  
*Emitted when a new [ProgressItem](#) is added.*
- void [progressItemCanceled](#) ([ProgressItem](#) \*item)  
*Emitted when an item was canceled. It will not go away immediately, only when the owner sets it complete, which will usually happen. Can be used to visually indicate the canceled status of an item. Should be used by the owner of the item to make sure it is set completed even if it is canceled. There is a [ProgressManager::slotStandardCancelHandler](#) which simply sets the item completed and can be used if no other work needs to be done on cancel.*
- void [progressItemCanceledById](#) (const QString &id)
- void [progressItemCompleted](#) ([ProgressItem](#) \*item)  
*Emitted when a progress item was completed. The item will be deleted afterwards, so slots connected to this are the last chance to work with this item.*
- void [progressItemLabel](#) ([ProgressItem](#) \*item, const QString &label)  
*Emitted when the label of an item changed. Should be used by progress dialogs to update the label of an item.*
- void [progressItemProgress](#) ([ProgressItem](#) \*item, unsigned int v)  
*Emitted when the progress value of an item changes.*
- void [progressItemStatus](#) ([ProgressItem](#) \*item, const QString &mess)  
*Emitted when the status message of an item changed. Should be used by progress dialogs to update the status message for an item.*
- void [progressItemThumbnail](#) ([ProgressItem](#) \*item, const QPixmap &thumb)  
*Emitted when the thumbnail data must be set in item.*
- void [progressItemUsesBusyIndicator](#) ([ProgressItem](#) \*item, bool value)  
*Emitted when the busy indicator state of an item changes. Should be used by progress dialogs so that they can adjust the display of the progress bar to the new mode.*

## Public Member Functions

- [MaintenanceTool](#) (const QString &id, [ProgressItem](#) \*const parent=nullptr)
- void [setNotificationEnabled](#) (bool b)
- virtual void [setUseMultiCoreCPU](#) (bool)

## Public Member Functions inherited from [Digikam::ProgressItem](#)

- void [addChild](#) ([ProgressItem](#) \*const kiddo)
- bool [advance](#) (unsigned int v)  
*Advance total items processed by n values and update percentage in progressbar.*
- bool [canBeCanceled](#) () const
- void [cancel](#) ()
- bool [canceled](#) () const
- unsigned int [completedItems](#) () const
- bool [hasThumbnail](#) () const
- const QString & [id](#) () const
- bool [incCompletedItems](#) (unsigned int v=1)
- void [incTotalItems](#) (unsigned int v=1)
- const QString & [label](#) () const
- [ProgressItem](#) \* [parent](#) () const
- unsigned int [progress](#) () const
- [ProgressItem](#) ([ProgressItem](#) \*const parent, const QString &id, const QString &label, const QString &status, bool canBeCanceled, bool hasThumb)
- void [removeChild](#) ([ProgressItem](#) \*const kiddo)
- void [reset](#) ()

*Reset the progress value of this item to 0 and the status string to the empty string.*

- void **setComplete** ()
 

*Tell the item it has finished. This will emit [progressItemCompleted\(\)](#) result in the destruction of the item after all slots connected to this signal have executed. This is the only way to get rid of an item and needs to be called even if the item is canceled. Don't use the item after this has been called on it.*
- bool **setCompletedItems** (unsigned int v)
- void **setLabel** (const QString &v)
- void **setProgress** (unsigned int v)
 

*Set the progress (percentage of completion) value of this item.*
- void **setShowAtStart** (bool showAtStart)
 

*Set the property to pop-up item when it's added in progress manager. Use this method if you consider that item is important to be notified to end-user.*
- void **setStatus** (const QString &v)
 

*Set the string to be used for showing this item's current status.*
- void **setThumbnail** (const QIcon &icon)
 

*Sets whether this item has a thumbnail.*
- void **setTotalItems** (unsigned int v)
- void **setUsesBusyIndicator** (bool useBusyIndicator)
 

*Sets whether this item uses a busy indicator instead of real progress for its progress bar. If it uses a busy indicator, you are still responsible for calling [setProgress\(\)](#) from time to time to update the busy indicator.*
- bool **showAtStart** () const
- const QString & **status** () const
- bool **totalCompleted** () const
- unsigned int **totalItems** () const
- void **updateProgress** ()
 

*Recalculate progress according to total/completed items and update.*
- bool **usesBusyIndicator** () const

### Protected Slots

- virtual void **slotCancel** ()
- virtual void **slotDone** ()
- virtual void **slotStart** ()

## 6.1048.1 Member Function Documentation

### 6.1048.1.1 setNotificationEnabled()

```
void Digikam::MaintenanceTool::setNotificationEnabled (
    bool b )
```

If true, show a notification message on desktop notification manager with time elapsed to run process.

### 6.1048.1.2 setUseMultiCoreCPU()

```
virtual void Digikam::MaintenanceTool::setUseMultiCoreCPU (
    bool ) [inline], [virtual]
```

Re-implement this method if your tool is able to use multi-core CPU to process item in parallel

Reimplemented in [Digikam::AutotagsAssignment](#), [Digikam::DbCleaner](#), [Digikam::FingerPrintsGenerator](#), [Digikam::ImageQualitySorter](#), [Digikam::MetadataRemover](#), [Digikam::MetadataSynchronizer](#), and [Digikam::ThumbsGenerator](#).

**6.1048.1.3 signalCanceled**

```
void Digikam::MaintenanceTool::signalCanceled ( ) [signal]
```

Emit when process is canceled.

**6.1048.1.4 signalComplete**

```
void Digikam::MaintenanceTool::signalComplete ( ) [signal]
```

Emit when process is done (not canceled).

## 6.1050.1 Member Enumeration Documentation

### 6.1050.1.1 LoadingMode

enum [Digikam::ManagedLoadSaveThread::LoadingMode](#)

used by [SharedLoadSaveThread](#) only

#### Enumerator

LoadingModeNormal	no sharing of loading process, no caching of image
LoadingModeShared	loading process is shared, image is cached

### 6.1050.1.2 LoadingPolicy

enum `Digikam::ManagedLoadSaveThread::LoadingPolicy`

#### Enumerator

<code>LoadingPolicyFirstRemovePrevious</code>	Load image immediately, remove and stop all previous loading tasks.
<code>LoadingPolicyPrepend</code>	Prepend loading in front of all other tasks, but wait for the current task to finish. No other tasks will be removed, preloading tasks will be stopped and postponed.
<code>LoadingPolicySimplePrepend</code>	Prepend in front of all other tasks (not touching the current task). Do not check for duplicate tasks, do not check for preloading tasks.
<code>LoadingPolicyAppend</code>	Append loading task to the end of the list, but in front of all preloading tasks. No other tasks will be removed, preloading tasks will be stopped and postponed. This is similar to the simple <code>load()</code> operation from <code>LoadSaveThread</code> , except for the special care taken for preloading.
<code>LoadingPolicySimpleAppend</code>	Append to the lists of tasks. Do not check for duplicate tasks, do not check for preloading tasks.
<code>LoadingPolicyPreload</code>	Preload image, i.e. load it with low priority when no other tasks are scheduled. All other tasks will take precedence, and preloading tasks will be stopped and postponed when another task is added. No progress info will be sent for preloaded images

### 6.1050.1.3 LoadingTaskFilter

enum `Digikam::ManagedLoadSaveThread::LoadingTaskFilter`

#### Enumerator

<code>LoadingTaskFilterAll</code>	filter all loading tasks
<code>LoadingTaskFilterPreloading</code>	filter only tasks with preloading policy

### 6.1050.1.4 TerminationPolicy

enum `Digikam::ManagedLoadSaveThread::TerminationPolicy`

#### Enumerator

<code>TerminationPolicyTerminateLoading</code>	Wait for saving tasks, stop and remove loading tasks This is the default.
<code>TerminationPolicyTerminatePreloading</code>	Wait for loading and saving tasks, stop and remove preloading tasks
<code>TerminationPolicyWait</code>	Wait for all pending tasks
<code>TerminationPolicyTerminateAll</code>	Stop all pending tasks

## 6.1050.2 Constructor & Destructor Documentation

### 6.1050.2.1 ManagedLoadSaveThread()

```
Digikam::ManagedLoadSaveThread::ManagedLoadSaveThread (
    QObject *const parent = nullptr ) [explicit]
```

Termination is controlled by setting the TerminationPolicy Default is TerminationPolicyTerminateLoading

## 6.1050.3 Member Function Documentation

### 6.1050.3.1 load()

```
void Digikam::ManagedLoadSaveThread::load (
    const LoadingDescription & description )
```

Append a task to load the given file to the task list. If there is already a task for the given file, it will possibly be rescheduled, but no second task will be added. Only loading tasks will - if required by the policy - be stopped or removed, saving tasks will not be touched.

### 6.1050.3.2 save()

```
void Digikam::ManagedLoadSaveThread::save (
    const DImg & image,
    const QString & filePath,
    const QString & format )
```

Append a task to save the image to the task list

### 6.1050.3.3 setLoadingPolicy()

```
void Digikam::ManagedLoadSaveThread::setLoadingPolicy (
    LoadingPolicy policy )
```

Set the loading policy. Default is LoadingPolicyAppend. You can override the default value for each operation.

### 6.1050.3.4 stopLoading() [1/2]

```
void Digikam::ManagedLoadSaveThread::stopLoading (
    const LoadingDescription & desc,
    LoadingTaskFilter filter = LoadingTaskFilterAll )
```

Same than previous method, but Stop and remove tasks filtered by LoadingDescription.

### 6.1050.3.5 stopLoading() [2/2]

```
void Digikam::ManagedLoadSaveThread::stopLoading (
    const QString & filePath = QString(),
    LoadingTaskFilter filter = LoadingTaskFilterAll )
```

Stop and remove tasks filtered by filePath and policy. If filePath isNull, applies to all file paths.

### 6.1050.3.6 stopSaving()

```
void Digikam::ManagedLoadSaveThread::stopSaving (
    const QString & filePath = QString() )
```

Stop and remove saving tasks filtered by filePath. If filePath isNull, applies to all file paths.

## 6.1054.1 Member Function Documentation

### 6.1054.1.1 [bestRepresentativeIndexFromList\(\)](#)

```
QPersistentModelIndex Digikam::MapViewModelHelper::bestRepresentativeIndexFromList (
    const QList< QPersistentModelIndex > & list,
    const int sortKey ) [override], [virtual]
```

## Parameters

<i>list</i>	A list containing markers.
<i>sortKey</i>	Determines the sorting options and is actually of type <code>GPSItemInfoSorter::SortOptions</code>

## Returns

Returns the index of the marker.

Reimplemented from [Digikam::GeoModelHelper](#).

**6.1054.1.2 itemCoordinates()**

```
bool Digikam::MapViewModelHelper::itemCoordinates (
    const QModelIndex & index,
    GeoCoordinates *const coordinates ) const [override], [virtual]
```

## Parameters

<i>index</i>	Current model index.
<i>coordinates</i>	Here will be returned the coordinates of the current marker.

## Returns

True, if the marker has coordinates.

Implements [Digikam::GeoModelHelper](#).

**6.1054.1.3 model()**

```
QAbstractItemModel * Digikam::MapViewModelHelper::model ( ) const [override], [virtual]
```

## Returns

Returns digiKam's filter model.

Implements [Digikam::GeoModelHelper](#).

**6.1054.1.4 onIndicesClicked()**

```
void Digikam::MapViewModelHelper::onIndicesClicked (
    const QList< QPersistentModelIndex > & clickedIndices ) [override], [virtual]
```

## Parameters

<i>clickedIndices</i>	A list containing the marker indices belonging to the group whose thumbnail has been clicked.
-----------------------	---

Reimplemented from [Digikam::GeoModelHelper](#).

#### 6.1054.1.5 pixmapFromRepresentativeIndex()

```
QPixmap Digikam::MapViewModelHelper::pixmapFromRepresentativeIndex (
    const QPersistentModelIndex & index,
    const QSize & size ) [override], [virtual]
```

##### Parameters

<i>index</i>	The marker's index.
<i>size</i>	The size of the thumbnail.

##### Returns

If the thumbnail has been loaded in the [ThumbnailLoadThread](#) instance, it is returned. If not, a QPixmap is returned and [ThumbnailLoadThread](#)'s signal named `signalThumbnailLoaded` is emitted when the thumbnail becomes available.

Reimplemented from [Digikam::GeoModelHelper](#).

#### 6.1054.1.6 selectionModel()

```
QItemSelectionModel * Digikam::MapViewModelHelper::selectionModel ( ) const [override], [virtual]
```

##### Returns

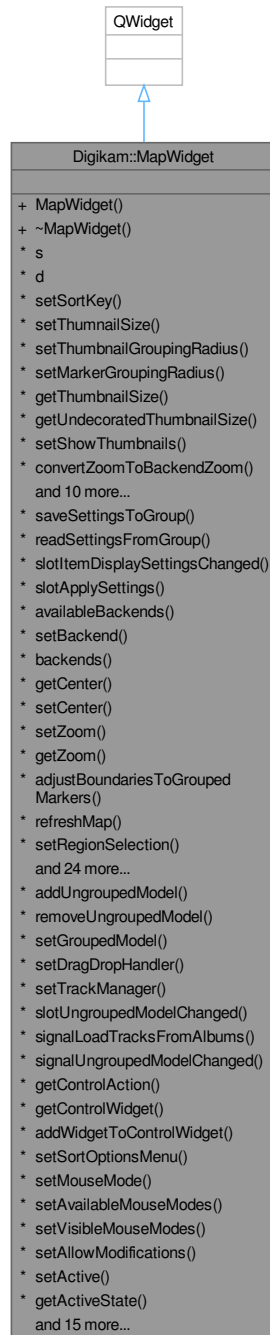

Returns digiKam's selection model.

Implements [Digikam::GeoModelHelper](#).

## 6.1055 Digikam::MapWidget Class Reference

The central map view class of geolocation interface.

### 6.1055.1 Detailed Description

The [MapWidget](#) class is the central widget of geolocation interface. It provides a widget which can display maps using either the Marble or Google Maps backend. Using a model, items can be displayed on the map. For models containing only a small number of items, the items can be shown directly, but for models with a larger number of items, the items can also be grouped. Currently, any number of ungrouped models can be shown, but only one grouped model. Item selection models can also be used along with the models, to interact with the selection states of the items on the map. In order to use a model with geolocation interface, however, a model helper has to be implemented, which extracts data from the model that is not provided by the Qt part of a model's API.

Now, a brief introduction on how to get geolocation interface working is provided:

- First, an instance of [MapWidget](#) has to be created.
- Next, [GeoModelHelper](#) has to be subclassed and at least the pure virtual functions have to be implemented.
- To show the model's data ungrouped, the model helper has to be added to [MapWidget](#) instance using `addUngroupedModel`.
- To show the model's data grouped, an instance of [AbstractMarkerTiler](#) has to be created and the model helper has to be set to it using `setMarkerGeoModelHelper`. The [AbstractMarkerTiler](#) has then to be given to [MapWidget](#) using `setGroupedModel`. If the items to be displayed do not reside in a model, a subclass of [AbstractMarkerTiler](#) can be created which returns just the number of items in a particular area, and picks representative items for thumbnails.
- To handle dropping of items from the host applications UI onto the map, `DragDropHandler` has to be subclassed as well and added to the model using `setDragDropHandler`.
- Finally, `setActive()` has to be called to tell the widget that it should start displaying things.

### 6.1055.2 Constructor & Destructor Documentation

#### 6.1055.2.1 ~MapWidget()

```
Digikam::MapWidget::~MapWidget ( ) [override]
```

### 6.1055.3 Member Function Documentation

#### 6.1055.3.1 addUngroupedModel()

```
void Digikam::MapWidget::addUngroupedModel (
    GeoModelHelper *const modelHelper )
```

#### 6.1055.3.2 adjustBoundariesToGroupedMarkers()

```
void Digikam::MapWidget::adjustBoundariesToGroupedMarkers (
    const bool useSaneZoomLevel = true )
```

Note that a call to this function currently has no effect if the widget has been set inactive via `setActive()` or the backend is not yet ready.

## Parameters

<i>useSaneZoomLevel</i>	Stop zooming at a sane level, if markers are too close together.
-------------------------	--

**6.1055.3.3 applyCacheToBackend()**

```
void Digikam::MapWidget::applyCacheToBackend ( ) [protected]
```

**6.1055.3.4 convertZoomToBackendZoom()**

```
QString Digikam::MapWidget::convertZoomToBackendZoom (
    const QString & someZoom,
    const QString & targetBackend ) const
```

**6.1055.3.5 dragEnterEvent()**

```
void Digikam::MapWidget::dragEnterEvent (
    QDragEnterEvent * event ) [override], [protected]
```

**6.1055.3.6 getColorInfos() [1/2]**

```
void Digikam::MapWidget::getColorInfos (
    const GeoGroupState groupState,
    const int nMarkers,
    QColor * fillColor,
    QColor * strokeColor,
    Qt::PenStyle * strokeStyle,
    QString * labelText,
    QColor * labelColor ) const
```

**6.1055.3.7 getColorInfos() [2/2]**

```
void Digikam::MapWidget::getColorInfos (
    const int clusterIndex,
    QColor * fillColor,
    QColor * strokeColor,
    Qt::PenStyle * strokeStyle,
    QString * labelText,
    QColor * labelColor,
    const GeoGroupState *const overrideSelection = nullptr,
    const int *const overrideCount = nullptr ) const
```

## Parameters

<i>clusterIndex</i>	Index of the cluster
<i>fillColor</i>	Color used to fill the circle
<i>strokeColor</i>	Color used for the stroke around the circle
<i>strokeStyle</i>	Style used to draw the stroke around the circle
<i>labelText</i>	Text for the label
<i>labelColor</i>	Color for the label text
<i>overrideSelection</i>	Get the colors for a different selection state
<i>overrideCount</i>	Get the colors for a different amount of markers

### 6.1055.3.8 getDecoratedPixmapForCluster()

```
QPixmap Digikam::MapWidget::getDecoratedPixmapForCluster (
    const int clusterId,
    const GeoGroupState *const selectedStateOverride,

## 6.1057 Digikam::MapWidgetView Class Reference

Class containing digiKam's central map view.

Inheritance diagram for Digikam::MapView:

### Public Types

- enum **Application** { **ApplicationDigikam** = 1 , **ApplicationImportUI** = 2 }

### Public Types inherited from [Digikam::StateSavingObject](#)

- enum [StateSavingDepth](#) { [INSTANCE](#) , [DIRECT\\_CHILDREN](#) , [RECURSIVE](#) }

## Public Member Functions

- [CamItemInfo](#) `currentCamItemInfo ()` const  
Returns the *CamItemInfo* for the current image.
- [ItemInfo](#) `currentItemInfo ()` const  
Returns the *ItemInfo* for the current image.
- bool `getActiveState ()` const
- [MapWidgetView](#) ([QItemSelectionModel](#) \*const selectionModel, [DCategorizedSortFilterProxyModel](#) \*const imageFilterModel, [QWidget](#) \*const parent, const [Application](#) application)  
Constructor.
- void `setActive (const bool state)`  
Set the map active/inactive.
- `~MapWidgetView ()` override  
Destructor.

## Public Member Functions inherited from [Digikam::StateSavingObject](#)

- [StateSavingDepth](#) `getStateSavingDepth ()` const
- void `loadState ()`
- void `saveState ()`
- virtual void `setConfigGroup (const KConfigGroup &group)`
- virtual void `setEntryPrefix (const QString &prefix)`
- void `setStateSavingDepth (const StateSavingDepth depth)`
- [StateSavingObject](#) ([QObject](#) \*const host)
- virtual `~StateSavingObject ()`

## Protected Member Functions

- void `doLoadState ()` override
- void `doSaveState ()` override

## Protected Member Functions inherited from [Digikam::StateSavingObject](#)

- [QString](#) `entryName (const QString &base)` const
- [KConfigGroup](#) `getConfigGroup ()` const

## 6.1057.1 Constructor & Destructor Documentation

### 6.1057.1.1 MapWidgetView()

```
Digikam::MapWidgetView::MapWidgetView (
    QItemSelectionModel *const selectionModel,
    DCategorizedSortFilterProxyModel *const imageFilterModel,
    QWidget *const parent,
    const Application application ) [explicit]
```

#### Parameters

<i>selectionModel</i>	digikam's selection model
<i>imageFilterModel</i>	digikam's filter model
<i>parent</i>	the parent object
<i>application</i>	the type of application host

## 6.1057.2 Member Function Documentation

### 6.1057.2.1 currentCamItemInfo()

`CamItemInfo` Digikam::MapWidgetView::currentCamItemInfo ( ) const

### 6.1057.2.2 currentItemInfo()

`ItemInfo` Digikam::MapWidgetView::currentItemInfo ( ) const

### 6.1057.2.3 doLoadState()

`void` Digikam::MapWidgetView::doLoadState ( ) [override], [protected], [virtual]

Implement this hook method for state loading. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1057.2.4 doSaveState()

`void` Digikam::MapWidgetView::doSaveState ( ) [override], [protected], [virtual]

Implement this hook method for state saving. Use [getConfigGroup\(\)](#) and [entryName\(\)](#) for the implementation.

Implements [Digikam::StateSavingObject](#).

### 6.1057.2.5 getActiveState()

`bool` Digikam::MapWidgetView::getActiveState ( ) const

#### Returns

The map's active state

### 6.1057.2.6 setActive()

`void` Digikam::MapWidgetView::setActive (   
 `const bool state` )

#### Parameters

<code>state</code>	If true, the map is active.
--------------------	-----------------------------

## 6.1058 Digikam::Mat Struct Reference

### Public Attributes

- int [cols](#)
- double \* [data](#)
- int [rows](#)

### 6.1058.1 Detailed Description

[Mat](#):

Normal matrix type. Indices range from [0, rows - 1 ] and [0, cols - 1].

### 6.1058.2 Member Data Documentation

#### 6.1058.2.1 cols

```
int Digikam::Mat::cols
```

Number of columns in the matrix

#### 6.1058.2.2 data

```
double* Digikam::Mat::data
```

Content of the matrix

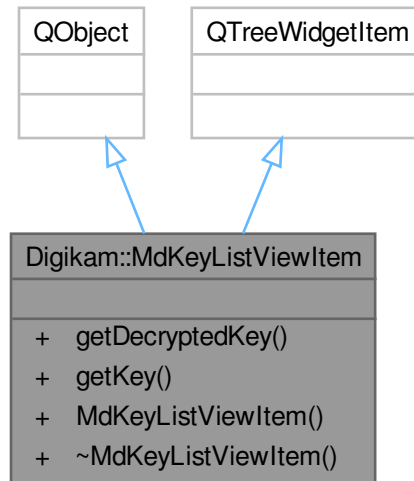

#### 6.1058.2.3 rows

```
int Digikam::Mat::rows
```

Number of rows in the matrix.

## 6.1059 Digikam::MdKeyListViewItem Class Reference

Inheritance diagram for Digikam::MdKeyListViewItem:

### Public Member Functions

- `QString` **getDecryptedKey** () const
- `QString` **getKey** () const
- **MdKeyListViewItem** (`QTreeWidgetItem *const parent`, `const QString &key`)

## 6.1060 Digikam::MediaPlayerView Class Reference

Inheritance diagram for Digikam::MediaPlayerView:

### Public Slots

- void **slotEscapePressed** ()
- void **slotRotateVideo** ()

### Signals

- void **signalEscapePreview** ()
- void **signalNextItem** ()
- void **signalPrevItem** ()

### Public Member Functions

- void **escapePreview** ()
- **MediaPlayerView** (QWidget \*const parent)
- void **reload** ()
- void **setCurrentItem** (const QUrl &url=QUrl(), bool hasPrevious=false, bool hasNext=false)
- void **setInfoInterface** ([DInfoInterface](#) \*const iface)

## Protected Member Functions

- bool `eventFilter` (QObject \*watched, QEvent \*event) override

## 6.1061 Digikam::MetadataHub Class Reference

### Public Types

- enum `Status` { `MetadataInvalid` , `MetadataAvailable` }
- enum `WriteComponents` { `WRITE_DATETIME` = 1 , `WRITE_TITLE` = 2 , `WRITE_COMMENTS` = 4 , `WRITE_PICKLABEL` = 8 , `WRITE_COLORLABEL` = 16 , `WRITE_RATING` = 32 , `WRITE_TEMPLATE` = 64 , `WRITE_TAGS` = 128 , `WRITE_POSITION` = 256 , `WRITE_ALL` = 511 }
- enum `WriteMode` { `FullWrite` , `FullWriteIfChanged` , `PartialWrite` }

### Public Member Functions

- QStringList `cleanupTags` (const QStringList &toClean)  
*cleanupTags remove duplicates and obsolete tags before setting metadata*
- void `load` (const `ItemInfo` &info)
- `MetadataHub` ()
- void `reset` ()
- bool `willWriteMetadata` (Digikam::MetadataHub::WriteComponent writeMode=WRITE\_ALL, const `MetaEngineSettingsContainer` &settings=`MetaEngineSettings::instance()` ->settings()) const  
*With the currently applied changes, the given writeMode and settings.*
- bool `write` (const `DImg` &image, WriteComponent writeMode=WRITE\_ALL, bool ignoreLazySync=false, const `MetaEngineSettingsContainer` &settings=`MetaEngineSettings::instance()` ->settings())  
*Constructs a meta engine object from the metadata stored in the given DImg object, calls the above method, and changes the stored metadata in the DImg object.*
- bool `write` (const QString &filePath, WriteComponent writeMode=WRITE\_ALL, bool ignoreLazySync=false, const `MetaEngineSettingsContainer` &settings=`MetaEngineSettings::instance()` ->settings())  
*Constructs a meta engine object for given filePath, calls the above method, writes the changes out to the file, and notifies the `ItemAttributesWatch`.*
- bool `writeTags` (const `DMetadata` &metadata, bool saveTags)  
*Used to deduplicate code from writeTags and usual write, all write to tags operations must be done here.*
- bool `writeTags` (const QString &filePath, WriteComponent writeMode=WRITE\_ALL, const `MetaEngineSettingsContainer` &settings=`MetaEngineSettings::instance()` ->settings())  
*Will write only Tags to image. Used by `TagsManager` to write tags to image Other metadata are not updated.*
- void `writeToBaloo` (const QString &filePath, const `MetaEngineSettingsContainer` &settings=`MetaEngineSettings::instance()` ->settings())  
*write tags, comments and rating to KDE Nepomuk replacement: Baloo*
- bool `writeToMetadata` (const `ItemInfo` &info, WriteComponent writeMode=WRITE\_ALL, bool ignoreLazySync=false, const `MetaEngineSettingsContainer` &settings=`MetaEngineSettings::instance()` ->settings())  
*writeToMetadata write to metadata using image info to retrieve tags and filepath use this method when multiple image infos are loaded in hub*

## Protected Member Functions

- void **applyChangeNotifications** ()
- void **load** (const QDateTime &dateTime, const [CaptionsMap](#) &titles, const [CaptionsMap](#) &comment, int colorLabel, int pickLabel, int rating, const [Template](#) &t)
- void **loadFaceTags** (const [ItemInfo](#) &info)
- void **loadTags** (const QList< int > &loadedTagIds)
- void **notifyTagDeleted** (int id)
- bool **write** ([DMetadata](#) &metadata, WriteComponent writeMode=WRITE\_ALL, const [MetaEngineSettingsContainer](#) &settings=[MetaEngineSettings::instance\(\)](#) ->settings())

*Applies the set of metadata contained in this [MetadataHub](#) to the given meta engine object.*

## 6.1061.1 Member Enumeration Documentation

### 6.1061.1.1 Status

```
enum Digikam::MetadataHub::Status
```

The status enum describes the result of joining several metadata sets. If only one set has been added, the status is always MetadataAvailable. If no set has been added, the status is always MetadataInvalid

#### Enumerator

MetadataInvalid	not yet filled with any value
MetadataAvailable	only one data set has been added, or a common value is available

### 6.1061.1.2 WriteMode

```
enum Digikam::MetadataHub::WriteMode
```

#### Enumerator

FullWrite	Write all available information
FullWriteIfChanged	Do a full write if and only if <ul style="list-style-type: none"> <li>• metadata fields changed</li> <li>• the changed fields shall be written according to write settings "Changed" in this context means changed by one of the set... methods, the <a href="#">load()</a> methods are ignored for this attribute. This mode allows to avoid write operations when e.g. the user does not want keywords to be written and only changes keywords.</li> </ul>
PartialWrite	Write only the changed parts. Metadata fields which cannot be changed from <a href="#">MetadataHub</a> (photographer ID etc.) will never be written

## 6.1061.2 Constructor & Destructor Documentation

### 6.1061.2.1 MetadataHub()

```
Digikam::MetadataHub::MetadataHub ( )
```

Constructs a [MetadataHub](#).

## 6.1061.3 Member Function Documentation

### 6.1061.3.1 cleanupTags()

```
QStringList Digikam::MetadataHub::cleanupTags (
    const QStringList & toClean )
```

#### Parameters

<i>toClean</i>	tag list to be cleared and de-duplicated
----------------	--

#### Returns

clean tag list

### 6.1061.3.2 load() [1/2]

```
void Digikam::MetadataHub::load (
    const ItemInfo & info )
```

Add metadata information contained in the [ItemInfo](#) object. This method (or in combination with the other load methods) can be called multiple times on the same [MetadataHub](#) object. In this case, the metadata will be combined.

### 6.1061.3.3 load() [2/2]

```
void Digikam::MetadataHub::load (
    const QDateTime & dateTime,
    const CaptionsMap & titles,
    const CaptionsMap & comments,
    int colorLabel,
    int pickLabel,
    int rating,
    const Template & t ) [protected]
```

private common code to load dateTime, comment, color label, pick label, rating

### 6.1061.3.4 loadTags()

```
void Digikam::MetadataHub::loadTags (
    const QList< int > & loadedTags ) [protected]
```

private common code to merge tags

### 6.1061.3.5 willWriteMetadata()

```
bool Digikam::MetadataHub::willWriteMetadata (
    Digikam::MetadataHub::WriteComponent writeMode = WRITE_ALL,
    const MetaEngineSettingsContainer & settings = MetaEngineSettings::instance()->settings()
) const
```

## Parameters

<i>writeMode</i>	The mode to write metadata
<i>settings</i>	The metadata settings to be set

## Returns

if write(DMetadata), write(QString) or write(DImg) will actually apply any changes.

**6.1061.3.6 write()** [1/3]

```
bool Digikam::MetadataHub::write (
    const DImg & image,
    WriteComponent writeMode = WRITE_ALL,
    bool ignoreLazySync = false,
    const MetaEngineSettingsContainer & settings = MetaEngineSettings::instance()->settings()
)
```

## Parameters

<i>image</i>	The <a href="#">DImg</a> container to retrieve current tags
<i>writeMode</i>	The mode to write metadata
<i>ignoreLazySync</i>	The flag to ignore the lazy sync metadata stage
<i>settings</i>	The metadata settings to be set

## Returns

Returns if the [DImg](#) object has been touched

**6.1061.3.7 write()** [2/3]

```
bool Digikam::MetadataHub::write (
    const QString & filePath,
    WriteComponent writeMode = WRITE_ALL,
    bool ignoreLazySync = false,
    const MetaEngineSettingsContainer & settings = MetaEngineSettings::instance()->settings()
)
```

## Parameters

<i>filePath</i>	The file path to retrieve current tags
<i>writeMode</i>	The mode to write metadata
<i>ignoreLazySync</i>	The flag to ignore the lazy sync metadata stage
<i>settings</i>	The metadata settings to be set

**Warning**

Do not use this method when multiple image infos are loaded It will result in disjoint tags not being written Use `writeToMetadata(Image info ...)` instead

**Returns**

Returns if the file has been touched

**6.1061.3.8 write() [3/3]**

```
bool Digikam::MetadataHub::write (
    DMetadata & metadata,
    WriteComponent writeMode = WRITE_ALL,
    const MetaEngineSettingsContainer & settings = MetaEngineSettings::instance()->settings()
) [protected]
```

**Parameters**

<i>metadata</i>	The metadata backend instance.
<i>writeMode</i>	The mode to write metadata.
<i>settings</i>	The <a href="#">MetaEngineSettingsContainer</a> determine whether data is actually set or not. The following metadata fields may be set (depending on settings): <ul style="list-style-type: none"> <li>• Comment</li> <li>• Date</li> <li>• Rating</li> <li>• Tags</li> <li>• Photographer ID (data from settings)</li> <li>• Credits (data from settings)</li> </ul>

**Note**

The data fields taken from this [MetadataHub](#) object are only set if their status is `MetadataAvailable`. If the status is `MetadataInvalid` or `MetadataDisjoint`, the respective metadata field is not touched.

**Returns**

Returns true if the metadata object has been touched.

**6.1061.3.9 writeTags() [1/2]**

```
bool Digikam::MetadataHub::writeTags (
    const DMetadata & metadata,
    bool saveTags )
```

**Parameters**

<i>metadata</i>	meta engine object that apply changes
<i>saveTags</i>	save switch

**Returns**

if tags were successfully set

**6.1061.3.10 writeTags() [2/2]**

```
bool Digikam::MetadataHub::writeTags (
    const QString & filePath,
    WriteComponent writeMode = WRITE_ALL,
    const MetaEngineSettingsContainer & settings = MetaEngineSettings::instance()->settings()
)
```

**Parameters**

<i>filePath</i>	The file path to update current tags
<i>writeMode</i>	The mode to write metadata
<i>settings</i>	The metadata settings to be set

**Returns**

if tags were successfully written.

**6.1061.3.11 writeToBaloo()**

```
void Digikam::MetadataHub::writeToBaloo (
    const QString & filePath,
    const MetaEngineSettingsContainer & settings = MetaEngineSettings::instance()->settings()
)
```

**Parameters**

<i>filePath</i>	path to file to add comments, tags and rating
<i>settings</i>	metadata settings to be set

**6.1061.3.12 writeToMetadata()**

```
bool Digikam::MetadataHub::writeToMetadata (
    const ItemInfo & info,
    WriteComponent writeMode = WRITE_ALL,
    bool ignoreLazySync = false,
    const MetaEngineSettingsContainer & settings = MetaEngineSettings::instance()->settings()
)
```

## Parameters

<i>info</i>	The image info to retrieve current tags
<i>writeMode</i>	The mode to write metadata
<i>ignoreLazySync</i>	The flag to ignore the lazy sync metadata stage
<i>settings</i>	The metadata settings to be set

## Returns

true if everything is successful

safe method

## 6.1062 Digikam::MetadataHubMngr Class Reference

Inheritance diagram for Digikam::MetadataHubMngr:

## Public Slots

- void **slotApplyPending** ()
- void **slotRemovePending** (const [ItemInfo](#) &info)

## Signals

- QString [getValue](#) (const QString &key, [ParseSettings](#) &settings)
- DbKeyIdsMap [ids](#) () const

## 6.1063.1 Member Function Documentation

### 6.1063.1.1 [getDbValue\(\)](#)

```
QString Digikam::MetadataKeys::getDbValue (
    const QString & key,
    ParseSettings & settings ) [override], [protected], [virtual]
```

Abstract method for retrieving the value from the database for the given key.

This method has to be implemented by all child classes. It is called by the [getValue\(\)](#) method.

#### Parameters

<i>key</i>	the key representing the value in the database
<i>settings</i>	the <a href="#">ParseSettings</a> object holding all relevant information about the image.

#### Returns

the value of the given database key

#### See also

[DbKeysCollection::getValue\(\)](#)

Implements [Digikam::DbKeysCollection](#).

## 6.1064 Digikam::MetadataListView Class Reference

Inheritance diagram for Digikam::MetadataListView:

- unsigned int [progress](#) () const
- [ProgressItem](#) ([ProgressItem](#) \*const parent, const QString &id, const QString &label, const QString &status, bool [canBeCanceled](#), bool hasThumb)
- void [removeChild](#) ([ProgressItem](#) \*const kiddo)
- void [reset](#) ()
 

*Reset the progress value of this item to 0 and the status string to the empty string.*
- void [setComplete](#) ()
 

*Tell the item it has finished. This will emit [progressItemCompleted\(\)](#) result in the destruction of the item after all slots connected to this signal have executed. This is the only way to get rid of an item and needs to be called even if the item is canceled. Don't use the item after this has been called on it.*
- bool [setCompletedItems](#) (unsigned int v)
- void [setLabel](#) (const QString &v)
- void [setProgress](#) (unsigned int v)
 

*Set the progress (percentage of completion) value of this item.*
- void [setShowAtStart](#) (bool [showAtStart](#))
 

*Set the property to pop-up item when it's added in progress manager. Use this method if you consider that item is important to be notified to end-user.*
- void [setStatus](#) (const QString &v)
 

*Set the string to be used for showing this item's current status.*
- void [setThumbnail](#) (const QIcon &icon)
 

*Sets whether this item has a thumbnail.*
- void [setTotalItems](#) (unsigned int v)
- void [setUsesBusyIndicator](#) (bool useBusyIndicator)
 

*Sets whether this item uses a busy indicator instead of real progress for its progress bar. If it uses a busy indicator, you are still responsible for calling [setProgress\(\)](#) from time to time to update the busy indicator.*

- bool [showAtStart](#) () const
- const QString & [status](#) () const
- bool **totalCompleted** () const
- unsigned int **totalItems** () const
- void **updateProgress** ()
  - Recalculate progress according to total/completed items and update.*
- bool [usesBusyIndicator](#) () const

#### Additional Inherited Members

#### Public Slots inherited from [Digikam::MaintenanceTool](#)

- void **start** ()

#### Signals inherited from [Digikam::MaintenanceTool](#)

- void [signalCanceled](#) ()
- void [signalComplete](#) ()

#### Signals inherited from [Digikam::ProgressItem](#)

- void [progressItemAdded](#) ([ProgressItem](#) \*item)
  - Emitted when a new [ProgressItem](#) is added.*
- void [progressItemCanceled](#) ([ProgressItem](#) \*item)
  - Emitted when an item was canceled. It will not go away immediately, only when the owner sets it complete, which will usually happen. Can be used to visually indicate the canceled status of an item. Should be used by the owner of the item to make sure it is set completed even if it is canceled. There is a [ProgressManager::slotStandardCancelHandler](#) which simply sets the item completed and can be used if no other work needs to be done on cancel.*
- void **progressItemCanceledById** (const QString &id)
- void [progressItemCompleted](#) ([ProgressItem](#) \*item)
  - Emitted when a progress item was completed. The item will be deleted afterwards, so slots connected to this are the last chance to work with this item.*
- void [progressItemLabel](#) ([ProgressItem](#) \*item, const QString &label)
  - Emitted when the label of an item changed. Should be used by progress dialogs to update the label of an item.*
- void [progressItemProgress](#) ([ProgressItem](#) \*item, unsigned int v)
  - Emitted when the progress value of an item changes.*
- void [progressItemStatus](#) ([ProgressItem](#) \*item, const QString &mess)
  - Emitted when the status message of an item changed. Should be used by progress dialogs to update the status message for an item.*
- void [progressItemThumbnail](#) ([ProgressItem](#) \*item, const QPixmap &thumb)
  - Emitted when the thumbnail data must be set in item.*
- void [progressItemUsesBusyIndicator](#) ([ProgressItem](#) \*item, bool value)
  - Emitted when the busy indicator state of an item changes. Should be used by progress dialogs so that they can adjust the display of the progress bar to the new mode.*

## 6.1070.1 Constructor & Destructor Documentation

### 6.1070.1.1 MetadataRemover() [1/2]

```
Digikam::MetadataRemover::MetadataRemover (
    const AlbumList & list = AlbumList(),
    RemoveAction action = None,
    ProgressItem *const parent = nullptr ) [explicit]
```

Constructor which remove all images metadata from an Albums list. If list is empty, whole Albums collection is processed.

### 6.1070.1.2 MetadataRemover() [2/2]

```
Digikam::MetadataRemover::MetadataRemover (
    const ItemInfoList & list,
    RemoveAction action = None,
    ProgressItem *const parent = nullptr ) [explicit]
```

Constructor which remove all images metadata from an Images list

## 6.1070.2 Member Function Documentation

### 6.1070.2.1 setUseMultiCoreCPU()

```
void Digikam::MetadataRemover::setUseMultiCoreCPU (
    bool ) [override], [virtual]
```

Re-implement this method if your tool is able to use multi-core CPU to process item in parallel

Reimplemented from [Digikam::MaintenanceTool](#).

- bool [removeXmpTag](#) (const char \*xmpTagName, bool family=false) const
- static bool [canWriteXmp](#) (const QString &filePath)
- static bool [registerXmpNameSpace](#) (const QString &uri, const QString &prefix)
- static bool [unregisterXmpNameSpace](#) (const QString &uri)

## 6.1079.1 Member Typedef Documentation

### 6.1079.1.1 AltLangMap

```
typedef QMap<QString, QString> Digikam::MetaEngine::AltLangMap
```

A map used to store a list of Alternative Language values. The map key is the language code following RFC3066 notation (like "fr-FR" for French), and the map value the text.

### 6.1079.1.2 MetaDataMap

```
typedef QMap<QString, QString> Digikam::MetaEngine::MetaDataMap
```

A map used to store Tags Key and Tags Value.

### 6.1079.1.3 TagsMap

```
typedef QMap<QString, QStringList> Digikam::MetaEngine::TagsMap
```

A map used to store Tags Key and a list of Tags properties :

- name,
- title,
- description.

## 6.1079.2 Member Enumeration Documentation

### 6.1079.2.1 Backend

enum `Digikam::MetaEngine::Backend`

Metadata Backend used to populate information.

Enumerator

Exiv2Backend	Default backend used by <a href="#">MetaEngine</a> .
LibRawBackend	<a href="#">DMetadadata</a> only.
LibHeifBackend	<a href="#">DMetadadata</a> only.
ImageMagickBackend	<a href="#">DMetadadata</a> only.
FFMpegBackend	<a href="#">DMetadadata</a> only.
ExifToolBackend	<a href="#">DMetadadata</a> only.
VideoMergeBackend	<a href="#">DMetadadata</a> only.
NoBackend	No backend used (aka file cannot be read).

### 6.1079.2.2 ImageColorWorkSpace

enum `Digikam::MetaEngine::ImageColorWorkSpace`

The item color workspace values given by Exif metadata.

### 6.1079.2.3 ImageOrientation

enum `Digikam::MetaEngine::ImageOrientation`

The item orientation values given by Exif metadata.

### 6.1079.2.4 MetadataWritingMode

enum `Digikam::MetaEngine::MetadataWritingMode`

The item metadata writing mode, between item file metadata and XMP sidecar file, depending on the context.

See also

[MetadataWritingMode\(\)](#), [metadataWritingMode\(\)](#)

Enumerator

WRITE_TO_FILE_ONLY	Write metadata to item file only.
WRITE_TO_SIDECAR_ONLY	Write metadata to sidecar file only.
WRITE_TO_SIDECAR_AND_FILE	Write metadata to item and sidecar files.
WRITE_TO_SIDECAR_ONLY_FOR_READ_ONLY_FILES	Write metadata to sidecar file only for read only items such as RAW files for example.

### 6.1079.2.5 XmpTagType

```
enum Digikam::MetaEngine::XmpTagType
```

Xmp tag types, used by setXmpTag, only first three types are used

## 6.1079.3 Constructor & Destructor Documentation

### 6.1079.3.1 MetaEngine() [1/3]

```
Digikam::MetaEngine::MetaEngine ( )
```

Standard constructor.

### 6.1079.3.2 MetaEngine() [2/3]

```
Digikam::MetaEngine::MetaEngine (
    const MetaEngineData & data ) [explicit]
```

Constructor to load from parsed data.

### 6.1079.3.3 MetaEngine() [3/3]

```
Digikam::MetaEngine::MetaEngine (
    const QString & filePath ) [explicit]
```

Constructor to Load Metadata from item file.

### 6.1079.3.4 ~MetaEngine()

```
Digikam::MetaEngine::~MetaEngine ( ) [virtual]
```

Standard destructor

## 6.1079.4 Member Function Documentation

### 6.1079.4.1 addToXmpTagStringBag()

```
bool Digikam::MetaEngine::addToXmpTagStringBag (
    const char * xmpTagName,
    const QStringList & entriesToAdd ) const
```

Set an Xmp tag content using a list of strings defined by the 'entriesToAdd' parameter. The existing entries are preserved. The method will compare all new with all already existing entries to prevent duplicates in the item. Return true if the entries have been added to metadata.

#### 6.1079.4.2 applyChanges()

```
bool Digikam::MetaEngine::applyChanges (
    bool setVersion = false ) const
```

The same than [save\(\)](#) method, but it apply on current item. Return true if metadata have been saved into file.

#### 6.1079.4.3 backendName()

```
QString Digikam::MetaEngine::backendName (
    Backend t ) [static]
```

Return a string of backend name used to parse metadata from file. See Backend enum for details.

#### 6.1079.4.4 canWriteComment()

```
bool Digikam::MetaEngine::canWriteComment (
    const QString & filePath ) [static]
```

Return 'true' if Comments can be written in file.

#### 6.1079.4.5 canWriteExif()

```
bool Digikam::MetaEngine::canWriteExif (
    const QString & filePath ) [static]
```

Return 'true' if Exif can be written in file.

#### 6.1079.4.6 canWriteIptc()

```
bool Digikam::MetaEngine::canWriteIptc (
    const QString & filePath ) [static]
```

Return 'true' if Iptc can be written in file.

#### 6.1079.4.7 canWriteXmp()

```
bool Digikam::MetaEngine::canWriteXmp (
    const QString & filePath ) [static]
```

Return 'true' if Xmp can be written in file.

#### 6.1079.4.8 clearComments()

```
bool Digikam::MetaEngine::clearComments ( ) const
```

Clear the Comments metadata container in memory.

#### 6.1079.4.9 clearExif()

```
bool Digikam::MetaEngine::clearExif ( ) const
```

Clear the Exif metadata container in memory.

#### 6.1079.4.10 clearIptc()

```
bool Digikam::MetaEngine::clearIptc ( ) const
```

Clear the Iptc metadata container in memory.

#### 6.1079.4.11 clearXmp()

```
bool Digikam::MetaEngine::clearXmp ( ) const
```

Clear the Xmp metadata container in memory.

#### 6.1079.4.12 convertDegreeAngleToDouble()

```
double Digikam::MetaEngine::convertDegreeAngleToDouble (
    double degrees,
    double minutes,
    double seconds ) [static]
```

Converts degrees values as a double representation. This code take a care about hemisphere position.

#### 6.1079.4.13 convertFromGPSCoordinateString() [1/2]

```
bool Digikam::MetaEngine::convertFromGPSCoordinateString (
    const QString & coordinate,
    long int *const numeratorDegrees,
    long int *const denominatorDegrees,
    long int *const numeratorMinutes,
    long int *const denominatorMinutes,
    long int *const numeratorSeconds,
    long int *const denominatorSeconds,
    char *const directionReference ) [static]
```

Converts a GPSCoordinate string as defined by XMP to three rationals and the direction reference. Returns true if the conversion was successful. If minutes is given in the fractional form, a denominator of 1000000 for the minutes will be used.

#### 6.1079.4.14 convertFromGPSCoordinateString() [2/2]

```
bool Digikam::MetaEngine::convertFromGPSCoordinateString (
    const QString & gpsString,
    double *const coordinate ) [static]
```

Convert a GPSCoordinate string as defined by XMP to a double floating point number in degrees where the sign determines the direction ref (North + / South - ; East + / West -). Returns true if the conversion was successful.

**6.1079.4.15 convertToGPSCoordinateString() [1/2]**

```
QString Digikam::MetaEngine::convertToGPSCoordinateString (
    const bool isLatitude,
    double coordinate ) [static]
```

Converts a GPS position stored as double floating point number in degrees to the form described as GPSCoordinate in the XMP specification.

**6.1079.4.16 convertToGPSCoordinateString() [2/2]**

```
QString Digikam::MetaEngine::convertToGPSCoordinateString (
    const long int numeratorDegrees,
    const long int denominatorDegrees,
    const long int numeratorMinutes,
    const long int denominatorMinutes,
    const long int numeratorSeconds,
    const long int denominatorSeconds,
    const char directionReference ) [static]
```

Converts a GPS position stored as rationals in Exif to the form described as GPSCoordinate in the XMP specification, either in the form "256,45,34N" or "256,45.566667N" Precision: A second at sea level measures 30m for our purposes, a minute 1800m. (for more details, see [https://en.wikipedia.org/wiki/Geographic\\_coordinate\\_system](https://en.wikipedia.org/wiki/Geographic_coordinate_system)) This means with a decimal precision of 8 for minutes we get +/-0,018mm. (if I calculated correctly)

**6.1079.4.17 convertToRational()**

```
void Digikam::MetaEngine::convertToRational (
    const double number,
    long int *const numerator,
    long int *const denominator,
    const int rounding ) [static]
```

This method converts 'number' to a rational value, returned in the 'numerator' and 'denominator' parameters. Set the precision using 'rounding' parameter. Use this method if you want to retrieve a most exact rational for a number without further properties, without any requirements to the denominator.

**6.1079.4.18 convertToRationalSmallDenominator()**

```
void Digikam::MetaEngine::convertToRationalSmallDenominator (
    const double number,
    long int *const numerator,
    long int *const denominator ) [static]
```

This method convert a 'number' to a rational value, returned in 'numerator' and 'denominator' parameters. This method will be able to retrieve a rational number from a double - if you constructed your double with 1.0 / 4786.0, this method will retrieve 1 / 4786. If your number is not expected to be rational, use the method above which is just as exact with rounding = 4 and more exact with rounding > 4.

#### 6.1079.4.19 `convertToUserPresentableNumbers()` [1/2]

```
void Digikam::MetaEngine::convertToUserPresentableNumbers (
    const bool isLatitude,
    double coordinate,
    int *const degrees,
    int *const minutes,
    double *const seconds,
    char *const directionReference ) [static]
```

Converts a double floating point number to user presentable numbers, integer degrees and minutes and double floating point seconds, and a direction reference ('N' or 'S', 'E' or 'W'). The method needs to know for the direction reference if the latitude or the longitude is meant by the double parameter.

#### 6.1079.4.20 `convertToUserPresentableNumbers()` [2/2]

```
bool Digikam::MetaEngine::convertToUserPresentableNumbers (
    const QString & coordinate,
    int *const degrees,
    int *const minutes,
    double *const seconds,
    char *const directionReference ) [static]
```

Converts a GPSCoordinate string to user presentable numbers, integer degrees and minutes and double floating point seconds, and a direction reference ('N' or 'S', 'E' or 'W')

#### 6.1079.4.21 `createExifUserStringFromValue()`

```
QString Digikam::MetaEngine::createExifUserStringFromValue (
    const char * exifTagName,
    const QVariant & val,
    bool escapeCR = true )
```

Takes a QVariant value as it could have been retrieved by `getExifTagVariant` with the given `exifTagName`, and returns its value properly converted to a string (including translations from Exiv2). This is equivalent to calling `getExifTagString` directly. If `escapeCR` is true CR characters will be removed from the result.

#### 6.1079.4.22 `detectLanguageAlt()`

```
QString Digikam::MetaEngine::detectLanguageAlt (
    const QString & value,
    QString & lang ) [static]
```

Language Alternative autodetection. Return a QString without language alternative header. Header is saved into 'lang'. If no language alternative is found, value is returned as well and 'lang' is set to a null string.

#### 6.1079.4.23 `Exiv2Version()`

```
QString Digikam::MetaEngine::Exiv2Version ( ) [static]
```

Return a string version of Exiv2 release in format "major.minor.patch"

#### 6.1079.4.24 exportChanges()

```
bool Digikam::MetaEngine::exportChanges (
    const QString & exvTmpFile ) const
```

Export metadata to a temporary EXV file container. 'exvTmpFile' is the path to the temporary EXV container to create.

#### 6.1079.4.25 getComments()

```
QByteArray Digikam::MetaEngine::getComments ( ) const
```

Return a Qt byte array copy of Comments container get from current item. Comments are JFIF section of JPEG images. Look Exiv2 API for more information. Return a null Qt byte array if there is no Comments metadata in memory.

#### 6.1079.4.26 getCommentsDecoded()

```
QString Digikam::MetaEngine::getCommentsDecoded ( ) const
```

Return a Qt string object of Comments from current item decoded using the 'detectEncodingAndDecode()' method. Return a null string if there is no Comments metadata available.

#### 6.1079.4.27 getDigitizationDateTime()

```
QDateTime Digikam::MetaEngine::getDigitizationDateTime (
    bool fallbackToCreationTime = false ) const
```

Return the digitization time stamp of the item. First Exif information is checked, then IPTC. If no digitization time stamp is found, [getItemDateime\(\)](#) is called if `fallbackToCreationTime` is true, or a null QDateTime is returned if `fallbackToCreationTime` is false.

#### 6.1079.4.28 getExifComment()

```
QString Digikam::MetaEngine::getExifComment (
    bool readDescription = true ) const
```

Return a QString copy of Exif user comments. Return a null string if user comments cannot be found.

#### 6.1079.4.29 getExifEncoded()

```
QByteArray Digikam::MetaEngine::getExifEncoded (
    bool addExifHeader = false ) const
```

Returns the exif data encoded to a QByteArray in a form suitable for storage in a JPEG image. Note that this encoding is a lossy operation.

Set true 'addExifHeader' parameter to add an Exif header to Exif metadata. Returns a null Qt byte array if there is no Exif metadata in memory.

#### 6.1079.4.30 `getExifTagComment()`

```
QString Digikam::MetaEngine::getExifTagComment (
    const char * exifTagName ) const
```

Return a Exif tag comment like a string. Return a null string if user comments cannot be found.

#### 6.1079.4.31 `getExifTagData()`

```
QByteArray Digikam::MetaEngine::getExifTagData (
    const char * exifTagName ) const
```

Get an Exif tag content like a bytes array. Return an empty bytes array if Exif tag cannot be found.

#### 6.1079.4.32 `getExifTagDescription()`

```
QString Digikam::MetaEngine::getExifTagDescription (
    const char * exifTagName )
```

Return the Exif Tag description or a null string.

#### 6.1079.4.33 `getExifTagLong()` [1/2]

```
bool Digikam::MetaEngine::getExifTagLong (
    const char * exifTagName,
    long & val ) const
```

Get an Exif tag content like a long value. Return true if Exif tag be found.

#### 6.1079.4.34 `getExifTagLong()` [2/2]

```
bool Digikam::MetaEngine::getExifTagLong (
    const char * exifTagName,
    long & val,
    int component ) const
```

Get an Exif tag content like a long value. Return true if Exif tag be found.

#### 6.1079.4.35 `getExifTagRational()`

```
bool Digikam::MetaEngine::getExifTagRational (
    const char * exifTagName,
    long int & num,
    long int & den,
    int component = 0 ) const
```

Get the 'component' index of an Exif tags content like a rational value. 'num' and 'den' are the numerator and the denominator of the rational value. Return true if Exif tag be found.

**6.1079.4.36 getExifTagsDataList()**

```
MetaEngine::MetaDataMap Digikam::MetaEngine::getExifTagsDataList (
    const QStringList & exifKeysFilter = QStringList(),
    bool invertSelection = false,
    bool extractBinary = true ) const
```

Return a map of Exif tags name/value found in metadata sorted by Exif keys given by 'exifKeysFilter'.

'exifKeysFilter' is a QStringList of Exif keys. For example, if you use the string list given below:

```
"Iop" "Thumbnail" "Image" "Photo"
```

List can be empty to not filter output.

... this method will return a map of all Exif tags which :

- include "Iop", or "Thumbnail", or "Image", or "Photo" in the Exif tag keys if 'invertSelection' is false.
- not include "Iop", or "Thumbnail", or "Image", or "Photo" in the Exif tag keys if 'invertSelection' is true. if 'extractBinary' is true, tags with undefined types of data are extracted (default), else contents is replaced by "Binary data ... bytes". Take a care as large binary data as original RAW data from DNG container can be huge and listing Exif tags from GUI can take a while.

**6.1079.4.37 getExifTagString()**

```
QString Digikam::MetaEngine::getExifTagString (
    const char * exifTagName,
    bool escapeCR = true ) const
```

Get an Exif tags content like a string. If 'escapeCR' parameter is true, the CR characters will be removed. If Exif tag cannot be found a null string is returned.

**6.1079.4.38 getExifTagTitle()**

```
QString Digikam::MetaEngine::getExifTagTitle (
    const char * exifTagName )
```

Return the Exif Tag title or a null string.

**6.1079.4.39 getExifTagVariant()**

```
QVariant Digikam::MetaEngine::getExifTagVariant (
    const char * exifTagName,
    bool rationalAsListofInts = true,
    bool escapeCR = true,
    int component = 0 ) const
```

Get an Exif tags content as a QVariant. Returns a null QVariant if the Exif tag cannot be found. For string and integer values the matching QVariant types will be used, for date and time values QVariant::DateTime. Rationals will be returned as QVariant::List with two integer QVariants (numerator, denominator) if rationalAsListofInts is true, as double if rationalAsListofInts is false. An exif tag of numerical type may contain more than one value; set component to the desired index.

#### 6.1079.4.40 getExifThumbnail()

```
QImage Digikam::MetaEngine::getExifThumbnail (
    bool fixOrientation ) const
```

Return a QImage copy of Exif thumbnail image. Return a null image if thumbnail cannot be found. The 'fix↔Orientation' parameter will rotate automatically the thumbnail if Exif orientation tags information are attached with thumbnail.

#### 6.1079.4.41 getFilePath()

```
QString Digikam::MetaEngine::getFilePath ( ) const
```

Return the file path of current item.

#### 6.1079.4.42 getGPSAltitude()

```
bool Digikam::MetaEngine::getGPSAltitude (
    double *const altitude ) const
```

Get GPS altitude information, in meters, relative to sea level (positive sign above sea level)

#### 6.1079.4.43 getGPSInfo()

```
bool Digikam::MetaEngine::getGPSInfo (
    double & altitude,
    double & latitude,
    double & longitude ) const
```

Get all GPS location information set in item. Return true if all information can be found.

#### 6.1079.4.44 getGPSLatitudeNumber()

```
bool Digikam::MetaEngine::getGPSLatitudeNumber (
    double *const latitude ) const
```

Get GPS location information set in the item, as a double floating point number as in degrees where the sign determines the direction ref (North + / South - ; East + / West -). Returns true if the information is available.

#### 6.1079.4.45 getGPSLatitudeString()

```
QString Digikam::MetaEngine::getGPSLatitudeString ( ) const
```

Get GPS location information set in the item, in the GPSCoordinate format as described in the XMP specification. Returns a null string in the information cannot be found.

**6.1079.4.46 getIptc()**

```
QByteArray Digikam::MetaEngine::getIptc (
    bool addIrbHeader = false ) const
```

Return a Qt byte array copy of Iptc container get from current item. Set true 'addIrbHeader' parameter to add an Irb header to Iptc metadata. Return a null Qt byte array if there is no Iptc metadata in memory.

**6.1079.4.47 getIptcKeywords()**

```
QStringList Digikam::MetaEngine::getIptcKeywords ( ) const
```

Return a strings list of Iptc keywords from item. Return an empty list if no keyword are set.

**6.1079.4.48 getIptcSubCategories()**

```
QStringList Digikam::MetaEngine::getIptcSubCategories ( ) const
```

Return a strings list of Iptc sub-categories from item. Return an empty list if no sub-category are set.

**6.1079.4.49 getIptcSubjects()**

```
QStringList Digikam::MetaEngine::getIptcSubjects ( ) const
```

Return a strings list of Iptc subjects from item. Return an empty list if no subject are set.

**6.1079.4.50 getIptcTagData()**

```
QByteArray Digikam::MetaEngine::getIptcTagData (
    const char * iptcTagName ) const
```

Get an Iptc tag content as a bytes array. Return an empty bytes array if Iptc tag cannot be found.

**6.1079.4.51 getIptcTagDescription()**

```
QString Digikam::MetaEngine::getIptcTagDescription (
    const char * iptcTagName )
```

Return the Iptc Tag description or a null string.

**6.1079.4.52 getIptcTagsDataList()**

```
MetaEngine::MetaDataMap Digikam::MetaEngine::getIptcTagsDataList (
    const QStringList & iptcKeysFilter = QStringList(),
    bool invertSelection = false ) const
```

Return a map of Iptc tags name/value found in metadata sorted by Iptc keys given by 'iptcKeysFilter'.

'iptcKeysFilter' is a QStringList of Iptc keys. For example, if you use the string list given below:

"Envelope" "Application2"

List can be empty to not filter output.

... this method will return a map of all Iptc tags which :

- include "Envelope", or "Application2" in the Iptc tag keys if 'invertSelection' is false.
- not include "Envelope", or "Application2" in the Iptc tag keys if 'invertSelection' is true.

**6.1079.4.53 getIptcTagsList()**

```
MetaEngine::TagsMap Digikam::MetaEngine::getIptcTagsList ( ) const
```

Return a map of all standard Iptc tags supported by Exiv2.

**6.1079.4.54 getIptcTagsStringList()**

```
QStringList Digikam::MetaEngine::getIptcTagsStringList (
    const char * iptcTagName,
    bool escapeCR = true ) const
```

Returns a strings list with of multiple Iptc tags from the item. Return an empty list if no tag is found. Get the values of all IPTC tags with the given tag name in a string list. (In Iptc, there can be multiple tags with the same name) If the 'escapeCR' parameter is true, the CR characters will be removed. If no tag can be found an empty list is returned.

**6.1079.4.55 getIptcTagString()**

```
QString Digikam::MetaEngine::getIptcTagString (
    const char * iptcTagName,
    bool escapeCR = true ) const
```

Get an Iptc tag content like a string. If 'escapeCR' parameter is true, the CR characters will be removed. If Iptc tag cannot be found a null string is returned.

**6.1079.4.56 getIptcTagTitle()**

```
QString Digikam::MetaEngine::getIptcTagTitle (
    const char * iptcTagName )
```

Return the Iptc Tag title or a null string.

#### 6.1079.4.57 getItemColorWorkSpace()

```
MetaEngine::ImageColorWorkSpace Digikam::MetaEngine::getItemColorWorkSpace ( ) const
```

Return the item color-space set in Exif metadata. The makernotes of item are also parsed to get this information. See ImageColorWorkSpace values for details.

#### 6.1079.4.58 getItemDateTime()

```
QDateTime Digikam::MetaEngine::getItemDateTime ( ) const
```

Return the time stamp of item. Exif information are check in first, IPTC in second if item don't have Exif information. If no time stamp is found, a null date is returned.

#### 6.1079.4.59 getItemDimensions()

```
QSize Digikam::MetaEngine::getItemDimensions ( ) const
```

Return the size of item in pixels using Exif tags. Return a null dimension if size cannot be found.

#### 6.1079.4.60 getItemIccProfile()

```
QByteArray Digikam::MetaEngine::getItemIccProfile ( ) const
```

Get image ICC profile.

#### 6.1079.4.61 getItemOrientation()

```
MetaEngine::ImageOrientation Digikam::MetaEngine::getItemOrientation ( ) const
```

Return the item orientation set in Exif metadata. The makernotes of item are also parsed to get this information. See ImageOrientation values for details.

#### 6.1079.4.62 getItemPreview()

```
bool Digikam::MetaEngine::getItemPreview (
    QImage & preview ) const
```

Return a QImage copy of Iptc preview image. Return a null item if preview cannot be found.

#### 6.1079.4.63 getMakernoteTagsList()

```
MetaEngine::TagsMap Digikam::MetaEngine::getMakernoteTagsList ( ) const
```

Return a map of all non-standard Exif tags (makernotes) supported by Exiv2.

#### 6.1079.4.64 `getMimeType()`

```
QString Digikam::MetaEngine::getMimeType ( ) const
```

Returns the mime type of this item. The information is read from the file; see the docs for [getPixelSize\(\)](#) to know when it is available.

#### 6.1079.4.65 `getPixelSize()`

```
QSize Digikam::MetaEngine::getPixelSize ( ) const
```

Returns the pixel size of the current item. This information is read from the file, not from the metadata. The returned `QSize` is valid if the [MetaEngine](#) object was *constructed* by reading a file or item data; the information is not available when the object was created from [MetaEngineData](#). Note that in the Exif or XMP metadata, there may be fields describing the item size. These fields are not accessed by this method. When replacing the metadata with `setData()`, the metadata may change; this information always keeps referring to the file it was initially read from.

#### 6.1079.4.66 `getStdExifTagsList()`

```
MetaEngine::TagsMap Digikam::MetaEngine::getStdExifTagsList ( ) const
```

Return a map of all standard Exif tags supported by Exiv2.

#### 6.1079.4.67 `getXmp()`

```
QByteArray Digikam::MetaEngine::getXmp ( ) const
```

Return a Qt byte array copy of XMP container get from current item. Return a null Qt byte array if there is no Xmp metadata in memory.

#### 6.1079.4.68 `getXmpKeywords()`

```
QStringList Digikam::MetaEngine::getXmpKeywords ( ) const
```

Return a strings list of Xmp keywords from item. Return an empty list if no keyword are set.

#### 6.1079.4.69 `getXmpSubCategories()`

```
QStringList Digikam::MetaEngine::getXmpSubCategories ( ) const
```

Return a strings list of Xmp sub-categories from item. Return an empty list if no sub-category are set.

#### 6.1079.4.70 `getXmpSubjects()`

```
QStringList Digikam::MetaEngine::getXmpSubjects ( ) const
```

Return a strings list of Xmp subjects from item. Return an empty list if no subject are set.

#### 6.1079.4.71 getXmpTagDescription()

```
QString Digikam::MetaEngine::getXmpTagDescription (
    const char * xmpTagName )
```

Return the Xmp Tag description or a null string.

#### 6.1079.4.72 getXmpTagsDataList()

```
MetaEngine::MetaDataMap Digikam::MetaEngine::getXmpTagsDataList (
    const QStringList & xmpKeysFilter = QStringList(),
    bool invertSelection = false ) const
```

Return a map of Xmp tags name/value found in metadata sorted by Xmp keys given by 'xmpKeysFilter'.

'xmpKeysFilter' is a QStringList of Xmp keys. For example, if you use the string list given below:

```
"dc" // Dublin Core schema. "xmp" // Standard Xmp schema.
```

List can be empty to not filter output.

... this method will return a map of all Xmp tags which :

- include "dc", or "xmp" in the Xmp tag keys if 'invertSelection' is false.
- not include "dc", or "xmp" in the Xmp tag keys if 'invertSelection' is true.

#### 6.1079.4.73 getXmpTagsList()

```
MetaEngine::TagsMap Digikam::MetaEngine::getXmpTagsList ( ) const
```

Return a map of all standard Xmp tags supported by Exiv2.

#### 6.1079.4.74 getXmpTagString()

```
QString Digikam::MetaEngine::getXmpTagString (
    const char * xmpTagName,
    bool escapeCR = true ) const
```

Get a Xmp tag content like a string. If 'escapeCR' parameter is true, the CR characters will be removed. If Xmp tag cannot be found a null string is returned.

#### 6.1079.4.75 getXmpTagStringBag()

```
QStringList Digikam::MetaEngine::getXmpTagStringBag (
    const char * xmpTagName,
    bool escapeCR ) const
```

Get a Xmp tag content like a bag of strings. If 'escapeCR' parameter is true, the CR characters will be removed from strings. If Xmp tag cannot be found a null string list is returned.

**6.1079.4.76 getXmpTagStringLangAlt()**

```
QString Digikam::MetaEngine::getXmpTagStringLangAlt (
    const char * xmpTagName,
    const QString & langAlt,
    bool escapeCR ) const
```

Get a Xmp tag content like a string set with an alternative language header 'langAlt' (like "fr-FR" for French - RFC3066 notation) If 'escapeCR' parameter is true, the CR characters will be removed. If Xmp tag cannot be found a null string is returned.

**6.1079.4.77 getXmpTagStringListLangAlt()**

```
MetaEngine::AltLangMap Digikam::MetaEngine::getXmpTagStringListLangAlt (
    const char * xmpTagName,
    bool escapeCR = true ) const
```

Get all redundant Alternative Language Xmp tags content like a map. See AltLangMap class description for details. If 'escapeCR' parameter is true, the CR characters will be removed from strings. If Xmp tag cannot be found a null string list is returned.

**6.1079.4.78 getXmpTagStringSeq()**

```
QStringList Digikam::MetaEngine::getXmpTagStringSeq (
    const char * xmpTagName,
    bool escapeCR = true ) const
```

Get a Xmp tag content like a sequence of strings. If 'escapeCR' parameter is true, the CR characters will be removed from strings. If Xmp tag cannot be found a null string list is returned.

**6.1079.4.79 getXmpTagTitle()**

```
QString Digikam::MetaEngine::getXmpTagTitle (
    const char * xmpTagName )
```

Return the Xmp Tag title or a null string.

**6.1079.4.80 getXmpTagVariant()**

```
QVariant Digikam::MetaEngine::getXmpTagVariant (
    const char * xmpTagName,
    bool rationalAsListOfInts = true,
    bool stringEscapeCR = true ) const
```

Get an Xmp tag content as a QVariant. Returns a null QVariant if the Xmp tag cannot be found. For string and integer values the matching QVariant types will be used, for date and time values QVariant::DateTime. Rationals will be returned as QVariant::List with two integer QVariants (numerator, denominator) if rationalAsListOfInts is true, as double if rationalAsListOfInts is false. Arrays (ordered, unordered, alternative) are returned as type QStringList. LangAlt values will have type Map (QMap<QString, QVariant>) with the language code as key and the contents as value, of type String.

**6.1079.4.81 hasComments()**

```
bool Digikam::MetaEngine::hasComments ( ) const
```

Return 'true' if metadata container in memory as Comments.

**6.1079.4.82 hasExif()**

```
bool Digikam::MetaEngine::hasExif ( ) const
```

Return 'true' if metadata container in memory as Exif.

**6.1079.4.83 hasIptc()**

```
bool Digikam::MetaEngine::hasIptc ( ) const
```

Return 'true' if metadata container in memory as Iptc.

**6.1079.4.84 hasSidecar()**

```
bool Digikam::MetaEngine::hasSidecar (
    const QString & path ) [static]
```

Performs a QFileInfo based check if the given local file has a sidecar.

**6.1079.4.85 hasXmp()**

```
bool Digikam::MetaEngine::hasXmp ( ) const
```

Return 'true' if metadata container in memory as Xmp.

**6.1079.4.86 initializeExiv2()**

```
bool Digikam::MetaEngine::initializeExiv2 ( ) [static]
```

Return true if Exiv2 library initialization is done properly. This method must be called before using libMetaEngine with multithreading. It initialize several non re-entrancy code from Adobe XMP SDK, and register a function to cleanup automatically all XMP SDK memory allocation. See Bug #166424 for details.

**6.1079.4.87 initializeGPSInfo()**

```
bool Digikam::MetaEngine::initializeGPSInfo ( )
```

Make sure all static required GPS EXIF and XMP tags exist

### 6.1079.4.88 isEmpty()

```
bool Digikam::MetaEngine::isEmpty ( ) const
```

Return 'true' if metadata container in memory as no Comments, Exif, Iptc, and Xmp.

### 6.1079.4.89 load()

```
bool Digikam::MetaEngine::load (
    const QString & filePath,
    Backend * backend = nullptr )
```

Load all metadata (Exif, Iptc, Xmp, and JFIF Comments) from a picture (JPEG, RAW, TIFF, PNG, DNG, etc...). Return true if metadata have been loaded successfully from file. If backend is non null, return the backend used to populate metadata (Exiv2). See Backend enum for details.

### 6.1079.4.90 loadFromData()

```
bool Digikam::MetaEngine::loadFromData (
    const QByteArray & imgData )
```

Load all metadata (Exif, Iptc, Xmp, and JFIF Comments) from a byte array. Return true if metadata have been loaded successfully from item data.

### 6.1079.4.91 loadFromDataAndMerge()

```
bool Digikam::MetaEngine::loadFromDataAndMerge (
    const QByteArray & imgData,
    const QStringList & exclude = QStringList () )
```

Load and merge metadata (Exif, Iptc and Xmp) from a byte array. Use 'exclude' to remove Exif tags from the 'imgData' that will not be merged. Return true if metadata have been loaded and merged successfully from item data.

### 6.1079.4.92 loadFromSidecarAndMerge()

```
bool Digikam::MetaEngine::loadFromSidecarAndMerge (
    const QString & filePath )
```

Load metadata from a sidecar file and merge. Return true if metadata have been loaded successfully from file.

### 6.1079.4.93 metadataWritingMode()

```
int Digikam::MetaEngine::metadataWritingMode ( ) const
```

Return the metadata writing mode.

#### Returns

Metadata writing mode as defined by the [MetadataWritingMode](#) enum.

#### See also

[MetadataWritingMode](#), [setMetadataWritingMode\(\)](#)

#### 6.1079.4.94 readWithExifTool()

```
bool Digikam::MetaEngine::readWithExifTool ( ) const
```

Return true if reading metadata operations with ExifTool is enabled.

#### 6.1079.4.95 registerXmpNameSpace()

```
bool Digikam::MetaEngine::registerXmpNameSpace (
    const QString & uri,
    const QString & prefix ) [static]
```

Register a namespace which Exiv2 doesn't know yet. This is only needed when new Xmp properties are added manually. 'uri' is the namespace url and 'prefix' the string used to construct new Xmp key (ex. "Xmp.digiKam.tag←List").

#### Note

If the Xmp metadata is read from an item, namespaces are decoded and registered by Exiv2 at the same time.

#### 6.1079.4.96 removeExifTag()

```
bool Digikam::MetaEngine::removeExifTag (
    const char * exifTagName ) const
```

Remove the Exif tag 'exifTagName' from Exif metadata. Return true if tag is removed successfully or if no tag was present.

#### 6.1079.4.97 removeExifThumbnail()

```
bool Digikam::MetaEngine::removeExifThumbnail ( ) const
```

Remove the Exif Thumbnail from the item

#### 6.1079.4.98 removeFromXmpTagStringBag()

```
bool Digikam::MetaEngine::removeFromXmpTagStringBag (
    const char * xmpTagName,
    const QStringList & entriesToRemove ) const
```

Remove those Xmp tag entries that are listed in entriesToRemove from the entries in metadata. Return true if tag entries are no longer contained in metadata. All other entries are preserved.

#### 6.1079.4.99 removeGPSInfo()

```
bool Digikam::MetaEngine::removeGPSInfo ( )
```

Remove all Exif tags relevant of GPS location information. Return true if all tags have been removed successfully in metadata.

#### 6.1079.4.100 removeIptcTag()

```
bool Digikam::MetaEngine::removeIptcTag (
    const char * iptcTagName ) const
```

Remove the all instance of Iptc tags 'iptcTagName' from Iptc metadata. Return true if all tags have been removed successfully (or none were present).

#### 6.1079.4.101 removeXmpKeywords()

```
bool Digikam::MetaEngine::removeXmpKeywords (
    const QStringList & keywordsToRemove )
```

Remove those Xmp keywords that are listed in keywordsToRemove from the keywords in metadata. Return true if keywords are no longer contained in metadata.

#### 6.1079.4.102 removeXmpSubCategories()

```
bool Digikam::MetaEngine::removeXmpSubCategories (
    const QStringList & categoriesToRemove )
```

Remove those Xmp sub-categories that are listed in categoriesToRemove from the sub-categories in metadata. Return true if subjects are no longer contained in metadata.

#### 6.1079.4.103 removeXmpSubjects()

```
bool Digikam::MetaEngine::removeXmpSubjects (
    const QStringList & subjectsToRemove )
```

Remove those Xmp subjects that are listed in subjectsToRemove from the subjects in metadata. Return true if subjects are no longer contained in metadata.

#### 6.1079.4.104 removeXmpTag()

```
bool Digikam::MetaEngine::removeXmpTag (
    const char * xmpTagName,
    bool family = false ) const
```

Remove the Xmp tag 'xmpTagName' from Xmp metadata. Return true if tag is removed successfully or if no tag was present.

#### 6.1079.4.105 rotateExifQImage()

```
bool Digikam::MetaEngine::rotateExifQImage (
    QImage & image,
    ImageOrientation orientation ) const
```

Fix orientation of a QImage image accordingly with Exif orientation tag. Return true if image is rotated, else false.

**6.1079.4.106 save()**

```
bool Digikam::MetaEngine::save (
    const QString & filePath,
    bool setVersion = false ) const
```

Save all metadata to a file. This one can be different than original picture to perform transfer operation Return true if metadata have been saved into file.

**6.1079.4.107 setComments()**

```
bool Digikam::MetaEngine::setComments (
    const QByteArray & data ) const
```

Set the Comments data using a Qt byte array. Return true if Comments metadata have been changed in memory.

**6.1079.4.108 setExif()**

```
bool Digikam::MetaEngine::setExif (
    const QByteArray & data ) const
```

Set the Exif data using a Qt byte array. Return true if Exif metadata have been changed in memory.

**6.1079.4.109 setExifComment()**

```
bool Digikam::MetaEngine::setExifComment (
    const QString & comment,
    bool writeDescription = true ) const
```

Set the Exif user comments from item. Look Exif specification for more details about this tag. Return true if Exif user comments have been changed in metadata.

**6.1079.4.110 setExifTagData()**

```
bool Digikam::MetaEngine::setExifTagData (
    const char * exifTagName,
    const QByteArray & data ) const
```

Set an Exif tag content using a bytes array. Return true if tag is set successfully.

**6.1079.4.111 setExifTagLong()**

```
bool Digikam::MetaEngine::setExifTagLong (
    const char * exifTagName,
    long val ) const
```

Set an Exif tag content using a long value. Return true if tag is set successfully.

**6.1079.4.112 setExifTagRational()**

```
bool Digikam::MetaEngine::setExifTagRational (
    const char * exifTagName,
    long int num,
    long int den ) const
```

Set an Exif tag content using a rational value. 'num' and 'den' are the numerator and the denominator of the rational value. Return true if tag is set successfully.

**6.1079.4.113 setExifTagString()**

```
bool Digikam::MetaEngine::setExifTagString (
    const char * exifTagName,
    const QString & value ) const
```

Set an Exif tag content using a string. Return true if tag is set successfully.

**6.1079.4.114 setExifTagURational()**

```
bool Digikam::MetaEngine::setExifTagURational (
    const char * exifTagName,
    unsigned long int num,
    unsigned long int den ) const
```

Set an Exif tag content using a unsigned rational value. 'num' and 'den' are the numerator and the denominator of the unsigned rational value. Return true if tag is set successfully.

**6.1079.4.115 setExifTagUShort()**

```
bool Digikam::MetaEngine::setExifTagUShort (
    const char * exifTagName,
    unsigned int val ) const
```

Set an Exif tag content using a unsigned short value. Return true if tag is set successfully.

**6.1079.4.116 setExifTagVariant()**

```
bool Digikam::MetaEngine::setExifTagVariant (
    const char * exifTagName,
    const QVariant & data,
    bool rationalWantSmallDenominator = true ) const
```

Set an Exif tag content using a QVariant. Returns true if tag is set successfully. All types described for the [getExifTagVariant\(\)](#) method are supported. Calling with a QVariant of type QByteArray is equivalent to calling `setExifTagData`. For the meaning of `rationalWantSmallDenominator`, see the documentation of the `convertToRational` methods. Setting a value with multiple components is currently not supported.

**6.1079.4.117 setExifThumbnail()**

```
bool Digikam::MetaEngine::setExifThumbnail (
    const QImage & thumb ) const
```

Set the Exif Thumbnail image. The thumbnail image must have the right dimensions before. Look Exif specification for details. Return true if thumbnail have been changed in metadata.

**6.1079.4.118 setFilePath()**

```
void Digikam::MetaEngine::setFilePath (
    const QString & path )
```

Set the file path of current item.

**6.1079.4.119 setGPSInfo() [1/3]**

```
bool Digikam::MetaEngine::setGPSInfo (
    const double *const altitude,
    const double latitude,
    const double longitude )
```

Set all GPS location information into item. Return true if all information have been changed in metadata. If you do not want altitude to be set, pass a null pointer.

**6.1079.4.120 setGPSInfo() [2/3]**

```
bool Digikam::MetaEngine::setGPSInfo (
    const double altitude,
    const double latitude,
    const double longitude )
```

Set all GPS location information into item. Return true if all information have been changed in metadata.

**6.1079.4.121 setGPSInfo() [3/3]**

```
bool Digikam::MetaEngine::setGPSInfo (
    const double altitude,
    const QString & latitude,
    const QString & longitude )
```

Set all GPS location information into item. Return true if all information have been changed in metadata.

**6.1079.4.122 setImageDateTime()**

```
bool Digikam::MetaEngine::setImageDateTime (
    const QDateTime & dateTime,
    bool setDateDigitized = false ) const
```

Set the Exif and Iptc time stamp. If 'setDateDigitized' parameter is true, the 'Digitalized' time stamp is set, else only 'Created' time stamp is set.

### 6.1079.4.123 setIptc()

```
bool Digikam::MetaEngine::setIptc (
    const QByteArray & data ) const
```

Set the Iptc data using a Qt byte array. Return true if Iptc metadata have been changed in memory.

### 6.1079.4.124 setIptcKeywords()

```
bool Digikam::MetaEngine::setIptcKeywords (
    const QStringList & oldKeywords,
    const QStringList & newKeywords ) const
```

Set Iptc keywords using a list of strings defined by 'newKeywords' parameter. Use 'getImageKeywords()' method to set 'oldKeywords' parameter with existing keywords from item. The method will compare all new keywords with all old keywords to prevent duplicate entries in item. Return true if keywords have been changed in metadata.

### 6.1079.4.125 setIptcSubCategories()

```
bool Digikam::MetaEngine::setIptcSubCategories (
    const QStringList & oldSubCategories,
    const QStringList & newSubCategories ) const
```

Set Iptc sub-categories using a list of strings defined by 'newSubCategories' parameter. Use 'getImageSubCategories()' method to set 'oldSubCategories' parameter with existing sub-categories from item. The method will compare all new sub-categories with all old sub-categories to prevent duplicate entries in item. Return true if sub-categories have been changed in metadata.

### 6.1079.4.126 setIptcSubjects()

```
bool Digikam::MetaEngine::setIptcSubjects (
    const QStringList & oldSubjects,
    const QStringList & newSubjects ) const
```

Set Iptc subjects using a list of strings defined by 'newSubjects' parameter. Use 'getImageSubjects()' method to set 'oldSubjects' parameter with existing subjects from item. The method will compare all new subjects with all old subjects to prevent duplicate entries in item. Return true if subjects have been changed in metadata.

### 6.1079.4.127 setIptcTagData()

```
bool Digikam::MetaEngine::setIptcTagData (
    const char * iptcTagName,
    const QByteArray & data ) const
```

Set an Iptc tag content using a bytes array. Return true if tag is set successfully.

**6.1079.4.128 setIptcTagsStringList()**

```
bool Digikam::MetaEngine::setIptcTagsStringList (
    const char * iptcTagName,
    int maxSize,
    const QStringList & oldValues,
    const QStringList & newValues ) const
```

Set multiple Iptc tags contents using a strings list. 'maxSize' is the max characters size of one entry. Return true if all tags have been set successfully.

**6.1079.4.129 setIptcTagString()**

```
bool Digikam::MetaEngine::setIptcTagString (
    const char * iptcTagName,
    const QString & value ) const
```

Set an Iptc tag content using a string. Return true if tag is set successfully.

**6.1079.4.130 setItemColorWorkSpace()**

```
bool Digikam::MetaEngine::setItemColorWorkSpace (
    ImageColorWorkSpace workspace ) const
```

Set the Exif color-space tag of item. See [ImageColorWorkSpace](#) values for details Return true if work-space have been changed in metadata.

**6.1079.4.131 setItemDimensions()**

```
bool Digikam::MetaEngine::setItemDimensions (
    const QSize & size ) const
```

Set the size of item in pixels in Exif tags. Return true if size have been changed in metadata.

**6.1079.4.132 setItemIccProfile()**

```
bool Digikam::MetaEngine::setItemIccProfile (
    const QByteArray & iccData ) const
```

Set image ICC profile.

**6.1079.4.133 setItemOrientation()**

```
bool Digikam::MetaEngine::setItemOrientation (
    ImageOrientation orientation ) const
```

Set the Exif orientation tag of item. See [ImageOrientation](#) values for details Return true if orientation have been changed in metadata.

**6.1079.4.134 setItemPreview()**

```
bool Digikam::MetaEngine::setItemPreview (
    const QImage & preview ) const
```

Set the lptc preview image. The thumbnail item must have the right size before (64Kb max with JPEG file, else 256Kb). Look lptc specification for details. Return true if preview have been changed in metadata. Re-implement this method if you want to use another item file format than JPEG to save preview.

**6.1079.4.135 setItemProgramId()**

```
bool Digikam::MetaEngine::setItemProgramId (
    const QString & program,
    const QString & version ) const
```

Set Program name and program version in Exif and lptc Metadata. Return true if information have been changed in metadata.

**6.1079.4.136 setMetadataWritingMode()**

```
void Digikam::MetaEngine::setMetadataWritingMode (
    const int mode )
```

Set metadata writing mode.

**Parameters**

<i>mode</i>	Metadata writing mode as defined by the <a href="#">MetadataWritingMode</a> enum.
-------------	---

**See also**

[MetadataWritingMode](#), [metadataWritingMode\(\)](#)

**6.1079.4.137 setProgramId()**

```
bool Digikam::MetaEngine::setProgramId ( ) const [protected]
```

Set the Program Name and Program Version information in Exif and lptc metadata

**6.1079.4.138 setReadWithExifTool()**

```
void Digikam::MetaEngine::setReadWithExifTool (
    const bool on )
```

Enable or disable reading metadata operations with ExifTool.

**6.1079.4.139 setTiffThumbnail()**

```
bool Digikam::MetaEngine::setTiffThumbnail (
    const QImage & thumb ) const
```

Adds a JPEG thumbnail to a TIFF images. Use this instead of setExifThumbnail for TIFF images.

**6.1079.4.140 setUpdateFileTimeStamp()**

```
void Digikam::MetaEngine::setUpdateFileTimeStamp (
    bool on )
```

Enable or disable file timestamp updating when metadata are saved. By default files timestamp are untouched.

**6.1079.4.141 setUseCompatibleFileName()**

```
void Digikam::MetaEngine::setUseCompatibleFileName (
    const bool on )
```

Enable or disable using compatible file name for sidecar files.

**6.1079.4.142 setUseXMPSidecar4Reading()**

```
void Digikam::MetaEngine::setUseXMPSidecar4Reading (
    const bool on )
```

Enable or disable using XMP sidecar for reading metadata.

**6.1079.4.143 setWriteDngFiles()**

```
void Digikam::MetaEngine::setWriteDngFiles (
    const bool on )
```

Enable or disable writing metadata operations to DNG files.

**6.1079.4.144 setWriteRawFiles()**

```
void Digikam::MetaEngine::setWriteRawFiles (
    const bool on )
```

Enable or disable writing metadata operations to RAW files. By default RAW files are untouched.

**6.1079.4.145 setWriteWithExifTool()**

```
void Digikam::MetaEngine::setWriteWithExifTool (
    const bool on )
```

Enable or disable writing metadata operations with ExifTool.

**6.1079.4.146 setXmp()**

```
bool Digikam::MetaEngine::setXmp (
    const QByteArray & data ) const
```

Set the Xmp data using a Qt byte array. Return true if Xmp metadata have been changed in memory.

**6.1079.4.147 setXmpKeywords()**

```
bool Digikam::MetaEngine::setXmpKeywords (
    const QStringList & newKeywords ) const
```

Set Xmp keywords using a list of strings defined by 'newKeywords' parameter. The existing keywords from item are preserved. The method will compare all new keywords with all already existing keywords to prevent duplicate entries in item. Return true if keywords have been changed in metadata.

**6.1079.4.148 setXmpSubCategories()**

```
bool Digikam::MetaEngine::setXmpSubCategories (
    const QStringList & newSubCategories ) const
```

Set Xmp sub-categories using a list of strings defined by 'newSubCategories' parameter. The existing sub-categories from item are preserved. The method will compare all new sub-categories with all already existing sub-categories to prevent duplicate entries in item. Return true if sub-categories have been changed in metadata.

**6.1079.4.149 setXmpSubjects()**

```
bool Digikam::MetaEngine::setXmpSubjects (
    const QStringList & newSubjects ) const
```

Set Xmp subjects using a list of strings defined by 'newSubjects' parameter. The existing subjects from item are preserved. The method will compare all new subject with all already existing subject to prevent duplicate entries in item. Return true if subjects have been changed in metadata.

**6.1079.4.150 setXmpTagString() [1/2]**

```
bool Digikam::MetaEngine::setXmpTagString (
    const char * xmpTagName,
    const QString & value ) const
```

Set a Xmp tag content using a string. Return true if tag is set successfully.

**6.1079.4.151 setXmpTagString() [2/2]**

```
bool Digikam::MetaEngine::setXmpTagString (
    const char * xmpTagName,
    const QString & value,
    MetaEngine::XmpTagType type ) const
```

Set a Xmp tag with a specific type. Return true if tag is set successfully. This method only accept NormalTag, ArrayBagTag and StructureTag. Other XmpTagTypes do nothing

**6.1079.4.152 setXmpTagStringBag()**

```
bool Digikam::MetaEngine::setXmpTagStringBag (
    const char * xmpTagName,
    const QStringList & bag ) const
```

Set a Xmp tag content using the bag of strings 'bag'. Return true if tag is set successfully.

**6.1079.4.153 setXmpTagStringLangAlt()**

```
bool Digikam::MetaEngine::setXmpTagStringLangAlt (
    const char * xmpTagName,
    const QString & value,
    const QString & langAlt ) const
```

Set a Xmp tag content using a string with an alternative language header. 'langAlt' contain the language alternative information (like "fr-FR" for French - RFC3066 notation) or is null to set alternative language to default settings ("x-default"). Return true if tag is set successfully.

**6.1079.4.154 setXmpTagStringListLangAlt()**

```
bool Digikam::MetaEngine::setXmpTagStringListLangAlt (
    const char * xmpTagName,
    const MetaEngine::AltLangMap & values ) const
```

Set an Alternative Language Xmp tag content using a map. See AltLangMap class description for details. If tag already exist, it will be removed before. Return true if tag is set successfully.

**6.1079.4.155 setXmpTagStringSeq()**

```
bool Digikam::MetaEngine::setXmpTagStringSeq (
    const char * xmpTagName,
    const QStringList & seq ) const
```

Set a Xmp tag content using the sequence of strings 'seq'. Return true if tag is set successfully.

**6.1079.4.156 sidecarFilePathForFile()**

```
QString Digikam::MetaEngine::sidecarFilePathForFile (
    const QString & path ) [static]
```

Return the XMP Sidecar file path for a item file path. If item file path do not include a file name or is empty, this function return a null string.

**6.1079.4.157 sidecarPath()**

```
QString Digikam::MetaEngine::sidecarPath (
    const QString & path ) [static]
```

Like [sidecarFilePathForFile\(\)](#), but works for local file path.

**6.1079.4.158 sidecarUrl()** [1/2]

```
QUrl Digikam::MetaEngine::sidecarUrl (
    const QString & path ) [static]
```

Gives a file url for a local path.

**6.1079.4.159 sidecarUrl()** [2/2]

```
QUrl Digikam::MetaEngine::sidecarUrl (
    const QUrl & url ) [static]
```

Like [sidecarFilePathForFile\(\)](#), but works for remote URLs.

**6.1079.4.160 supportBmff()**

```
bool Digikam::MetaEngine::supportBmff ( ) [static]
```

Return true if library support Base Media File Format (aka CR3, HEIF, HEIC, and AVIF). Note: use this function only after to call [initializeExiv2\(\)](#), else false will always returned. The function return true only if Exiv2  $\geq$  0.27.4 compiled with BMFF support.

**6.1079.4.161 supportJpegXL()**

```
bool Digikam::MetaEngine::supportJpegXL ( ) [static]
```

Return true if Exiv2 library is compiled with JpegXL metadata support.

**6.1079.4.162 supportMetadataWriting()**

```
bool Digikam::MetaEngine::supportMetadataWriting (
    const QString & typeMime ) [static]
```

Return true if library can write metadata to typeMime file format.

**6.1079.4.163 supportXmp()**

```
bool Digikam::MetaEngine::supportXmp ( ) [static]
```

Return true if Exiv2 library is compiled with Xmp metadata support.

**6.1079.4.164 unregisterXmpNameSpace()**

```
bool Digikam::MetaEngine::unregisterXmpNameSpace (
    const QString & uri ) [static]
```

Unregister a previously registered custom namespace

**6.1079.4.165 updateFileTimeStamp()**

```
bool Digikam::MetaEngine::updateFileTimeStamp ( ) const
```

Return true if file timestamp is updated when metadata are saved.

**6.1079.4.166 useCompatibleFileName()**

```
bool Digikam::MetaEngine::useCompatibleFileName ( ) const
```

Return true if using compatible file name for sidecar files.

**6.1079.4.167 useXMPSidecar4Reading()**

```
bool Digikam::MetaEngine::useXMPSidecar4Reading ( ) const
```

Return true if using XMP sidecar for reading metadata is enabled.

**6.1079.4.168 writeDngFiles()**

```
bool Digikam::MetaEngine::writeDngFiles ( ) const
```

Return true if writing metadata operations on DNG files is enabled.

**6.1079.4.169 writeRawFiles()**

```
bool Digikam::MetaEngine::writeRawFiles ( ) const
```

Return true if writing metadata operations on RAW files is enabled.

**6.1079.4.170 writeWithExifTool()**

```
bool Digikam::MetaEngine::writeWithExifTool ( ) const
```

Return true if writing metadata operations with ExifTool is enabled.

## 6.1080.1 Member Function Documentation

### 6.1080.1.1 convertCommentValue()

```
QString Digikam::MetaEngine::Private::convertCommentValue (
    const Exiv2::Exifdatum & exifDatum ) const
```

Wrapper method to convert a Comments content to a QString.

### 6.1080.1.2 decodeGPSCoordinate()

```
bool Digikam::MetaEngine::Private::decodeGPSCoordinate (
    const char * exifTagName,
    double *const coordinate ) const
```

Decodes Latitude or Longitude from EXIF tag name.

### 6.1080.1.3 detectEncodingAndDecode()

```
QString Digikam::MetaEngine::Private::detectEncodingAndDecode (
    const std::string & value ) const
```

Charset autodetection to convert a string to a QString.

### 6.1080.1.4 extractIptcTagString()

```
QString Digikam::MetaEngine::Private::extractIptcTagString (
    const Exiv2::IptcData & iptcData,
    const Exiv2::Iptcdatum & iptcTag ) const
```

Helper method to decode IPTC tag string contents following characters encoding preset.

### 6.1080.1.5 isUtf8()

```
bool Digikam::MetaEngine::Private::isUtf8 (
    const char *const buffer ) const
```

UTF8 autodetection from a string.

### 6.1080.1.6 printExiv2ExceptionError()

```
void Digikam::MetaEngine::Private::printExiv2ExceptionError (
    const QString & msg,
    Exiv2::AnyError & e ) [static]
```

Generic method to print the Exiv2 C++ Exception error message from 'e'. 'msg' string is printed using qDebug rules.

### 6.1080.1.7 printExiv2MessageHandler()

```
void Digikam::MetaEngine::Private::printExiv2MessageHandler (
    int lvl,
    const char * msg ) [static]
```

Generic method to print debug message from Exiv2. 'msg' string is printed using qDebug rules. 'lvl' is the debug level of Exiv2 message.

## 6.1081 Digikam::MetaEngineData Class Reference

### Classes

- class [Private](#)

### Public Member Functions

Inheritance diagram for Digikam::MetaEngineData::Private:

### Public Member Functions

- void **clear** ()

### Public Attributes

- Exiv2::ByteOrder **exifByteOrder** = Exiv2::invalidByteOrder
- Exiv2::ExifData **exifMetadata**
- Exiv2::DataBuf **iccProfileBuf**
- std::string **imageComments**
- Exiv2::IptcData **iptcMetadata**

## 6.1083 Digikam::MetaEngineMergeHelper< Data, Key, KeyString, KeyStringList > Class Template Reference

### Public Member Functions

- void [exclusiveMerge](#) (const Data &src, Data &dest)
- void [mergeAll](#) (const Data &src, Data &dest)
- void [mergeFields](#) (const Data &src, Data &dest)
- [MetaEngineMergeHelper](#) & **operator**<< (const KeyString &key)

### Public Attributes

- KeyStringList **keys**

### 6.1083.1 Member Function Documentation

#### 6.1083.1.1 exclusiveMerge()

```
template<class Data , class Key , class KeyString , class KeyStringList = QList<KeyString>>
void Digikam::MetaEngineMergeHelper< Data, Key, KeyString, KeyStringList >::exclusiveMerge (
    const Data & src,
    Data & dest ) [inline]
```

Merge two (Exif,IPTC,Xmp) Data packages, the result is stored in dest. The following steps apply only to keys in "keys": The result is determined by src. Keys must exist in src to kept in dest. Fields from src take precedence over existing data from dest.

#### 6.1083.1.2 mergeAll()

```
template<class Data , class Key , class KeyString , class KeyStringList = QList<KeyString>>
void Digikam::MetaEngineMergeHelper< Data, Key, KeyString, KeyStringList >::mergeAll (
    const Data & src,
    Data & dest ) [inline]
```

Merge two (Exif,IPTC,Xmp) Data packages, where the result is stored in dest and fields from src take precedence over existing data from dest.

### 6.1083.1.3 mergeFields()

```
template<class Data , class Key , class KeyString , class KeyStringList = QList<KeyString>>
void Digikam::MetaEngineMergeHelper< Data, Key, KeyString, KeyStringList >::mergeFields (
    const Data & src,
    Data & dest ) [inline]
```

Merge two (Exif,IPTC,Xmp) Data packages, the result is stored in dest. Only keys in keys are considered for merging. Fields from src take precedence over existing data from dest.

## 6.1084 Digikam::MetaEnginePreviews Class Reference

### Public Member Functions

- int **count** () const  
*Returns how many embedded previews are available.*
- QByteArray **data** (int index=0)
- int **dataSize** (int index=0)
- QString **fileExtension** (int index=0)
- int **height** (int index=0)
- QImage **image** (int index=0)
- bool **isEmpty** ()  
*Returns if there are any preview images available.*
- [MetaEnginePreviews](#) (const QByteArray &imgData)
- [MetaEnginePreviews](#) (const QString &filePath)
- QString **mimeType** (int index=0)
- QString **originalMimeType** () const  
*Returns the mimeType of the original image, detected from the file's content.*
- QSize **originalSize** () const  
*Returns the pixel size of the original image, as read from the file (not the metadata).*
- int **size** () const
- int **width** (int index=0)

### 6.1084.1 Constructor & Destructor Documentation

#### 6.1084.1.1 MetaEnginePreviews() [1/2]

```
Digikam::MetaEnginePreviews::MetaEnginePreviews (
    const QString & filePath ) [explicit]
```

Open the given file and scan for embedded preview images

#### 6.1084.1.2 MetaEnginePreviews() [2/2]

```
Digikam::MetaEnginePreviews::MetaEnginePreviews (
    const QByteArray & imgData ) [explicit]
```

Open the given image data and scan the image for embedded preview images.

## 6.1084.2 Member Function Documentation

### 6.1084.2.1 data()

```
QByteArray Digikam::MetaEnginePreviews::data (
    int index = 0 )
```

Retrieve the image data for the specified embedded preview image

### 6.1084.2.2 dataSize()

```
int Digikam::MetaEnginePreviews::dataSize (
    int index = 0 )
```

For each contained preview image, return the size of the image data in bytes, width and height of the preview, the mimeType and the file extension. Ensure that `index < count()`. Previews are sorted by width\*height, largest first.

### 6.1084.2.3 image()

```
QImage Digikam::MetaEnginePreviews::image (
    int index = 0 )
```

Loads the data of the specified preview and creates a QImage from this data. Returns a null QImage if the loading failed.

## 6.1085 Digikam::MetaEngineRotation Class Reference

### Public Types

- enum [TransformationAction](#) {  
[NoTransformation](#) = 0 , [FlipHorizontal](#) = 1 , [FlipVertical](#) = 2 , [Rotate90](#) = 5 ,  
[Rotate180](#) = 6 , [Rotate270](#) = 7 }

### Public Member Functions

### Protected Attributes

- int **m** [2][2]

## 6.1085.1 Member Enumeration Documentation

### 6.1085.1.1 TransformationAction

```
enum Digikam::MetaEngineRotation::TransformationAction
```

This describes single transform primitives. Note some of the defined Exif rotation flags combine two of these actions. The enum values correspond to those defined as JXFORM\_CODE in the often used the JPEG tool transupp.h.

#### Enumerator

NoTransformation	no transformation
FlipHorizontal	horizontal flip
FlipVertical	vertical flip
Rotate90	90-degree clockwise rotation
Rotate180	180-degree rotation
Rotate270	270-degree clockwise (or 90 ccw)

## 6.1085.2 Constructor & Destructor Documentation

### 6.1085.2.1 MetaEngineRotation() [1/3]

```
Digikam::MetaEngineRotation::MetaEngineRotation ( )
```

Constructs the identity matrix (the matrix describing no transformation)

### 6.1085.2.2 MetaEngineRotation() [2/3]

```
Digikam::MetaEngineRotation::MetaEngineRotation (
    TransformationAction action ) [explicit]
```

Returns the matrix corresponding to the given TransformationAction

**6.1085.2.3 MetaEngineRotation()** [3/3]

```
Digikam::MetaEngineRotation::MetaEngineRotation (
    MetaEngine::ImageOrientation exifOrientation ) [explicit]
```

Returns the matrix corresponding to the given TransformationAction

**6.1085.3 Member Function Documentation****6.1085.3.1 exifOrientation()**

```
MetaEngine::ImageOrientation Digikam::MetaEngineRotation::exifOrientation ( ) const
```

Returns the Exif orientation flag describing this matrix. Returns ORIENTATION\_UNSPECIFIED if no flag matches this matrix.

**6.1085.3.2 isNoTransform()**

```
bool Digikam::MetaEngineRotation::isNoTransform ( ) const
```

Returns true if this matrix describes no transformation (is the identity matrix)

**6.1085.3.3 operator\*=( )** [1/3]

```
MetaEngineRotation & Digikam::MetaEngineRotation::operator*= (
    const QList< TransformationAction > & actions )
```

Applies the given transform actions to this matrix

**6.1085.3.4 operator\*=( )** [2/3]

```
MetaEngineRotation & Digikam::MetaEngineRotation::operator*= (
    MetaEngine::ImageOrientation exifOrientation )
```

Applies the given Exif orientation flag to this matrix

**6.1085.3.5 operator\*=( )** [3/3]

```
MetaEngineRotation & Digikam::MetaEngineRotation::operator*= (
    TransformationAction action )
```

Applies the given transform to this matrix

**6.1085.3.6 toTransform()** [1/2]

```
QTransform Digikam::MetaEngineRotation::toTransform ( ) const
```

Returns a QTransform representing this matrix

**6.1085.3.7 toTransform()** [2/2]

```
QTransform Digikam::MetaEngineRotation::toTransform (
    MetaEngine::ImageOrientation orientation ) [static]
```

Returns a QTransform for the given Exif orientation

**6.1085.3.8 transformations()**

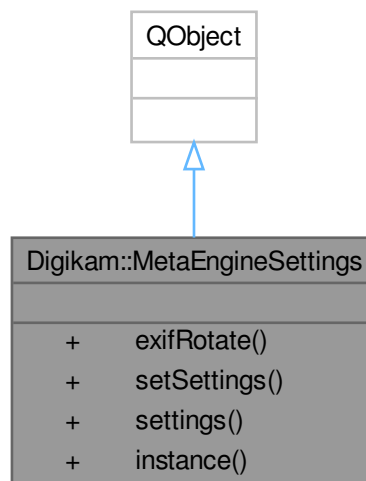

```
QList< MetaEngineRotation::TransformationAction > Digikam::MetaEngineRotation::transformations
( ) const
```

Returns the actions described by this matrix. The order matters. Not all possible matrices are supported, but all those that can be combined by Exif rotation flags and the transform actions above. If `isNoTransform()` or the matrix is not supported returns an empty list.

Converts the mathematically correct description into the primitive operations that can be carried out losslessly.

**6.1086 Digikam::MetaEngineSettings Class Reference**

Inheritance diagram for Digikam::MetaEngineSettings:

**Signals**

- void **signalMetaEngineSettingsChanged** (const [MetaEngineSettingsContainer](#) &current, const [MetaEngineSettingsContainer](#) &previous)
- void **signalSettingsChanged** ()

## Public Member Functions

- [MetaEngineSettingsContainer](#) settings () const

## Static Public Member Functions

- static [MetaEngineSettings](#) \* [instance](#) ()

## Friends

- class [MetaEngineSettingsCreator](#)

## 6.1086.1 Member Function Documentation

### 6.1086.1.1 [exifRotate\(\)](#)

```
bool Digikam::MetaEngineSettings::exifRotate ( ) const
```

Shortcut to get exif rotation settings from container.

### 6.1086.1.2 [instance\(\)](#)

```
MetaEngineSettings * Digikam::MetaEngineSettings::instance ( ) [static]
```

Global container for Metadata settings. All accessor methods are thread-safe.

### 6.1086.1.3 [setSettings\(\)](#)

```
void Digikam::MetaEngineSettings::setSettings (
    const MetaEngineSettingsContainer & settings )
```

Sets the current Metadata settings and writes them to config.

### 6.1086.1.4 [settings\(\)](#)

```
MetaEngineSettingsContainer Digikam::MetaEngineSettings::settings ( ) const
```

Returns the current Metadata settings.

## 6.1087 Digikam::MetaEngineSettingsContainer Class Reference

The class [MetaEngineSettingsContainer](#) encapsulates all metadata related settings.

## Public Types

- enum **AlbumDateSource** {  
**NewestItemDate** = 0 , **OldestItemDate** , **AverageDate** , **FolderDate** ,  
**IgnoreDate** }
- enum **RotationBehaviorFlag** {

## 6.1087.1 Detailed Description

### Note

this allows supply changed arguments to [MetadataHub](#) without changing the global settings.

## 6.1087.2 Member Enumeration Documentation

### 6.1087.2.1 RotationBehaviorFlag

enum `Digikam::MetaEngineSettingsContainer::RotationBehaviorFlag`

Describes the allowed and desired operation when rotating a picture. The modes are in escalating order and describe if an operation is allowed. What is actually done will be governed by what is possible: 1) RAW files cannot be rotated by content, setting the metadata may be problematic 2) Read-Only files cannot be edited, neither content nor metadata 3) Writable files will have lossy compression 4) Only JPEG and PGF offer lossless rotation Using a contents-based rotation always implies resetting the flag.

## 6.1088 Digikam::MigrateFromDigikam4Page Class Reference

Inheritance diagram for Digikam::MigrateFromDigikam4Page:

### Public Slots

- void **migrationToggled** (bool b)

## Public Member Functions

- void **setPageWidget** (QWidget \*const w)
- void **setShowLeftView** (bool v)

## Static Public Member Functions

- static bool **checkForMigration** ()

## 6.1088.1 Member Function Documentation

### 6.1088.1.1 **checkForMigration()**

```
bool Digikam::MigrateFromDigikam4Page::checkForMigration ( ) [static]
```

Return true if migration data are available on the system

### 6.1088.1.2 **isMigrationChecked()**

```
bool Digikam::MigrateFromDigikam4Page::isMigrationChecked ( ) const
```

Returns true if the user selected to do a migration

## 6.1089 Digikam::MimeFilter Class Reference

Inheritance diagram for Digikam::MimeFilter:

### Public Types

- enum `TypeMimeFilter` {  
**AllFiles** = 0 , **ImageFiles** , **NoRAWFiles** , **JPGFiles** ,  
**JPEG2000Files** , **JPEGXLFiles** , **WEBPFiles** , **PNGFiles** ,

## 6.1091.1 Member Function Documentation

### 6.1091.1.1 filterAction()

`FilterAction` Digikam::MixerFilter::filterAction ( ) [override], [virtual]

Returns the action description corresponding to currently set options.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1091.1.2 filterIdentifier()

`QString` Digikam::MixerFilter::filterIdentifier ( ) const [inline], [override], [virtual]

Return the identifier for this filter in the image history.

Implements [Digikam::DImgThreadedFilter](#).

### 6.1091.1.3 readParameters()

```
void Digikam::MixerFilter::readParameters (
    const FilterAction & action ) [override], [virtual]
```

Implements [Digikam::DImgThreadedFilter](#).

## 6.1092 Digikam::MixerSettings Class Reference

## 6.1096.1 Member Enumeration Documentation

### 6.1096.1.1 MLPipelineStage

enum [Digikam::MLPipelineFoundation::MLPipelineStage](#)

#### Enumerator

Finder	Finder stage finds the data for the pipeline.
Loader	Loader stage loads and prepares the data for extraction.
Extractor	Extractor stage pulls the features from the data.
Classifier	Classifier stage adds a label (face, autotag, etc) to an extracted object.
Trainer	Classifier stage adds a label (face, autotag, etc) to an extracted object.
Writer	Writer stage saves the data to the DB.
None	Empty stage.

## 6.1096.2 Member Function Documentation

### 6.1096.2.1 cancel()

```
void Digikam::MLPipelineFoundation::cancel ( ) [virtual]
```

worker threads can be in 1 of 3 states when cancel is called

1. waiting for a new package
2. processing a package
3. waiting to push a package

handle all 3 cases so the worker thread sees the cancel signal

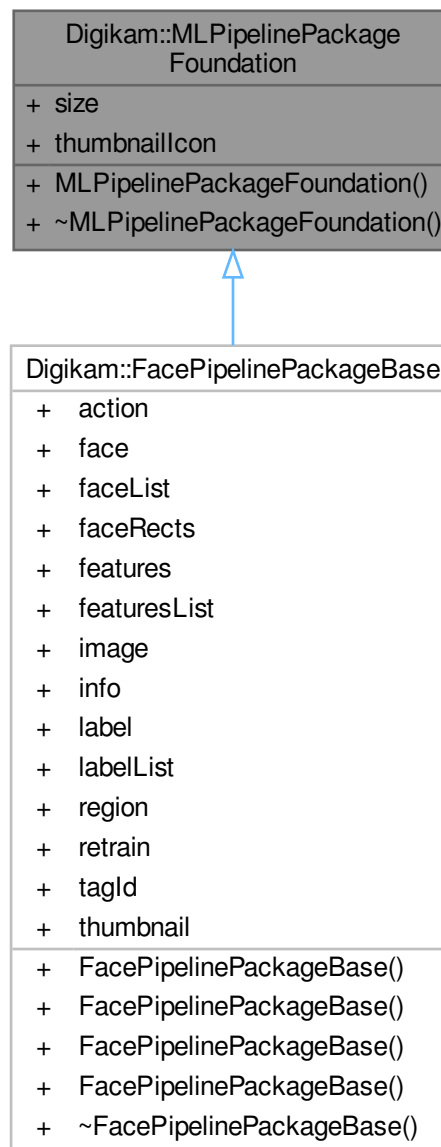

## 6.1097 Digikam::MLPipelineFoundation::\_MLPipelinePerformanceProfile Struct Reference

### Public Attributes

- QAtomicInteger< int > **currentThreadCount**
- int **elapsedTime** = 0
- int **itemCount** = 0
- int **maxElapsedTime** = 0
- int **maxQueueCount** = 0
- QAtomicInteger< int > **maxThreadCount**

## 6.1098 Digikam::MLPipelinePackageFoundation Class Reference

Inheritance diagram for Digikam::MLPipelinePackageFoundation:

### Public Attributes

- quint64 **size** = 0
- QIcon **thumbnailIcon**

## 6.1099 Digikam::MLPipelinePackageNotify Class Reference

Inheritance diagram for Digikam::MLPipelinePackageNotify:

### Public Types

- typedef `QExplicitlySharedDataPointer< MLPipelinePackageNotify >` **Ptr**

### Public Member Functions

- **MLPipelinePackageNotify** (const `QString` &\_name, const `QString` &\_path, int \_processed, const `DImg` &↔\_thumbnail)
- **MLPipelinePackageNotify** (const `QString` &\_name, const `QString` &\_path, int \_processed, const `QIcon` &↔\_thumbnail)

### Public Attributes

- const `QString` **name**
- const `QString` **path**
- int **processed** = 0
- `QIcon` **thumbnail**

## 6.1100 Digikam::ModelCompleter Class Reference

Inheritance diagram for Digikam::ModelCompleter:

### Signals

- void **signalActivated** ()
- void **signalHighlighted** (int albumId)

### Public Member Functions

- void **addItem** (const QString &item)
- QAbstractItemModel \* **itemModel** () const
- QStringList **items** () const
- **ModelCompleter** (QObject \*const parent=nullptr)
- void **setItemModel** (QAbstractItemModel \*const model, int uniqueIdRole, int displayRole=Qt::DisplayRole)
- void **setList** (const QStringList &list)

### 6.1100.1 Member Function Documentation

#### 6.1100.1.1 setItemModel()

```

void Digikam::ModelCompleter::setItemModel (
    QAbstractItemModel *const model,
    int uniqueIdRole,
    int displayRole = Qt::DisplayRole )
  
```

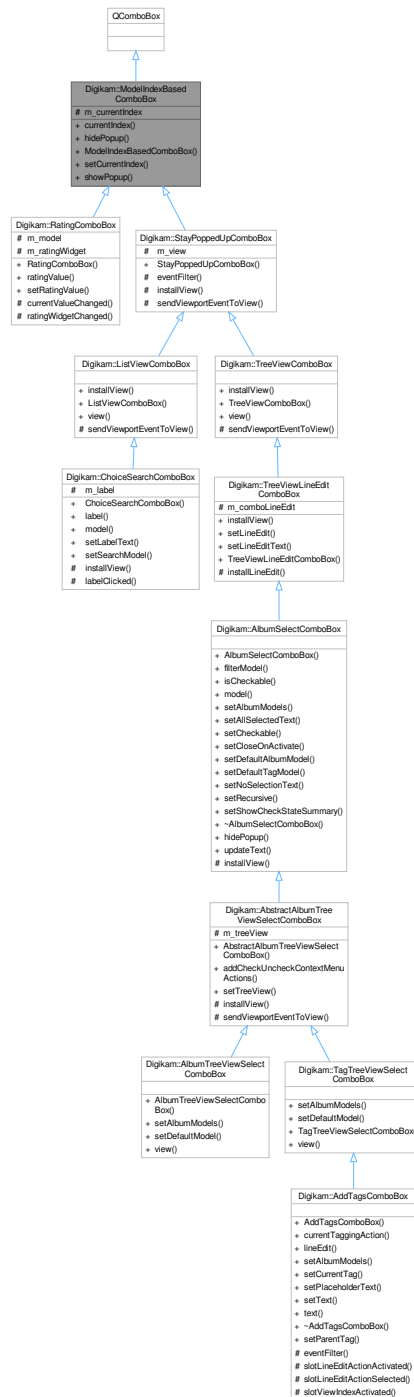

If the given model is != null, the model is used to populate the completion for this text field.

## Parameters

<i>model</i>	to fill from or null for manual mode
<i>uniqueIdRole</i>	a role for which the model will return a unique integer for each entry
<i>displayRole</i>	the role to retrieve the text for completion, default is Qt::DisplayRole.

## 6.1101 Digikam::ModelIndexBasedComboBox Class Reference

Inheritance diagram for Digikam::ModelIndexBasedComboBox:

### Public Member Functions

- QModelIndex **currentIndex** () const
- void **hidePopup** () override

- [ModelIndexBasedComboBox](#) (QWidget \*const parent=nullptr)
- void **setCurrentIndex** (const QModelIndex &index)
- void **showPopup** () override

### Protected Attributes

- QPersistentModelIndex **m\_currentIndex**

## 6.1101.1 Constructor & Destructor Documentation

### 6.1101.1.1 QModelIndexBasedComboBox()

```
Digikam::ModelIndexBasedComboBox::ModelIndexBasedComboBox (
    QWidget *const parent = nullptr ) [explicit]
```

QComboBox has a current index based on a single integer. This is not sufficient for more complex models. This class is a combo box that stores a current index based on QModelIndex.

## 6.1102 Digikam::ModelMenu Class Reference

Inheritance diagram for Digikam::ModelMenu:

### Signals

- void **activated** (const QModelIndex &index)
- void **hovered** (const QString &text)

## Public Member Functions

- int **firstSeparator** () const
- int **hoverRole** () const
- QAction \* **makeAction** (const QIcon &icon, const QString &text, QObject \*const parent)
- int **maxRows** () const
- QAbstractItemModel \* **model** () const
- **ModelMenu** (QWidget \*const parent=nullptr)
- QModelIndex **rootIndex** () const
- int **separatorRole** () const
- void **setFirstSeparator** (int offset)
- void **setHoverRole** (int role)
- void **setMaxRows** (int max)
- void **setModel** (QAbstractItemModel \*model)
- void **setRootIndex** (const QModelIndex &index)
- void **setSeparatorRole** (int role)

## Protected Member Functions

- void **createMenu** (const QModelIndex &parent, int max, QMenu \*parentMenu=nullptr, QMenu \*menu=nullptr)  
*put all of the children of parent into menu up to max*
- virtual void **postPopulated** ()  
*add any actions after the tree*
- virtual bool **prePopulated** ()  
*add any actions before the tree, return true if any actions are added.*

### 6.1102.1 Detailed Description

A QMenu that is dynamically populated from a QAbstractItemModel

### 6.1102.2 Member Function Documentation

#### 6.1102.2.1 prePopulated()

```
bool Digikam::ModelMenu::prePopulated ( ) [protected], [virtual]
```

Reimplemented in [Digikam::BookmarksMenu](#).

## 6.1103 Digikam::Modifier Class Reference

Inheritance diagram for Digikam::Modifier:

## 6.1103.1 Member Function Documentation

### 6.1103.1.1 [parseOperation\(\)](#)

```
QString Digikam::Modifier::parseOperation (
    ParseSettings & settings,
    const QRegularExpressionMatch & match ) [override], [protected], [pure virtual]
```

TODO: describe me

#### Parameters

<i>settings</i>	contains settings
<i>match</i>	result of the regular expression match done in <a href="#">Option::parse()</a>

#### Returns

Implements [Digikam::Rule](#).

Implemented in [Digikam::CaseModifier](#), [Digikam::DefaultValueModifier](#), [Digikam::RangeModifier](#), [Digikam::RemoveDoublesModifier](#), [Digikam::ReplaceModifier](#), [Digikam::TrimmedModifier](#), and [Digikam::UniqueModifier](#).
